If the North can bring itself to an acknowledegement of these contemporary realities, the necessary mechanisms of change—in commodities, in credit, in manufactures and resource transfer—will all become easier to negotiate with the South; and there will be hope for the human condition world-wide. If, however, such realities continue to be ignored and policies proceed on other premises, the vista of human betterment which unfold will be for Northern eyes only. The South will remain blanketed in the fog of despair and rising anger that now enshrouds it.

On Sunday I visited the Arlington National Cemetery and paid my own tribute to a great American. I was struck, as I did, by a line in one of those many inspiring passages memorialising President Kennedy:

"And my fellow citizens of the world: ask not what America will do for you, but what together we can do for the freedom of man."

The South asks no more of America. Is America prepared to act in planetary fellowship for the true freedom of all men—starting with freedom from the thraldom of poverty? Sixteen years after Jack Kenedy's inauguration, a new President has assured the "citizens of the world" of his administration's desire "to shape a world order that is more responsive to human aspirations." United States policies and positions as they unfold over the next few weeks will tell a large part of the world whether those aspirations are now better understood.

THE CORPORATE BRIBERY LEGISLATION

HON. MICHAEL HARRINGTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. HARRINGTON. Mr. Speaker, for the benefit of my colleagues, I am inserting into the RECORD a statement on H.R. 3815, the corporate bribery legislation now pending in the Consumer Protection and Finance Subcommittee of the Interstate and Foreign Commerce Committee. In the statement, I point out that while the subcommittee efforts to date are indeed laudable, there remains to be considered a related and equally important issue—corporate contributions to foreign political parties. If the pending legislation is enacted in its present form, corporate payments made to secure specific business advantages—bribes—will be prohibited but, under many circumstances, corporate payments to foreign political parties would not be affected. It seems clear that in the face of strict penalties for international bribery, many corporations may then rely increasingly upon corporate contributions to foreign political parties to win the favor of foreign governments. If we merely allow a shift from corporate bribery to corporate contributions to foreign political parties, we have hardly resolved the improper payments issue.

The statement is accompanied by additional supporting information compiled from the May 12, 1976, report of the Securities and Exchange Commission to the Senate Banking Committee.

The text follows:

STATEMENT BY THE HONORABLE MICHAEL J. HARRINGTON ON H.R. 3815

During the past few years, the debate on global corporate payments has tended to focus on one dominant aspect of the controversy—bribery to gain specific business advantages. The virtual avalanche of revelations demonstrating the scope and magnitude of international bribery understandably lent a sense of immediacy to this particular problem above all other considerations. The disclosures which rocked and occasionally toppled governments on three continents contributed as well to the American crisis of confidence and thereby undermined our own government and institutions. American political leaders rightly sensed the priority attached to the issue and actively set about in search of a solution.

On the topic of corporate bribery to date, we have had hearings in the Senate and the House, received recommendations by a Presidential Task Force, and witnessed investigations by at least four agencies in the Executive Branch—the Securities and Exchange Commission, the Internal Revenue Service, the Federal Trade Commission and the Department of Justice. The broad consensus in the Senate on this issue was reflected in the passage last year of the Proxmire bill by a vote of 86–0. In the House, a similar effort was initiated but, unfortunately, time constraints prevented final passage of the legislation, a bill which I had the pleasure of supporting in testimony before this subcommittee. Finally, the Carter Administration has voiced its strong support of legislation mandating criminal penalties for corporate bribery.

Thus, in the aftermath of the dismal record of American corporate misconduct overseas, H.R. 3815 is a commendable signal of official American intolerance of corporate wrongdoing abroad. It is a first step towards restoring a diminished public trust.

Yet there remains another aspect of the corporate payments problem that equally deserves our attention. Imagine the American sense of outrage if we were to discover that, for years, foreign corporations were regularly subsidizing our elections and making massive annual contributions to our political parties. Surely we would feel that the American democratic process had been impaired and the outcome distorted.

We would feel that our system of government had been tampered with in a fundamental way. Yet some American corporations have regularly contributed to foreign political parties, candidates, and media outlets, especially during foreign elections and foreign political campaigns. Such payments will not be affected by the pending legislation. Neither will the contributions have to be disclosed to the Securities and Exchange Commission, if they are consistent with the laws of the host country and not material to the firm's business. In most foreign countries, corporate contributions to political parties are legal.

If we criminalize corporate payments made to secure specific business advantages, as the pending bill does, should we not also address the problems posed by allowing corporate payments made for broader political purposes? While H.R. 3815 does hold American business to a higher standard of conduct by prohibiting outright bribes, it does not eliminate or discourage American corporate interference in the political or economic affairs of foreign countries. It does not address the issue of American corporate contributions to foreign political parties to curry favor with, influence or destabilize an incumbent foreign government. And, as we are all well aware, recent American history provides ample evidence of such efforts. Clearly, the issue of corporate political contributions abroad has not only ethical but serious foreign policy implications as well.

Even before the current wave of bribery disclosures, ITT's efforts in 1970 to block the election of Salvadore Allende were documented by two Senate reports. After the Central Intelligence Agency declined ITT's offer of corporate funds to stop Allende the agency promised "to advise ITT on how to channel its own funds." (Covert Action in Chile, 1963–1973, Staff Report of the Senate Select Committee on Intelligence, p. 58.) Later, ITT passed $350,000 to the Conservative Party candidate, Jorge Alessandri. Late last year, the New York Times reported that, in 1970, Anaconda Copper Company offered to funnel $500,000 through the State Department to the same Conservative Party Candidate.

In Italy a somewhat similar effort was undertaken by Exxon, the world's largest oil company. In testimony before the Senate Subcommittee on Multinational Corporations, Exxon executives acknowledged that, between 1963 and 1972, Exxon passed $59 million to the Italian Christian Democratic Party, the Socialist Democratic Party and the Socialist Party. During the course of these hearings, similar disclosures were made by other corporate executives. Mobil Oil representatives acknowledged providing $2.1 million to Italian political parties in the early seventies. And from 1969 through 1972, Gulf Oil Corporation paid $627,000 to various Italian publishers controlled by Italian political parties.

These transactions should be considered within the context of parallel Central Intelligence Agency efforts to channel official U.S. dollars to the same parties. According to the final report of the House Select Committee on Intelligence, the CIA passed $75 million to Italian parties and politicians between 1948 and 1972. Of this sum, $10 million was spent in the 1972 parliamentary elections. And in January 1976, the New York Times reported that on December 8, 1975, President Ford approved a $6 million CIA expenditure for upcoming Italian elections.

Again in testimony before the same Senate subcommittee, Gulf Chairman Bob R. Dorsey stated that in Korea, Gulf made two massive contributions to the Korean Democratic Republic Party—$1 million in 1966 and $3 million in 1970. He acknowledged that over the years, Gulf made substantial contributions in Bolivia, Sweden and Canada as well.

Various press accounts have reported that other American corporations have contributed to foreign political parties in lesser amounts. According to these articles, the Continental Oil Company channelled $148,000 to unspecified foreign political parties. Firestone Tire and Rubber Co. provided $32,000 to an unspecified political party. And throughout 1973, a Philip Morris subsidiary in the Dominican Republic paid $1,000 monthly to the political party of President Joaquin Balaguer.

It is not my purpose here to enumerate all instances of either documented or alleged corporate political contributions, but rather to indicate briefly the dimensions of this aspect of a larger problem. The point is that, from all indications these transactions were undertaken with a view toward making a long-term investment in a foreign political system, rather than to win a specific contract or to edge out a competitor.

The primary defense of American businesses with respect to such payments has been that corporate political contributions frequently are legal in the host country. As there are no prohibitions or reporting requirements on such payments, the corporations argue, American business cannot and should not be penalized for activities that are perfectly legal where they are undertaken.

Despite the factual accuracy of this argument, I continue to feel that serious and extensive consideration should be given to the issues posed by corporate political contributions abroad.

First, it is obvious that the foreign policy repercussions of such payments can be severe. In their support of one foreign political party over another, American corporate activities can undermine official U.S. policy. Both Chilean President Allende and Venezuelan President Perez broke off talks with U.S. officials on compensation for nationalized property when they learned of corporate payments. Sen. Church contended that disclosure of the Exxon payments in Italy helped the Italian Communist Party score spectacular gains in the 1976 parliamentary elections. Numerous other examples could be cited but the point is clear. U.S. business contributions to foreign political parties can severely impair official policy. The U.S. Government, not private business, should conduct U.S. foreign policy.

Furthermore, consideration of corporate political contributions also bears on the question of government/corporate collusion for the channeling of corporate funds abroad, as documented by the Church report on ITT in Chile. Similarly, in the aftermath of the disclosures of Exxon payments in Italy, there arose widespread press speculation that the payments were actually a covert mechanism for CIA funding. Likewise, early this year the Wall Street Journal reported that government investigators were assembling "strong indications" that the CIA may have encouraged corporations to pay under-the-table cash to buy intelligence information for the

U.S. Government. The fact that the intelligence community/corporate relationship has never been thoroughly examined is "the best indication of its sensitivity" the article notes. Thus, it is obvious that all efforts should be made to ensure that U.S. business abroad is not perceived either as a conduit or an agent of the Central Intelligence Agency. By allowing corporate contributions to foreign political parties to continue, it is doubtful that such speculation can be avoided.

Finally, the past few years have witnessed a tremendous outcry over countless CIA activities undertaken in friendly, democratic countries. Just as we oppose official covert or overt intervention in the internal affairs of these countries, we should likewise oppose even more strenuously similar actions undertaken by the private sector. Surely if the American public condemns foreign intervention by the American Government in the internal affairs of our allies, it is fair to say they will hardly condone a parallel effort by the private sector.

In light of these considerations, it seems to me that a sounder approach to the problem of corporate political contributions would involve strict and specific limitations on the kinds of American corporate activities permitted on a foreign party's behalf (i.e., paid political advertisements) coupled with stringent disclosure provisions and/or clear prohibitions. It may be necessary to enact even tougher provisions than those included in the corporate bribery legislation as this issue may become an increasingly important one. Since political payments for specific business purposes will clearly be prohibited by the new corporate bribery law, it is not unreasonable to suspect that American corporations may, in turn, increasingly rely on regular political contributions overseas to promote goodwill toward American foreign investment and to win the favor of foreign governments. A shift from international corporate bribery to international corporate political contributions is hardly a solution to the problem of corporate payments.

While I have not translated these ideas into legislation, allow me to summarize them briefly. First, corporate payments to foreign political parties, candidates and media outlets should be distinguished from corporate payments made for specific business purposes. Corporate payments to political parties should be the subject of even stricter disclosure and/or criminalization measures. Second, the Congress should enact a strong policy statement as well, opposing such contributions.

If we really believe in the concepts of nonintervention and self-determination for all peoples, then we ought to be willing to enact measures applicable to individuals found to be engaging in an activity which we supposedly have disavowed as an official instrument of U.S. foreign policy. Surely we should not permit, condone, or ignore corporate practices abroad which we ourselves would consider an outrage if they were to be engaged in by foreign nationals here at home. In my testimony last year before this subcommittee, I acknowledged that there is little one subcommittee can do, in its consideration of one particular piece of legislation, to restore the public faith in our national institutions. yet we now have an Administration whose prime foreign policy concern to date has been the restoration of morality and ethical principles to all of our international relations. Given the demonstrated commitment of the Carter Administration to this goal, I feel strongly that the Congress and the Executive could successfully work together to explore, and attempt to resolve, many of the far-reaching problems of the improper payments issue which I have briefly outlined today. In theory, we have long recognized the principle of nonintervention in the internal affairs of other countries as a corrolary of democracy. Surely the Carter Administration and the Congress can work together to restore this principle to its proper place in our political philosophy.

Companies listed in the Securities and Exchange Commission Report of May 12, 1976 to the Senate Banking Committee as having made political contributions to foreign political parties. This category does not include "Foreign Sales-Type Commissions" or "Payments to Foreign Officials."

COMPANY AND FOREIGN POLITICAL CONTRIBUTION

American Cyanamid Co.**—From 1971–75, payments of $10,000 to $20,000 annually. These were legal until 1974 and illegal thereafter.

American Home** Products—Contributions in four countries. The legality of some of the contributions appears questionable.

American Standard, Inc.—No illegal contributions. Legal contributions of less than $500 per year.

Baxter Labs**—Subsidiaries purchased $300 of tickets for fund raising dinner, and contribution of $120 were made to a political party. Both activities were legal.

Bristol Myers Co.—Preliminary results make company confident that no illegal contributions were made.

Castle & Cook**—$30,000 in two contributions that were legal where made.

Cities Service**—Expenditures of $30,000 for "political purposes," that were disguised on books and records of subsidiary. Company was informed that subsidiary believed that none of the funds were paid to government officials.

General Telephone & Electronics Corp.—Payments of approximately $182,000 over five years that were legal where made. One improperly recorded.

Honeywell—No illegal contributions.

Intercontinental Diversified Corp.—Contributions from 1971–75 as permitted by local law.

Koppers Co. Inc.—No illegal contributions.

Kraftco Corp.—Contributions totaling $8.500 from 1972–76 in countries where legal.

Merck & Co.—Payments totaling $157,684 from 1968–75 that were legal under local law but improperly recorded on books.

Rockwell Intn'l.—$8,300 in Canada, where the contribution was legal.

Standard Oil of Indiana**—From 1970–73, $617,000 in Italy. From 1970–75, $35,700 in Canada. The contributions were legal in these countries during the periods in question.

Sterling Drug—No illegal contributions.

United Technologies.—No illegal contributions.

Warner-Lambert Co.—From 1971–1975, contributions of $15,300. The local managers were advised that the contributions were legal.

VISITORS TO THE CAPITOL

HON. E de la GARZA

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. DE LA GARZA. Mr. Speaker, it is always a pleasure to welcome young people into this Hall and today it is a particular pleasure because these young people are my friends.

The James Pace High School Band of Brownsville, under the direction of Joe Harness, is in Washington participating in the Festival of Nations Band Contest. They will visit the House of Representatives this afternoon. They are accompanied by superintendent of Brownsville schools, Raul Besteiro.

This is one of the finest bands in the Southwest. After only two years in existence they have won superior ratings in every contest entered this year. This is upward mobility and we are proud of them.

IRONWORKERS COMPLETE IMPORTANT JOB IN PHILADELPHIA

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. EILBERG. Mr. Speaker, I am proud to bring to the attention of my colleagues the news of the completion of an important construction project by ironworkers in Philadelphia.

According to a report in the May 1977 cover story of the Ironworker, which is the official publication of the International Association of Bridge, Structural and Ornamental Iron Workers, members of local 405 have been involved in a major project to improve transportation in the city. The project involves Interstate 95 and the city's subway-elevated lines.

These ironworkers can be proud of their contribution to the region, as described in the following article:

IRONWORKERS COMPLETE REBAR JOB IN PHILADELPHIA

Rocky's neighborhood is changing. From the location of this year's Academy Award winning film, the Kensington area of Philadelphia, downtown to the Society Hill section, Ironworkers of Local 405 are placing the rebar for a major project designed to improve transportation in Philadelphia.

One part of the job involves completion of the last leg of Interstate 95 for two miles in Philadelphia County, connecting to a tunnel downtown. This 20-year battle to get right-of-way through the city will cut travel time from the current 45 minutes to less than 10 in December.

Another part of construction involves Philadelphia's mass transit commuter system. A two-mile portion of the Broad Street Subway and the Frankford Elevated are being rebuilt, including a 15 x 30-foot tunnel which runs for about 2500 feet beneath I-95.

These jobs constitute 3,200 tons of reinforced steel. About 900 tons of it is galvanized because of the heavy salt mixture which will be poured over the surface of the El in cold, precipitous weather.

A peak of 32 Ironworkers were employed during the rebar phase by King Erectors, Inc. A minority firm incorporated just a month before construction began on I-95, King is a subsidiary of G & H Steel which employs more than 500 Ironworkers each year. Anthony Doria, a Spanish American, and Gary Welsh, a Black American, manage the company with a combined total of 41 years of experience. Doria spent the last 15 years as an Ironworker foreman and Welsh became a foreman shortly after he entered the trade 14 years ago with G & H. King Erectors is also doing work on the Metro and South Capitol Bridge in Washington, the Osteopathic Hospital in Harrisburg, and the Southeast Expressway in Boston.

Prime Contractor for the I-95 job is Slattery Associates of Philadelphia. Foreman Herb Cardenas and Steward Edward Doria are members of Local 405, Philadelphia.

GOLCONDA JOB CORPS CENTER

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. SIMON. Mr. Speaker, the Job Corps Center at Golconda in my district is the first Job Corps Center east of the Mississippi to receive North Central Association of Colleges and Schools accreditation.

We are proud of that attainment.

The center at Golconda is making an important contribution to our area and our Nation.

I am inserting into the RECORD the press release about the matter that was issued by the Forest Service:

GOLCONDA JOB CORPS CENTER ACCREDITED BY THE NORTH CENTRAL ASSOCIATION

Center Director Robert E. Williams announced today that the Golconda Civilian Conservation Center has received full accreditation by the North Central Association of Colleges and Schools. The school was admitted into NCA membership at the Association's Annual Meeting held April 12–14, 1977. The Golconda Center was one of 25 schools in Illinois that attained NCA membership this year for the first time.

"Accreditation by the NCA means that the Center has met the rigorous standards set for membership", said Director Williams. "These standards, which are established by more than 4,300 member schools of the Commission on Schools, signify that the school has the resources, personnel and leadership necessary as preconditions for effective education."

What is even more important is the fact that young men in training at Golconda CCC will be able to reap the benefits of being graduates of a fully accredited institution for college entrance and job placement.

Accreditation by the NCA must be renewed each year, based on the objective conditions existing within the school. In commenting upon this, Williams stated: "Continuation within the NCA requires a joint effort by the community and the Center staff to make certain that the potentiality for quality education remains unimpaired. The advantage of NCA membership is that it assures the public at large that the school has met those standards which good schools in the NCA region consider to be imperative for effective education to take place."

NCA State Chairman, Dr. John S. Kemp of the University of Illinois, extended his congratulations to the school, noting that "the Golconda Job Corps Center now has joined the growing league of fine schools whose purpose is the continuing improvement of education."

Director Williams was present in Chicago as a representative of the school when it was admitted to membership. He said, "In addition to the accreditation of schools, the NCA Annual Meeting program provides sessions on the many changes taking place in education. This year's program featured more than 120 different programs on a wide range of educational topics. It's an excellent opportunity to meet and exchange ideas with hundreds of fellow educators from other states."

The North Central Association, the Nation's largest regional accrediting agency, is a voluntary league of more than 4,300 secondary and elementary schools and 800 colleges and universities in 19 states. The Association works with individual schools to improve the quality of education through a continuous process of accreditation and evaluation.

TRIBUTE TO RABBI MORTON A. BAUMAN

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. WAXMAN. Mr. Speaker, Rabbi Morton A. Bauman, D.D., D.H.L., is retiring after serving for 27 years as spiritual leader of Temple Beth Hillel, which is the oldest reform congregation in the San Fernando Valley of southern California. On June 3, 1977, the temple sanctuary will be dedicated and named the Rabbi Morton A. Bauman Sancutary in his honor.

Rabbi Bauman was born in Detroit, Mich. in 1912, doing his undergraduate studies at the University of Cincinnati and being ordained as a rabbi from Hebrew Union College in 1937. He did graduate work in education at the University of California at Berkeley, and in religion at the University of Southern California. He earned his degree of doctor of Hebrew literature at the University of Judaism, and thus is the first reform rabbi to have received a graduate degree from a Conservative Seminary. Hebrew Union College also bestowed upon him an honorary degree of doctor of divinity.

Rabbi Bauman served in San Francisco and as the rabbi of Temple Israel in Hollywood—interrupted by 4 years of service as an Army chaplain during World War II. He came to Temple Beth Hillel, North Hollywood, in 1949, where he now has life tenure. His list of offices and accomplishments is impressive; he is a past president of the Jewish Committee for Personal Service, the Pacific Association of Reform Rabbis, and the Southern California Association of Liberal Rabbis. He has served as chairman of the Chaplaincy Committee of the Board of Rabbis, the Library Committee of the Jewish Federal Council, and the Advisory Committee of Service to Military Families of the Los Angeles Chapter of the American Red Cross.

Rabbi Bauman has been a member of the State of California Advisory Committee on Institutional Religion, the Community Relations Committee of the Jewish Federation Council, and a member of the board of the council and of the Board of Jewish Family Service. He has served as a member of the California Advisory Committee of the U.S. Civil Rights Commission, the Board of the Valley Chapter of the American Red Cross, and the Board of Overseers of Hebrew Union College; and he has taught at the University of Judaism and at Hebrew Union College.

It is difficult to see how this dedicated man could have found time for more contributions, but he did. He wrote prayerbooks for adults and children for the holy days and for Sabbath evening worship service in the synagogue, as well as a Children's Haggadah. Rabbi Bauman has been active on the Valley Interfaith Council, served as president of the MD Club at Valley Presbyterian Hospital, and has unselfishly given his time for 28 years as rabbi for the California Home for the Aged without remuneration.

On April 22, 1977, the title of rabbi emeritus was bestowed upon him. The dedication of the Temple Sanctuary is only one of several events which are planned to honor Rabbi Bauman, and I ask the Members to join me in extending our congratulations and admiration for his life of accomplishment and service, in which I am sure we are joined by his wife, June, and their four children.

BLACKWELL APPOINTED TO HEAD OMBE

HON. WYCHE FOWLER, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. FOWLER. Mr. Speaker, an outstanding Atlantan, Dr. Randolph Blackwell has been named Director-designate of the Office of Minority Business Enterprise. Dr. Blackwell was executive director of Southern Rural Action for 9 years, and prior to that he was program director of the Southern Christian Leadership Conference, where he worked closely with Dr. Martin Luther King, Jr. The following article from the Atlanta Daily World points to many of Dr. Blackwell's accomplishments:

BLACKWELL TABBED TO DIRECT OMBE

(By Yvonne Shinhoster)

Secretary of Commerce Juanita Krebs announced on Wednesday that Dr. Randolph T. Blackwell of Atlanta has been selected as the director-designate of the Office of Minority Business Enterprise.

Dr. Blackwell, 50, is a noted educator, author and administrator. He was closely associated with the late Dr. Martin Luther King Jr. as program director of the Southern Christian Leadership Conference. Before joining the U.S. Commerce Department, the new OMBE director was executive director of Southern Rural Action Inc. a non-profit organization promoting small business ownership in southern communities.

As director of OMBE, Dr. Blackwell will exercise leadership responsibility for the federal government's national effort to bring minorities into the mainstream of America's economic life as owners of profitable businesses.

OMBE's annual budget since 1973 has remained relatively stable at about $50 million. The agency employs some 225 nonprofit community based organizations to provide business management and technical assistance to minority businesses. Regional offices are located in San Francisco, Chicago, Dallas, Atlanta, Washington, D.C. and New York.

A notive of Greensboro, North Carolina, Dr. Blackwell graduated from North Caroline A&T College in 1949 with a B.S. degree in Sociology. He graduated from Howard University in 1953 with a Doctor of Laws degree.

He has been a guest lecturer at the Massachusetts Institute of Technology and the Federal Institute and is widely published in the field of civil rights, voter registration, economics and law. Dr. Blackwell has also coauthored two college textbooks, Principals of Economics and College Business Law.

In earlier years, Dr. Blackwell served as associate professor of economics at Alabama A&M College and as associate professor of

Social Science at Winston-Salem Teachers College.

Mr. Blackwell is married to the former Elizabeth Knox of Winston-Salem, and they have one daughter, Blanche, age 20.

LEGAL SERVICES PROGRAM SHOULD BE TERMINATED

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. ASHBROOK. Mr. Speaker, the Judiciary Committee has reported out H.R. 6666 which would continue and expand the highly questionable legal services program. Few programs have compiled as bad a record as this so-called poor peoples' legal aid. It should be terminated and the American people should call all to account who encourage the continuation of its activities.

As a member of the Education and Labor Committee for over 16 years and more recently the Judiciary Committee—both of which have at one time or another had jurisdiction over legal services—I have had an opportunity to follow the beginning and subsequent development of the Federal legal services program. This program is fundamentally flawed and should be terminated.

"Legal services" is not a poor people's program. It is not a program to impartially seek justice, but one which uses public funds to seek political change outside the electoral process—not just in the courts, but through grassroots lobbying organizations, paid legislative agents, voter registration efforts, political publications, and lobbying the personnel of State and Federal agencies.

Since its inception, employees of the Federal legal services program have been taxpayer-funded advocates and organizers of such political causes as quotas in jobs and schooling, welfare rights, unions of the unemployed, student protests, Indian land claims, homosexual demands, proposals for graduated State income taxes, ERA, voting rights for prison inmates, rent strikes, boycotts of private businesses, antibusiness regulation, no-growth environmentalism, massive expansion of the food stamp program, Naderite consumerism, American Indian movement extremism, State takeovers of local education, land use controls, and more. My files are full of their circulars and radical propaganda.

Yes, under both the Corporation and at OEO employees of taxpayer-funded legal services projects have been in the forefront of action for radical political change. They have advanced the priorities of those who control the program, all the while self-righteously claiming to speak for the poor.

He who pays the piper calls the tune. If lawyers are hired by and report to the boards of directors of nonprofit corporations—as is the case with legal services attorneys—they are inevitably accountable to the members of those boards. Unlike the members of the Board of the National Legal Services Corporation, who are chosen by the President, subject to Senate confirmation, members of local boards which hire project attorneys have no such accountability. They are, by and large, self-chosen and self-perpetuating.

This is not to argue that particular lawyers are less than totally faithful to the interests of their particular clients. It is the clear statement, however, that lawyers hired by local projects adhere to the priorities set by the leaders of those projects. Legal services lawyers are paid by fee. They receive fixed salaries, established through their local projects.

If it is determined to be "in the interest of the poor" for an attorney to devote a month's time researching a fine point of law, rather than representing 10 clients, then it shall be thus.

Similarly, legal services officials frequently argue that class action suits, test case litigation, legislative and administrative lobbying, group representation, economic development, and community education are a more efficient use of scarce resources than is involved in hundreds of individual lawsuits. In the absence of the economic constraints which normally govern lawyer-client relationships in the private marketplace, such decisions are readily made. Indeed, effectiveness in law reform is a significant factor weighed in determining levels of funding to local legal services projects.

Previous debates over the Federal legal services program have been concerned with the need for regulations to limit abuses. Such restrictions, even if tightly worded and enforced with integrity, would not eliminate the kinds of abuses inherent to the program.

Having said this, however, I would like to point out just a few instances of how this bill would make a bad situation even worse.

One key change is the effective repeal of the Green amendment. The intent of this amendment was to prohibit the funding by grant or contract of all the activities of backup centers including the litigating activity. These centers have been actively involved in class action suits and social change, such as busing, welfare rights, and prison reform. H.R. 6666 would specifically authorize these actions to continue.

The bill would also get the legal services program deeply involved in legislative draftsmanship. It woud allow backup centers and LSC fund recipients to use the funds to draft model legislation if requested by an elected legislator. This has been mockingly referred to as the "auxiliary congressional staff" section.

Another section repeals the prohibition on involvement in school desegregation cases. Previously the Center for Law and Education in Cambridge, Mass., intervened on the probusing side in Detroit. Repeal of this prohibition would undoubtedly mean more of the same.

Do we really want to continue activities like the LSC-funded Massachusetts Law Reform Institute which lobbied actively in behalf of a referendum for a graduated State income tax? Or the actions of the LSC-funded Pine Tree Legal Assistance, Inc., and Native American Rights Fund, which have been trying to force the State of Maine to give two-thirds of its land back to the Passamaquoddy and Penobscot Indian Tribes? Is this really providing legal services to the poor?

I intend to vote against every piece of legislation which would sanction continuation of this program and every appropriation to fund it. I urge my colleagues to do likewise.

The injustice of this highly political program must be ended.

H.R. 7127, MORE COSPONSORS TO STOP AG-LAND

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. ABDNOR. Mr. Speaker, H.R. 7127 is the second reintroduction of H.R. 4789, which I offered to amend the Internal Revenue Code of 1954 to prohibit tax-exempt organizations from purchasing farmland. Those who are interested in this issue may wish to refer to my remarks on pages 7002–7003 of the March 9 RECORD and 11800 of the April 21 RECORD.

Eleven of my colleagues joined me in the first reintroduction (H.R. 6464) and nine more have cosponsored H.R. 7127, which I have introduced today. These members represent diverse constituencies and widely differing philosophical persuasions. They are united, however, by the belief that tax-exempt organizations should not be competing with family farmers in the market for agricultural land.

Due to the demands placed on their time by the President's energy proposals, Department of the Treasury officials have not yet responded to the request filed on April 8 by 11 of my colleagues and myself that the administration take a position on this vital issue. The preliminary, unofficial word we have received, however, is that they may oppose H.R. 4789 in favor of simply amending the law to require that the income from such purchases by tax-exempt organizations be taxable as unrelated business income. Certainly that would be a step in the right direction, but in my view it would be an inordinately small and ineffective one.

I have asked Chairman ULLMAN of the Ways and Means Committee to request departmental reports on this legislation. I believe the issue merits the administration's attention. Hopefully the preparation of official departmental reports for the committee will result in more adequate attention to all the ramifications of purchases of farmland by the big money managers. When these ramification are fully considered, I am confident the administration will conclude—as 20 of my colleagues and I have—that tax-exempt organizations should be barred from purchasing land for farming purposes.

The cosponsors of H.R. 7127 are: BADILLO, BAUCUS, CORNWELL, GOODLING, JEFFORDS, KEMP, MONTGOMERY, PANETTA, and SKUBITZ.

STATEMENT ON H.R. 5959, A BILL TO REVISE AND EXTEND THE RENEGOTIATION ACT

HON. MARK W. HANNAFORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. HANNAFORD. Mr. Speaker, when H.R. 5959, a bill to revise and extend the Renegotiation Act of 1951, comes to the floor for action in the near future, I will rise in opposition to the bill, and I will offer an amendment in the nature of a substitute. My amendment will simply put the Board on a standby and inactive status until "the President determines, during a period of national emergency" that having the Board in effect "would be in the best interest of the United States." My amendment is printed in today's RECORD and I invite my colleagues to take note of it.

Specifically, the bill raises several serious questions with respect to the functions of the Renegotiation Board.

One. Is this agency, which was created in 1951 to review defense contracts which were hastily negotiated in a period of national emergency, necessary during peacetime?

Two. What are the costs of compliance to Renegotiation Board regulations faced by taxpayers and industry?

Three. How much of the renegotiation process involves duplicated efforts by Government agencies?

Four. How are "excess profits" determined by the Renegotiation Board?

Five. How would the proposed legislation affect small and minority businesses?

I shall briefly address these questions:

1. NECESSITY OF THE RENEGOTIATION BOARD DURING PEACETIME

Mr. Speaker, when the renegotiation process was instituted in 1951, the purpose was to protect the Government against excessive profits on defense contracts. Renegotiation was a retrospective procedure due to limited compliance regulations, the lack of sufficient procurement review personnel, and the pressures of national emergency conditions. However, since that time, a host of procurement laws, regulations, and agencies have been established. Moreover, during peacetime, defense contract negotiations can be effectively executed, avoiding a costly renegotiation process.

2. COST OF COMPLIANCE

Mr. Speaker, a review of the Renegotiation Board's performance illustrates that taxpayers and industry have paid substantial amounts for questionable benefits. For example, during the 6-year period, 1971–76, total filings received by the Board were 22,378. Also during that time, total net excess profit determinations by the Board were $112 million. Thus, during this 6-year period, on average about $5,000 from each firm was recovered.

Filings with the Board

	Firms
1971	3,154
1972	4,874
1973	3,910
1974	3,665
1975	3,708
1976	3,067
Total	22,378

1971–76 EXCESS PROFIT DETERMINATIONS

Total: $271 million less $130 million (income tax credits) equals $141 million less $29 million (Board operating costs) nets $112 million.

At what cost, however, was the $112 million net excess profit determination made? Estimates reveal that industry paid almost $400 million to comply with the Board's regulations in terms of labor, electronic data processing, and other administrative costs. This cost represents more than three times the net excess profit determination obtained by the Board from 1971–76. Furthermore, a substantial portion of this $112 million is yet to be recovered through litigation in the Court of Claims. This means additional costs to taxpayers. Mr. Speaker, last year alone, estimated compliance costs to the public and to industry equaled approximately $200 million; and excess profits actually recovered by the Board were $4 million—about 2 percent of the compliance cost.

In an analysis of the proposed Renegotiation Act, the Federal Paperwork Commission concludes that the bill would "create additional administrative and procedural burdens as well as unnecessary paperwork and redtape, the cost of which appears to outweigh the potential benefits." Let me also remind my colleagues at this time that the Board's current backlog of filings amounts to $150 billion and that the proposed legislation would, according to the Congressional Budget Office, increase filings by 10 percent. Mr. Speaker, H.R. 5959 would increase costs much beyond the $200 million cited for 1976.

The product-line reporting method required by section 4(2) of the bill and the possible "audit" of "every" financial statement submitted as stated in section 10(b) impose great inflexibility and further administrative burdens on contractors and the Board itself. Neither of these provisions have been supported by the Carter administration and the Renegotiation Board itself admits that its operating costs will increase, the amount depending on the interpretation of the word "audit"; but it may involve the hiring of 200 to 2,000 additional auditors.

Mr. Speaker, ultimately this legislation will severely restrict defense contractors and, in turn, higher costs will be passed along to the Government and to taxpayers. Surely, no sophisticated economic analysis is necessary to recognize the potential inflationary impact of this proposal. At a time when fiscal responsibility and reduced deficit financing are of primary concern, there can be no sound justification for the enactment of H.R. 5959.

3. DUPLICATING THE EFFORTS OF OTHER GOVERNMENT AGENCIES

Mr. Speaker, let me emphasize that currently all defense contractors are monitored by the Defense Contract Audit Agency and the Office of Defense Contract Services. Contractors have also been subject to the Truth in Negotiations Act since July 1970 and to more than 11 other cost accounting standards. As stated during hearings on the Renegotiation Act held by the Subcommittee on General Oversight and Renegotiation in March, "By doing its job effectively, the DCAA makes it virtually impossible to justify on the basis of zero-based budgeting the continued activity of the Renegotiation Board during periods of peace."

4. THE DETERMINATION OF "EXCESS PROFITS"

Mr. Speaker, a considerably disturbing aspect of the Renegotiation Board's assessment of "excess profits" is that the term "excess profits" has never been clearly defined. In fact, according to the Director of Procurement and Systems Acquisition Division of the General Accounting Office, that determination is currently "totally subjective." In testimony before the General Oversight and Renegotiation Subcommittee, Mr. Gutmann claimed:

> At the present time, it is almost impossible to tell whether excessive profit determinations have been made in any consistent and uniform manner. The Board has not made progress in implementing the recommendation in that regard that we [the GAO] made in the earlier reports on our review of the activities of the Board. . . .

Mr. Gutmann summarized the difficulty of conceptualizing "excess profits" by saying that:

> . . . you have different types of contracts awarded. Some of them have a minimal element of risk. Some of them have a high element of risk and it is a matter of judgment in each case as to what would be considered an excessive profit.

Additionally, recent studies by the Department of Defense and analyses by the financial and investment community indicate that current defense-related profits are considered inadequate. What is more, Mr. Speaker, section 8 of H.R. 5959 requires interest to be paid on all excessive profits commencing the first day of the year following that in which they were earned. Senior staff members of the Renegotiation Board have expressed concern over the constitutionality of this provision, which would require contractors to pay interest on a determination of "excess profits" for a period of time even before it was known that such an excess profit exists.

5. IMPACT OF H.R. 5959 ON SMALL AND MINORITY BUSINESSES

Mr. Speaker, the negotiation process chiefly affects smaller defense contracting businesses. Increased compliance requirements embodied in H.R. 5959 raise operating costs for small businesses. In turn, these costs will be passed on to the Government. However, if the small business cannot meet increased operating costs, expenses must be reduced. In attempting to cut expenses, these firms may be forced to decrease their labor forces, spurring unemployment. The potentially harmful impact of H.R. 5959 on small businesses, which employ about 50 percent of U.S. workers, through measures such as product-line reporting, mandatory audits, and interest penalties may result in a significant deterioration of competition in the defense industry.

With respect to minority businesses, the provisions of H.R. 5959 would contra-

dict existing authority contained in section 8(a) of the Small Business Act, as amended. Presently, the SBA assists in steering profitable subcontracting work to minority-owned businesses in order to alleviate their developmental problems. Many of these firms fall within the scope of the Renegotiation Act. Therefore, it is conceivable that what is granted these firms under section 8(a) of the Small Business Act, as amended, would be taken away by the Renegotiation Act as proposed.

Mr. Speaker, for the reasons cited above, I intend to offer an amendment in the nature of a substitute to H.R. 5959, which would activate the Renegotiation Board only during periods of national emergency. This amendment has the support of many of my colleagues, and it is our view that this approach represents a reasonable, noninflationary, and cost-effective alternative to H.R. 5959.

ANTIBUSING LEGISLATION

HON. WILLIAM L. ARMSTRONG

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. ARMSTRONG. Mr. Speaker, last week I signed a discharge petition to require the House Judiciary Committee to bring antibusing legislation to the floor for consideration, possible amendment, and a vote.

At first, I was reluctant to do so. It seemed to me the committee should not be forced to act until members of the Judiciary Committee had a reasonable opportunity to draft legislation, possibly a constitutional amendment to curb the massive forced busing of schoolchildren which has been imposed on many of the Nation's school districts. I felt it would be better for such a proposal to be considered voluntarily by the committee. Expert witnesses could be summoned to testify, language could be written to accomplish the intended purpose while avoiding undesirable side effects.

Obviously, the issues at stake in the busing controversy are of great importance to this Nation—maintaining and improving educational standards for all students; assuring an opportunity for a high quality education to all; providing for integration of public education and strengthening neighborhood schools—these are issues which deserve a fair hearing by the Judiciary Committee and the opportunity for all Members of the House to speak, offer amendments and to vote on forced busing and alternatives.

Unfortunately, however, the Judiciary Committee does not seem willing to hold such hearings or to even seriously consider various pending proposals to end or drastically reduce forced school busing.

By refusing to act, the committee leaves other Members no choice. Therefore, I have joined a bipartisan group in signing a discharge petition to require that House Joint Resolution 19 be brought to the floor for consideration and action by the entire House. I wish the Judiciary Committee had done its work and not made this somewhat drastic procedure necessary.

PLANNING FOR PEOPLE

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Ms. OAKAR. Mr. Speaker, Norman Krumholz, the planning director of Cleveland, Ohio, was recently described in a newspaper article that accurately and succinctly portrays work that has made Norman Krumholz the finest professional city planner in the Nation.

I believe that persons throughout the Nation, who are concerned about urban life, will be interested in this excellent description of one man and his work. The article appeared in the Washington Post for Wednesday May 11, 1977. Its author, Neal R. Peirce, deserves commendation for the excellence of the article.

The article follows:

A CITY PLANNER WHO DRAWS THE PEOPLE IN

(By Neal R. Peirce)

CLEVELAND.—Hair shirt to the establishment, professed advocate for the downtrodden and a pioneer of "cutback planning" for declining cities, Cleveland's planning director appears to be one of a kind. But the approaches he is taking may be the wave of the future.

His name is Norman Krumholz—some of his staff members call him "Stormin' Norman." He believes that planners, instead of charading as aloof technicians and relying on abstract mathematical models to design some "best future" for the "city beautiful," should plunge into the political battle as advocates for the kind of poor and near-poor people who make up the vast bulk of aging cities like Cleveland.

Every piece of planning that truly affects the future, Krumholz says, benefits some people and may harm others. Massive urban freeways and big downtown office complexes, he suggests, may line the pockets of developers and the construction unions, but what is their effect on poor people, on city neighborhoods?

The key question, Krumholz and his planners say, is, "Who pays, who benefits?"

"The problems of Cleveland and its people," they contend, "have less to do with land uses, zoning or issues of urban design—the traditional domain of city planners—and more to do with personal and municipal poverty, unemployment, neighborhood deterioration and abandonment, crime and inadequate mobility."

Thus when highways, office complexes, rapid-transit plans or sales of city properties are proposed, Krumholz does not—as one of his staffers put it—"wait to be consulted. He barges in, uninvited, wherever he finds the door ajar."

It's a perilous approach, creating many powerful enemies. But though his initial appointment came from Carl Stokes, a black mayor, Krumholz has survived under Ralph Perk, Stokes's Republican-ethnic successor. One reason, he suggests: Opponents on one issue often turn out to be allies on the next.

For any proposed project, Krumholz raises basic questions: Will it provide more jobs at livable wages for Cleveland residents? Will it stem the tide of neighborhood deterioration? Will it return more, rather than less, tax money to the city so that public services can be maintained and expanded?

The city, Krumholz says, must be hard-headed and businesslike in its investment decisions. In any project, he says, there should be some *quid pro quo* for the city—"not in ribbon cutting, but in terms of the fiscal vitality of the city."

When a new West Side highway was proposed, the city's cost share seemed a bargain—just $10 million. But Krumholz showed it would displace 1,000 housing units and cost Cleveland $400,000 in lost taxes annually. Stokes blocked the project.

Krumholz blew the whistle when developers asked the city to pay for bridge and road improvements—estimated at $15 million—to serve a proposed $350 million "Tower City" of downtown office buildings and apartments. "We thought it was pie in the sky," Krumholz said: There was no guarantee that the developers could raise the needed capital, existing buildings might "go bust" with loss of tenants, and analysis showed property-tax receipts might increase little or actually decline. The city council overrode Krumholz, 32-1, but capital problems have continued to stymie the project.

Krumholz believes his office's "greatest success" was in forcing a much better deal for the city—especially the "transit-dependent" third of its people who don't own cars—in negotiations for transfer of the ailing Cleveland Transit System to a regional authority. The city planners demanded—and got—reduced fares, expanded bus service, and agreement to spend about $1 million a year for a "dial-a-ride" pre-notification pick-up and delivery service for elderly and infirm transit-dependent passengers.

Krumholz also forced a moratorium on proposed rapid-rail extensions, a position that brought him into conflict with environmentalists, transit officials and business leaders who view rail expansion as a way to bolster development and inflate the value of downtown real estate.

His latest challenge to big business is an idea for a special downtown property tax, on top of existing real-estate taxes, to finance center-city public improvements that increase profits for landowners there.

All this places Krumholz in league with the neighborhood movement, now fast developing in Cleveland and other cities. By fighting for the poor on immediate issues, he provides them with the research backup that their grass-roots organizations often lack.

Krumholz is a pioneer, Columbia University sociologist Herbert Gans suggests, in "cutback planning"—chartering for an era of population and economic decline in aging cities like Cleveland.

Krumholz rightfully insists that the residue of poor left in center cities should not be forced to pay inordinate costs in the era of decline, or be ripped off by the business-labor coalitions intent on new freeways and downtown edifices that benefit suburban workers and executives. More of the costs, he says, must fall on businesses, suburbanites, and the federal government through income-maintenance plans for the poor.

But the poor are ill-served unless there are also creative plans to encourage investment, to create jobs in the older cities. Krumholz has some ideas along those lines—but not many.

The ultimate test will be to devise plans that stop the rip-offs but also encourage investors and new job opportunities. "Stormin' Norman" may not have arrived there yet. But he has made a beginning.

ROMULUS WILL HONOR UNIVERSITY OF DETROIT BASKETBALL STAR

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. FORD of Michigan. Mr. Speaker, a 20-year-old youth from Romulus, in my congressional district, will be recognized by a special day in his honor during Michigan Week festivities on May 21.

That date will be named "John Long Day" in Romulus in honor of a young man who has become a hometown hero for his outstanding abilities as a basketball player with the University of Detroit Titans.

I am proud to bring the story of this young athlete to the attention of my colleagues, and I am inserting at this point in the RECORD an article from the Romulus Roman of April 13, which outlines his accomplishments:

ROMULUS WILL HONOR UNIVERSITY OF DETROIT BASKETBALL STAR

John Long learned to play basketball on a rough, outdoor court near the Romulus Civic Center.

"We would watch professional basketball on television and then go out and practice what we saw," said the 6-foot, 5-inch star forward of the University of Detroit Titans basketball team.

Although the city has torn down the court Long learned to play on, Romulus has not forgotten its newest hometown hero.

The city will honor him with a special "John Long Day" May 21 as part of its Michigan Week Youth Day festivities at the civic center, 11495 Warham.

Romulus will present the 20-year-old junior with a key to the city and a recognition plaque commending him for his outstanding high school and college basketball career.

As a senior on the 1974 Romulus High School basketball team, Long averaged 25 points a game and was named to the Michigan All-State squad.

As a starter for the Titans, Long has been one of the team's most consistent performers, with coach Dick Vitale calling him a budding superstar. Long averaged 21 points and 10 rebounds a game this season to lead the Titans to their best season ever.

In the nationally televised match-up between the U. of D. and the University of Michigan during the NCAA regional playoffs, Long dumped in 25 points in the Titan's losing effort.

"When the broadcaster announced John's name before the game and told the entire nation he was from Romulus, I think everyone in the city had a very proud moment," said Jay Young, Romulus public information officer

"He is a lifetime resident of the city, one of 10 children from a poor family, who has been able to distinguish himself. We are very proud of John."

The Romulus Civic League also honor Long with a fundraising millionaire's party at 8 p.m., May 28, in the civic center. All income from the party will go to build a basketball court on civic property to replace the one Long practiced on as a child.

" I think it's appropriate to use the money to build another court," Long siad.

"I appreciate the thought. It is a great honor to have the city you grew up in set aside a special day for you."

The court will be dedicated to Long, who said he still considers himself a Romulus resident and lives with his mother, Mrs. Minnie Davis, when not on campus.

PENNSYLVANIA'S 16TH CONGRESSIONAL DISTRICT QUESTIONNAIRE RESULTS

HON. ROBERT S. WALKER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. WALKER. Mr. Speaker, in early February I mailed a questionnaire to each household in Pennsylvania's 16th Congressional District. I did so in an effort to get a better understanding of the views and opinions of those I represent. I intend to use these views and opinions as an important guide in voting on the many issues of national importance that are considered and discussed before the House.

Now that the results of that questionnaire have been tabulated, and to establish what will become a regular procedure for me, I am submitting the results of my questionnaire for the RECORD and for the information of my colleagues.

The questions and results are as follows:

[In percent]

1. Some economists feel a balanced Federal budget is needed to help solve our economic problems. Other economists feel the Federal Government should spend more than it gets as a way of stimulating the economy. Where do you stand? [1] [2]

Balanced budget:	
1	74
2	18
3	5
Spend more:	
4	3

2. President Carter wants Congress to give him the power to reorganize the Federal Government. Others insist that Congress should be a partner in the reorganization effort. Where do you stand?

Carter:	
1	31
2	21
3	16
Congress:	
4	32

3. Many Americans, including President Carter, favor amnesty for Vietnam era draft evaders. Others, including some Members of Congress, oppose the President's plan. Where do you stand?

Favor amnesty:	
1	21
2	11
3	13
Oppose amnesty:	
4	55

4. Some experts believe we must build the B–1 Bomber in order to maintain an adequate national defense. Other experts feel our defense is stronge enough and the B–1 is unnecessary. Where do you stand?

Build B–1:	
1	35
2	25
3	14
Unnecessary:	
4	26

5. A pay raise for top Federal officials, including Members of Congress and judges, has been recommended as one way of attracting top-notch people to government service. It is being opposed as too expensive. Where do you stand?

Favor raise:	
1	6
2	8
3	13
Oppose raise:	
4	73

6. Some experts feel our present policy toward the Soviet Union (détente) is good for the United States and should continue. Other experts feel we are not being strong enough in our dealing with the Russians and a harder line is needed. Where do you stand?

Maintain present policy:	
1	16
2	15
3	23
Adopt harder line:	
4	46

7. Deregulation of the price of natural gas will result in increased prices to the consumer but means more gas can become available to insure that factories and schools can remain open. Where do you stand?

Deregulation:	
1	3
2	23
3	16
Regulation:	
4	26

8. A Federal Consumer Protection Agency has been proposed to promote consumers' views at the national level. Opponents of this proposal say there is enough protection for consumers and the proposed agency means more bureaucrats and more spending. Where do you stand?

Establish agency:	
1	19
2	12
3	13
Agency unnecessary:	
4	56

9. A Congressional investigation of the assassinations of President Kennedy and Dr. Martin Luther King has been proposed. Opponents of such an investigation say it is not a priority matter for new spending. Where do you stand?

Investigation needed:	
1	11
2	8
3	9
Investigation unnecessary:	
4	72

[1] Numbers 1 and 4 indicate directly opposing views on an issue and those positions are noted directly above those numbers. Number 2 indicates those individuals "leaning" toward the Number 1 position but not definite about it and Number 3 indicates those individuals "leaning" toward the Number 4 position but not definite about that view.

[2] The number of responses to each question which indicated "no opinion" were negligible and were, therefore, not considered in tabulating the percentages.

WHAT IS A MOTHER?

HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. MURTHA. Mr. Speaker, on this past Sunday which was very appropri-

ately set aside to honor the mothers in our Nation, I came across some remarks prepared by a good friend of mine, Joseph F. Pencek. These comments properly commemorate the Nation's mothers, and I would like to share them with the Members:

WHAT IS A MOTHER?

A mother is a jewel, gold, wonderful and gentle, she rocks the cradle of those who run the world. Mother is the one who has sustained me in time of need, she was there when I needed her, her love will prevail as long as there is a breath of life in me. Oh mother, sweet mother, I couldn't in a million years writing in a million books tell of the bond between mother and son/daughter for it is . . . God's bond, it shall never perish—even beyond the grave! The sage has said: "The well known sounds so sweet to mortals given . . . are heard in mother, home, and heaven." And "men are what their mothers made them." We should not fail to mention—"What the mother sings to the cradle goes all the way down to the grave." "All that I am or hope to be, I owe to my angel mother!"

A mother is unique, we can only have one, that is to say, the one whose womb brings us into this world. When we are sad, mother is sad, when we are glad, mother is glad. When mothers know that her children are in pain, her tears of anguish flow; many times these tears aren't seen, for they are hidden, but believe me, they are there. An old proverb wisely states—God could not be everywhere and therefore he made mothers. When all of your friends forsake you and you are feeling blue, always remember mother—for she is still with you. To those of you who have a living mother, by all means visit her, constantly show your love, for alas, you won't always have mother around; to those whose mother is gone, remember her in your prayers! As long as you live, never forget, she gave you the gift of life; you are always in her debt.

JOSEPH F. PENCEK,
Jury Commissioner of Cambria County.

PHILADELPHIA FIRE DEPARTMENT OBSERVES FIRE SERVICE RECOGNITION DAY

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. EILBERG. Mr. Speaker, the Philadelphia Fire Department will observe Fire Service Recognition Day on Saturday, May 14, with open house at all its fire stations.

Fire Service Recognition Day is a national observance in every city in the country to focus attention on the important role fire departments play in protecting the public's safety.

Fire Commissioner Joseph R. Rizzo has extended a special invitation to all Philadelphians to visit their local fire stations, meet their firemen, examine the modern firefighting equipment, and learn about the vital services the men provide.

Mayor Frank L. Rizzo has issued a proclamation designating Saturday, May 14, as Fire Service Recognition Day. He will present it to Fire Commissioner Rizzo during a ceremony at city hall.

The city's fire department is nationally recognized as the country's No. 1 major professional fire service agency.

It previously won 18 first place awards from the National Fire Protection Association for the best fire service record of cities of 500,000 or more population.

During this same period it also won four Grand Awards from the NFPA for the best fire safety record of any city in the country.

In the first year of the NFPA's "Learn Not to Burn" competition, the fire department received an award for its outstanding fire prevention program in the public, parochial, and private schools.

The fire department has also received 13 George Washington Medals from the Freedoms Foundation of Valley Forge, including the foundation's highest medal, the Principal Award four times, for its innovative fire safety education programs.

It is recognized nationally for its excellent award-winning fire prevention programs involving every segment of the community and its work in educating youngsters about the hazards of fire and how to prevent fires from occurring in the home.

LOCAL 718, INTERNATIONAL ASSOCIATION OF FIRE FIGHTERS

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. MOAKLEY. Mr. Speaker, I would like to commemorate today the 35th birthday of local 718 of the International Association of Fire Fighters in Boston, Mass.

This union was started on April 17, 1942, at the Hotel Bradford, with 300 signatures from firefighters across the Boston area. Membership quickly rose to 600 and loyalty has remained strong in this group until today.

In its beginning, local 718 worked hard to combat long hours and low wages and poor working conditions of Boston firefighters. It overcame much opposition from company officers to communicate with fellow workers and promote fair treatment of their fellow members. It slowly accomplished its membership's goals of better working conditions and adequate wages, never forgetting that public service is the basis of the firefighter's work for society.

Early critics predicted that the union would not last 6 months, but hard work and close cooperation with city officials led to a strong and healthy group. The late Honorable Maurice J. Tobin; Fire Commissioner William A. Reilly, and Chief of Department Samuel Pope all helped to build local 718 and thus to better the lot of the Boston firefighter.

Today, local 718 is a model of responsible self-organization. Members serve their union and the Boston public with great distinction. I am proud to mark the 35th anniversary of local 718's dedication to the Boston community.

FACING HAVANA AND HANOI WITHOUT IFF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. DERWINSKI. Mr. Speaker, Prof. John P. Roche, whose column appeared in the Washington Star of May 10, is noted not only for his career in academic circles, but also for his practical experience in government.

He expresses very pertinent observations of the national scene in his column discussing our relations with Hanoi and Havana. In my judgment, he very properly makes his point.

The article follows:

FACING HAVANA AND HANOI WITHOUT IFF

(By John P. Roche)

The more I learn about our negotiations with Hanoi and Havana, the more I wish my Himalayan cat, Mariah, were handling them.

I have seen Mariah, apparently asleep in the driveway at one moment, rocketing to the roof of a car the next, just before a dog appeared. In contrast, I have seen her napping untroubled on the flagstones when a huge Newfoundland ambled up and lay down beside her. And there is a ructious spaniel who appears from time to time, runs a circle or two around her and yaps: Mariah yawns and rolls over.

Clearly, she has what in World War II was called "IFF Radar." She instinctively Identifies Friends and Foes, and reacts accordingly.

We, on the other hand, seem to have lost our capacity to distinguish friend from foe.

Begin with the objective situations in Vietnam and Cuba: both are bankrupt totalitarian countries desperately in need of economic and technical assistance. Both are dedicated opponents of human rights and, or course, of the United States. Both are attempting to "normalize" relations with the United States in hopes we will bail them out.

No one can blame them for trying to roll a drunk, but a serious case can be made against our getting stoned. As suggested here, when Castro pulls his army out of Africa and the Middle East its members could make a significant contribution to Cuba's gross domestic product. Moreover, a democratization of Cuba could lead to the return of 700,000 exiles—mostly middle class technicians and artisans. On a population base of roughly 8 million, they could provide quite an economic stimulus.

But democratization could create problems for the Caudillo. Senator George McGovern told the Havana periodical *Bohemia* that Fidel "is one of the most important leaders in the world today," but the exiles—who have IFF—are skeptics. McGovern may be a nice man, but they question his view that Castro has successfully guaranteed fundamental rights in Cuba. McGovern does not run the DGI, Fidel's KGB-trained secret police. So exchange ambassadors, but let Moscow pick up Fidel's tab.

Now to the American-Vietnamese negotiations in Paris, where Mariah would certainly be on the roof of a Renault. Asst. Secretary of State Richard Holbrooke strikes me as decent, but to put him in the ring with a veteran cutthroat like Vietnam's Deputy Foreign Minister Phaerm Hien is absurd. You see, Holbrooke feels guilty about our Vietnam commitment.

I feel guilty about it too, but for different reasons: We botched it; and we then abandoned 16 million South Vietnamese to savage totalitarians.

In the words of an impartial witness, "Now, after the Communist victory, the South Vietnamese, realize they lost a precious thing. They realize the intervention of the United States was right. Only its manner was debatable. Now they would like substantial military help to regain that freedom."

Doubtless some CIA stooge? No, alas, 10 years late, a leader of the anti-Thieu forces in Saigon learned there can be things worse than war. Nguyen Kong Hoan, a former Saigon deputy and leader of the anti-Thieu peace group, who was rewarded with a place in the new unified Hanoi legislature, managed to escape and boggled the minds of the anti-war partisans here with these sentiments. For some odd reason, his remarks received little media coverage.

Perhaps we should ship Nguyen Kong Hoan to Paris to advise Holbrooke, but at the moment an utterly unfazed Hanoi delegation is simply demanding that we live up to our end of a secret 1973 bargain and provide Vietnam with $4.7 billion for "reconstruction." (They've backed away from the word "reparations.")

President Nixon, of course, had no right to make such a commitment; if he had, it would be worthless. The $4.7 billion was meant as a bribe to Hanoi to honor the 1973 "peace" agreement.

Two years ago the massive invasion of South Vietnam taught us how seriously Hanoi took the Paris accord. Now they have the gall to demand payment for breach of contract! Their new scenario: we recognize them, allow them into the U.N. and fork over billions in return for some more caskets and good will. The first two are acceptable, but please, Mr. President, if you must do penance, send them $4.7 billion—in Confederate money.

EVERYBODY'S AUNT BESS

HON. GOODLOE E. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. BYRON. Mr. Speaker, May 13 is a special day in Hampstead, Md. Aunt Bess Snyder is celebrating her 85th birthday and the day is important because Aunt Bess is important. She is affectionately known as everybody's Aunt Bess. Throughout her 85 years in this central Maryland community she has been a continuing source of inspiration and upstanding Christian values. I would like to share with my colleagues in the U.S. House of Representatives some of the outstanding qualities that make Aunt Bess a shining light to all whose lives she touches.

During World War II this remarkable lady corresponded with 160 servicemen and 1 WAC, writing at least 30 letters each and every Sunday afternoon. She always enclosed a bulletin from Saint Mark's Lutheran Church where she is been a member for more than 70 years.

For many years she has gone out of her way to visit the ailing in hospitals, often many miles from her home. She brings with her a ready smile, perhaps a flower or some produce from her garden and a cheery visit. Every day she is sure to make several calls to friends with problems or sickness to ease their burden.

Aunt Bess says:

These days my main joy still comes from helping the sick and aged.

My fellow residents of central Maryland and myself say one of our great joys comes from knowing this wonderful lady. To everybody's Aunt Bess, congratulations on your birthday and thank you for the 85 years you have given to your fellow man.

"VILLA ALLEGRE": BILINGUAL CHILDREN'S TELEVISION PROGRAM

HON. FORTNEY H. (PETE) STARK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. STARK. Mr. Speaker, I would like to bring to the attention of my colleagues California Senate Joint Resolution No. 3, memorializing the President and the Congress of the United States to enact legislation assuring the continuance of the bilingual children's program, "Villa Allegre." This series is presented by over 260 stations across the United States, and is viewed by an audience of 10 million. Bilingual television programing has shown itself to be an effective learning tool and means to combat racial isolation available for both the non-English speaking as well as the English-speaking child.

The "Villa Allegre" series was recently nominated for an Emmy award by the Academy of Television Arts and Sciences. This is a tribute to both Bilingual Children's Television, Inc., as well as HEW and the U.S. Office of Education for their continued support of "Villa Allegre."

I hope that my colleagues, in recognizing the educational importance of this and other similar children's programs, will demonstrate their support by endorsing the continued funding of "Villa Allegre." I would also hope the Appropriations Subcommittee on Health, Education, and Welfare will indicate, through appropriate language in its report, its support for the continuation of "Villa Allegre" objectives. Below is a reprint of the California Senate Resolution:

SENATE JOINT RESOLUTION No. 3

Senate Joint Resolution No. 3—Relative to bilingual television programming

Whereas, In the fall of 1974, an innovative bilingual children's television program known as "Villa Alegre" made its debut nationally; and

Whereas, "Villa Alegre" is produced by Bilingual Children's Television, Inc., a California nonprofit corporation based in Oakland, California; and

Whereas, Utilizing the most singularly powerful medium in existence today, "Villa Alegre" is aimed for children at the formative years where its impact can be of most value to the viewer; and

Whereas, "Villa Alegre" provides a sense of identity as well as understanding and appreciation of the Spanish and English languages, instills a sense of pride and confidence in the heritage of the Spanish-speaking community, introduces monolingual children to a new linguistic melody, and broadens curriculum experiences, while celebrating cultural diversity; and

Whereas, The program helps to create a linguistic and cultural bridge within the home, school, and total community and can serve as an effective educational tool in complying with recent United States Supreme Court decisions involving bilingual education: and

Whereas, Bilingual Children's Television, Inc., producers of "Villa Alegre," has developed invaluable expertise in bilingual children's television programming, has compiled extensive research data on bilingual children, and has gained a keen insight into the educational needs of children during the formative years; and

Whereas, The value and impact of "Villa Alegre" on all children in the United States is manifest in its institutional, civic and community support and its utilization in homes and classrooms nationally; now, therefore, be it

Resolved by the Assembly and Senate of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to enact legislation to assure the continuation of "Villa Alegre" for all children; and be it further

Resolved, That the Secretary of the Senate transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States.

FAIRMOUNT PARK COMMISSION IN PHILADELPHIA GETS EXTRA LAND FOR RECREATIONAL USE

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. EILBERG. Mr. Speaker, I am pleased to report that Philadelphia Mayor Frank L. Rizzo has announced that over 205 acres of city-owned land in northeast Philadelphia is being turned over to the Fairmount Park Commission for open space and recreational use.

I am always delighted, Mr. Speaker, when additional land is made available for this purpose; my delight is magnified in this instance because I have the high honor of representing northeast Philadelphia in the Congress.

The acreage which is being made available for recreational use had been held by the police, streets, and welfare departments and had been considered for other uses.

In making the land available in this manner, Mayor Rizzo pointed out that the community has wanted the land for some time, and that he was happy to have been able to resolve this matter to the community's satisfaction.

Robert W. Crawford, president of the Fairmount Park Commission and Recreation Commissioner, has called the area virtually the only remaining open space along the Delaware River within the Philadelphia city limits. He has said that it would make a fine site for water-related activities, including the city's second boat ramp.

THE NEED TO CURB PLUTONIUM BREEDER REACTOR DEVELOPMENT

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. BINGHAM. Mr. Speaker, I am pleased to call my colleagues' attention to an extremely significant news story from this morning's New York Times entitled "Bonn, Under Domestic Pressures, Slows Breeder Reactor Research." The article, which follows my remarks, notes that domestic pressures in the West German Parliament—which are so serious that they may threaten Chancellor Schmidt's government—have forced the West Germans to freeze their development of breeder reactors. Today's news suggests that the FRG may follow the American lead in reassessing its commitment to nuclear power and to a future plutonium economy.

Mr. Speaker, I am very concerned that no action taken by this Congress should undermine President Carter's courageous effort to curb nuclear proliferation. Congress should support the President's decision to defer indefinitely commercialization of plutonium-fueled reactors and nuclear fuel reprocessing plants. To this end, we must reject any attempt to undercut the President's policy by restoring funds for the Clinch River breeder reactor. I pledge my best efforts to block any such attempt because I believe it is only fair that we in Congress give the President's rejection of the plutonium economy for the present a chance to bear fruit overseas. The news from Bonn would seem to indicate that such a harvest may be forthcoming.

The text of the Times article follows:

BONN, UNDER DOMESTIC PRESSURES, SLOWS REACTOR RESEARCH

(By Craig R. Whitney)

BONN, May 11.—The West German Government, faced with political criticism of its nuclear energy policies, is being forced to slow down research on the plutonium-based breeder reactors that President Carter opposes.

The Government still is committed to develop breeders, which produce plutonium, the prime ingredient of nuclear weapons. But, officials said today, $51.7 million in funds for research and development have been frozen until skeptics in Parliament can be convinced that this avenue to nuclear power is neither costly nor dangerous.

Last month President Carter cut off support for breeder development in the United States. He did not call on other nations to follow suit but he clearly hoped that the American example would be taken seriously elsewhere.

DOMESTIC PRESSURES ARE KEY FACTOR

The West German Government, committed to making the nation's nuclear power industry a world leader, announced only two weeks ago that it would request $96 million over the next five years for breeder research and development.

Dr. Armin Grunewald, an aide of Chancellor Helmut Schmidt, said today that as far as he knew, the Chancellor did not mention the possibility of freezing development funds in talks with President Carter in London last weekend.

The reason for the freeze is more closely connected with domestic politics and with the governing Social Democratic Party's weakness and disunity than with Mr. Carter's opposition to breeder technology.

A small group of left-wing members of Parliament from Schleswig-Holstein, where antinuclear feeling has been particularly strong, said they would break party discipline and vote against the government budget if the breeder program stayed in. This could have meant the end of Mr. Schmidt's precarious majority in Parliament since only five defections could bring the Government down.

The Ministry of Research and Technology agreed to the freeze yesterday, denying any connection with the threatened revolt. According to the ministry's spokesman, the prototype breeder that has been under construction near the Dutch border will not be affected.

WIDE INTEREST IN BREEDER TECHNOLOGY

The French, British and West German governments have all supported research into breeder technology because, unlike the United States, they must import all the nuclear fuel they use, and breeders produce more fissionable material than they burn. The Soviet Union, too, has been developing breeder reactors.

West Germany plans to have 29 nuclear power plants generating 30,000 megawatts of electricity by 1985, and the Government believes that both breeders and reprocessing of spent fuel will be essential after that. President Carter opposes this approach. The industrial democracies at the London meeting did not come to an agreement, but set up a committee that is to report in two months.

As the debate has grown more intense, so has skepticism about whether West Germany's course is realistic. Citizens' lobbies have sprouted in opposition to Mr. Schmidt's plans. A conservative, Christian Lenzer, said today:

"One can have differences of opinion about the necessity of fast breeder reactors but this surprising reversal is a sign that the Minister of Research and Technology can't even get his views through over the objections of leftist comrades in his own party."

TRIBUTE TO THE NEW ARTEF PLAYERS

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. WAXMAN. Mr. Speaker, we are fortunate, in southern California, to be enriched by a Jewish repertory company called the New Artef Players. Named after a Yiddish theater ensemble active in the 1920's and 1930's, this group of actors, writers, designers, and musicians, led by Paul Bennett, its administrative director, and Armand Volkas, artistic director, is contributing greatly to the cultural life of the communities it reaches. In the most exciting manner, the traditions of Jewish consciousness are preserved and fostered for the enjoyment of Jews and non-Jews alike. The company performs at synagogues, college campuses, and has a special education program for children which is presented at public schools.

On April 30, 1977, the New Artef Players will open a new and original play at Temple Emmanuel of Beverly Hills, titled, "Passions," the production explores Jewish life during the medieval period, Jewish-Christian relationships, and the roots of anti-Semitism. The date marks the 1-year anniversary of the opening of "Survivors," a chronicle of the emotional aftereffects of the European holocaust of World War II. The company, in a lighter vein, also has in its repertory, "The Tales of Chelm," colorful adaptations of old Eastern European folk tales about the legendary town of fools.

I am happy to be the means of bringing this exceptional theater group to the attion of the House, so that we may join in the New Artef Players anniversary celebration.

JUST WALK IN AND VOTE?

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. LAGOMARSINO. Mr. Speaker, this body has before it legislation to "reform" the voter registration laws now in force for all Federal elections. This proposal for "universal voter registration" has resulted in considerable controversy over the merits and feasibility of such reform. As you know, I strongly oppose this proposal and was most pleased to read a perceptive editorial on this matter in the San Luis Obispo Telegraph and Tribune. I would like to bring this editorial to the attention of my colleagues at this time:

JUST WALK IN AND VOTE?

The Democrats on Capitol Hill are attempting to increase the turnout of Americans for federal elections by pushing a bill which would allow "walk-in registration" on election day, in such elections, by anyone who's living in the precinct (even if he just moved in that day).

The Democrats in Sacramento, not to be outdone, are preparing their own version of "walk-in registration," which would allow this kind of thing for state, county, city and special district elections.

It's mostly Democrats who are pushing this instant-registration, because the voter who hasn't registered in the usual way, 29 days or more before election, is more often than not inclined to vote Democratic.

This walk-in registration could be dangerous.

It's bad enough when a person can walk into a polling place, identify himself with a driver's license, announce he's just moved in and vote in a contest for, say, Congress. It would require voter fraud on a massive scale, probably, to influence the outcome of an election in a congressional district.

But it's potentially very dangerous to apply the same rule to elections on the local scale, where the number of qualified voters (for a seat on a city council or board of supervisors, say) is small, and where irresponsible people, bent on mischief, could drastically affect the election results. Few of us, in any supervisorial district, could be comfortable with a system which allowed total strangers to walk in, be introduced by a friend who'd already voted, announce they'd just moved into the precinct, and cast a vote.

The Democratic proposals in Sacramento

are as vague as those in Washington, and just as costly.

They would require county clerks, for instance, to mail election materials and registration affidavits to all "residential households," including addresses where nobody is registered. How a county clerk is supposed to find a list of houses where nobody is registered is best left to the imagination.

Another section of the proposed laws would require county clerks to supply election material enough to provide ballots for everyone "reasonably" believed to live in a precinct—and other material for not only that precinct but the five precincts closest, on the chance that someone will wander into the wrong polling place.

The identification requirement, in the California version of the proposed easier-voting law, would include a driver's license. This, in the case of young people, might be sufficient proof of age, since driver's licenses aren't issued to young people without birth certificates or the like. But it gives no clue whatsoever to the license-holder's current address—when he can walk in and say he's just moved the day before to the precinct in which he seeks to cast a ballot.

Voter registration, for anyone who cares, is a very easy procedure the way it is. The person who doesn't care enough to get registered in the normal way doesn't deserve a chance to vote, however it might swell the total of ballots cast.

COMMUNIST DRIVE TO REHABILITATE VIETNAM'S IMAGE IS UNDERWAY

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. ASHBROOK. Mr. Speaker, readers of the New York Times were treated to some real Communist propaganda in Sunday's Review of the News section. It was a case of a pro-Communist writer, Wilfred Burchett, writing an article in a Communist-lining newspaper, the Guardian, which was picked up by an old line Communist-fronter, Corliss Lamont, who paid for the ad. To top it off, it was printed, as I have already stated, in a paper which, to be charitable, is soft on communism and has a readership gullible to leftist entreaties.

Here is the leadoff paragraph in the Lamont-Burchett-Guardian propaganda ad:

Vietnam's reeducation of former puppet officers and officials of the Saigon regime has succeeded to a degree almost incomprehensible.

On and on the propaganda goes. No mention of executions or terror. Few Americans except those in the State Department believe the Burchett drivel. Last week my amendment to prevent any American aid to Vietnam passed this House overwhelmingly. The State Department has launched a campaign to rescind it. Maybe they can recruit Wilfred Burchett, Corliss Lamont, and the Guardian in their propaganda drive. Few Americans, however, will agree that the Cambodian or Vietnamese Governments are deserving of any aid whatsoever. Even fewer will believe that the idyllic conditions these pro-Communists present really exist in that tyrannical country.

1,001 YEARS OF NATURAL GAS

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. TEAGUE. Mr. Speaker, on April 27, in the Wall Street Journal, there appeared an editorial concerning natural gas which evokes food for thought. The article follows:

1,001 YEARS OF NATURAL GAS

The conventional wisdom about President Carter's energy program seems to be that the gasoline tax won't fly in Congress, but that the other elements of the plan will sooner or later be enacted. Indeed, there is a deep suspicion among the political crowd that the gas tax was designed to lose, in the process drawing off the opposition's energies so the rest of the package could go through unmolested.

Our own estimate, though, is that the whole package will collapse a piece at a time. This estimate is not merely wishful thinking, although it certainly expresses our hopes. But it is more firmly based on the fact that the United States has been seriously thinking about energy for more than three years. Not only the general public, but also Congress and the press corps have developed a sophistication about energy issues, and we think we are now past the point of being vulnerable to blindly adopting scare scenarios and emergency solutions.

The notion that we may soon be freezing in the dark unless we sacrifice by paying higher taxes to Washington could not be sold to Congress by President Ford and Vice President Rockefeller when we were all relative greenhorns at the energy game. Yes, Mr. Carter certainly deserves his chance to scare Congress into action. But because he seems to learn quickly and is flexible rather than stubborn, there is a good chance Mr. Carter will discover the true shape of the energy problem in the process of failing to get any major portion of his package adopted.

Take natural gas, for example. Mr. Carter apparently thinks the United States is running out of the stuff. If that were true, we might be as scared as he seems to be. But in the course of the debates on his plan, the President will discover that while we are now consuming 20 trillion cubic feet of natural gas every year and that—if prices were only decontrolled—we have roughly 20,000 trillion cubic feet of natural gas at hand, with some estimates that there may be 50,000 trillion cubic feet of it. That is, enough to last between 1,000 and 2,500 years at current consumption.

The President's energy advisers know this. It was explained to them recently in a briefing by specialists of the American Gas Association. Experts in ERDA have been trying to tell the White House

What Mr. Carter has been told is that we have only 216 trillion cubic feet of proven reserves of natural gas, 10 years' supply. But that number was developed by the U.S. Geological Survey in 1974 relating resources available at 1974 technology and 1974 prices, of 52 cents per thousand cubic feet. USGS does not and never has projected what resources would be available at higher prices.

ERDA, though, has unofficially estimated that at an uncontrolled price of $2.25 the nation would be awash with natural gas. It would bring in 230 trillion cubic feet of what USGS calls "inferred reserves," make economic the 285 trillion cubic feet of Devonian shale in Appalachia, the 600 trillion cubic feet of Western "tight sands" and between 200 trillion and 300 trillion cubic feet of coal-seam methane.

At somewhere between $2.50 and $3.00 per thousand cubic feet, the industry could tap the big deposit—geopressured methane that exists at depths of 15,000 feet, both onshore and offshore, in the Gulf region. This natural gas dissolved in water runs to between 20,000 and 50,000 trillion cubic feet. If you consider that 1,000 cubic feet of natural gas is roughly equivalent to one million British Thermal Units, this exotic natural gas is not all that expensive at $3 per million BTUs. Americans now pay about $2.05 per million BTUs of natural gas delivered at their homes, $3 per million BTUs of fuel oil and $10 per million BTUs of electricity.

The only conceivable way Americans would freeze in the dark anytime in the near future is if the government continues to keep the price of natural gas from getting into the ranges that would finance tapping these reserves. Holding down the price is of course precisely what President Carter proposes, a ceiling of $1.75 per thousand cubic feet.

We can't believe that President Carter genuinely desires that we freeze in the dark because of his policies. Instead, we assume it will take him a little time to get fully informed on the true nature of the energy problem. Perhaps some friend will call him up and tell him about this editorial, and we can begin thinking of dancing in the dark instead of freezing in it.

PERSONAL FINANCIAL STATEMENT

HON. JERRY M. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. PATTERSON of California. Mr. Speaker, I believe the best interest of the American people requires that personal financial disclosure statements should be made to the public by the President and Vice President, Members of Congress, candidates for Federal office, and highly paid employees of the legislative, executive, and judicial branches of our Government. I have cosponsored the Financial Disclosure Act which would make that a requirement, and which I believe would do much to restore trust in our Government and give the public the ability to evaluate the financial integrity of its public officials.

Consistent with my cosponsorship of that measure, and with my philosophy of honesty and openness in government, I am at this time making public a statement of my own personal financial status including the amount and source of my income, assets, liabilities, and taxes paid.

The material follows:

PERSONAL FINANCIAL STATEMENT OF JERRY M. PATTERSON, U.S. CONGRESSMAN, MAY 15, 1977

I. 1976 Income:	
Jerry M. Patterson—salary	$44,600.00
Speaking fees and honoraria	2,500.00
Mary Jane Patterson—salary	14,585.60
Total income	61,685.60
II. Present assets (itemized if over $5,000):	
Real property, Annandale, Va.	90,000.00

PERSONAL FINANCIAL STATEMENT OF JERRY M. PATTERSON, U.S. CONGRESSMAN, MAY 15, 1977—Continued

Real property, Buena Park, Calif.	$60,000.00
Real property, Washington, D.C.	40,000.00
1974 automobile	9,000.00
1976 automobile	7,500.00
1976 automobile	4,500.00
1971 automobile	1,700.00
Savings	10,000.00
Furniture, furnishings, paintings, and jewelry	35,000.00
All other and miscellaneous items	5,000.00
Total estimated value of assets	262,700.00
III. Present liabilities (itemized if over $1,000):	
First trust deed on Annandale property	85,000.00
First trust deed on Buena Park property	40,400.00
First trust deed on Washington, D.C., property	31,150.00
Legal lien on 1974 automobile	4,414.00
Legal lien on 1976 automobile	2,900.00
Bank of Washington	2,000.00
All other nonitemized debts	500.00
Total liabilities	166,364.00
IV. Major taxes paid in 1976:	
Federal income taxes	13,891.30
State income taxes	2,742.00
Local property taxes	2,040.06

THE HOUSING PROBLEM

HON. MATTHEW F. McHUGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. McHUGH. Mr. Speaker, when Franklin Roosevelt assumed the Presidency in 1933, he said that he found a nation one-third of which was ill-housed, ill-clad, and ill-fed.

Fortunately, we have made a great deal of progress since President Roosevelt took office. We survived that depression, and large numbers of us have prospered. Yet, many of our citizens still suffer from lack of adequate food and shelter. The deprivation is surely not so dramatic as in the 1930's, but it is still there.

As a member of the House Agriculture Committee, I have seen the desperation of people who have trouble feeding themselves and their families. I have seen how inadequate diets have contributed to ill health, and ultimately to a national health care bill which continues to escalate.

I do not serve on any of the congressional committees which relate most directly to our Nation's housing programs. However, in recent months I have become much more conscious of how real our housing problems are. While we recovered our economic health following the Great Depression of Roosevelt's day, it is clear that an increasing number of Americans today are facing a crisis in finding a decent home. The problem is reflected in the housing supply itself, in the condition of the existing housing stock, and in the high cost of buying or renting a home.

HOUSING POLICY: PROMISE VERSUS PERFORMANCE

At the very beginning I should stress that our present housing problems do not result from lack of a national housing policy. We do have a housing policy, a policy contained in the National Housing Act of 1949. In that legislation, Congress firmly committed this Nation to a housing goal, "the goal of a decent home and a suitable living environment for every American family," as the legislation itself put it.

Almost 20 years later, in the Housing and Urban Development Act of 1968, Congress reaffirmed this goal, and it set forth specific housing production targets to be achieved between 1969 and 1978.

Those targets called for the production of 26 million housing units over that 10 year period, of which 6 million were to be designed for low- and moderate-income families. The goal was ambitious: 2½ million new housing units per year, 600,000 to be built for those with the greatest need.

Sadly, even as that goal was forward looking and promising, our failure to achieve it has been as dramatic and distressing.

Until 1972, it appeared possible that the Nation would meet its 10 year goal. Housing was being produced at record levels and we were on target. Then in 1973, without consulting Congress, the Nixon administration placed a moratorium on most housing programs administered by the Department of Housing and Urban Development. Congress continued to appropriate funds for those programs, and it sought to pressure the administration into acting. However, through the use of impoundments and other administrative techniques, and partly as a result of its inability to resolve deepening economic problems, the Nixon administration effectively brought to an end this effort to upgrade our housing stock and meet our housing needs.

Numbers tell the story most clearly. In the last 3 years, new housing starts have averaged a little over 1.3 million units per year, or about one-half the goal we set for ourselves in 1968.

Even counting large shipments of mobile homes, we now have a backlog of needed housing of at least 2.3 million units. Let me put it another way. Assuming the typical home houses four persons, we are talking about a backlog, for the last 3 years alone, which could house the entire population of the State of Michigan.

This year assuming interest rates and the weather remain stable, we may produce as many as 1.8 million housing units. But that will still add another 450,000 units to our backlog.

As with most things, the burden of our failure falls most heavily upon those least able to carry it. Our stated policy calls for 600,000 new units per year of Government assisted housing for people with low and moderate incomes. Yet, over the last 3 years, we have produced only 154,000 units, less than 10 percent of the goal we committed ourselves to in 1968.

HUD estimates that in 1977 we will see 100,000 new units started for low- and moderate-income families, and another 200,000 units in 1978. If these estimates are fulfilled, our net assisted housing backlog would be 900,000 units 900,000 units to be added to the existing backlog of 1.65 million units from the last 3 years alone.

How tragic this is. It means a backlog of needed housing for people with low and moderate incomes equivalent to the populations of Marvland and Massachusetts combined. In the largest city in my own district, Binghamton, N.Y., it translates into a backlog of 4,500 units of decent and affordable housing.

THE CONSEQUENCES OF OUR FAILURE ON PEOPLE

Statistics are always cold and impersonal. We must remember that they impact upon people, people to whom promises have been made. In the Older Americans Act of 1965, for example, we stated as a matter of policy that our elderly have a right to suitable housing at prices they can afford. In 1971, to give meaning to that policy, the White House Conference on Aging called for a minimum of 120,000 new federally assisted housing units annually for our elderly. That target has never been reached.

Just what impact does our failure have on people? It means that almost 3 million families must live in housing infested by rats and mice. It means that over 1 million households lack some or all plumbing. It means that bedrooms are occupied by 3 or more people in over 2 million households. According to a recent study, one-quarter of all Americans, one-quarter of our fellow citizens, live in conditions of housing deprivation.

And just how does our failure in housing impact upon the unemployed? The slowdown in housing construction has taken an enormous toll in the construction industry, where unemployment has been at an intolerable level for some years now. It reached its peak late in 1975, when the unemployment rate was recorded at 18.1 percent. Even as late as February of this year, however, unemployment was over 15 percent, which means that more than 700,000 construction workers were unable to find jobs.

Here we have hundreds of thousands of American workmen, with skills in their hands and frustration in their hearts, men who are capable of producing housing, but who sit idle even as we talk, not working, not meeting one of our most serious national problems. We know that every new housing start can put two of these men on the job for at least a year, but yet they remain idle.

The point is that, in setting our priorities for the late 1970's, we must face up to the fact that we have failed miserably in meeting our housing goals, and this failure has had, and continues to have, a substantial impact upon people. Parenthetically, this impact has been especially heavy in the Northeast, an area which can least afford to carry it.

THE CONSEQUENCES OF OUR FAILURE ON PRICE

The consequences of our failure on the cost of housing have also been dramatic.

In 1970, 50 percent of American families could afford to purchase a median priced new home. Today, only 27 percent can do so. In the last 6 years, the median sale price for new homes jumped about 90 percent, and a recent study predicts that by 1980 the average price of a new home will be $78,000. Prof. Kenneth Rosen of Princeton says it will be $90,000 by 1986.

The market for existing homes is not much better. Their median sale price increased by 65 percent between 1970 and 1976, so that now only 36 percent of our families can afford to purchase one.

Finally, a recent study by the Congressional Budget Office found that the downpayment required on a new home rose one and two-thirds times as fast as income and the downpayment required on an existing home rose one and one-quarter times as fast between 1971 and 1975.

Who can afford to buy a home under these circumstances? Clearly, only the most affluent among us. Homeownership, one of the cherished goals of most American families, is fast becoming a luxury beyond their reach. According to the National Association of Home Builders, 8 out of every 10 potential home buyers are now priced out of the market.

Moreover, if a family is fortunate enough to already own their home, they may be having some trouble maintaining it. Since 1970, the cost of maintaining a new home has increased by more than 100 percent, while that cost has gone up by 73 percent for an existing home. These figures make clear what it means to be "house poor."

And, of course, those who cannot buy must rent. As you may have already guessed, the cost of rental property is on the same upward curve. More than 40 percent of those who rent must now devote more than one-quarter of their income to housing. Once again, the poor are worse off. In 1975, of the 8 million households with incomes less than $5,000 per year, the median percentage of income devoted to rent was 35 percent.

From our close examination of the food stamp program in the Agriculture Committee, we know that shelter costs, particularly in the North, are the most substantial expense for poor families, and many have to shortchange themselves on food in order to meet these shelter costs.

WHAT CAN BE DONE?

What can be done about it?

Frankly, it is much easier to describe the problem than to fashion the solutions. As I said earlier, we do not lack a national housing policy, or a clearly defined set of goals. These have been stated in prior legislation.

What we have lacked in recent times is a healthy economic climate, and a genuine commitment to housing.

Our inflationary economy has had the usual impact on land values, interest rates, building materials, and labor. Until we can bring this inflation under reasonable control, we cannot expect substantial progress in the housing industry. To the extent that Federal deficits have contributed to this inflation, and they have, we must strive to reduce those deficits. President Carter's pledge to work toward a balanced budget is encouraging, and I am hopeful that Congress will match the President's determination, not be emasculating needed programs, but by making some hard choices on priorities.

The Federal Government has become too inefficient and wasteful. This is costly, and meaningful reorganization can help. Again, I sense a real commitment in this area, but it will take time. Our Government did not grow to its present size in a hundred days, and it will take longer than that to rationalize it.

Finally, of course, no discussion of inflation is complete without a bow toward spiraling energy costs. They have clearly had the most dramatic impact on our economy, and here again we will not see an immediate solution. I do have every hope, however, that we will finally be able to summon the wisdom and courage needed to fashion a comprehensive energy policy.

Putting people back to work is also part of the solution. For every 1 percent of unemployment, the Federal Government now loses about $20 billion. Why? Because people who do not work, do not pay taxes, and we lose that revenue. In addition, people who do not work are generally receiving unemployment benefits or some form of public assistance, and that costs us money. The same phenomenon takes place at the State and local level. This means that in many cases local governments have to raise taxes to maintain current services, and those increased taxes affect the cost of housing.

Beyond these larger economic concerns, concerns which relate to our economy in general, there is something else we can do. We can insist that our Federal agencies have a more genuine commitment to housing. I am speaking here more about attitude than programs. We have some decent programs. What has often been lacking is a firm commitment to implementing them, to getting housing built or rehabilitated.

To be sure, some of our programs can be improved. However, in my 2 years in Congress I have seen more problems with administration than with programs. It has often appeared that agency people were there to place roadblocks in the way of groundbreaking.

I hope I am not being unfair in saying that the Nixon-Ford administrations were not really committed to our Federal housing programs, and this hostility was at times reflected in HUD. It is still too early to say with certainty whether the Carter administration will bring a fresh enthusiasm to these programs. The new Secretary of HUD, Patricia Roberts Harris, has given us some reason for hope. For example, in a statement to the National Housing Conference, she said:

> We must affirm as a Nation that a decent house is a right, and that adequate shelter is a basic commodity equivalent to food and clothing in the spectrum of human needs.

Of course, those are just words, but encouraging ones indeed.

Finally, beyond bringing inflation under control and lighting a new fire under existing housing programs, we must be open to new ideas. New ideas often abound in Washington. For example, Senator BROOKE has proposed allowing graduated mortgage payments so that young families could make smaller monthly payments when they first take out a loan and larger payments later on, when family income would presumably rise.

Last year, I joined with some other Members of Congress in cosponsoring a bill which would have subsidized a portion of the interest on mortgages for low- and middle-income homeowners. It would have reduced the monthly payments for those who qualified, and thus would have made it easier for them to enter the housing market. The Government subsidy would be repaid when the house was sold or the mortgage retired. By that time, of course, it can be assumed that the home would have appreciated in value, making it possible for the subsidy to be re-repaid.

CONCLUSION

These proposals and others may or may not be workable. The point is that there are new ideas and innovations, and we should be prepared to consider them. This willingness to be open to experiment has been lacking in recent years. I can only hope that with a new administration, an administration which prides itself on innovation and openness, we can celebrate a new day in housing. How Mr. Carter and his administration respond in the coming months will tell much about them.

STATE PENSION SYSTEMS

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. SIMON. Mr. Speaker, one of my long-time friends, Charles C. Clayton, president-elect of the State Universities Annuitants' Association of Illinois and former journalism professor and newspaper publisher, has sent me a statement by Dr. Henry Rehn, head of the Annuitants' Chapter of Southern Illinois University and former dean of the school of business there.

It points out the difficulty in one State pension system in the State of Illinois.

We have at least two State pension systems that are not in good shape in Illinois and I know from contacts I have had that some pension systems in other States are in significantly worse shape.

The article is a good illustration of why it is imperative that the Federal Government gets inflation under control.

It is also a good illustration of why we have the responsibility at the Federal level to take a good, hard look at State and local pension systems. I have never favored excessive Federal control over any area, but if State and local pension systems are permitted to follow practices that result in long-range damage to

those who are supposed to be the recipients, ultimately the Federal Government will have to be assuming an increase in responsibility. The State and local pension area is a good illustration of the truth of the old adage, "An ounce of prevention is worth a pound of cure."

I hope that some of my colleagues will take a look at this statement:

THE STATE UNIVERSITIES RETIREMENT SYSTEM, ILLINOIS

This system established in 1941 when the dollar was worth as much as $2.65 is today, was a good system but over a hundred changes have been made and more are needed to meet present day needs.

We who are covered by the system have faithfully made our full contributions through payroll deductions. The State however has consistently failed to make its full contribution as required by law. By 1967 this consistent failure to live up to the law resulted in underfunding of the system aggregating 144 million. The very size of the figure was impressive enough to bring about legislation to keep this underfunding from going further. This law too was ignored by the State administration and now the underfunding amounts to about 660 million. Three years ago the State Universities Annuitants' Association put adequate funding as its top priority request. That request was not granted.

The funding issue is one in which the presently employed should take the lead and there is evidence that they are going to do so. In this effort, we of course, join wholeheartedly. In December, Charles Clayton, ex-president of our Carbondale Chapter and President-elect of the State Universities Annuitants' Association, presented our views to the Faculty Senate of SIU–C. I have met with Hobart Hester, head of our Civil Service Employees Council, John Jackson, III, President of the Faculty Senate, Barbara Spears, head of the Professional and Clerical Staff Personnel, and Arthur Aikman, the University's advisor to the Board of the State Universities Retirement System to present our views. Unfortunately, I have not yet gotten in touch with Paul Davis, the other advisor from SIU–C.

Important though the funding is, there are two other concerns that stand out because they touch almost everyone under our system, employee or annuitant and because that impact is frightening and for many it is here and now. It is not only here now, it has been here working to our disadvantage and promises to continue to do so unless positive action is taken to stop it. These two concerns merit top priority consideration not only from our standpoint but from the standpoint of everyone under our system. They are the present treatment of survivors and the continuing inflation.

There are now four different groups of survivors receiving different treatment under our system. One group, the survivors of annuitants who retired before 1959, receive no annuity whatsoever. A second group, those survivors of annuitants who retired between 1959 and 1969 receive annuities up to $200 a month. The third group, those survivors of annuitants that retired between 1969 and 1971, receive annuities up to $250 a month. The fourth group, those survivors of annuitants that retired after 1971 receive half of the annuitants' annuity based on the amount established at retirement not on the amount at time of death. None of these survivors receive even the modest cost-of-living increase given to annuitants. Why should these four groups be treated so differently? Today's prices are the same for all of them. Our Annuitants Association is making this our first priority. Surely the presently employed are just as eager as we are to provide for their survivors. Our Federal government is concerned with this matter. Our own Congressman Paul Simon is co-sponsor of a bill before the House which is to bring more uniformity to the treatment of survivors of Federal employees.

We know, in a general way, that inflation is a serious matter, but not many of us realize the full impact of this hurt that falls so heavily on us, the retired. Since the end of 1966, the cost of living has gone up almost 74 percent for urban and clerical workers according to the U.S. Bureau of Labor statistics. For those employed salaries and wages do adjust to inflation. Annuities do not normally have that characteristic. To provide it the State of Illinois, to its credit, took action demonstrating that in this as in a number of other cases including legislators themselves, it can do what is considered RIGHT even if it is not legally required to do so.

In 1969, with inflation exceeding 5 percent on a yearly basis an annual 1½ percent increase on the annuity as established at retirement was authorized. Instead of dropping off, inflation continued right on upward to 5.9 percent for 1970, then eased off to 4.3 percent in 1971, and 3.3 percent in 1972. However, it became obvious that it was not going down to 1½ percent so the figure was increased to 2 percent, but inflation went up to 6.2 percent in 1973, 11 percent in 1974, 9.1 percent in 1975, and 4.8 percent in 1976. Now it has turned sharply upward and it seems most estimates are that it will be an achievement to hold it to 6 percent. Even the contemplated increase from 2 percent to 3 percent will thus fall far short. No fixed percentage figure will be satisfactory in the face of an unpredictable and fluctuating inflation. Our Federal Government has recognized that and bases its cost-of-living increase given to its Civil Service, Military and Social Security retirees on the actual inflation figures. Why should not the State of Illinois do the same?

Let us assume the case of a person retiring at the end of 1966, with an average best salary of $10,000, not an unusual figure at that time. With 40 years of service that would provide a base annuity of $8,000. However, for the 335 retirees listed in a late 1974 tabulation, the average years of service was substantially below 27 years. For our illustration, therefore let us assume 27 years of service with a base retirement of 50 percent, i.e., $5,000, quite an adjustment but there is more to come. Continuing inflation has and is cutting that person's purchasing power, as indicated in the following tabulation:

	Annuity amount	Net amount	Purchasing power lost		
			Total	System	You
1967, 1st yr of retirement	$5,000	$4,860	$140	----------	$140
1971, 5th yr of retirement	5,225	4,185	1,040	$225	815
1976, 10th yr of retirement	5,775	3,295	2,430	775	1,705
1967–71, 1st 5 yr	25,450	22,505	2,945	450	2,495
1971–76, 2d 5 yr	27,625	18,420	9,205	2,645	6,580
1967–76, the decade	53,075	40,925	12,150	3,075	9,075
Suppose you retire in 1972:					
1972 with base retirement	$10,000	$9,680	$320	----------	$320
1976	10,800	7,760	3,040	$800	2,240
The 5 years	52,000	43,255	8,745	2,000	6,745
Suppose you retired in 1972 and the 2-percent increase had been 3 percent:					
1972 with base retirement	10,000	9,680	320	----------	320
1976	11,200	8,045	----------	1,200	1,955
The 5 years	53,000	44,020	8,980	3,000	5,980

These figures escalate at an alarming rate. No one is going to make up to us the losses this retiree has sustained. It is high time, however, that our State said, "this has gone far enough."

TEAGUE SPEAKS OUT ON NUCLEAR ENERGY

HON. MIKE McCORMACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. McCORMACK. Mr. Speaker, I wish to submit, for the RECORD, a most thoughtful and well researched letter by Congressman TEAGUE to the American people on nuclear power. Mr. TEAGUE is, as you know, chairman of the Committee on Science and Technology. This letter provides a concise description of the nuclear process as well as a thorough discussion of the issues involved in nuclear power generation. I highly recommend this letter as important reading for all Members of Congress:

NUCLEAR POWER: CONGRESSMAN TEAGUE SPEAKS THE PEOPLE'S LANGUAGE

Congressman Olin E. Teague, Chairman of the Committee on Science and Technology in the House of Representatives, recently expressed concern that the general reading public has not been given clear and easily understandable information about nuclear energy.

He stated, "Although the debate over nuclear energy will affect each and every one of us, the facts are presented in complex scientific terms, too difficult for most of us to understand. And yet the voting public is repeatedly asked through referendums and the like to make crucial decisions concerning the future of nuclear power in America. If the people of this democracy are to make responsible decisions they must have facts and information they can comprehend on which to base those decisions."

In the open letter to the American public which follows, Mr. Teague has sought to clarify the nuclear issue.

This nation has survived and prospered for 200 years on decisions made by an informed and concerned voting public. Today, we are faced with major decisions that will affect not only living Americans but the many generations of Americans that will come after us. One of these decisions concerns nuclear power in America.

Experts tell us that familiar energy sources such as oil and natural gas, which have served this nation in such abundance and at such economical costs, are dwindling and will meet less than half of our demand by the end of the century, at the rate we are consuming them today.

What will remain for us will be coal and

nuclear power, for the near future, with the hope that continued research in solar and other energy sources will develop these technologies as quickly as possible to assume increasing portions of our energy burden. However, the present research and development of these new energy areas is not enough to project their ultimate potential. Although we have perfected solar energy to heat water and heat and cool homes—techniques that can now be marketed commercially—we still do not know whether solar energy may someday produce enough power to operate a steel mill.

We are all very familiar with coal and the fact that America has some of the most abundant coal reserves in the world. We are also painfully aware that our present methods of burning coal pollute the atmosphere and pose serious health hazards. In addition, many of the current methods of mining coal devastate our land.

Making our present methods of burning coal cleaner has presented new problems. The new federal clean air standards have required the installation of a system of scrubbers in coal burning power plants. These scrubbers are located at the bottom of the plant's smoke stacks to help purify the exhausts before they are released into the air. Even with the use of scrubbers, though, we do not achieve clean air but merely air that is less dirty. In addition, this cleaning-up process will generate about half a billion tons of waste material by 1980. In an attempt to solve the problem of getting rid of this waste, a power station in Pennsylvania is just completing a $90 million disposal system which has entailed a major construction project. Coal is useful and abundant and we cannot abandon it as an energy resource—in fact, we must greatly increase this production to conserve our remaining oil and natural gas for priority use. We must also be prepared to bear the burden of cleaning up the coal process and to weigh the cost and problems associated with this new burden against those of other energy sources.

Scientists are working on new methods to use coal in more environmentally acceptable yet economical ways. The new methods that have been developed, reducing coal to a gas or a liquid, require massive amounts of money and we cannot expect them to be commercially competitive for a number of years. We need to drastically increase our coal production now, while continuing to search for better methods to mine, burn and transport coal and new methods to reclaim the stripped land to its original or an improved condition. Nevertheless, coal is a depletable resource like oil and natural gas and it is important that we not rely on it or any other energy source exclusively.

Nuclear power is one of our newest energy sources. It was not until 1957 that nuclear energy was used for the first time to produce electric power for civilian use.

Today, America has 65 nuclear plants in operation that provide electricity to heat our homes and run our factories and farms. These 65 nuclear plants generate nine percent of the total U.S. electric capacity.

However, during the bitter cold January–February period this winter, when oil tankers were marooned in icy rivers and coal was frozen in hoppers and on barges, nuclear power accounted for 12 percent of all the electricity generated in the United States. In some regions this percentage rose much higher. In January, Chicago and northern Illinois received 47.1 percent of their electricity from nuclear power and Connecticut and parts of western Massachusetts 50.5 percent. Even if we tripled our coal production by the year 2000, we would still need a substantive reserve of nuclear energy or we would be in critical danger.

The word nuclear immediately calls to mind complex scientific formulas and technical language but much of this information can be simply explained.

Since 1939, we have known how to release energy that is locked inside the atoms of the metal uranium. This form of energy is known as nuclear energy and is released from a microscopic particle (atom) of uranium by splitting that atom. Every element that exists in nature, be it oxygen, carbon, uranium or any other, consists of these small units called atoms. Each atom has a central core—known as its nucleus—which contains two kinds of even smaller particles, protons and neutrons. Orbiting around the nucleus or central core are tiny particles called electrons. The process of splitting the atom jars a neutron loose, which then hits another uranium atom and starts a chain reaction. This process is known as fission. When an atom of uranium is split, part of its mass is converted into energy or heat. By the continuous splitting of the many atoms in a tiny pellet of uranium (one-half inch long and as thick as a lead pencil) we can produce as much energy as burning 2.2 tons of coal or 56,000 cubic feet of natural gas. This process of splitting the uranium atoms is carried out in an intense furnace known as a reactor.

The uranium found in nature is a mixture of uranium atoms, some with 235 protons and neutrons in their central core (uranium 235), some with 238 protons and neutrons (uranium 238), and some with 234 (uranium 234). They are all uranium atoms and are chemically indistinguishable.

In nature, the central core of most atoms remains the same unless disturbed from the outside. The central cores or nuclei of certain atoms in nature are not stable and can explode all by themselves, firing out some particles. Streams of these fired out particles are called rays or radiation. Atoms with central cores that explode spontaneously are called radioactive. All uranium atoms are radioactive but, of those found in nature, only the uranium 235 atoms are fissionable. In other words, uranium 235 atoms are so naturally excitable that they can keep splitting to produce a chain reaction. Unfortunately, uranium 235 is only a very small part of the natural uranium that we extract from the earth. Uranium ore contains about seven parts of uranium 235 out of every 1,000 parts of uranium. Nearly all the rest is uranium 238, which is not fissionable and whose atoms cannot split spontaneously in a continuing process (releasing large amounts of heat or energy).

The unstable condition in a uranium 235 atom creates such motion that neutrons will leave a U_{235} atom, thus destroying that atom, and bombard the nucleus of a neighboring atom. A neutron will, by its impact, cause the U_{235} nucleus or central core to split and release, among other things, two or three neutrons held in that nucleus or core. If conditions are right, at least one of these neutrons released from the core will hit and split another uranium 235 nucleus. This will release more neutrons to split more nuclei and a chain reaction will result.

Since natural uranium contains very little of the fissionable uranium 235, a chain reaction is only possible under very special conditions. In order to change natural uranium into a fuel that will cause the necessary chain reaction more easily, we must "enrich" the natural uranium by adding or raising the amount of uranium 235 in it from seven parts in 1,000 to 30 parts in 1,000.

This is a process of increasing the amount of U_{235} in the uranium or making it richer in U_{235}. This "enrichment" now makes the uranium about three percent uranium 235, the level necessary for use in a nuclear reactor. The process of "enriching" uranium with more uranium 235, so it can be used as fuel in a nuclear reactor, is carried out in three government plants in the United States.

This "enriched" uranium, after chemical treatment, is then formed into slugs several inches in length and packed in tightly sealed containers. These containers are known as fuel rods and in this state are shipped to nuclear plants to be used as fuel in the reactors. The closely controlled chain reactions occurring in these fuel rods create the heat that is needed to produce electricity.

After a fuel rod has been in the reactor for three or four years it is no longer useful and must be replaced by a new fuel rod. This means that we are constantly using up our supply of natural uranium to make new fuel rods.

This poses the same dilemma that we have faced with oil and natural gas and that we will eventually face with coal. Once these resources are depleted there is no way to create them again, for it has taken billions of years for them to evolve in the earth's crust.

Estimates of our uranium supply vary considerably, but if we consider our known reserves plus our probable reserves we come up with a figure of 1.8 million tons. The cost of uranium ore has risen from $8.00 a pound in 1973 to $41.00 a pound in 1976. Although our uranium supply and the future price of a pound of uranium can only be estimated, we do have some absolute facts about uranium. We know that uranium being used in a nuclear reactor can create heat and energy from the fissionable uranium 235, and that the reactor process can also cause a chemical change in the abundant uranium 238. If a neutron hits an atom of uranium 238 it will be absorbed by the nucleus, creating an unstable condition in the nucleus. This unstable condition will eventually transform the uranium 238 atoms to a man-made fissionable material known as plutonium 239.

Thus, a nuclear reactor which uses the scarce uranium 235 as its fuel also produces a by-product, plutonium 239, which is a man-made fissionable material.

The "spent" or used fuel rods removed from a reactor contain, in their waste, some unused uranium 235 plus the by-product, plutonium 239. This "spent" fuel can be "reprocessed," a method of separating the unused uranium 235 and the plutonium 239 from other waste material of no value. Once "reprocessed" or separated, the uranium 235 and plutonium 239 can be "recycled" into new fuel and used in other reactors.

If we reprocess the spent fuel from our working reactors, we can stretch our natural supply of uranium over more time. If we do not reprocess spent fuel we automatically discard usable energy producing material since the spent fuel rods contain 25–30 percent of uranium 235 which is still usable, plus the plutonium 239.

In principle, reprocessing spent fuel is not unlike recycling of old newspapers, tin cans, glass and other materials we have previously considered garbage or waste. The waste from the nuclear process has similar value and cannot be overlooked in an era of scarce resources.

There are no civilian reprocessing plants currently in operation in the United States. One plant, in West Valley, New York, operated until 1972, when it was closed for efficiency improvement and expansion. At the time the West Valley plant operated it reprocessed primarily fuel elements from military reactors. It has not been reopened because the cost of making the alterations in accordance with new regulatory requirements has been estimated to be too great and such alterations would take up to 12 years. A new plant in Barnwell, South Carolina, has been completed, except for newly required waste processing equipment. It is not yet licensed to open. Reprocessing will not only give us the use of the 25–30 percent of uranium 235 not used the first time around plus the by-product plutonium

239, but reprocessing or separation also simplifies the management of nuclear waste products.

NUCLEAR REACTORS

The only type of nuclear reactor in commercial use in the United States today is known as a light water reactor.

In these light water reactors ordinary water surrounds the fuel rods and acts as a coolant. All light water reactors either need continuous new supplies of enriched uranium or a combination of enriched uranium and their reprocessed and recycled spent fuel (containing the unused uranium 235 plus the plutonium 239 by-product). In order to keep light water reactors running, we will always have to extract some natural uranium from the earth. If we reprocess the spent fuel we will merely have to use less of our natural uranium.

Another type of reactor, which is not yet in commercial use in the United States but has been through several successful experimental plant phases, is known by the breeder reactor. It is called breeder because it has the unique quality of producing more fuel than it uses, thus actually breeding fuel.

The breeder uses the by-product plutonium 239 as a fuel. The plutonium fuel rods needed to fuel the reactor are wrapped in a blanket of uranium 238. At the time the plutonium 239 atoms split to cause the desired chain reaction that produces heat for electricity, they also bombard the blanket of uranium 238 with neutrons which are absorbed by the uranium 238. The same unstable condition as described previously occurs in the uranium 238, eventually changing it to plutonium 239. This means that a breeder uses plutonium 239 not only to produce energy but also to produce more plutonium 239. Thus a breeder produces more fuel than it can use.

If breeders are commercialized then this nation would not have to continue mining uranium ore.

Since uranium 238 comprises 99 percent of natural uranium ore, we now have a huge stockpile of the mined and purified uranium 238 that was not usable in light water reactors. The breeder can turn this uranium 238 into a nuclear fuel of extraordinary value by converting it to plutonium 239. It is estimated that our current stockpile of uranium 238 would last centuries in a breeder program. This otherwise useless material fed into breeder reactors could produce electricity equal to that produced by five times all the oil in existence in all the OPEC countries combined. The breeder technology offers us an almost unlimited supply of energy.

The U.S. has a background in breeder technology that goes back to 1951 when we began operation of our first experimental breeder.

We have had a small breeder in operation in Idaho since 1963. There is a somewhat larger one, about 80 percent complete, in the state of Washington. These predecessors will give us the experience and know-how to proceed with a larger breeder, demonstration size, now being designed for construction on the Clinch River at Oak Ridge, Tennessee. We need the operating experience of the Clinch River Breeder Reactor before we are able to make a decision on a commercial size breeder.

In President Carter's recent energy message, he outlined plans to defer construction of the Clinch River Breeder and the reprocessing of spent fuel. These proposals will be debated in the Congress within the next few months and the voting public will have the opportunity to influence these decisions through their Representatives. Two critical facts to keep in mind at this point are that without reprocessing of spent fuel we lose the use of both the leftover uranium 235 and the by-product plutonium 239, and, in addition, we cannot go forward with a breeder program because the reprocessed or separated plutonium 239 is necessary for the breeder.

RADIOACTIVE WASTE

Nuclear power is cheaper, cleaner and safer than burning coal. Nuclear power plants emit almost no polluting elements into the air. However, the waste products from the operation of a nuclear plant are radioactive and must be handled with great care. These wastes can be divided into two categories—low level radioactive wastes and high level radioactive wastes. The low level radioactive waste products are buried in commercial burial grounds that must be licensed by the Nuclear Regulatory Commission. Plans for the disposition of various forms of high level wastes are now being formulated. The federal government will most porbably dispose of them in salt bed formations deep in the earth after they have been turned into a solid glass form and sealed in steel containers. Converting the liquid high level wastes to solid glass much like pyrex reduces its volume, makes it easier to transport and store and reduces the chance of the waste ever getting back into man's environment. This is necessary because these materials, just like the natural ore they come from, will continue to be radioactive for many thousands of years.

The intense radioactivity contained in the waste is continually diminishing so that after several hundred years the waste is actually less radioactive than the uranium ore found in the earth.

NUCLEAR SAFETY

Like many of our daily activities—driving an automobile, working in a coal mine, and so on—operating nuclear reactors is not risk free. The risks involved in these vocations and pastimes, however, have not been sufficient to cause us to abandon our automobiles and airplanes or close our coal mines and oil refineries; rather, we have made concerted efforts to minimize the risks involved in all of these and many other activities.

Perhaps because we have always been acutely aware of the risks involved in nuclear reactors we have been even more conscientious about their safety features.

Whereas it took us many years and many thousands of highway deaths to make seat belts standard equipment in automobiles, we have constructed and operated our nuclear reactors with such care from the very beginning that our nuclear safety record to date is perfect. In nearly two decades of commercial nuclear power generation there has been no injury to any member of the public and no radiation injury to any plant worker.

In 1975, a study conducted on nuclear reactor safety compared the risk of possible nuclear accidents with natural and man-made occurrences to which society is exposed. Even with 100 nuclear plants in operation by 1980, the study concluded that non-nuclear events such as air crashes, dam failures, tornadoes, hurricanes, earthquakes and falling meteors are about 10,000 times more likely to produce large numbers of fatalities than nuclear plant accidents.

These comparisons are important for all of us to understand, because they present a perspective of nuclear risk based on factual information. The American public will be the final judge as to whether the benefits from nuclear power outweigh the risks presented by it, and they must have the most accurate information available for their decision.

SPREAD OF NUCLEAR WEAPONS

The most complex nuclear issue that faces the United States and the world today is the concern over increased availability or proliferation of weapons made from nuclear material. Once the spent fuel from today's operating light water reactors has been reprocessed or separated the plutonium 239 by-product can be used in an explosive device. However, it is the reprocessing that gives us the use of the remaining energy in the spent fuel. In addition, the plutonium 239 is needed to start up the breeder reactors. If the United States chooses not to reprocess spent fuel we would not preclude groups or other nations from making explosives from reprocessed plutonium 239. Several other nations have reprocessing capability and have already used this to make weapons.

It is not realistic to believe that today, with 45 nations in the world generating varying amounts of nuclear power and several nations possessing both enrichment and reprocessing plants, any United States policy could give us absolute control over the availability or spread of nuclear weapons.

On the other hand, we as a nation can have considerable influence in the world community over limiting the spread of these weapons through both cooperation and reliable export policies.

The issues of safety and weapons have come up most often in discussing plutonium and breeders. There are many who believe that only a breeder reactor produces plutonium 239. However, the fact is that before the breeder can make plutonium 239, it must be fed this plutonium 239 as a fuel. This fuel will come from the reprocessed spent fuel from our operating light water reactors.

Plutonium is a product of the nuclear process—with or without breeders. In fact, the Clinch River Breeder Reactor, since it will be a small demonstration size plant, will produce only about one-third as much plutonium as is produced in any of the conventional reactors now being built in the United States.

The valid concern voiced about plutonium is that, once it has been reprocessed, or separated from the spent fuel, it will be easier to divert for weapons. This is a major issue to address. However, rather than deny ourselves the value of reprocessing by prohibiting it, we should concentrate on perfecting the strictest controls over plant operation. The Nuclear Regulatory Commission has the power to grant licenses for nuclear plants to operate and to grant permission to use new processes such as the separation and recycling of plutonium. The Nuclear Regulatory Commission is currently conducting hearings to decide if plutonium recycling will be permitted in the United States.

If a nation or group is determined to make a nuclear explosive it can do so wtihout stealing reprocessed fuel. When India stunned the world by detonating a nuclear explosive, the material it used came from a small research reactor sold to India by Canada. There are hundreds of research reactors in existence throughout the world today.

While the United States reviews the issue of reprocessing, other nations have already gone ahead both with reprocessing spent fuel and with breeder programs.

Britain, France and the U.S.S.R. all have operated successful experimental breeder plants. The U.S.S.R. has had a demonstration plant (larger than experimental, smaller than commercial) in operation since 1972. The French have had one in operation for two years. This means that both Russia and France are far ahead of the United States in their breeder programs, and other nations such as Japan, England and Germany may also be soon. France is even beginning to make plans for selling breeders on the international market. In addition, England, France, the U.S.S.R., India and China all have facilities for reprocessing or separating spent fuel. Other nations such as Japan and Germany are actively planning facilities. All of this clearly indicates that, with or without the United States, the rest of the world is steadily moving toward increased dependence on nuclear power.

The United States has, in the past, been the world leader in nuclear technology and has made its expertise in the field available to other nations on a selective basis. The enrichment and reprocessing steps involve technology that could easily be used to make nuclear weapons. Our goal has always been to prevent increasing numbers of nations from obtaining the technical know-how to enrich uranium and reprocess spent fuel. To this end, we have established a policy of prohibiting the export or transfer of enrichment and reprocessing technology to other nations and have chosen instead to provide enrichment services to these nations.

ENRICHMENT SERVICES

In the past, 90 percent of the western world's reactor fuel has been enriched in one of the three United States government plants. Since June of 1974, enriched uranium from these plants has been fully committed and we have not been able to take new orders. Where does this leave our customers, throughout Europe, Asia and the rest of the free world, who have depended on us to furnish them nuclear fuel? It leaves them with three choices: shut down their nuclear power plants for lack of fuel; build their own enrichment plants; or take their business elsewhere, perhaps to the U.S.S.R. or China, who have enrichment facilities in operation now. Some European nations have the technical know-how for enrichment and will have operating facilities soon.

THE UNITED STATES AS A SUPPLIER

United States law allows this nation to export reactors and the enriched uranium to fuel them, but only to nations who have agreed to certain safeguards against diversion of the materials for weapons' use. However, we do not have a monopoly in commercial nuclear technology.

There are, in fact, six nations in the world today where a larger percentage of electrical power is generated from nuclear energy than in this country.

Until 1972, the United States filled 85 percent of the world export orders for nuclear plant equipment. Since then, the United States share of export trade has decreased to 42 percent. This decline is due both to the expansion of other countries into the export trade and to increasing doubts about this nation as a reliable supplier of equipment and, most importantly, of enriched uranium.

INTERNATIONAL AGREEMENTS

America's overriding concern over the spread of nuclear weapons has spurred our strong support of international agreements and organizations to monitor and insure the safe use of nuclear material. We have tried to use our influence in controlling the spread of nuclear weapons through the Nonproliferation Treaty. To date, 98 nations who do not possess nuclear weapons have agreed to the treaty while another 12 have signed but not yet ratified it. In exchange for agreeing to the treaty terms, a non-weapon nation will receive assistance, from those nations with nuclear weapons, in developing their own civilian nuclear capacity. However, there are a number of nations who have the capability of producing nuclear weapons who have so far refused to agree to the treaty. The treaty thus becomes only a partial deterrent to proliferation of weapons.

UNITED STATES ROLE

The world is faced with the stark reality of running out of oil and natural gas. Most nations are not so fortunate as the United States, which has great reserves of coal. Thus the need for nuclear energy is more urgent abroad than in America. It is not unreasonable to state that several of the world's industrial nations have launched a nuclear initiative that we would be powerless to stop. We can also assume that many more nations will develop increasing dependence on nuclear power as their demand for energy increases and their supply of other energy resources diminishes.

What role, then, can we play in the world nuclear arena? Our ultimate goal should be to insure that no nation is denied the peaceful use of nuclear energy—so long as they give assurance not to make explosives. Of equal importance, we must promote the safest possible production of nuclear energy throughout the world.

We must not adopt ostrich-like behavior toward reprocessing and some form of breeder development. Our refusal to confront the issues involved here will not make either reprocessing or breeders magically disappear throughout the world. We must not abandon the opportunities afforded by reprocessing or the unlimited energy that breeders can provide. We must promote the strictest controls and safeguards over reprocessing spent fuel and recycling new fuel from it. We must influence other nations to sign the Nonproliferation Treaty and in turn be a reliable and committed supplier of technology and services for civilian nuclear power abroad. We must not step aside but step out in front, using our leadership and prestige to clear the path of a secure energy future for all nations while insuring the safety of present and future generations.

HATCH ACT NEEDS REFORM, NOT REPEAL

HON. JOSEPH L. FISHER

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. FISHER. Mr. Speaker, in the near future the House of Representatives will be considering amendments to the Hatch Act known as the Federal Employee Political Rights Act. I agree with the principle of this legislation—that Federal employees should be encouraged to increase their participation in civic and political life—but think that the committee bill goes too far. My views were recently spelled out in an article which appeared in the Federal Times. I would like to share this article with my colleagues before the debate on the Hatch Act:

HATCH ACT NEEDS REFORM, NOT REPEAL

(By JOSEPH L. FISHER)

What is the proper balance between a federal employee's right to participate in the political process and the need to maintain a politically neutral civil service?

This question has been the topic of continuous congressional debate since 1791. Enactment of the Hatch Act in 1939, which attempted to resolve this matter legislatively, neither interrupted nor stilled the debate.

The Hatch Act has withstood three Supreme Court challenges. Most recently, in 1973, the court upheld the constitutionality of a section of the Hatch Act prohibiting federal executive agency employees from taking an active part in political campaigns.

The court, in its opinion, declared, "It is in the best interest of the country, indeed essential, that federal service should depend on meritorious performance rather than political service."

In 1966 a congressionally authorized bipartisan Commission on Political Activity of Government Personnel was charged with investigating federal laws which limit or discourage the participation of federal or state officers and employees in political activity. Their report, issued the following year, concluded that the degree of political activity permitted federal employees should be expanded "within limits" and that "sanctions at all levels of government against coercion and misuse of position" should be strengthened.

The draft bill proposed by the commission attempted to spell out permitted and prohibited political activities. In considering which political offices Federal employees could run for and which they could campaign for, the nature of the office was the determining factor. The commission's recommendation was that employees could work in campaigns for local offices and run for part-time local offices. It also recommended a prohibition on the holding of office in political organizations. Additional provisions dealt with prohibitions on corrupt political practices and coercion as well as providing administrative arrangements for enforcement.

A bill to revise the Hatch Act was passed in the last session of Congress but vetoed by President Ford. The veto was sustained by the House of Representatives.

A similar bill is soon to be voted on by the House Post Office and Civil Service Committee.

The present Hatch Act is confusing and could profit from revisions to clarify what is prohibited and to encourage Federal workers to take part in permissible activities. My concern lies with the major provision that would lift all restrictions on political activity by Federal employees. Enactment of this provision, in my opinion, would jeopardize the merit system as we know it and threaten impartial administration of the law.

I come to this position both from my own experience as a civil servant for many years and from contact with residents of my congressional district, which contains the largest number of government workers in any district outside of Washington, D.C.

Contact with residents of my district has served to reinforce my own opinion about the necessity for some revision of the Hatch Act, but not the sweeping change that has been proposed.

In the last session of Congress, I sent out a questionnaire which included a question on the desirability of changing the Hatch Act. More than 20,000 persons responded. And I would estimate that about a third of the responses were from civil servants. Fifty-nine percent were against any change in the Hatch Act and 34 percent for some change.

Judging from all of this, Federal employees do not want changes that would permit supervisors in Federal agencies in subtle ways to influence career advancement, salary, and working conditions improperly.

Even under the present law, we have seen a vicious attempt in recent years to politicize many of the bureaus and departments of government. If, in addition, federal workers were thought of as a political campaign force, I think the merit system as we know it and the impartial administration of the laws would be jeopardized.

For example, suppose all restrictions on political activity were lifted. Ms. Rogers and Ms. Dawson are the two candidates for one promotion slot in a department of the Social Security Administration. The supervisor, Ms. Smythe, is the campaign manager for a candidate for the House of Representatives. Ms. Dawson volunteers to be a speech writer in the campaign. Valid or not, this situation is certainly ripe for a charge of playing politics.

As another example, suppose Mr. Jones, a claims clerk in the Veterans Administration, is vice chairman of the county Democratic Party. Mr. Burt, who happens to be a precinct chairman for the Republicans has filed a claim. The case drags on for six months. Are Mr. Burt's and Mr. Jones' political differences responsible for the delay?

The Hatch Act seeks to protect by prohibiting. Thus two major considerations collide: the right of a citizen to free speech, assembly, and petition on the one hand, and the right of a citizen to expect impartial administration of the laws, along with the right of federal employees to a work environment free from political pressures on the other.

Questions to be resolved: How much political activity can government employees be allowed while still insuring the fair administration of government policy and the full protection of government employees? Is all political activity equally damaging? A proper balance must be found between rights and responsibilities.

Under our system of government, a citizen has the right to petition his government and the government has an obligation to deal with that citizen impartially. A citizen can be reasonably certain of impartial dealing from government employees when he knows they are politically neutral. His case will not be harmed because his political affiliation is different from that of the bureaucrat with whom he must deal, nor will it be helped because his affiliation is the same. Dangers inherent in a politicized bureaucracy can range from unquestioning loyalty to the administration to foot-dragging in carrying out the orders of elected officials.

A public employee, just as a private citizen, should be guaranteed that the government will not attempt to influence his political opinions. Federal employees should not be made vulnerable to subtle or direct coercion to engage in political activities. The most effective way to prevent the coercion is to forbid such activities. That, of course, is the rationale behind the Hatch Act.

Under the present Hatch Act all federal employees may express political opinions as private citizens, but may not actively engage in political campaigns other than non-partisan campaigns.

In metropolitan Washington and a few other areas with large concentrations of federal employees, a partial exemption from the Hatch Act permits federal employees to participate fully in local (city and county) political campaigns for non-party candidates even in partisan elections. This exemption covers approximately 11 percent of the federal work force. The remainder can be active only in non-party elections. Thus there appears to be an underlying assumption that all political activity is not equally damaging.

I believe that any improper pressure on the federal employee to take part in election activities would most likely come in connection with a campaign for federal office where the outcome might make a difference to the employee's supervisor or to the agency for which he works. Similarly, an employee's participation in a federal campaign would be the most likely to make the employee vulnerable to charges of playing politics on the job.

State and local political campaigns, on the other hand, have relatively little significance for or influence on the federal bureaucracy. I do not think that a federal employee's impartiality would be affected significantly by his involvement in a state or local campaign on his own time. Nor do I think that there would be great likelihood of fellow employees or supervisors improperly influencing other employees to become involved in campaigns with little direct relevance to the federal government.

That is why I have introduced a bill intended as a compromise between lifting restrictions on all political activity by federal employees and preserving the Hatch Act as is. The bill (HR 3645) would considerably broaden the political opportunities for federal workers, especially in their own communities by permitting their participation in state and local politics. Under my bill, federal employees could run for part-time state and local office and campaign for others running for state and local office, whether full or part-time.

Tradition, typical duties, and number and frequency of official meetings would be used in defining "part-time" offices. Federal workers would be eligible to run for 78 percent of the mayoral and 94 percent of the city council positions, more than half of the county board positions and some state offices such as lieutenant governor in my own state of Virginia.

At the same time, the limits on full political activity at the federal level would be retained. As under the present Hatch Act, federal employees would be allowed to belong to political organizations, but would still be prohibited from holding office in political parties at any level of government. The public would be likely to question the impartiality of public servants holding official political party positions.

Suppose a young woman, employed by the U.S. Department of Agriculture and living in Arlington, Va., wants to become politically involved. Under the present Hatch Act, she can join the Young Democrats or Young Republicans and attend their meetings.

She can, because of a special exemption in the Hatch Act, join and hold office in a local, nonpartisan organization which nominated candidates for election to the county board even though the election is partisan. This would not be allowed, however, if she lived in Youngstown, Ohio, which does not enjoy Arlington's partial exemption from the Hatch Act.

Suppose this young woman wants to become involved in a political campaign. This year in Arlington there will be campaigns for all elected state officials: governor, lieutenant governor, attorney general, four state delegates, clerk of the court in Arlington, and one member of the Arlington County Board. Under the present Hatch Act, the only campaign in which the Arlington woman can become involved is the county board campaign. Under my bill, she would be able to canvass voters, stuff envelopes, or manage a campaign for any of these offices. My bill would also allow her to run for lieutenant governor, state delegate or member of the county board.

I believe my bill is a balanced proposal—permitting federal employees to take part in much of the political life of this country without exposing them to political pressures that could jeopardize their jobs, working conditions, and chances for promotion. No compromise, of course, is perfect. But I believe we should experiment with this partial lifting of Hatch Act protections in order to see the effect before proceeding further.

THE TRAVELING TEXAS AGGIE

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. TEAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article from the May 10 edition of the Washington Post concerning my alma mater, Texas A. & M. University, one of the finest schools in the Nation.

The article follows:

SAY, DID YOU HEAR THE ONE ABOUT THE TRAVELING TEXAS AGGIE?

COLLEGE STATION, Tex.—Almost everyone in the Lone Star State has heard the story about the angry Texas Aggies who got into an argument with a group of Louisiana Cajuns visiting the Texas A and M University campus here.

The Aggies, the story goes, became so riled that they began throwing sticks of dynamite at the Cajuns, who lighted them and threw them back.

And because every Texan has heard the story about the Aggie who thought bacteria referred to the rear entrance of a cafeteria, the Aggie who invested heavily in frozen radio dinners, and the Aggie who went to the butcher shop and ordered five karate chops.

These sound a lot like the Polish jokes that got Polish groups up in arms a few years ago, they are. But there is one difference: Aggie jokes are spread mainly by the sons of Texas A and M, the Aggies themselves.

Put two Texans together anywhere around the world and the chances are that they soon will while away the time telling each other Aggie jokes. A few of the jokes are very funny, most are corny and some are even racist, but somehow Aggie jokes have survived for years and are thriving.

Perhaps the oddest thing about this Aggie putdown is that the jokes conceal the fact that Texas Agricultural and Mechanical University has become something like the MIT of Texas. The big oil and gas, engineering and construction companies pick off the Aggie graduates for high-paying jobs as fast as they come off the assembly line with their diplomas.

"There's something different about an Aggie graduate," one recruiter for a large firm said. "He's usually level-headed and sober, he has good grades and he's not afraid to work. He's science-oriented, and he hasn't spent a lot of time playing around in college."

If the university is so good, then why all the corny self-deprecation?

"We think that when you're No. 1, people make jokes about you," Edwin H. Cooper, director of admissions, said. But that doesn't explain why—when Poles complain about Polish jokes, Cajuns bristle at Cajun jokes and Mafia jokes bring an Italian Defamation League into existence—most Aggie jokes originate with Aggies.

Dr. James H. Copp, a university professor of psychology, called it the "Okie from Muskogee syndrome," a reference to the popular country-western song of a few years ago that proclaimed that Okies from Muskogee don't smoke marijuana or engage in promiscuous sex and so forth.

In other words, the Okie from Muskogee was proud to be a rather square individual.

Copp, like many other Texas A and M faculty members, gladly admits that the school "is a little bit square."

Copp said Aggies don't relish hearing Aggie jokes told by outsiders. But when those jokes are made up and told by outsiders, such as rivals at the University of Texas in Austin, it is usually because Aggies are admittedly "easy targets" because of the school's conservative image, according to Lane B. Stephenson, the school's public relations spokesman.

It is a rare Aggie that can withstand the temptation to tell another Aggie joke.

On the desk in his dean's office, Copp continued, is a model of an "Aggie car" with very lopsided wheels.

"The administration really rejoices in this squareness," he said. "They simply say, 'Thank goodness we aren't like the rest of the world,'" Copp said.

The Texas A and M campus, for one thing, is a hodge-podge of architectural styles where few buildings match, and it is ringed by fast-food franchises.

The school is not only conservative in its image, but occasionally conservative in spending too. A new medical school will cost

only about $4 million, because present buildings will be renovated and used. But on the other hand a new student center a couple of years ago cost millions of dollars, and was done in atrocious design—lending credibility to stories of Aggie poor taste.

In 1970, at a time when many other college students were demonstrating, several thousand Aggie students marched on the president's house. But not to protest.

They went to honor and to welcome Dr. Jack K. Williams and his wife on his first full day in office.

George W. Strake Jr., a Houston oil and real estate magnate, was so proud of the students that he ordered his foundation to give two $5,000 contributions to the Aggie student government.

When streaking was a college fad, only one streak took place in Aggieland. But it gained national headlines. Not because the nude streaker was on a motorbike on the campus, but because a conservative, short-haired and angry Aggie tried to lasso the streaker with a rope.

Texas A and M maintains its conservative image, partly, some school officials indicate, by continuing to be a state school that refuses to drop its high entrance requirements or make an effort to recruit racial minorities. Out of an enrollment of about 28,000, only about 100 are blacks, about half of them on athletic scholarships, and only about 500 are Mexican-Americans—in a state that has a high percentage of both blacks and Mexican-Americans.

There is, however, one minority group the school has recruited: women. Although they were banned from the school until a few years ago, there are now 7,000 of them.

But Texas A and M also is a military school, with a corps of 2,000 cadet officers who wear uniforms at all times. Their training is conducted separately from that of the ROTC students. The school's long military tradition dates back to its founding in 1876. During World War II it provided more military officers than West Point, and over the years 150 Aggies have become generals and admirals. Seven Aggies won medals of honor in World War II.

Except for the official military academies such as Annapolis and West Point, Texas A and M commissions more officers than any school in the country.

In addition to its military cadets, the university has the largest agricultural enrollment in the nation, about 6,000, and more than 6,000 other students study engineering.

The university is just getting around to placing some emphasis on the liberal arts.

"We devote the major portion of our energies and resources to practical studies—in the classroom and the laboratory," Stephenson said.

Texas A and M has never gone in for fads, he added, but "we taught ecology and environmental studies five to six years before it became fashionable elsewhere."

Aggie alumni around the world give more money to their alma mater than do those of any other public university with the exception of the much larger university of Michigan. They must be the most loyal alumni in the nation, and perhaps around the world, and they are the only ones to hold "muster" annually, 400 special services around the world to honor Aggies who have died in the preceding year.

Somewhere in all this madness there must be some method, says sociologist Dr. Edward Joubert of the University of Southern Louisiana. Joubert is a Cajun and an Aggie graduate so he has sampled the best, or perhaps the worst, of the jokes about both Cajuns and Aggies.

Joubert said the Aggie joke syndrome has its basis in the fact that Aggies need a sense of identity and brotherhood because they have been a "threatened minority."

FAULTY LOGIC BEHIND CONSUMER AGENCY

HON. WILLIS D. GRADISON, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. GRADISON. Mr. Speaker, among the proposals which seem to continually reappear before Congress, is the idea of a Federal Agency for Consumer Protection—ACP. Once again we are faced with a proposal, H.R. 6805, which would establish such an agency. The premise for creating a consumer protection agency is based on faulty logic, and this proposal would cause numerous problems.

Everyone agrees that existing departments and agencies are not doing an adequate job of protecting consumers. This is not, however, due to a disregard for the needs and views of consumers. Rather, this is a consequence of inefficient decisionmaking processes which have produced unforeseen and sometimes catastrophic results.

The question then becomes how to most effectively remedy this situation. It seems illogical to me, to attempt to remedy the inefficacy of several agencies by creating a new agency. Such an agency will not only be afflicted with the problems of the existing agencies, but in addition will cause increased confusion, delay, and consequent dissatisfaction.

Proponents of this legislation feel that this agency would advocate the interests and views of consumers to other agencies and departments, to balance the lobbying influence of groups representing special interests. Such a view fails to acknowledge that the basic purpose of every Federal agency or department is to decide what is best for the citizens of our country, the consumers.

The sensible solution to this problem is to reform the existing agencies, rather than adding a new one. If the problem is a lack of consumer representation, reforms should be made within each agency to insure that consumers' interests are given primary consideration. If there are other problems, these also should be solved by altering an agency's structure.

Some have argued that while regulatory reform of this nature is desirable, it simply has not come about. However, it is Congress fault that it has not occurred. Congress is responsible for overseeing agencies and assuring their effectiveness, but has been remiss in carrying out this duty. I feel that we should begin to exercise our proper responsibilities instead of passing off this function to a new agency.

The creation of an Agency for Consumer Protection assumes that consumers have some type of consensus of their objectives, needs, and preferences. In reality, such agreement hardly ever exists. To ascertain what is best for consumers, the ACP would often have to reconcile the competing preferences of various groups of consumers. The ACP would thus utilize a decisionmaking process similar to that of existing agencies, rather than advocating an obvious consumer viewpoint as many of this agency's proponents expect.

The cost of an Agency for Consumer Protection should not be ignored. The estimated price of such an agency fails to take account of increases in both the paperwork burden of businesses and the additional costs of regulation caused by such bureaucratic infighting. All of these costs are eventually paid by the consumer in the form of higher prices and taxes.

Instead of establishing this new agency, Congress should face up to the problem squarely and bring agencies which have gotten out of hand back under control. Passage of legislation establishing the ACP would constitute an admission to the American people that Congress can no longer control the agencies it has created.

THE IMPACT ON THE ELDERLY OF OUTRAGEOUS HEALTH CARE COSTS

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. PEPPER. Mr. Speaker, as chairman of the Select Committee on Aging and its Subcommittee on Health and Long-Term Care, it was my privilege to testify this morning on the administration's hospital cost-containment proposal before a joint hearing of the Subcommittees on Health of the Ways and Means and Interstate and Foreign Commerce Committees.

Controlling the outrageous escalation of health care costs must be a priority for every American. I insert the text of my remarks at this point in the RECORD:

STATEMENT BY CONGRESSMAN CLAUDE PEPPER

Chairman Rogers, Chairman Rostenkowski, I am pleased to have this opportunity to comment on the Administration's proposal to contain hospital costs.

The time for decisive action has long since come, and I commend the Administration and my colleagues in Congress for giving us this bold and important proposal.

As Chairman of the Select Committee on Aging and its Subcommittee on Health and Long-Term Care, I will address the issue from the viewpoint of elderly patients. It is they who are most in need of ongoing health care, and it is the elderly and the poor whose suffering is greatest when we fail to hold down the cost of this care.

Americans over 65 accounted for over 44% of the $46.6 billion we spent on hospital care in fiscal year 1975, and some 29.4% of the $103.2 billion spent for personal health care expenditures that year, despite the fact that they comprise only 11% of the population.

In fiscal year 1976, Medicare alone cost the Federal Government $17.8 billion. The Congressional Budget Office projects that it will cost almost $46 billion by fiscal year 1982.

This is a staggering amount. But unless we act now to make our health care system efficient, even this will not buy health security for older Americans in the years to come.

Rising hospital costs have a direct and devastating effect on the elderly. The American Hospital Association has reported that their hospital use has increased at a rate that is three times that for the rest of the population.

As hospital costs increase, so do the deductible and coinsurance the elderly are required to pay out of their pockets. In January of this year, we saw a 19 percent increase in these out-of-pocket expenses for Medicare beneficiaries, who now pay more for health care than they did when Medicare was enacted in 1965. Hospital costs alone account for a great deal of this expense, for in this same period, since 1965, tney have quadrupled.

Comparing the 19 percent increase in Medicare out-of-pocket payments with the 5.9 percent increase in Social Security that takes effect July 1, it takes no great wisdom to figure out that the elderly are losing ground, and losing it fast. There are people living in or approximate to my district who have to make a choice every day between a cup of coffee and a morning newspaper. Rising costs erode the protection Medicare was meant to provide for the elderly. We must be committed to beat the rampant inflation in health care. The success of our efforts now will affect the quality and availability of health care in America for the rest of this century and into the next.

The bill before your Committees represents an important first step toward these goals, and I believe it should be enacted.

Its approach is a sound one. Limiting increases in hospital revenues by restricting the increased amounts third-party and charge payors may cover will encourage efficiency and good management on the part of the 6,000 hospitals covered by the plan. Moreover, I believe it will encourage new approaches to the delivery of inpatient hospital care.

But this proposal must be viewed as an experimental one. The Department of Health, Education and Welfare must carefully monitor the effect of these steps to insure that they do not in any way promote inferior care of patients in these hospitals.

I am especially pleased that the Administration proposal seeks to encourage the development of health maintenance organizations by exempting hospitals which receive at least 75 percent of their revenues from Federally-defined HMOs. Time and again, HMOs have demonstrated that preventive health care can reduce the incidence of hospitalization and therefore hold down overall costs. They promote appropriate utilization of hospital facilities. This is a healthy exception.

I will shortly introduce legislation which seeks to further encourage the development of health maintenance organizations by providing them with incentives to enroll elderly and poor Americans. It makes no sense to restrict the availability of such innovative services which stress primary and preventive care first and then hospitalization only as required. In that legislation I also will propose cost controls on HMOs which guarantee that they will spend their dollars on patient services and not exceed the cost of similar services available in the area.

The provisions in the bill before you represent an important beginning, but there are other steps I believe we should consider now or in the near future—steps which can help to further contain costs and, at the same time, improve the quality of care that is available to all our people.

The effort to control hospital revenues is a logical place to begin, since they represent the largest chunk of health care expenditures, but this is not enough. Unless we impose similar restraints on suppliers and others who play a role in the health care system, we will not realize a real across-the-board saving.

I would recommend, for example, a careful look at the level of physician charges. Since 1965, physicians' services have tripled.

The April issue of the Social Security Bulletin reconfirms what we already know about the role of doctors in rising health costs:

"The physician community probably has the most influence on expenditures within the American health care system. Physicians are the most important determinant of who will receive hospital care, what care will be provided, and what the duration of care will be. They thus exert a major influence on hospital expenditure levels."

There are several methods that might be employed, other than an outright cap on increases in charges. We might, for example, consider instituting a negotiated fee schedule for specific services.

And we must make an effort to reduce costs by reducing what it costs to practice medicine.

For example, since the 1970–71 school year, the average cost of getting a medical education has doubled. Medical malpractice insurance has increased by about 400% since 1970.

The start-up costs for doctors are staggering, as are the prices of medical equipment considered by most to be necessary.

We should explore alternative health delivery methods—promoting group practice, outpatient clinics, home health services, and, as I emphasized earlier, health maintenance organizations.

Second, we should encourage the sharing and exchange of medical education and information, especially highly-developed and expensive medical equipment. The Health Services Agencies can and should play a significant role in the process of coordinating facilities and information as well as the certificate of need procedures. They should be part of the process from the beginning, compiling demographic information, keeping files on the health needs of the area, and making recommendations to the States and to HEW with regard to the need for capital expansion, including the purchase of new and expensive equipment. I would hope the Administration would investigate this as a potential area for future cost control.

Third, I believe we must place more emphasis on Professional Standards Review Organizations and the in-house utilization review committees already established in hospitals. Legislation I have introduced, H.R. 1116 and H.R. 1126, include among their provisions a requirement that nurses, social workers, guidance counselors, and other health professionals be included in PSROs. I would go a step further and propose that hospital utilization review committees be encouraged to include registered nurses, at the very least. These committees make critical decisions about the kinds of services that are provided, and nurses, who deal with patients on a continuous basis, should be given a role in the decision-making process about the kinds and amount of services that are rendered.

Fourth, I believe we must take strong action to hold down the price of prescription drugs. Drugs and drug sundries accounted for over $11 billion of the nation's health bill in fiscal 1976. While Americans over 65 comprise only about 11% of the population, they account for 25% of the prescriptions purchased.

And most of this cost now comes right out of their pockets. The time has come to promote greater competition among drug manufacturers. I believe we also should re-examine our patent laws and pricing practices. Generic drugs should be used whenever possible. And we must promote more efficient management of the drug industry.

Finally, and in my view, most importantly, we need to restructure our thinking on the subject of health care. The time has come to stop thinking strictly in terms of acute and corrective care and turn our attention to preventive health care. We have been saddled for many years with a "crisis" orientation, and it's an expensive habit. Our neglect of preventive medicine has cost the nation billions of dollars in unnecessary medical services. Last fall, President Carter addressed this issue in a speech to the American Public Health Association, in which he called for a new emphasis on preventive health care.

There can be no hope of permanently reducing health costs until we move toward a system of health maintenance. And now is the perfect time to change our thought structure. Today when we realize that money does not necessarily guarantee good health, we can and must prepare our health maintenance structure.

Briefly, this will mean that we redouble our efforts to isolate and treat childhood disease, and I commend the Administration's recent steps in this regard.

It will mean greater emphasis on regular physical examinations and early diagnosis and treatment.

It will mean, especially for the elderly, the assurance of home health care—not just after hospitalization, as is now the case, but as a way to prevent the need for hospitalization.

I urge your Committees not only to act quickly on the President's plan but also to consider methods of strengthening the Administration's proposals even more. I respectfully recommend that you consider the following questions:

Should suppliers and physicians be included in a cost-containment plan?

Should the Nation's 20,000 nursing homes be included?

Finally, as we implement a cost-containment program, can we now press forward with plans for a national health insurance system which provides comprehensive medical coverage for every man, woman and child in America?

CARTER STYLE: IMAGE FIRST, SUBSTANCE LAST

HON. JOHN M. ASHBROOK

IN THE HOUSE OF REPRESENTATIVES

OF OHIO

Thursday, May 12, 1977

Mr. ASHBROOK. Mr. Speaker, if there ever were any doubt about it, the surfacing of the Caddell memorandum makes official what most Carter watchers had known all along: President Carter is charting a course of imagery and public relations to establish an identity with the American people that will survive his later liberal legislative drives. Give the image of cutting down the thermostat and on the use of limousines but in fine print offer $20 billion more in red ink right off the bat, phase in national health insurance, propose more foreign aid, and so forth, right down the line.

John Roche has an excellent article on this subject which appeared in the Washington Star. Mr. Carter reminds us of the old political truism: Establish the reputation for working hard and you can sleep until noon. It is time that he be called to account for his double standard. The article is as follows:

CADDELL TO CARTER: WHEN IN DOUBT, SMILE

(By John R. Roche)

Well, who would have thought it? Jimmy Carter has a Machiavelli in the White House closet, Patrick H. Caddell. This came to light when some anti-intellectual-in-residence leaked Caddell's 56-page version of *The Prince* to the press. Prepared last December,

it is quite a document. Presidents have long been told the virtues of positive thinking, but Caddell hit a novel note: he focused on the merits of charismatic inertia!

"Too many good people have been beaten because they tried to substitute substance for style," observed Niccolo Caddell to the Georgia Lorenzo. He proceeded to indicate in Hegelian-Marxist terms that since neither the "thesis" nor the "antithesis" would provide any political mileage, the thing to do was wait for a new "synthesis," smiling all the while. He also recommended a number of cosmetic ventures—fireside chats, visits with folks around the country, and a cutback on limousines—as stand-by measures while the President waited for Hegel's world-spirit to do its thing.

Providing philosophical advice to princes is an ancient and—as Caddell may discover—risky art. Plato spent a couple of years slaving in Sicilian mines when the tyrant of Syracuse rejected his admonitions, and Machiavelli died broke. In Carter's case, I announced last summer that basically his style was his substance. But then I wasn't looking for a job. Though not the seventh son of a seventh son in the Gaelic tradition, I have always known in advance the day and hour of the trains I would miss.

However, setting out the President's posture in this realistic fashion is hardly a political masterstroke. Frederick the Great's first book was entitled *The Anti-Machiavelli*. Voltaire then remarked that the first thing a Machiavellian would do was denounce Machiavelli, but he was a well-known wise guy and Frederick remained "the Great," despite his patent cynicism. (His cannon were inscribed "Ultimat ratio regum," the ultimate legitimation of the King!)

Forgive this compulsive pedantry: I am a professor of political theory. But putting aside the fun and games, even assuming that Jimmy may not have followed the Hegelian references too closely, what are the practical premises of Caddell's tract? Here I can speak from personal experience. Well-meaning high theorists used to ship President Jonnson extensive reflections on his character and the appropriate philosophical course of his Administration. Some ran to 150 pages.

Inevitably they would land on my desk with a note: "What's he trying to say?" or some variant query. Johnson wanted desperately to be taken seriously by the intellectuals, was an extraordinarily intelligent man, but could hardly take time out from Vietnam or the Middle East to absorb 150 pages. So I would take the treatises home, labor through them, and present him with summaries. After we got to know each other well, I would add a grade—the highest ever awarded was one B-plus.

In essence, the advice came down to "Stop Being Lyndon Johnson." The options suggested ranged from Winston Churchill to Jesus Christ; invariably he was urged to "communicate" with the American people, and from 1966 on a common theme was "Don't lose Vietnam, but quit fighting." This was quite unrealistic: LBJ for better or worse was LBJ, incapable of being born again either as Winston Churchill or Jesus Christ.

Indeed, because he was somebody, an elemental giant, he generated intense love and intense hatred. If I had ever gone into the Oval Office and said, "You must stress style over substance," he would have choked me with his bare hands. And, by God, given the liberal commitments of the Democratic Party, I would have deserved it.

Now comes Niccolo Caddell with a treatise which must have received an A from his master; otherwise the President would have kicked him through the French windows. His advice, translated into my English, is: when in doubt, Smile. When George Meany growls about unemployment, visit a veterans' hospital in Iowa—and Smile. When you learn that 1977 inflation is running at over 13 per cent, close down two fancy dining rooms at the Pentagon, fire Joe Califano's chef—and Smile.

In short, since nobody in the United States really believes anything, the way to get reelected in 1980 (and Caddell is already on that track) is to avoid all matters of substance—and Smile. I doubt if Caddell will suffer the plight of Plato, but if the President takes his advice, they both may be unemployed in 1981.

VONNIE EASTHAM HONORED BY CALIFORNIA STATE UNIVERSITY, CHICO

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. JOHNSON of California. Mr. Speaker, today the California State University at Chico is honoring one of its most distinguished alumni and supporters for her outstanding contributions to the university and to her community. Because her efforts in behalf of the university are unparalleled, the university has established a new award designed to fittingly honor Mrs. George M. (Vonnie) Eastham. She will be presented with the university's first distinguished service award.

It has been my pleasure to work with Vonnie for many years, and I know from first hand experience of her sincere dedication, unlimited energy, and total devotion to university projects and constant improvement and fostering of campus-community relations. My wife Albra and I join with the many people of the university and in the city of Chico in wishing her well, in congratulating her on the receipt of this honor, and in saying thank you for her many significant contributions.

Vonnie has set a challenging example for all of us to follow. She is truly unselfish in sharing her many talents with the university and community which she obviously loves so much. The list of her accomplishments and contributions is long. I feel I can best share with you the scope of her activity and generosity by including in the RECORD at this point a copy of the editorial which recently appeared in the May 4 issue of the Chico Enterprise-Record entitled "Well-Deserved Honors." I am sure that you will agree with me that the university has made a very wise selection in presenting its first distinguished service award to Vonnie Eastham.

WELL-DESERVED HONORS

Recognition and appreciation of several hundred years of combined endeavor in diverse fields of higher education will be the theme of a special dinner scheduled for next Thursday in the Bell Memorial Union at Chico State University.

The purpose of the dinner is to pay tribute to 11 members of the university faculty who are retiring at the close of the present school year.

Under ordinary circumstances, such a dinner would be of interest primarily to fellow educators and of little import to citizens of the community. But as the list of retirees is examined, it becomes apparent that almost all of them have over the years developed meaningful cultural and civic connections with the people on both a local and regional basis. Look through the list (in alphabetical order) and see how many such names you recognize:

Robert Bain, art; Robert Biehler, psychology; F. Marian Roberts, nursing; Minnetta Millard, nursing; Florence Hadley, nursing; Russell Morris, education; James Kinnee, music; Einar Siro, industry and technology; Harold Petersen, health science; Garrett Starmer, speech pathology and audiology; Robert Wallace, animal science, agricultural business, education and mechanics.

An added feature of the faculty retirement dinner will be the presentation of a new honor—the first annual Univerity Distinguished Service Award—in recognition of significant contributions to the well-being of Chico State by a member of the community.

Devised as a means of placing emphasis on the importance of town-gown relationships, the new award will honor lay citizens of the vast Northeastern California service area of Chico State University.

We believe it is especially appropriate that the first recipient of this new award will be Mrs. George M. (Vonnie) Eastham, of Chico. In our opinion, they could not have made a better choice.

As a student and as an alumna over the past quarter century, Vonnie Eastham has had a continued "official" relationship with the university. But it has been the positive impact of her endeavors as a citizen—in the capacity of innovator, helper and go-between, you might say—that has set her aside as eminently deserving of this important new award.

Mrs. Eastham's contributions have been many in number, but it has been our feeling that her endeavors in three categories have been exceptional.

One is the role she has played as a patron, ticket campaigner and general booster of Chico State's outstanding Chico Court Theatre during its decade of superb summer season productions. Largely through her efforts, the Chico Women's Club and Chico Junior Women's Club took over the promotional and ticket-handling chores when the project was first devised as the Theatre in the Glen by exemplary Dr. Lawrence Wisner and his drama students. Vonnie Eastham's work with the project helped it become a model scholarship-assisted program viewed with envy by other universities and communities.

A second special category of contribution grew out of a close relationship Mrs. Eastham developed over the years with the Hearst family as a result of her research and authorship of a definitive volume on the life of Phoebe Apperson Hearst, famed philanthropist and mother of the late William Randolph Hearst.

Mrs. Eastham has been honored several times by the Phoebe Apperson Historical Society in St. Clair, Mo. But her relationship became of significant value to Chico State several years ago when the Hearst Foundation came forth with an initial grant of $20,000 to finance a special Indian research project under the direction of Dr. Norris Bleyhl, Chico State director of Regional Information and Records Project. A second Hearst grant was subsequently accorded.

Yet perhaps the most lasting and far-reaching of Mrs. Eastham's contributions has been her untiring work on behalf of the General Douglas MacArthur Scholarship program she helped found back in 1955. Mrs. Eastham's husband served on Gen. MacArthur's staff in Japan following World War II, and the relationship led to the naming of the scholarship program. Over the years, it has provided modest financial assistance—and, more importantly, a "people to people" relationship—for scores of youngsters from

foreign lands attending Chico State. Just last month, Mrs. Eastham added another chapter to the scholarship program story with announcement of a $10,000 grant from the Hearst Foundation.

Despite these and other contributions, it would be erroneous to consider Vonnie Eastham's relationship with Chico State as that of a mere booster, flatterer or sycophant. On the contrary, she has had her "outs" with segments of the university at times and has labored valiantly on behalf of voiceless causes. Even in that capacity, however, her efforts have helped produce the positive results of re-examination and have worked to the benefit of the institution.

Here at The Enterprise-Record, we have come to value Vonnie Eastham as a helpful combination news source and "press agent," so to speak, for her diverse interests and projects ranging from the CSU-related matters listed above through ordinary civic affairs and campaign activities of her beloved Democratic Party.

Under such circumstances, we feel that the 11 retiring faculty members and Mrs. Eastham will constitute a harmonious group worthy of applause and honor at next Thursday's dinner. We salute all 12 of them and remind that tickets still can be obtained (before the Monday deadline) by telephoning 895-5201, the office of CSU President Stanford Cazier.

ARBITRATION FOR POSTAL SUPERVISORS

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. CLAY. Mr. Speaker, since the enactment of the Postal Reorganization Act of 1970, we in Congress, the people throughout this country, and the employees of the Postal Service have become, with each day, more acutely aware of the insensitivity of postal management to the needs of Congress, the public and postal employees.

The most recent example of this insensitivity occurred only last month, on April 19, when Postal Service management requested a meeting of postal union leaders to discuss the implementation of a reduction in delivery service from 6 days a week to 5 days, as recommended to Congress by the "blue ribbon" Commission on Postal Service. Reaction from Congress to the Postal Service's unilateral action was not long in coming. On April 20, the chairman of the Subcommittee on Postal Personnel and Modernization of the House Post Office and Civil Service Committee, Mr. WILSON of California, wrote the Postmaster General and in the strongest possible terms advised him against any further action on his part until the Congress and the administration had an opportunity to examine the full report of the Commission. The complete text of that letter follows:

COMMITTEE ON POST OFFICE AND CIVIL SERVICE, SUBCOMMITTEE ON POSTAL PERSONNEL AND MODERNIZATION,

Washington, D.C., April 20, 1977.

HON. BENJAMIN F. BAILAR,
Postmaster General, U.S. Postal Service, Washington, D.C.

DEAR MR. POSTMASTER: It has been brought to my attention that one of your subordinates, Mr. James V. P. Conway, Sr. Assistant Postmaster General for Employee and Labor Relations Group, has written a letter to the leaders of the unions that are signators to the collective bargaining agreement with the Postal Service stating that it is the Postal Service's obligation "to give careful consideration to the (Postal Service) Commission's recommendations" [to pursue the recommendation that mail delivery now in effect be reduced from six days to five days a week].

In reading Mr. Conway's letter, this first step in reducing service to the American public is based on the assumption that the United States Postal Service should positively respond to the recommendations contained in the report of the Commission on Postal Service which was issued on April 18, 1977. Because of the apparent necessity to educate you and your subordinates on the law that created the Postal Study Commission, I felt it incumbent upon myself to stress that the Commission's mandate was to report to the President and the Congress of the United States—not to the United States Postal Service.

As you know, I strongly opposed the creation of the Postal Study Commission because I felt that it would be just another case of a blue ribbon committee being created to obliterate the issues and to prolong the answers at an unnecessary expense to the taxpayers. Quite frankly, I thoroughly read the Commission's report and I sadly observe that my worst fears are realized.

Be that as it may, the purpose of this letter is not to comment on the contents of the report at this time, as I plan to release a statement in the very near future, on its value. However, I am concerned that an official of the United States Postal Service would take any superfluous action in response to the Commission's report until the President of the United States and the Congress has an opportunity to react. It should be obvious to those who followed the history of H.R. 8603, which culminated in Public Law 421 that the Study Commission, if it had any meaningful purpose at all was to give the President and the Congress an opportunity to revise Title 39, USC, to better enable the Postal Service to meet the public's demand for service at an acceptable cost.

In reading Mr. Conway's letter, I can only assume that the Postal Service has determined again to move unilaterally in a direction without regard to the interest of the postal employee or the public on how the USPS should function. Candidly, this is disillusioning for me and counterproductive for the Postal Service.

I assume that my speech which appeared in the Congressional Record on March 17, 1977 concerning the reduction of mail service was brought to your attention. I utilized that opportunity to raise some reasonable questions on the feasibility of implementing a five day delivery service. If you have not had an opportunity to review the statement, I recommend it to you. The point being that since I, as a Congressman and Chairman of the Postal Personnel and Modernization Subcommittee was reluctant at that time to draw any firm conclusion as to the recommendations that might be issued by the Postal Study Commission, I think it is only reasonable to expect the same type of restraint by the Postal Service.

In conclusion, let me say that the precipitous action by Mr Conway could well lead to the destruction of the Postal Service as we have known it. I would sincerely counsel that the Postal Service's management restrain its reaction to the Postal Commission's recommendations until the President and the Congress have had an opportunity to offer their observations.

Very truly yours,

CHARLES H. WILSON,
Chairman.

On April 21, Chairman NIX of the House Post Office and Civil Service Committee, along with 21 other members of that committee, also wrote the Postmaster General questioning his "precipitous action" in the proposed implementation of the reduction of delivery services. The text of Chairman NIX's letter follows:

APRIL 21, 1977.

HON. BENJAMIN F. BAILAR,
Postmaster General, U.S. Postal Service, Washington, D.C.

DEAR MR. POSTMASTER GENERAL: A letter dated April 19, 1977, relating to the Report of the Commission on Postal Service, sent by Senior Assistant Postmaster General for Employee and Labor Relations, James V. P. Conway, to the four craft unions, has come to my attention.

I am somewhat intrigued by the thrust of that letter. Mr. Conway, who appears to be speaking for the United States Postal Service, states that the Postal Service, "pursuant to the recommendation of the Commission on Postal Service," is immediately "commencing serious study of the proposed change to five day delivery service" from the six day service currently provided.

I would not object to the Postal Service beginning such a study on its own initiative and pursuant to its existing statutory authority, which, in fact, it began some time ago. I do question the propriety and wisdom of the Postal Service in using the Commission's report and recommendations as justification for this study.

I would remind you that the Commission on Postal Service was created to make its report and recommendations to the President and the Congress—not to the Postal Service. Obviously, the Commission also construed its mandate in this manner, since its initial sentence under "Major Recommendations" reads as follows: "Based on these major conclusions, the Commission on Postal Service makes the following major recommendations to the President and Congress."

I fail to understand how you feel "obligated to give careful consideration to the Commission's recommendations," albeit that you have selected only one of many, which, coincidentally, seems to support a view generally believed to be that currently advocated by the Postal Service.

Serious questions also come to mind as to the timing of your invitation to the four craft unions to discuss the matter of five day delivery. It seems to me that since this matter has been under consideration for quite some time by the Postal Service and if such consultation is required or even desirable on your part, that the invitation should have been extended when you initially began consideration of this matter. I sincerely hope that your motivation does not stem from the fact that the Postal Service can now justify or defend this action because of the Commission's recommendation.

Further, it is obvious that the Commission intended its recommendations as a total "reform" package, not one that should be selectively supported as one sees fit or as they meet one's wishes.

It seems clear to me that these recommendations were intended to be considered by the President and the Congress. I assure you that after careful and timely study, the Committee will make both administrative and legislative recommendations to which, I suggest, you should feel "obligated to give careful consideration."

In the event you continue to be of a different opinion, kindly inform me at the earliest possible time whether you will commence serious study of some other Commission recommendations and whether they seem to have general support in the Postal Service, such as:

(1) the restriction on the closing of small post offices;

(2) an increase in public service appropriations;

(3) an appropriation to eliminate current indebtedness for previous operating losses;

(4) the retention of the four major classifications of mail;

(5) a relaxation of the private express statutes for time-value letter mail when the Postal Service cannot offer comparable service; and

(6) giving the Postal Rate Commission final authority in rate and classification proceedings.

Before concluding, let me make one point crystal clear. It is totally incongruous and I will not support and will not recommend increased public funding for public service costs while further reductions in mail service over current levels are being considered or implemented by the United States Postal Service. For to provide less service at greater costs, both to the mail user and the general treasury, is simply not justified.

In fact, because of other pronouncements by the Postal Service, I am further puzzled by your precipitous action in this regard. For some six months now, you have made statement after statement asserting the improved financial condition of the Postal Service. As recently as two days ago, you stated in Miami that for the past twelve months the Postal Service has "achieved a surplus of approximately $5 million." This "achievement" has obviously come about with a six day delivery standard. Also, the Postal Service has surely determined, that even with current service requirements, it will not need additional revenues at least until March of 1978. In light of these facts, it seems to me that the Postal Service's decision to use the Commission recommendation as the reason for an immediate study of five day delivery is extremely suspect, to say the least.

As you can see, other Members of the Committee, with whom I have had an opportunity to discuss this matter, have joined with me in sending this letter to you.

We urge you not to use this Commission report to the President and the Congress as the basis or justification for any unilateral action on your part. It was not intended, nor should it be used for that purpose.

We also urge you to suspend any actions which may be related to the report and its recommendations until the President and the Congress have had a reasonable time to review and study the report. We assure you that we will offer solutions to postal service problems which will be responsive to the needs of all our citizens.

Sincerely yours,

Robert N. C. Nix, Chairman, Morris K. Udall, William D. Ford, Richard C. White, James J. Howard, Ralph H. Metcalfe, Edward J. Derwinski, Tom Corcoran, James M. Hanley, William Lehman, Herbert E. Harris II, Stephen J. Solarz, Leo J. Ryan, Michael O. Myers, Gene Taylor, Jim Leach, Charles H. Wilson, William Clay, Gladys N. Spellman, Cecil Heftel, Patricia Schroeder, and Benjamin A. Gilman.

Mr. Speaker, I cite the above instance of postal management's lack of understanding and sensitivity to the needs of the public and to the will of Congress, as only the latest example of 7 long years of misunderstanding and insensitivity. My purpose in rising today is to speak out against the long standing practice of top postal management to treat one of its most dedicated groups of employees, postal supervisors, as second-class postal citizens.

On March 30, 1977, the Postmaster General in a speech before the Institute of Collective Bargaining in New York City stated:

One final important difference between ourselves and the private sector is that the Reorganization Act also set certain stipulations regarding our relationship with our so-called managerial organizations. I say so-called because the leaders of these organizations act like union leaders, yet want to be treated as managers. They want all of the benefits of organized labor while retaining the prerogatives of management. As you can imagine this mentality presents a continuing problem to postal management, particularly when, as required by law, we consult with them on pay levels and other management policies.

To my mind, Mr. Speaker, if the above quoted words of the Postmaster General indicate any "mentality" at all, it is clearly that of the Postmaster General's inability to understand section 1004 of the Postal Reorganization Act and to belittle the absolute importance of these "so-called managerial organizations" to carry out the primary mission of the Postal Service. that is to provide a service to the public. I am disturbed to learn that the present Postmaster General finds that consulting with these organizations to be a "continuing problem to postal management," whatever that term may mean in light of continued postal problems and failures.

It is precisely because of his failure and the failure of top postal management to consult with these managerial organizations, as required by law, that I am compelled to speak and introduce legislation today which will allow at least one of these organizations the right to a fair determination of whether or not the Postal Service has, in fact, carried out the dictates of the law.

It behooves the Postmaster General, I believe, to look into the past and determine why these managerial organizations exist. They are not, as the Postal Service would have you believe, some hybrid of union and management, nor merely social clubs established for the purposes of comradeship. They were established and exist today to protect the often neglected and constantly trampled upon right of their members. If the top management of the Postal Service were to act in a responsible and fair manner toward these groups of employees, certainly the need for such organization's existence would diminish. Their existence, not unlike unions, will continue so long as top management sees fit to ignore what is fair, what is right, and what is just for all of its employees.

The National Association of Postal Supervisors, along with the other two managerial organizations, has made every effort to work and consult openly and fairly with top postal management.

But such management views that right of consultation—a right guaranteed by the law to the managerial organizations—as no more than their absolute right to change policies immediately after telling these organizations about these changes.

On three separate occasions, top management has so abused this right of consultation that these organizations have been compelled to file suit in Federal court in order to obtain real consultation as provided by law. In all three cases, the positions of these organizations have been upheld. Because of the continuing necessity of these organizations to take the Postal Service to court to enforce their rights, they have come to believe that a better system of determining their rights must be available.

In the 94th Congress, legislation was introduced and passed by the House which provided that such disputes between supervisory organizations and the Postal Service be settled through binding arbitration. The Senate failed to act on this legislation; and I, therefore, am introducing that bill today. I urge my colleagues to add their names to this bill and support my efforts to obtain its enactment in this Congress.

The bill provides simply that in matters of consultation, as provided by the law, either party may refer disagreements on national policy to final and binding tripartite arbitration.

There are some critics of this legislation who say that such a law equates this supervisory organization to that of a union and that it is unheard of for such a nonunion organization to have arbitration rights. The right of arbitration of differences is not a right peculiar to unions, not a collective bargaining right, but rather is a right which is commonly used to settle any contractual differences between parties. It has the advantage of saving time and money. The alternative to arbitration is the courts. The need for arbitration, in this instant case, stems from the need for fair and just treatment by top management, no more, no less. Its protection must flow to all the citizens of the corporate community, not just those belonging to some organizations, but to all where there is a past and present record of insensitivity, of misunderstanding, of apathy by top management to the very real needs of all of its employees.

Mr. Speaker, we are all well aware of the past 7 years of insensitivity of the Postal Service's top management to Congress. I have cited earlier in this statement the most recent example. I introduce this legislation today which only touches a small group of persons subject to that same insensitivity. Perhaps it shall put the Postal Service management on notice that Congress will no longer tolerate the indifference of the Postal Service to Congress, to the public, or to its employees.

There may be some situations in which there may be a lack of clarity between the intent of my bill referring to supervisors or crafts employees, a determination will be made in favor of the latter.

The text of my bill to provide arbitration to settle disputes between supervisory organization and the Postal Service follows. I urge my colleagues to join in sponsoring this legislation and its earliest possible enactment by the Congress.

AN EXPERT'S VIEW OF THE NEED FOR A CONSUMER PROTECTION AGENCY

HON. FREDERICK W. RICHMOND

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. RICHMOND. Mr. Speaker, it was my privilege today to attend a luncheon at the Women's National Democratic Club in honor of that valiant proponent and defender of consumer rights, Ms. Esther Peterson. As I mentioned when I introduced Ms. Peterson to our distinguished hosts, I think we can all be confident in knowing that Esther has returned to Government at a post which she helped to create.

The subject of Ms. Peterson's speech was an eloquent and I might add nonsense argument in favor of creation of a Consumer Protection Agency. Since this issue is of great interest to the Members of the House, I am placing Ms. Peterson's speech into the RECORD:

AN ADDRESS BY ESTHER PETERSON

It is a pleasure to be here today with so many good friends.

Those of you who know me, know that I am a gentle person. It is not my nature to get angry—unless there is a darn good reason. Well, the events of the past few weeks, since I took office as special assistant to President Carter, have given me a darn good reason. And I am angry.

As many of you know, the keystone of President Carter's consumer program is creation of an Agency for Consumer Protection. The ACP bill, as it is now called, is probably the most misunderstood legislation on Capitol Hill. What it would do is set up a nonregulatory advocate which would present the consumer's case before the many Federal agencies which make decisions affecting consumers. It would fill the "empty chair" in Agency proceedings where now only the voice of industry is heard.

For eight years, consumer groups, senior citizens organizations, labor unions, women's groups and other citizen groups across the country have fought for this legislation, only to be disappointed time after time by close votes in the House or Senate. Last year these grass roots organizations did get the Consumer Protection Agency bill through both Houses—with the support of consumer-minded Members of Congress—but the victory quickly turned sour when President Ford let it be known that he would have no part of the legislation. With the threat of veto hanging over Congress like a sword of Damocles, the Congress abandoned its efforts.

Why, you may wonder, should it be so tough to get a consumer agency—particularly an agency which is merely an advocate—an agency with absolutely no power to set standards, prosecute wrongdoers, issue licenses or force businesses to change their practices in any way. Why, you may wonder . . .

The answer, pure and simple, is big business lobbying. And so we come to the source of my anger.

First, let me make clear that I am not talking about responsible companies like Levi Strauss, Arco and others that have expressed support for the Consumer Agency. And remember that I come to my job fresh out of business where, I believe, my experience showed that business can flourish while at the same time being responsive to consumers' needs. I am talking here about the traditional bastions of big business representation in Washington. These big business representatives, led by the U.S. Chamber of Commerce, the National Association of Manufacturers, the Grocery Manufacturers of America, Procter and Gamble, General Motors, and the business roundtable, have attacked the Consumer Protection Agency bill with forces that General Patton would have envied. Big business is using every tactic money can buy to insure that consumers are deprived of the same rights of representation in Washington that large companies have long enjoyed.

Big business, in short, wants to protect their virtual monopoly over access to Federal decisionmakers.

Let me say right off the bat that I like a good fight as much as the next guy, but a good fight has to be fair. In this fight, the big business community has persistently used distortions, scare tactics and, frequently, outright lies. In this regard, I want to share with you part of a letter I have just sent to Dick Lesher, president of the U.S. Chamber of Commerce. I said:

"It appears to me that the chamber's dogmatic refusal to accept the consumer's right to be heard by regulatory technicians is causing the chamber to deliberately misstate the case for a small consumer agency as proposed by President Carter. Despite numerous refinements and safeguards for business, accepted over the course of eight years of congressional debate, the Chamber is still on square one, frozen in its prejudice against the voice spoken on behalf of consumers, unwilling to concede even the existence of numerous accommodations incorporated into the legislation by Congress."

I cannot emphasize strongly enough that legitimate business concerns have been addressed during the long legislative battle over this bill. For eight years, sponsors of the bill have worked with business to smooth the rough edges of this legislation. The information gathering and advocacy powers which the ACP would have are subject to a wide array of safeguards. And, in the month that my office has been in existence, I have time and again emphasized to business that my door is wide open to those with a positive interest in improving—as distinct from gutting—this legislation. Some have responded—bless them—and we intend to keep working with responsive and responsible elements of industry.

Up against this massive expenditure of time, manpower and money are the consumer groups which, with a few phone lines, a modest postage budget, a few mimeograph machines, and a lot of energy and guts pass the message on to a handful of underfunded groups throughout the country. The imbalance in resources speaks for itself, and it is precisely that imbalance which the consumer agency bill seeks to redress.

On the matter of resources, I should add that the budget of what the chamber is fond of calling a "super agency" is only $15 million per year. The chamber of commerce lobbying budget in 1975 was $20 million. Proctor and Gamble, another leading opponent, spent $365 million last year on advertising alone—25 times the ACP's proposed budget. And ACP's cost is equal to the cost of running the Pentagon for about 90 minutes.

In all of the catch phrases about the bill, we sometimes lose track of how it all affects us as individual consumers. Let me give you an example.

Suppose the Federal Energy Administration is considering whether to remove price and allocation controls from home heating oil—who among us could go before the FEA and offer a technically adequate presentation of why this should or should not occur? Who among us could marshal an argument to counter that presented by the oil company lawyers, economists, statisticians, and research specialists armed with graphs and charts and mounds of data. Who among us could formulate viable alternatives to those proposed by the regulated industry? And what is wrong with having the regulators listen to another point of view?

Let me turn from the chamber and its distortions to another well-financed and visible opponent of the consumer agency: The business roundable. This group of Fortune 500 companies carries considerable weight around this town, as you well know. Recently, they hired Leon Jaworski to help lobby against this bill. I wonder what has happened to Leon Jaworski. I've had great respect for this man. Our country owes him a great debt. But, for the life of me, I can't understand how he could misread our proposed law.

In his capacity as counsel to the Roundtable, Mr. Jaworski sent a letter to every member of the House Government Operations Committee outlining his concerns about the ACP bill. The Jaworski letter pictures the ACP as a kind of Gorgon with authority so broad that "the stability and effectiveness of Government" would be threatened by it. Jaworski also said that the proposed agency—which I remind you has no regulatory authority—would wield "practically limitless statutory authority." I'm certainly not denying Mr. Jaworski's right to select any client he chooses. I'm not a lawyer, but it seems to me that he's really stretching on that one.

Ironically, the lobbying against this bill shows why the bill is necessary. Every member of the 43-member government operations committee—which this week approved the bill by a single vote—was barraged with phone calls, visits and constituent letters parroting the fallacious arguments which had spewed forth efficiently from corporate lobbying headquarters in Washington to their congressional districts.

A consumer voice should also be heard when the Federal Government considers air fares, backhaul restrictions for ground transportation of consumer goods, and deceptive advertising which confuses and misleads consumers. A consumer voice should be heard in complex rate-making proceedings and in proceedings where safety standards for consumer goods are being considered.

When I took this job, President Carter stressed to me his commitment to making Government more efficient and more responsive to consumers. This legislation is a crucial part of his program to reorganize Federal activities and to give consumers a stronger voice in Government decisionmaking. We have a tough battle ahead but we intend to win. I hope that each of you will be an active soldier in this battle. Mark Twain once said, "when angry, count to four; when very angry swear." To that I would add, "when extremely angry, grit your teeth, gather your forces and win on the merits." With your help, that is exactly what we intend to do.

CAMPBELL COUNTY, TENN., BLACK LUNG CLINIC

HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. DUNCAN of Tennessee. Mr. Speaker, as a longtime supporter of improved benefits for those who suffer from "Black Lung Disease." I commend to my colleagues in the House the following article which appeared in the May 1, 1977, edition of the Knoxville News Sentinel.

The article describes the outstanding

care the Campbell County Black Lung Clinic is providing to coal miners who suffer from this dread disease.

I applaud the men and women who work at the Campbell County Clinic for their service to their fellow man and reaffirm my commitment to foster legislation which will help relieve the great suffering which is brought about by black lung.

CAMPBELL COUNTY BLACK LUNG CLINIC OFFERS COAL MINERS ROOM TO BREATHE

(By Willard Yarbrough)

JACKSBORO.—Campbell County has abundant clean air but men with coal-mining backgrounds at times find it difficult to breathe.

They are victims of the industry's major occupational health hazard, pneumoconiosis. The illness is commonly called "black lung" because coal dust settling in the lungs not only reduces breathing capacity, but actually turns them black.

The Jacksboro Black Lung Health Center is treating hundreds of ex-miners, examining others for black lung symptoms, and teaching victims how to live with their illness.

"Press this pillow into your tummy and exhale all air possible," nurse Jane Davis told black lung victim Columbus McGhee in a demonstration at the mobile home-center. "Now breathe deeply through your nose, purse your lips and breathe out slowly."

Mrs. Davis explained that black lung victims must force themselves to breathe. They are taught at the clinic and disciplined to continue therapy at home.

Louise Watkins, a licensed practical nurse, rolled McGhee onto his stomach, and beat a staccato on his back with her open palms.

"This treatment helps a victim loosen the mucus in his lungs so he can expel it, making more room for air in breathing," she said.

Black lung victims also are taught how to cough. Family members are likewise trained for the home therapy. Breathing exercises are recommended three times daily for 15-minute intervals.

An ex-miner told Bedford W. Bird he once tried to sleep by using two pillows for props, but he was so frightened he would suffocate during the night that he couldn't go to sleep. The miner underwent similar training for three months and now sleeps without waking, said Bird.

Bird is deputy director of the Department of Occupational Health with the United Mine Workers union and is in technical charge of the Jacksboro center.

McGhee is president of the La Follette Black Lung Association and has led demonstrations in these hills and in Washington on behalf of miners welfare and legislation to both protect victims' health and for quicker qualification for pensions. He says he wants red tape sliced so that victims can obtain pensions short of more than two years time.

"Unless a pending bill in Congress is approved, hundreds of pensioned miners stand to lose their income and thousands of others waiting for pensions will never live to receive theirs," he said.

"It's time to cut out this Government red tape and to provide for miners disabled by breathing coal dust in the mines. The miners and their dependents deserve better treatment," he added.

McGhee says the U.S. Department of Labor and other agencies responsible do not protect miners properly, saying that inspection lags as to coal dust residue breathed by miners and enforcement generally "is a farce."

Bird said the Black Lung Center here will close by November unless Congress adopts the Dent-Perkins Bill which carries a $10 million funding to continue the black lung centers. This center was founded 18 months ago, has examined 300 and administered 1550 treatments for men suffering respiratory ailments, he said.

Dr. Perry Huggin, respiratory expert who once directed Knoxville's East Tennessee Chest Clinic, is the center's medical director. He has detected black lung victims via X-rays performed by the Knoxville mobile unit (21 persons were X-rayed by the unit here one day this past week). His findings are subject to confirmation at the state's Knoxville clinic, but that doesn't necessarily guarantee a miner his black lung pension.

"Present Federal law requires a review both by the Labor Department and the coal operator," said Bird. "Standards are so rigid that it is difficult for two experts to agree that a miner is qualified for a pension. But the Dent-Perkins bill would ease this exactitude, trim red tape, and bring quicker decisions as to pensions."

Campbell County can count 1243 ex-miners who have been approved for black lung pensions, but there are many more claimants awaiting action. Anderson County has 726 approvals, 332 of them in Lake City; Roane has 495 with 302 of those living in Oliver Springs; Marion County 394 and Grundy County 392.

The Jacksboro Center, under direction of John Cruze, continues to detect and treat miners and ex-miners, along with anyone else seeking help, suffering from respiratory problems. Satellite clinics are held on various schedules, with medics including Dr. Huggin taking the program to Clairfield, Wynn-Habersham, Petros, Norma, Jellico and Briceville. Many patients come here from surrounding counties.

A three-member team follows leads on miners and their families, seeking them out at their remote homes to inform them of the program and to urge them to report for examination and treatment.

A board of directors, with membership primarily from within the Black Lung Association, is an advisory body for the Jacksboro Center. One is W. H. (Willie) Cooper, a retired miner who'll turn 80 in June.

"The center is providing great help to all of us," he said. "Somehow, Congress must find a way to keep it and others operating.

"I was a miner most of my life and realize the benefits of such care. My father, John L. Cooper, and Uncles Jimmy and Thomas Cooper, were among those 184 victims of the mine explosion at Fraterville in 1902. I remember as a boy hearing the explosion at Cross Mountain in 1911 that killed another 84 miners.

"Men risk their lives to produce coal. Those who do deserve all the consideration and welfare possible, particularly those men suffering from the black lung disease. Congress can't do too much for them and their families."

WELFARE REFORM WITHOUT INJUSTICE: A TOP AGENDA ITEM FOR THIS CONGRESS

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1977

Mr. KEMP. Mr. Speaker, earlier this year I participated in the extensive hearings on welfare reform conducted by the Secretary of Health, Education, and Welfare. Those hearings were the basis for the recommendations made by the Secretary to the President and for the subsequent proposals of the President.

With the exception of a welfare lobby, virtually everyone participating in those hearings expected reform to reduce the size of the welfare rolls and thereby provide improved benefits to the truly needy.

This is not going to happen under the administration's current proposals, for the guaranteed jobs provision President Carter announced would not take people off public dependency. These jobs are public service jobs just like those proposed in the discredited Humphrey-Hawkins bill of the last Congress. It is almost as if the President incorporated that bill into his proposals. Expanding Government and Government jobs is just not the answer to welfare problems.

The basis for what the President should have recommended is, by coincidence, found in the current issue of Modern Age, the quarterly review. Authored by Dr. Donald J. Devine, a professor of politics and government at the University of Maryland, and entitled, "Welfare Without Injustice," this essay constructs a frame of reference in which policymakers can decide how best to refashion the Nation's welfare system.

Welfare reform has to be a top-priority item for this Congress. The people expect it—as they should. I commend this article, therefore, to all my colleagues.

It follows:

WELFARE WITHOUT INJUSTICE

(By Donald J. Devine)

WELFARE WITH COERCION

The welfare state promises that a fully free society may be retained in its essentials if only the national government is given the single additional power of caring for those in need. This promise is alluring since it starts with a free and unhampered market to provide for the overwhelming number of individual preferences. It will only use the state to override these preferences with positive government intervention when these free decisions will lead to insufficient "food, safety, clothing, shelter, medical care, education, congenial employment or companionship" for the minority who are in need.

The promise, however, also has problems which are so manifest that they cannot be ignored. The best modern philosophical defense of the welfare state, consequently recognizes that in order to use positive government intervention for these purposes, it is necessary to abandon the "perfectionist perspective" which demands that no individual rights be overriden. It even admits that popular preferences must be overcome on occasion and that this could be abused so that "all sorts of tyrannies" could be excused. This defense expects that widespread understanding of who deserves welfare, how much they are due and whether real welfare has been provided will weigh against the negative possibilities and will control abuses; but this is certainly something to be tested rather than assumed.

Beyond the problem of whether real welfare is provided and whether this reaches those who deserve it, is the fundamental problem that coercion, including government coercion, can cause injury which is typically feared as the worst injustice which can be inflicted upon a society. Government injury may be done to those who are forced to contribute so that others may have more goods or services, or to those who are forced to behave in a certain manner so that others may have a congenial environment and social companionship. More critically, not only may those perceived to be giving be harmed but those perceived to be receiving also may be aggrieved—either because by stating that the problem has been solved by government alternative assistance is not given; or as a result of an injury from an intended or, more

often, an unintended consequence of this or another government policy.

As one looks at national government welfare involvement in the United States, moreover, injury seems a characteristic aspect of its conception and implementation in virtually every area of policy. Taking the areas of involvement given above as ones necessary for welfare state involvement in reverse order, much has been said already in the area of government attempts to force companionship—especially in the area of race relations. It perhaps is sufficient to add here merely that three-fourths of whites are totally opposed to forced busing, that the whites affected by these policies have become enranged by them, and that they have reacted to what they perceive as government-enacted injustice against them even in violent ways. At the same time, while blacks are the one group in society which will support forced busing when given no other alternatives, only 6 percent of blacks support it when given less coercive alternatives. Indeed, in one study of blacks in Los Angeles where a sample was given a wide range of choices on how integration should be achieved, only 3 percent chose private coercion and only 19 percent chose government at all while 56 percent thought that voluntary means would achieve integration best. The welfare state, nonetheless, routinely continues to coerce companionship in the name of better welfare for all when it is approved by almost no one.

Much of the justification of the welfare state has been that it guarantees employment. Besides the fact that when one looks at employment percentages since 1900 unemployment does not seem to have been much if any lower since the welfare state began, it is clear that the unemployment insurance laws themselves (and many others as well) create disincentives for employment. Government job training programs, moreover, are very expensive and the best of them increase earnings very little even for those few who complete the programs. Most importantly, the minimum wage laws imposed in the name of better employment increase unemployment especially among the poor, the young and minority groups since they do not allow employers to offer or potential employees to accept wages lower than the artificial minimum even if both wish to do so. This is most unjust for the unskilled young since it does not allow them to engage in apprentice programs which cannot economically afford higher immediate salary but which can pay better over the long run.

By and large education is a relatively new area for extensive involvement by the national government but expenditures already total near thirty billion dollars. It is doubtful that this national involvement has increased educational quality, though, as it appears that beyond a certain threshold, increased expenditures do not assist education. Yet increased centralization does lead to a uniformity of education which not only frustrates innovation but which also may assault the values of cultural minorities. Indeed, the major monetary effect of increased national involvement appears to be higher rewards to already advantaged teachers, educational administrators and contractors. Expenditures for higher education are much more unjust, moreover, as they redistribute wealth from the poor who cannot afford college and the uneducable who cannot benefit from it, towards the well-off upper middle classes who attend college and benefit extraordinarily in higher salaries, greater prestige and more secure self-esteem.

Medical care is also a relatively new area of great government involvement. Yet, the data which are available suggest that these programs also have resulted in injury. Thus, not only have all citizens been taxed over $30 billion since the 1966 beginning of the plan to pay for it but the greater demand encouraged by the program has increased medical costs to those taxed. Even more amazing, according to the testimony before Congress in 1973 of Karen Davis of the Brookings Institution, costs went up even for the elderly in whose benefit Medicare and Medicaid presumably were enacted. She estimated that the elderly paid $309.00 per capita for medical care in fiscal 1966 before Medicare and $404.00 in 1972 after six years of government "help"—including $67.00 in premiums for Medicaid.

There is a long history of government involvement in the area of providing shelter to the needy, however (indeed it was the premier welfare program of the New Deal), and this allows some detailed analysis over a good period of time. The earliest program of public housing, though, not only has been cost inefficient and has built only 822,000 units in over three decades but it also has destroyed 320,000 units (up to 1967). Moreover, when one adds 330,000 destroyed by building highways through urban neighborhoods using eminent domain, it appears that government social programs created little net gain for a tremendous financial investment at a great cost in destroying traditional neighborhoods—many of which had vibrant social patterns. Moreover, the programs aid very selectively, often on the basis of political favoritism. Consequently, only 7 percent of those eligible can live in the housing but those favored few receive a service which increases their income by the equivalent of a 30 percent addition. And this is partially subsidized by the 93 percent of the poor who do not receive the benefits.

The urban renewal program, at the same time, makes government a net destroyer of housing since over the period of its existence at a cost of $12 billion it has destroyed a half a million more units than it has built. More importantly, half of the units which were built went to relatively wealthly individuals at the expense of what was previously housing available to the poor. Furthermore, as government housing planners have come to realize these problems and have shifted to subsidizing private construction, housing costs have been increased 2.5 percent for all consumers through increased demand, while a subsidy of $5,440 is given to a very few people. Most importantly, in the name of making assistance available to the widest possible number of the "needy," eligibility requirements are set almost at the median income level. But those who are most attractive to lenders, not surprisingly, end up being those at the high end of the requirements level and this program also ends up aiding those less in need of assistance. Indeed, it would be difficult to plan a housing program which could do more harm than federal housing policy actually has done.

Perhaps the welfare state is most injurious in the areas of necessities such as food and clothing, however, since these are so basic to life. Policies of price supports for food and materials, accordingly, directly increase costs for basic necessities and programs which encourage less production do the same—in both cases with the costs falling especially hard on those least able to bear it. Prices are increased further by government regulations: for example, the DES ban was estimated to increase meat costs from 3 to 15 cents a pound; and when the courts held that certain goods fell under the agricultural exemption from ICC regulation, frozen fruit and vegetable prices fell an average of 19 percent and poultry prices fell 33 percent. Of most importance, the welfare state seems cruelest to those who are most defenseless and who usually only ask for the basic necessities. Thus, the aged are brutalized by the inflation intrinsic to the development of the welfare state as their savings are reduced to the degree that none but the most affluent can avoid becoming dependent upon the state even after a lifetime of self-sufficient earning and saving.

The only alternative which seems able to reduce these problems for the welfare state is to rely more upon direct payments of cash or vouchers to the needy either for single programs or through a general plan of negative income taxes. Yet, if separate programs are used, the inequities become overwhelming. Thus, a non-working woman on welfare with three children could obtain the equivalent income of $6,015 per year in 1972—or $1,400 more than the median income for women who work. Consequently, it is rational to shift to more general aid. But these programs (food stamps, for example) have many problems not the least of which is that they never reach anywhere near all those who are qualified nor do they achieve their purpose (*e.g.* increasing nutrition). So, the tendency is to switch to a negative income tax to cover all. Here, however, there is the problem of decreasing incentives to work since even when plans are devised to build-in incentives, there is decreased working. Thus, "successful" programs show more than a ten percent reduction in work. And any decrease in being self-supporting seems unjust as it takes self-respect from an individual and subjects him to the indignities of self-important social workers and insensitive bureaucrats.

In addition, it is relevant to consider the inefficiencies involved in these general programs as the working and middle classes pay the overwhelming percentage of these costs from their limited earnings. For years welfare administrators maintained that there were very few on welfare who were not eligible to receive it. But in late 1972 the new administrator of the Aid to Families with Dependent Children program demanded that local units end mispayments or bear the cost and within nine months—after an unbroken increase in the size of the program for two decades—there was a decrease of 342,000 eligibles. In addition, the mere size of a general program can mean that clerical errors have monumental effect as did the $800 million in overpayments made under the Supplemental Security Income program of the Social Security Administration in 1974–1975. Furthermore, there are even flagrant abuses as the clever find ways to subvert the intent of welfare programs—such as privileged college students collecting food stamps: *e.g.* one-third to one-half of all food recipients in Ingram County, Michigan were students at Michigan State University.

The greatest problem, though, is that politicians like to pass such programs which symbolically deal with problems but which, because of anticipated complaints from taxpayers, are not adequately funded. And the further removed they are from taxpayer scrutiny the more skillful politicians are able to confuse the issue and "succeed" with apparently costless programs. Accordingly, the national government old age social security insurance system was never funded as insurance under actuarial standards and benefits were covered by taxes on current workers. Because population demographics since the 1935 beginning of the program initially had many workers supporting one retiree, the program remained solvent, coverage was expanded and expensive new programs like Medicare even were added to the system, while benefits to those already in the program were increased continually.

During these years there were negative effects resulting from the fact that only a

small proportion of the program was backed by real reserves. Most actually were "obligations" of one agency of the federal government to pay another. Since actual savings were not used to cover the program, it has been estimated that overall savings were reduced about 38 percent and, consequently, that GNP was reduced by almost $120 billion as of 1974. As a result of this it is estimated that overall wages on the average were about 15 percent lower than they would have been without a social security program.

Financial irresponsibility has a way of catching up eventually, though. As the "baby boom" of the 1940's turns into the "elderly boom" of the end of the century and as the declining birth rate of the 1970's "zero population growth" period guarantees fewer worker-contributors at the same time, in thirty years or so there will only be two workers available to support one recipient. If the system accepts no new beneficiaries over the next seventy-five years planned outlays will exceed receipts by $2.5 trillion and it now looks like the system will become unbalanced as early as 1980. Unfortunately, this immense obligation will not be met from taxes alone and the system will probably not be reformed so that it becomes fiscally sound. The almost certain response of the politicians will be an incedible inflation which will create more injury to the aged of the future (*i.e.* today's young) than any possible benefits which have accrued to beneficiaries in the past. And the only response of the welfare state is to brand anyone who discusses the subject an extremist.

After four decades of experience, then, the promises of the welfare state have not been realized and, indeed, its costs have been immense. Not only have hundreds of billions of dollars in national wealth been squandered which could have been used for constructive social purposes but there have been staggering social costs as well. Hundreds of thousands of youth, and especially minority youth, have been made unemployed or underemployed through minimum wage and related employment laws; millions of children are taught values their parents object to and thousands of children are transported out of their neighborhoods while the poorer support the better-off to obtain more income and higher education. At the same time, almost everyone is forced to pay more dearly for medical and hospital care in the name of medical care for all while, at the cost of tens of billions of dollars, housing programs have resulted in less and more costly housing for the poor. In addition, even food and clothing essentials have been made more difficult to obtain for those most in need as a direct and indirect result of government regulation while everyone's savings have been ravaged by inflation.

This would seem to represent a tremendous regressiveness in societal welfare which would have been critical if the market sector had not produced great increases in wealth to offset many of the costs. More critically, it seems as if the problem is inherent in the idea of a welfare state as its rejection of the "perfectionist perspective" on individual welfare and rights appears to lead it too easily to become insensitive to personal and property rights of individuals. Moreover, the welfare state tool of central government planning simply seems too gross an information-gathering and implementation mechanism not to unintentionally injure many of its intended beneficiaries and, thus, to do injustice to them. The programs, in sum, just seem too sweeping to deal with the complexity of individual personal problems.

Finally, the expectation that using the concept of welfare to control what the state does fails because national legislators pass so many complex programs, voters find it impossible to evaluate their success of failure. Especially do national authorities have control of the money supply and can increase taxes through inflation without visible legislation—the inflation causing all sorts of difficult to discern economic dislocations and social inequities. And under the cover of this confusion, actual welfare state policy seems to create more injustice than it solves.

HOUSE OF REPRESENTATIVES—*Friday, May 13, 1977*

The House met at 11 o'clock a.m.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

As many as are led by the Spirit of God, they are the children of God.—Romans 8: 14.

Our Father God, with the dawning of a new day we pause in Thy presence to pray for guidance and wisdom as we live and labor through the coming hours. Be in our minds that only worthy thoughts may enter. Be on our lips that only words of truth may be spoken. Be alive in our hearts that only love may live in us.

Direct us, O Lord, in all our doings, with Thy most gracious favor and further us with Thy continual help, that in all our works begun, continued, and ended in Thee, we may glorify Thy holy name and finally, by Thy mercy, obtain everlasting life: through Jesus Christ our Lord. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 126. An act to reduce the hazards of earthquakes, and for other purposes.

REPORT ON RESOLUTION PROVIDING FOR THE CONSIDERATION OF H.R. 1139, NATIONAL SCHOOL LUNCH ACT AND CHILD NUTRITION AMENDMENTS OF 1977

Mr. MURPHY of Illinois, from the Committee on Rules, submitted the following privileged report (Rept. No. 95–304) on the resolution (H. Res. 569) providing for consideration of H.R. 1139, National School Lunch Act and Child Nutrition Amendments of 1977, which was referred to the House Calendar and ordered to be printed.

LEGISLATIVE PROGRAM

(Mr. RHODES asked and was given permission to address the House for 1 minute.)

Mr. RHODES. Mr. Speaker, I take this time to inquire of the majority leader as to the program for the balance of the week and next week.

Mr. WRIGHT. Mr. Speaker, will the distinguished minority leader yield?

Mr. RHODES. I am glad to yield to the distinguished majority leader.

Mr. WRIGHT. Mr. Speaker, it is our hope, I should say, to finish action on the countercyclical measure pending before us and if the time remains, to take up the conference report on the Tax Reduction and Simplification Act of 1977.

In any event, it is our plan to rise and adjourn at 3 o'clock today. If we have not completed action on the latter bill, it would have to be carried over until next week.

On Monday the House would meet at noon. We will consider six bills under suspension, as follows:

H.R. 4301, national sea grant program authorization;

H.R. 3849, authorization for National Advisory Committee on Oceans and Atmosphere (NACOA);

H.R. 5493—extend authorizations for Seal Beach, Great Dismal Swamp and San Francisco Bay Natural Wildlife Refuges;

H.R. 3348, increase authorization limitation for Canal Zone Biological Area;

H.R. 4140, extend provisions of Fisherman's Protective Act of 1967; and

H.R. 6823, Coast Guard authorization, fiscal year 1978.

Votes on suspensions will be withheld until debate is concluded on all suspensions.

If we do not consider or complete the conference report on H.R. 3477 today, we would then take that report up next.

We then would take up H.R. 1139, Amendments to National School Lunch Act, subject to a rule being granted.

On Tuesday, the House again would meet at noon and would call the Private Calendar.

We then would take up some 13 suspension bills:

H.R. 6138, Youth Employment and Training Act of 1977. This is a most important piece of legislation. It is a major building block in the congressional program this year;

H.R. 5742, Drug Enforcement Administration;

H.R. 3722, SEC Act authorizations, fiscal year's 1978–80;

H.R. 4992, authorization for Indian business development program;

H.R. 4746, saline water research extension;

H.R. 6752, Water Resources Planning Act amendment;

H.R. 2501, survey correction in Wyoming;

H.R. 5885, further river basin authorizations;

H.R. 6010, extension of aviation war risk insurance;

H.R. 6197, further authorizations for disaster relief;

H.R. 6401, further authorizations for deepwater ports;

H. Res. 322, direct Architect of Capitol to study possible use of solar energy for House Office Building complex; and

H.J. Res. 424, John F. Kennedy Library.

Votes on suspensions will be withheld until completion of debate on all suspensions.

Following that we would expect to take up the conference report on Senate Concurrent Resolution 19. That is the budget resolution.

On Wednesday the House would meet at 10 o'clock. It might be important at this point to remind the Members that our agreement early in the session was that we would follow a certain course through May 15. Next week will begin the second phase. Following May 15, on Wednesdays and Thursdays and Fridays, if there is a session on Friday, the House would meet at 10 a.m.

We would expect to come in at 10 a.m. on Wednesday, the 18th, and we would consider H.R. 6684, the International Security Assistance Act for fiscal year 1978. That is the military phase of the foreign aid program. Then we would consider H.R. 10, amendments to the Hatch Act. Both of those are subject to the granting of rules.

On Thursday again we would meet at 10 o'clock and consider H.R. 6111, the Juvenile Justice and Delinquency Prevention Act, subject to the granting of a rule.

Then the House would receive former Members of Congress on Thursday.

There will be no session on Friday of next week.

Conference reports may be brought up at any time and further program will be announced later.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. RHODES. I yield to the gentleman from Maryland.

Mr. BAUMAN. I thank the gentleman for yielding.

I just want to ask the majority leader, inasmuch as the Speaker made a very eloquent and proper warning to the House that committee should stop meeting during the House sessions, particularly out of town, and since we are going to the schedule of 10 o'clock sessions after May 15 for 3 days every week, would it be the intention of the leadership to discourage meetings of committees so that we can devote ourselves to floor activities? I noticed in the last 2 weeks that many committees were meeting during the 5-minute rule and floor absences were noticeable.

Mr. WRIGHT. If the distinguished minority leader would yield further, I thank the gentleman from Maryland for his quite accurate characterization of the Speaker's comments. The Speaker is always eloquent and always proper.

Mr. BAUMAN. I find him so.

Mr. WRIGHT. I think the Speaker's admonition was well taken. I think what the Speaker was saying was a reminder to all committees that under the budget process authorizing legislation that carries with it financial expenditure, authorizations must be reported from the committees by today. Next week that no longer obtains.

The committees always can meet earlier than 10 o'clock in the morning if they have business to transact on those days we go in early. We would hope that our meeting at 10 o'clock in the morning on 3 days each week will expedite the transaction of the business of the House and permit us to work our will upon this great volume of legislation which has emanated from the committees.

Mr. BAUMAN. If the gentleman will yield further, I will ask the majority leader, Do I then understand that there will be an effort to discourage committee meetings during the sessions of the House at least for the next phase of the legislative year?

Mr. WRIGHT. I think that is a fairly proper conclusion. There must perforce be exceptions, and there will be occasions, I am sure, on which committees will have to meet and will seek and gain the permission of the House to do so.

Mr. BAUMAN. I thank the gentleman.

Mr. RHODES. Mr. Speaker, I yield back the remainder of my time.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY NEXT

Mr. WRIGHT. Mr. Speaker, I ask uanimous consent that the business in order under the Calendar Wednesday rule on Wednesday next may be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

AUTHORIZING THE SPEAKER TO DECLARE RECESS ON THURSDAY, MAY 19, 1977, FOR THE PURPOSE OF RECEIVING FORMER MEMBERS

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that it be in order for the Speaker to declare a recess on Thursday, May 19, 1977, subject to the call of the Chair, for the purpose of receiving in this Chamber former Members of the House of Representatives.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

ADJOURNMENT OVER TO MONDAY, MAY 16, 1977

Mr. WRIGHT. Mr. Speaker, I ask unanimous consent that when the House adjourns today, it adjourn to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

INTERGOVERNMENTAL ANTIRECESSION ASSISTANCE ACT OF 1977

Mr. BROOKS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 6810) to amend and extend title II of Public Law 94-369, to establish a new title to the State and Local Fiscal Assistance Act of 1972, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from Texas (Mr. BROOKS).

The question was taken.

Mr. ASPIN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 322, nays 0, not voting 110, as follows:

Mr. DICKS changed his vote from "nay" to "yea."

So the motion was agreed to.

The result of the vote was announced as above recorded.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 6810, with Ms. HOLTZMAN in the chair.

The CHAIRMAN. When the Committee rose on Thursday, May 12, 1977, the committee amendment in the nature of a substitute had been considered as having been read and open to amendment at any point.

Are there any amendments to the committee amendment in the nature of a substitute?

AMENDMENT OFFERED BY MR. ASPIN

Mr. ASPIN. Madam Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ASPIN: Page 26, strike out line 1, and everything that follows through page 28, line 10, and insert in lieu thereof the following:

SEC. 3. (a) Section 203 of the Public Works Employment Act of 1976 is amended to read as follows:

"ALLOCATION

"SEC. 203. (a) IN GENERAL.—There shall be allocated for each State for each calendar quarter out of amounts appropriated out of section 202(b) for that quarter, an amount which bears the same ratio to the amount appropriated under that section for that period as the amount allocable to the State under subsection (b) bears to the sum allocable to all States under such subsection.

"(b) DETERMINATION OF ALLOCABLE AMOUNT.—

"(1) IN GENERAL.—For the purposes of subsection (a) the amount allocable to a State under this subsection for any calendar quarter is the amount which bears the same ratio to the amount appropriated as—

"(A) the aggregate taxes of that State, multiplied by the relative tax effort factor of that State, bears to—

"(B) the sum of the products determined under subparagraph (A) for all States,

except that—

"(i) the product determined under subparagraph (A) for the State described in subsection (e)(1)(B) shall be deemed to be equal to two-thirds of the product of the aggregate taxes of that State, multiplied by the relative tax effort factor of that State; and

"(ii) the product determined under subparagraph (A) for each State described in subsection (e)(1)(C) shall be deemed to be equal to the population of such State multiplied by the lowest per capita product (as determined under paragraph (6)) of any of the States described in subsection (e)(1)(A).

"(2) AGGREGATE TAXES OF A STATE.—For purposes of paragraph (1) the aggregate taxes of a State is the total taxes taken into account under paragraph (2) of section 109(c) of the State and Local Fiscal Assistance Act of 1972 for the most recent reporting year.

"(3) RELATIVE TAX EFFORT FACTOR.—For purposes of paragraph (1) the relative tax effort factor of a State is a percentage equal to the quotient of the general tax effort factor of that State divided by the average tax effort factor for all the States described in subsection (e)(1)(A) and (B).

"(4) GENERAL TAX EFFORT FACTOR.—The general tax effort factor of any State is the general tax effort factor determined under section 109(c)(1)(A) of the State and Local Fiscal Assistance Act of 1972 for the most recent entitlement period.

"(5) AVERAGE TAX EFFORT FACTOR.—The average tax effort factor for all the States is equal to the sum of the general tax effort factors of all the States described in subsection (e)(1)(A) and (B) divided by the number of States described in subsection (e)(1)(A) and (B).

"(6) Lowest per capita product.—The lowest per capita product for any State described in subsection (e)(1)(A) is the smallest quotient resulting from the division of—

"(A) each product determined under paragraph (1)(A) for each such State; by

"(B) the population of such State.

"(c) DIVISION BETWEEN STATE AND UNITS OF LOCAL GOVERNMENT.—Division between State governments and units of local government.—The State government shall be entitled to receive one-third of the amount allocated to that State under subsection (a) for each calendar quarter. Except as provided in subsection (f), the remaining portion of each State's allocation shall be distributed among the units of local government of that State as provided in subsection (d).

"(d) LOCAL ALLOCATION.—

"(1) Indian tribes and Alaskan native villages.—If within a State there is an Indian tribe or Alaskan native village which has a recognized governing body which performs substantial governmental functions, then there shall be allocated to such tribe or village a portion of the amount allocated to the units of local government of such State for the calendar quarter which bears the same ratio to such amount as the population of that tribe or village within that State bears to the population of that State.

"(2) ALLOCATION TO UNITS OF LOCAL GOVERNMENT.—The amount remaining for allocation within a State after the application of paragraph (1) shall be allocated among the units of local government located in that State so that each unit of local government will receive an amount which bears the same ratio to the total amount to be allocated to all units in such State as—

"(A) the aggregate adjusted taxes of that local unit of government, multiplied by the relative tax effort factor of that local unit of government, bears to—

"(B) the sum of the products determined under subparagraph (A) for all units of local government located in that State.

"(3) AGGREGATE ADJUSTED TAXES OF A UNIT OF LOCAL GOVERNMENT.—For purposes of paragraph (2) the aggregate taxes of a unit of local government is the total nonschool taxes taken into account under paragraph (2) of section 109(e) of the State and Local Fiscal Assistance Act of 1972 for the most recent reporting year.

"(4) RELATIVE TAX EFFORT FACTOR.—For purposes of paragraph (2) the relative tax effort factor of a unit of local government is a percentage equal to the quotient of the general tax effort factor of that unit of local government divided by the average tax effort factor of all units of local government within that State.

"(5) GENERAL TAX EFFORT FACTOR.—The general tax effort factor of any unit of local government is the general tax effort factor determined under section 109(e)(1) of the State and Local Fiscal Assistance Act of 1972 for the most recent entitlement period.

"(6) AVERAGE TAX EFFORT FACTOR.—The average tax effort factor for all the units of local government within a State is equal to the sum of the general tax effort factors of all units of local government within the State divided by the number of units of local government within the State.

"(e) GOVERNMENTAL DEFINITIONS AND RELATED RULES.—For purposes of this title—

"(1) STATE.—The term 'State' means—

"(A) each of the fifty States;

"(B) the District of Columbia; and

"(C) each of the following: Puerto Rico, Guam, the Virgin Islands, and American Samoa.

"(2) UNITS OF LOCAL GOVERNMENT.—The term 'unit of local government' means the government of a county, municipality, township, or other unit of government below the State which is a unit of general government (determined on the basis of the same principles as are used by the Bureau of the Census for general statistical purposes).

"(3) TOWNSHIPS.—The term 'township' includes equivalent subdivisions of government having different designations (such as "towns"), and shall be determined on the basis of the same principles as are used by the Bureau of the Census for general statistical purposes.

"(4) UNITS OF LOCAL GOVERNMENT LOCATED IN LARGER ENTITY.—A unit of local government shall be treated as located in a larger entity if part or all of its geographic area is located in the larger entity.

"(5) ONLY PART OF UNIT LOCATED IN LARGER ENTITY.—If only part of a unit of local government is located in a large entity, such part shall be treated for allocation purposes as a separate unit of local government, and all computations shall, except as otherwise provided in regulations, be made on the basis of the ratio which the estimated population of such part bears to the population of the entirety of such unit.

"(6) BOUNDARY CHANGES, GOVERNMENTAL REORGANIZATION, ETC.—If, by reason of boundary line changes, by reason of State statutory or constitutional changes, by reason of annexations or other governmental reorganizations, or by reason of other circumstances, the application of any provision of this section to units of local government does not carry out the purposes of this subtitle, the application of such provision shall be made, under regulations prescribed by the Secretary, in a manner which is consistent with such purposes.

"(f) Limitation as to Territorial Governments.—The amount available under subsection (c) for allocation to the local governments of each of the States as defined in subsection (e)(1)(C) shall be held by the Secretary in trust until such time as the government of such State submits an allocation plan which has been approved by the legislature of such State, which meets the requirements set forth in section 206(a), and which is approved by the Secretary under the provisions of section 206(b). The Secretary may provide by regulation for the development of an alternative definition of local government for each such State and take such other measures as may be necessary to assist each such State in developing such an allocation plan.".

(b) Section 206(a)(2) of the Public Works Employment Act of 1976 (42 U.S.C. 6726(a)(2)) is amended by striking out "unemployment rate data" and inserting in lieu thereof "aggregate adjusted tax rate data".

Redesignate sections 5, 6, and 7 as sections 4, 5, and 6, respectively.

Mr. ASPIN (during the reading). Madam Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

POINT OF ORDER

Mr. ROSENTHAL. Madam Chairman, I make a point of order against the amendment.

The CHAIRMAN. The gentleman will state his point of order.

Mr. ROSENTHAL. Madam Chairman, the amendment changes the formula in a bill that is described as establishing a new title to the State and Local Fiscal Assistance Act of 1972.

In the present law, which is commonly known as the countercyclical bill, the Congress enunciated as among its purposes to deal with recession phenomena, and the act is cited as the Intergovernmental Antirecession Assistance Act of 1977.

It originally came from the Public Works Employment Act of 1976 (42 U.S.C. 6722(b)).

The formula that is used, beginning on page 26, line 4 says: "Applicable State Percentage."

On lines 20 and 21 on page 26 it says:

Subparagraph (A) of section 203(b)(3) of the Public Works Employment Act—

On page 27, line 3 it says:

of the Public Works Employment Act—

On line 19 on page 27 it says:

of the Public Works Employment Act—

And on line 25, page 27, it says:

of the Public Works Employment Act—

Et cetera.

The formula for State percentages and allocations under the existing bill is based on unemployment in given areas of the country. The bill is founded on a response to unemployment in communities around the country and, thus, the applicable State percentages are based on unemployment.

The amendment offered by the gentleman from Wisconsin (Mr. ASPIN) changes the very foundation of that formula and takes it away from the unemployment underpinning and changes it to something else. The gentleman wants to change this bill that is for the local fiscal assistance based on the Public Works Employment Act of 1976 and put in a new basis for allocation of the formula.

I am not sure I know what his basis is, whether it is the size of the community, the size of the people in the community, or the dress of the people in the community, but it has nothing to do with unemployment upon which this bill is founded.

The gentleman also has other irrelevant bases for changing the formula.

Thus I would urge, Madam Chairman, that a point of order lies against the amendment offered by the gentleman from Wisconsin (Mr. ASPIN).

The CHAIRMAN. Does the gentleman from Wisconsin desire to be heard upon the point of order?

Mr. ASPIN. Madam Chairman, I do desire to be heard upon the point of order.

The CHAIRMAN. The gentleman from Wisconsin is recognized.

Mr. ASPIN. I believe that the points raised by the gentleman from New York (Mr. ROSENTHAL) clearly do not constitute a point of order.

The purpose of this bill is to provide countercyclical funds. The trigger in the bill is still unemployment. The amounts of money in this bill are determined by the unemployment rate. Beginning October 1, 1977, the amount of money available for distribution to States and localities will be determined upon the unemployment rate. How many percentages or how many tenths of a percent it is above 6 percent; so the unemployment principle is still in the bill.

Once the percent has been determined this formula does indeed change the distribution formula and changes it in a way in which I believe it is much better—as I will explain when I have a chance to talk about my amendment—because the unemployment rate is already below the national average and is almost useless.

The CHAIRMAN. Does the gentleman from New York desire to be heard further on his point of order?

Mr. ROSENTHAL. I do, Madam Chairman.

Very briefly, Madam Chairman, the amendment offered by the gentleman from Wisconsin (Mr. ASPIN) is founded on the tax effort of communities. It is to that response that I feel and believe a point of order would lie because it does not deal with the basic fundamentals of the existing law which is based on the percentage of unemployment in various communities.

The point that the gentleman is making is clearly not a point of order against the amendment. The amendment does not apply unless the unemployment rate is above 6 percent. The triggering-in is still unemployment. It distributes the money differently. I understand the concern of the gentleman from New York. Under the present formula New York City gets one-quarter of the money, and what we are trying to do is change the formula a little bit. I understand the gentleman's concern, but why does he not just vote against the amendment and not raise a point of order?

The CHAIRMAN. The Chair is ready to rule on the point of order.

The Chair finds, first, that the amendment offered by the gentleman from Wisconsin (Mr. ASPIN) amends the same section of the law as the committee amendment; and, second, finds that the amendment is germane under the precedents since it accomplishes the same result by a different but related method. The use of a different method to accomplish the same result does not in any way offend the germaneness doctrine. The amendment does not remove the unemployment factor which triggers the authorization in the committee bill. For that reason the point of order is overruled.

The gentleman from Wisconsin (Mr. ASPIN) had asked unanimous consent that his amendment be considered as read and printed in the RECORD.

Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. ASPIN. Madam Chairman, the amendment that I am offering here is an amendment on not only my behalf but also on behalf of the gentleman from Iowa (Mr. BLOUIN) and the gentleman from Illinois (Mr. CORCORAN). We are offering this amendment which is an amendment to change the distribution formula in the bill. It does not change the amount of money to be distributed in any way. The amount of money stays the same. It does not change the number of quarters over which this money will be spent. That stays the same in either case. What it does change is the way in which the money is allocated, and the amendment changes it to base the distribution on the basis of tax effort rather than on the basis which is in the bill, which is the totally inadequate unemployment statistics which are in the bill.

The reason why the formula which is in the bill at this time is inadequate is because it is based upon unemployment statistics, and unemployment statistics below the national level are notoriously inaccurate. The national unemployment rate is probably fairly adequate. Below the national level by State, by city, it becomes less accurate. As the Bureau of Labor Statistics has testified before our subcommittee, unemployment statistics

for small communities, anything less than 50,000, is almost a random number.

The second reason why the unemployment rate is an inadequate measure is that what we are trying to deal with here is countercyclical funds. We are trying to deal with recessions. We are trying to stimulate the economy at the time of a recession, but the unemployment statistics do not distinguish between layoffs due to the recession and structural unemployment. So this distribution formula confuses the recession with the structural problems and sends the money to the places where the structural problems exist rather than to the places where the recession is causing the layoffs. It is important to remember what the Senate Committee on Government Operations said in their report, and I quote:

> The purpose of countercyclical assistance is neither to correct the problem of structural unemployment in certain areas of the country nor to redistribute tax dollars from affluent to poor jurisidctions.

We have other programs to do those. The purpose of this program, the countercyclical program, is to fight recession and stimulate the economy. It is the purpose of this countercyclical assistance, which is at the heart of the reason why we are offering this amendment based upon tax effort as the best way to distribute the funds.

When a country goes into a recession, the taxing and financing policies of State and local governments exacerbate the recession. What happens is that they get less money and they have more increased demand for services at the local level. When that happens, local governments are forced to either cut back on services and/or raise taxes. That exacerbates the recession and makes the recession worse. So the purpose of countercyclical funds is to send the money into these places which are forced to cut back on these services and/or to raise taxes in order to counter that effect, so that we do not make it worse. That is the purpose of countercyclical funds.

If we distribute money on the tax effort basis, that will be the way to get the money to where it will be most likely spent. What happens is that the places which have a high tax effort also have a high level of services. Those are the places most likely to cut back on the services. We do not want them to cut back on the services. We do not want them to raise taxes. We want them to have the services and the taxes kept at the same level. That is why we distribute money according to this method.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

(By unanimous consent, Mr. ASPIN was allowed to proceed for an additional 3 minutes.)

Mr. ASPIN. Madam Chairman, what places will be helped with this new distribution formula? First of all, major cities will be helped if we adopt this new distribution formula. Out of 31 major cities in the country, 24 will be helped under the formula, as opposed to 7 helped under the bill the way it is.

Second, it will distribute the money more equitably throughout the country. Under the present formula, New York State gets 22 percent of the money. Nebraska gets zero. North Dakota gets zero. South Dakota gets zero. Wyoming gets zero.

Madam Chairman, how can we justify such a distribution formula when there are 50 States. All 50 States are more or less to some degree feeling the effect of the recession. How can we justify a program which sends almost one-quarter of the money to just one State? It cannot be defended. It is not right.

Under the proposed amendment, New York does very, very well. It is still No. 1, but we should not have a distribution formula which sends one-quarter of the money to one State in the Union.

Madam Chairman, the formula I am proposing will correct that imbalance. It is not a formula that has just been picked out of a hat. It is a formula, the basis for which is in the revenue sharing formula. It is a formula which the subcommittee recommended. The Subcommittee of the Committee on Government Operations held hearings on it, had extensive staff studies on the subject, and decided that that was the formula that was the best. When it got to the full committee, in the shuffle the formula was changed; but I think that the original subcommittee formula was the better formula.

Madam Chairman, I urge that we put that formula back in the bill by adopting this amendment.

Mr. JOHN L. BURTON. Madam Chairman, will the gentleman yield?

Mr. ASPIN. I yield to the gentleman from California.

Mr. JOHN L. BURTON. Madam Chairman, just one question on tax effort. Local government tax effort is basically a property tax. How does that suffer in a recession? The tax base, unless the businesses close down, the property tax efforts are not really relevant.

Mr. ASPIN. Yes; but the businesses do close down.

Mr. JOHN L. BURTON. Not that much.

Mr. ASPIN. Yes it does. The property tax does drop off when we get a recession. Businesses go out of business. People just stop paying their taxes. Some of them go delinquent and their property gets taken away; but property taxes, not as much as the income taxes, but property taxes decline in a time of recession.

Mr. JOHN L. BURTON. But certainly not as much as income tax or excise tax or sales tax.

Mr. ASPIN. That is true.

Mr. JOHN L. BURTON. Madam Chairman, I thank the gentleman.

Mr. ROSENTHAL. Madam Chairman, I rise in opposition to the amendment.

Madam Chairman, I do want to correct the record in one instance. First, under the Aspin formula New York City would get more money than under the committee formula, so that I want the gentleman to understand that my interest is somewhat broader than the gentleman from Wisconsin would indicate.

The Aspin amendment actually does violence to the whole bill, the thrust of the bill, and does violence to the administration's efforts at an economic stimulus package. It is the committee bill that is supported by the Secretary of the Treasury and the President for very, very good reasons.

The Aspin amendment lifts unemployment out of the formula used to distribute the countercyclical funds, and replaces unemployment by taxes collected and by tax effort. In other words, at a time when the Nation's unemployment rates stand at 7 percent, with more than 6.7 million Americans out of work, the Aspin amendment would disregard unemployment in assessing the State or local economy. The arguments in support of Mr. ASPIN's amendment are that it is unfair that New York would get 21 point some percent of the money; that unemployment figures are inaccurate: that unemployment is not a good indicator of the impact of recession; and tax effort is a better indicator.

The committee, in adopting this formula which the other body adopted, felt that the money ought to go where the people are unemployed because under the Aspin formula Montgomery County, Md., with 3 percent unemployment, would get the same amount of money per capita as Oakland, Calif., with 13 percent unemployment. In general terms, the Aspin amendment would distribute almost 25 percent of the total money to areas with unemployment of less than 6 percent, and 10 percent to areas with unemployment of less than 4.5 percent.

It does violence to the whole program, and while there has been some imprecision in unemployment figures in communities of less than 50,000, Dr. George Peterson, director of the public finance programs of the Urban Institute testified before our subcommittee:

> The particular allocation formula in this program, I think, has shown to be very effective at reaching pockets of unemployment. It is much more effectively targeted toward this objective than is general revenue sharing or most of the other Federal aid programs.

The Aspin formula is the exact same formula as the general revenue sharing program Dr. Peterson was critical of. He continued:

> Although we can question whether unemployment has been an important cause of the fiscal distress of local areas, unemployment rates are highly and regularly associated with almost all other indicators of fiscal weakness.

When Dr. Shiskin, head of the Bureau of Labor Statistics, testified before the subcommittee, he referred to the fact that Congress uses unemployment statistics in a number of programs; in the CETA law of 1973, the Public Works Employment Act of 1976, and the Public Works and Economic Development Act of 1965. He suggested that there were 4,300 geographic locations where they collect available, dependable unemployment statistics every month. Now, the Aspin amendment does violence to what the Secretary of the Treasury testified in support of before the subcommittee. Mr. Blumenthal testified:

> It, therefore, seems to me to make a good deal of sense to relate this particular countercyclical mechanism to a trigger that measures the state of the economy—in this case, the unemployment approach.

Mr. ASPIN presumably would like to get some votes on this floor by suggesting that New York State would get 21.5 percent or 21.6 percent of the money. We would prefer not to get any of this money, the same way as the States he referred to.

The CHAIRMAN. The time of the gentleman from New York has expired.

(By unanimous consent Mr. ROSENTHAL was allowed to proceed for 2 additional minutes.)

The program was designed to deal with unemployment in places where it was. We would wish that the unemployment would go away in some of these major cities of the country, but it simply has not done that. While saying that unemployment is not a good indicator of the impact of a recession-related distress, high unemployment can result from structural or chronic problems not directly related to the recession, there is little doubt that a recession seriously aggravates such long-term problems.

Even if we assume that a city like Detroit would have 8-percent unemployment in the absence of a recession, it is the recession which explains the sharp rise in Detroit's unemployment to over 20 percent in 1975 and as much as 11.6 percent today. The same is true of cities such as Pittsburgh and Buffalo, with high chronic unemployment problems.

Tax effort, which the Aspin amendment would substitute for unemployment in the countercyclical formula, not only does not reflect recessionary pressures accurately, it does not even necessarily reflect economic distress. Many affluent suburbs, for example, have relatively high tax efforts due to the strong local demand for services and the ability of the populace to afford high taxes. These affluent areas, such as the ones I have already mentioned, would benefit substantially under the Aspin amendment.

So I would urge all of my colleagues to think seriously why the program is here, in the first place. It is here to deal with unemployment in chronically high unemployment areas. These are the areas that the money ought to go to, these are the areas that the distress is most acute. The Aspin amendment would substitute tax effort of a totally irrelevant formula that deals with these problems.

I urge the Members to support the administration and support the President in support of the countercyclical program and vote against the Aspin amendment.

Mr. PATTISON of New York. Madam Chairman, will the gentleman yield?

Mr. ROSENTHAL. I yield to the gentleman from New York (Mr. PATTISON).

Mr. PATTISON of New York. Madam Chairman, I congratulate the gentleman on his statement.

Madam Chairman, I rise in opposition to the amendment offered by my colleague, Mr. ASPIN. I have had a great deal of difficulty understanding the rationale for the amendment. It has been my understanding throughout the life of the program that its purpose was to provide funding for communities which are hard hit by the recession. The program was created to lessen the impact of the recession on State and local communities so that the communities would not be forced to take actions that undercut national economic recovery—reductions in services and tax increases.

Unemployment is an obvious indication of the recession's impact. To delete this factor from the program's formula, would be to take away the prime motivation behind it. It has been shown that the countercyclical aid program puts the money where the needs are. Over 75 percent of the funds have gone to communities with unemployment rates in excess of 8 percent and over 85 percent of the funds have been distributed to governments with unemployment rates above 7 percent. This proves that the formula is working well.

Unemployment is an important indication of a community's well-being. It is synonymous with need. As the law is written, where need is low, payments are not authorized. We must continue to target these funds in the way which we have found effective.

The Government Operations Committee has addressed this issue squarely. The committee members voted to reject this proposal even though in the majority of cases, their own districts were scheduled to benefit under the Aspin suggestion. I applaud my colleagues who would not forfeit the benefits for the Nation because of parochial interests. I must agree with the committee and urge my colleagues to defeat this proposal.

Mr. WYDLER. Madam Chairman, I move to strike the requisite number of words, and I rise in opposition to the Aspin amendment.

Madam Chairman, what we are actually being asked to do here today with the Aspin amendment is to make a massive determination that because we have some trouble with some of the statistics relating to unemployment, we are from this day forward not going to use unemployment figures as a measure of the need of the communities around this Nation for Federal aid and help. If unemployment is not an accurate statistic for this program, then of course it would logically follow that it would not be an accurate statistic for any Federal program.

The gentleman from Wisconsin (Mr. ASPIN) has stated his position on this matter, saying that unemployment is not reliable and it should not be a method and the means by which we distribute these funds.

I disagree with him. I sat on the subcommittee as the ranking Republican and, actually, the bill we have before us, the committee bill, is my bill. It was an amendment that I offered in the committee, a substitute amendment.

I find myself in the odd position of being in agreement and supporting the administration on this matter.

I have in my hand a letter that only came to me today, from the Secretary of the Treasury, Mr. Blumenthal, in which he disagrees with the gentleman from Wisconsin (Mr. ASPIN). Mr. Blumenthal says the administration strongly supports all provisions of the committee bill. And he says, regarding the Aspin amendment, the following:

> Other formulae, most notably one based on local tax effort, have been suggested as substitutes for the unemployment based formula. These substitutes, particularly the tax effort formula, have one important shortcoming—they do not necessarily reflect in any way the impact of recession on State and local governments. To the extent that they measure need they measure "permanent need," that is present in good times and bad times, not the cyclical need caused by the recession. Whatever the value of these formulae for other general assistance programs, they are not appropriate for a countercyclical program.
>
> Therefore, any amendment to the Committee bill that would revise the local allocation formula from one based on unemployment to one based on tax effort would be contrary to the purpose of the legislation and thus, would be undesirable.

Of course, I understand the realities of the situation. Members are going to look at lists with column A and column B that are handed to them and decide how much money their particular districts or States may get, and they will make determinations.

In this particular case, the Aspin amendment would probably help my district much more than it would hurt it, but I think there is something more important that is involved here. That is the question of whether we are going to help those parts of the country that are still suffering from nagging unemployment.

Many of the areas of the country have recovered, and many are well on the road to recovery, but there are many that are not recovering. The Northeast section and the Midwest section of the country and the New York City area in particular are still plagued by heavy and very desperate unemployment.

So I am asking the Members to think about that and conclude that maybe in this one case we should consider something besides just the self-interest of our districts.

Not all areas will gain under the Aspin amendment by any means. Many will lose, and I am just going to give the Members an idea of some of the States that will lose under the Aspin amendment.

These are the States that will lose: Alabama, Alaska, Arizona, Arkansas, California, Connecticut, Delaware, the District of Columbia, Florida, Georgia, Hawaii, Louisiana, Maine, Michigan, Mississippi, New Jersey, New Mexico, New York, Ohio, Oregon, Pennsylvania, South Carolina, Vermont, Washington, and West Virginia.

Those are just some of the States that will lose under the Aspin formula.

Let me say to those Members who represent States that might gain under the Aspin formula that they may be running the danger of losing whatever aid their districts or their States are now getting. If we at this time try to come in and impose a totally new formula under this program, this matter is going to have to go back to the other body, and the new formula would have to be agreed to there. We all know that the current program has been passed by the other body. It is their program, and I understand from the proponents of it that they feel this program should be extended for the next year, and that all the Members who would be on the conference committee in this matter are strongly determined

to continue the present program, which is the committee bill.

If we come in with a totally new program, there is a good chance that we may end up with no program at all, in which case all of these column A's and column B's become meaningless. Then we will get nothing; nobody will get anything, and that may be the result of the decision we make today if we support the Aspin amendment.

So I ask the Members to consider that. I ask them also to consider this point: The gentleman from Wisconsin (Mr. ASPIN) made the argument as to why a tax effort is better than unemployment figures. He explained why it would help the cities and other areas. But let us listen to the groups that are opposed to the Aspin amendment and are in support of the committee bill: The National League of Cities, the National Association of Counties, the Conference of Mayors, the Governors' Conference, and the Association of State Legislators. Those people are out on the firing line; they know what the problem is and where it is.

Madam Chairman, I ask this House and this committee to consider that we will achieve our objectives by voting down the Aspin amendment.

Mr. MOORHEAD of Pennsylvania. Madam Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Madam Chairman, I rise in support of the committee bill.

I think it might be helpful to give the Members a little history about how this legislation came to pass. In the Joint Economic Committee's subcommittee which I chaired, we looked into the problem of what happens when a national recession occurs. We found that States and localities that were particularly hard hit by the recession—and, incidentally, ask any man in the street what recession is, and he says, "Unemployment"—we found that the areas of the communities that were hardest hit did one of three things and maybe all of them. They increased taxes to balance their budget, they cut back on employment and services, or they postponed capital improvements.

Madam Chairman, at the very time that it was national policy to stimulate the economy we were forcing the localities to take exactly the opposite course, and we found that it was those communities which had the highest unemployment that had to take the strongest action in opposition to the national effort.

Therefore, Madam Chairman, I introduced in this body the countercyclical antirecession bill, and we had 50 or 60 cosponsors. As it properly should have been, it was referred to the Committee on Government Operations.

However, the other body, not being bound by as strict rules as we are, attached the same bill to the public works bill. In conference, after a lengthy conference, the House conferees agreed to a limited extension of the countercyclical bill as part of the public works economic stimulus package; and the bill came back to this House.

Understandably, Madam Chairman, some of the members of the Committee on Government Operations, believing that this was an invasion of their jurisdiction, moved to strike title II, the countercyclical bill, from the package. Even though this House recognizes the importance of committee jurisdiction, that motion was defeated by a vote of 153 to 250. The debate was not over the merits of a bill based on unemployment, but it was based on a jurisdictional dispute.

Madam Chairman, let us look at the difference between the Aspin formula and the formula proposed in the committee bill. The Aspin formula is focused on something called tax effort.

Some of the wealthiest suburbs in the Nation which do not have to take these actions counter to the national policy of stimulating the economy will fare better than some of the hardest hit communities of this Nation because the hardest hit ones are the ones that have high unemployment. Therefore, the Aspin substitute is really a general revenue sharing bill unrelated to need, unrelated to the need to counter the antistimulus stance that the hard-hit localities and States are forced to take. Furthermore, the Aspin formula is based on a totally irrelevant consideration.

For those reasons and also for the procedural reasons suggested by the gentleman from New York, Madam Chairman, we should pass the committee bill, support the committee, support the administration, and support the various interest groups that the gentleman from New York (Mr. WYDLER) has listed.

Mr. CORCORAN of Illinois. Madam Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Madam Chairman, I am pleased to rise in support of the amendment sponsored by the gentleman from Wisconsin (Mr. ASPIN) and cosponsored by the gentleman from Iowa and myself.

This amendment focuses on the distribution formula contained in the bill as reported from committee and makes a significant change in the distribution formula for the current countercyclical program.

Madam Chairman, in testimony before our subcommittee, of which I am pleased to be a member, it was demonstrated that the current factor in the distribution of the funds is a faulty factor and very much in need of reform. Unemployment, which is the current factor in the distribution formula, is not a good measure of cyclical problems in the economy. An employment-based program disburses money into the economy regardless of cyclical indicators of economic activity. Furthermore, unemployment data is severely inadequate.

As Dr. Julius Shiskin, the Director of the Bureau of Labor Statistics, indicated in his testimony before our subcommittee, the unemployment rates for jurisdictions with populations of less than 50,000 are no better than random numbers. Furthermore, there are error rates for jurisdictions of 50,000 or more which are quite high.

Thus there are many local governments with unemployment problems that are not participating in the current program.

Finally, Madam Chairman, unemployment rates tend to be a lagging indicator of recession. As a consequence, any formula based on unemployment rates will not trigger in until the economy is well into a recession, and for many smaller communities they will never participate in the current program.

On the other hand, the formula based on tax effort is a good means of disbursing the funds into the communities where they can be used for the various purposes intended in the original design of the countercyclical program.

Taxes are a good indicator of government size and activity. Governments with higher taxes by definition have a greater taste for public services. As a consequence, giving economic stimulus money to these governments greatly increases the chances they will spend it and get the money into the economy. Also it is a good indicator of how well the local community is working to help itself.

Furthermore, tax effort tends to be positively correlated with need.

So, Madam Chairman, I urge that the committee adopt the Aspin-Blouin-Corcoran amendment because, in addition to the changes in the formula itself, it provides one other important benefit. I first of all wish to associate myself with the remarks of the gentleman from Wisconsin, (Mr. ASPIN) in talking about the benefit of the program as the gentleman provides in his amendment in terms of spurring the economy and moving the funds out to help as a countercyclical measure when we are in an unfortunate recession but, in addition to that it seems to me that we must recognize that State and local governments do need some assistance in time of a recession.

They, because of the increasingly elastic character of their tax system have a reduction in revenues when we are in a recession. At that point they are being hurt by something over which they have no control. In fact, a recession is more a factor of Federal Government policies than it is of State and local communities. As a result, in the opinion of the subcommittee it is better to have a more properly designed program which would provide some compensation to those State and local governments for their loss of revenue. Therefore, again, using the tax effort as a factor in the distribution of those funds, we provide a means of getting the money to those local governments which are in a position to use the money properly and in compensation for the problems that they are suffering during the course of the recession.

For these and other reasons I am pleased to submit this amendment, as a cosponsor, to the Members of the House and I ask for their support.

Mr. FASCELL. Madam Chairman, I move to strike the requisite number of words.

Madam Chairman, may I say at this time that I am in support of the committee bill and against the Aspin amendment. I take this time to ask some questions so that we can establish something on the record. I will address these questions to the proponents of the amendment offered by the gentleman from Wisconsin (Mr. ASPIN).

If the gentleman from Wisconsin (Mr. ASPIN) would be kind enough to help me

out on this, as I say, I am opposed to the amendment he has offered. The questions I ask are legitimate ones, and I do this in order to get the answers on the record.

First, Madam Chairman, in establishing the formula derived on a tax effort, as I understand it, it is taxes divided by income, is that correct?

Mr. ASPIN. That is correct.

Mr. FASCELL. As to the definition of taxes, as I understand it, it is taxes collected, but not levied, is that correct?

Mr. ASPIN. I am sorry, Madam Chairman, but I am not sure I understand the gentleman from Florida.

Mr. FASCELL. As an example, it is one thing for me to levy a tax, as a municipality on my books, but it is another thing to collect them.

Mr. ASPIN. That is correct.

Mr. FASCELL. As I understand taxes, in the formula for tax effort, in the gentleman's formula, this means taxes collected but not levied?

Mr. ASPIN. Taxes levied and collected, I am told.

Mr. FASCELL. It is taxes levied and collected?

Mr. ASPIN. That is what the gentleman says. It is imposed upon the local population.

Mr. FASCELL. You say taxes levied and collected, imposed upon the local population? Is that spelled out in the bill?

Mr. ASPIN. I believe it is.

Mr. FASCELL. Or is that a guideline adopted by ORS for revenue sharing?

Mr. WYDLER. Madam Chairman, will the gentleman yield to me? Possibly I can help.

Mr. FASCELL. I yield to the gentleman from New York.

Mr. WYDLER. I thank the gentleman for yielding.

I will just read the gentleman the language if that will help. Does he want me to?

Mr. FASCELL. I do not know. Does the gentleman mean the language in the bill?

Mr. WYDLER. Yes. It is a definition.

Mr. FASCELL. I know, but the point is where is the definition?

Mr. ASPIN. If the gentleman will yield further, if he will tell me where he is trying to go, maybe we can help him.

Mr. FASCELL. All I am trying to find out is what is the formula, No. 1; and, No. 2, what are the definitions which are used? Are the definitions in the bill? Are the definitions in the report? Are the definitions in the guidelines by ORS, or where are they? That is all I am trying to ask.

Mr. ASPIN. The problem that the gentleman is trying to point to is what?

Mr. FASCELL. I am, first, trying to find what is "tax effort" in the gentlemans' formula simply by looking at the definition. I have gotten two different answers already which worries me considerably, and before we get through, we are going to have about four answers. That is what worries me. Again I assure the gentleman all I am trying to do is to get it nailed down under the gentleman's best definition, not mine.

Mr. ASPIN. I am told here that the definition is the definition that was used in the general revenue sharing provisions.

Mr. FASCELL. All right, that helps some, but where is the definition? It is not in the law. Is it in the ORS guidelines?

Mr. ASPIN. No. In part it is in the law, 109(c)(2) of the State and Local Fiscal Assistance Act.

Mr. FASCELL. What does that mean in English?

Mr. ASPIN. That is where it is stated. If I can explain, basically what it is is it is all taxes. Taxes are defined as compulsory payments paid by people which are imposed by the State and by the local government.

Mr. FASCELL. That is a different definition, I will say to the gentleman. Wait a minute and let me finish, because this is a very important point. If it is taxes collected, for example, and not levied, we have a very great disparity. Obviously if we levy as per assessment rolls but cannot collect because our people do not have the money, and we are using taxes as part of the tax effort, I say we are distorting and discriminating. If, on the other hand, we are using taxes levied and collected, we have to average that out as part of the fraction used in your formula before we can get to the definition of income which I have not yet inquired about.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. FASCELL was allowed to proceed for 5 additional minutes.)

Mr. FASCELL. Definition in the law and understanding of it in legislative history is very important. Because if the definition is not in the law and it is down in the ORS guidelines, it could change tomorrow if they want to change it, depending on some assumption or statistical model. That is the point.

Mr. ASPIN. First of all, what we are talking about is a distribution, a ratio of taxes to the total income.

Mr. FASCELL. No; that is what the gentleman is talking about.

Mr. ASPIN. Yes, that is what I am talking about. But the gentleman is talking about a situation when a recession hits, then both are affected.

Mr. FASCELL. I am not arguing about how the formula works. I am simply trying to find out what the gentleman's formula is, first. We can then argue how it works. So all I need to know, again, is a definition of taxes under the gentleman's formula. I have heard that it is taxes levied. I have heard it is taxes collected. I have heard it is both. I am not doing this to embarrass anybody, believe me. It is just a serious problem that I am having. Anyway, let me make the point.

Mr. ASPIN. As I said before, it is taxes levied and collected which, as I understand, under the distinction of the gentleman from Florida, would be taxes collected.

Mr. FASCELL. All right. That is what I had understood originally. All right, if it is taxes collected and not levied, let me just make the point, and then I am going to leave it and go to the next part of the definition. If it is taxes collected and not levied—suppose I am a municipality. I am doing the best I know how. I levied all my taxes. I only collect 20 percent, because of economic conditions, people are unemployed and cannot pay taxes which were levied in good faith—why should that municipality be penalized?

Under your definition, all the gentleman is going to give me credit for in tax effort is what I am able to collect.

Mr. ASPIN. That is not true.

Mr. FASCELL. That is what the gentleman just got through saying.

Mr. ASPIN. Let me explain this. The ratio of taxes to income was determined before the recession hit. Before the recession they should be collecting a high percentage of tax levies.

Mr. FASCELL. I am not getting into that. All I am saying is that at whatever point we apply the formula, before, after, during, or in the middle, we are going only on taxes collected and not on taxes levied.

Next point: Does this include nontax sources or not?

Mr. ASPIN. What sources?

Mr. FASCELL. Does this include nontax revenues?

Mr. ASPIN. It includes nontax revenues if they are collected in a way which is not related to the use of the tax.

Mr. FASCELL. Translated, that means if we have a user tax, if we have a water tax, if we have a sewer tax, if we have a road tax, if we have a sanitary tax, which is city taxes, it is not counted in this formula.

Mr. ASPIN. If it is related to the degree of use it is not.

Mr. FASCELL. It is all user tax.

Mr. ASPIN. No, not all of them are related this way.

Mr. FASCELL. In my area, we do not have general revenue special taxes. We have either general revenue based on ad valorem, we have user taxes and we have special district user and ad valorem taxes.

Mr. ASPIN. Let me explain.

Mr. FASCELL. All I am saying is that nonsource taxes are not included in the computation of taxes, so all of us who collect special revenue based on user tax do not get credit for that in your formula.

Mr. ASPIN. That is not necessarily true. It depends on whether the levy changes with the amount of use and there are a number of special fees which are applied in which the rate does not change based upon use and this would be included as a tax under this bill so the gentleman is not correct.

Mr. FASCELL. I am correct, except in the case the gentleman states.

Madam Chairman, let me raise another problem as an example of why I think this new formula is highly discriminatory and I cannot support it. For example, Florida has a law that requires 100 percent assessment of actual value. Does every State have that? No.

Mr. ASPIN. It does not matter.

Mr. FASCELL. It does But why not? Does not that assessment and millage—which is levy go into the tax effort. We do have a law requiring assessment at 100 percent value.

Mr. ASPIN. It does not matter.

Mr. FASCELL. We do in Florida. I do not know what you do in Wisconsin.

Mr. ASPIN. Madam Chairman, will the gentleman yield further?

Mr. FASCELL. Wait a minute. Let me finish.

The CHAIRMAN. The time of the gentleman from Florida has expired.

(By unanimous consent, Mr. FASCELL was allowed to proceed for 1 additional minute.)

Mr. FASCELL. Madam Chairman, the other part of the problem is if a State has a cap on millage which a municipality may levy and requires 100-percent assessment, it receives unfair treatment as compared with a State that has no mandatory 100-percent assessment and unlimited millage. I think this is discriminatory.

Mr. MOFFETT. Madam Chairman, I move to strike the requisite number of words. I rise in opposition to the amendment.

Madam Chairman, it is obvious that the revenue sharing concept which has been knocking around this place for some time and has been endorsed any number of times is at work again.

It is also obvious, it seems to me, that whenever that concept is laid before this body, there is a tremendous temptation to embrace and adopt it. It is very natural that that is the case. This was the essence of the politics behind the New Federalism, and we all know it. Some of us who have accepted and approved revenue sharing provisions in the past have done so somewhat halfheartedly because of this because almost every Member here knows of examples in his or her district where categorical programs in a city, even in a medium-sized city, were dismantled and right nearby, 5 or 10 minutes away revenue sharing which was supposed to supplement these categorical programs gave a rather affluent town money it did not need, money it used to lower its tax rate or keep that tax rate where it was. There is no question that it puts us in a very difficult political position whenever revenue sharing is put before us.

But, I would ask my colleagues, what if we took a flood relief program and we said, "Well, do you have any floods in Indiana? Do you have any floods in Iowa?" and Members say, "No, we do not have any, but we would sure like to get some of that cash. Why don't we take some of that money and put it into road-building, because everybody needs roads."

That is exactly what is being proposed. It is as if we have a program to feed disadvantaged children, and we say to a Member, "Do you have disadvantaged children in your district" and they say, "We really do not have too many disadvantaged children, but let's put that in a program to feed everybody across the board."

A little more on point, if we took the unemployment compensation program and we said, "Well, in certain States they don't have many unemployed, so let us just turn it into a general welfare program." Take the general revenue sharing concept, take that loaf of bread, but do not take the biggest chunks of bread and give them to the people who are most hungry. Instead, break up the loaf and sprinkle it around the country without regard to who is hungry or undernourished. That is what we are doing today if we adopt the Aspin amendment.

We are taking this money away from the people who need it most, there is no question about that, and giving way to that admittedly tremendous temptation to grab the revenue sharing aspects and apply them. That is what we are confronted with, whether or not we can really act as a national body, a national legislature, and not act parochially.

Mr. KOCH. Madam Chairman, will the gentleman yield?

Mr. MOFFETT. I yield to the gentleman from New York.

Mr. KOCH. Madam Chairman, I want to commend the gentleman, and the arguments he makes, and I would like to expand upon them. I find a bizarre quality in the debate, introduced by those in support of the Aspin amendment. Logically if we talk about assisting dairy farmers, we talk about milk; if we talk about assisting people to get hydroelectric power, we talk about dams; if we talk about assisting the shipping industry, we talk about ships; if we talk about providing assistance for counties where the Federal Government owns and does not pay tax on vast park lands, we talk about the Western States. Those are the kinds of things we talk about to help in those situations. And those of us who do not have those problems do not ask to come to this Chamber and ask to share in the munificence of the Federal Government provided for such assistance.

Now, in this bill we are addressing the problems of the recession. Recession means unemployment, and it is outrageous to bring in other criteria for the very reasons that the gentleman in the well has expressed so well. If we want to talk about recession, we must talk about unemployment; we can not talk about tax effort.

The fact is that in areas that have the unemployment, they cannot raise their taxes. Now, as the gentleman from New York (Mr. ROSENTHAL) mentioned at the very outset, New York City stands to gain under the Aspin amendment, but there is something more important than simply gaining under the Aspin amendment. There is the question of principle.

The CHAIRMAN. The time of the gentleman from Connecticut has expired.

(On request of Mr. KOCH and by unanimous consent Mr. MOFFETT was allowed to proceed for 1 additional minute.)

Mr. KOCH. If, each time we come in here and there is legislation, are we then to take out a chart and say, "How do we do under this or that formula?" and then vote solely on that basis, or do we say, "What is best for this country?" If each of us is going to stand up on the floor and solely vote on how many dollars come into our districts on a parochial basis without regard to the national need then this Chamber will not be held in high repute by the general public, nor will it deserve the public's high regard.

Mr. MOFFETT. I would like to make one more point before I conclude. When I arrived here in 1974—and I think many of the other people who arrived in Congress then feel this way—I had the feeling that the regional cleavages were starting to be reduced, and that we were not going to have any longer that kind of balancing between the rural areas and the city areas. It was going to be, "Do we really work together?"

The kind of amendment being offered here today, with all due respect to the gentleman from Wisconsin, only further exacerbates and further puts us at a distance from one another.

The CHAIRMAN. The time of the gentleman from Connecticut has again expired.

(On request of Mr. DELLUMS and by unanimous consent, Mr. MOFFETT was allowed to proceed for 2 additional minutes.)

Mr. MOFFETT. I am not saying that this Member or any other Member acts selflessly with regard to one's district. We are all parochial to some degree, and we should be, but I know that this Member and some of the other Members are working to try to get support for the farm bills, for the Midwest and for other areas. All we ask is for some fairness when a program is created to deal with a very, very important problem which involves misery, heartache, increases in illness and crime. I am speaking of employment and its various manifestations. Let us resist the temptation to spread the wealth all over the country.

Mr. DELLUMS. Madam Chairman, will the gentleman yield?

Mr. MOFFETT. I yield to the gentleman from California (Mr. DELLUMS).

Mr. DELLUMS. I thank the gentleman for yielding.

Madam Chairman, I applaud the gentleman in the well for making what I consider a very profound statement. I also applaud the gentleman from New York (Mr. KOCH) for making such an eloquent statement.

Madam Chairman, I would like to add one comment to both of the arguments that have been made by these gentlemen.

I have in my hand a document which I assume was prepared by the people who are in support of the amendment offered by the gentleman from Wisconsin (Mr. ASPIN), and at the end are statistics based on various congressional districts. There is an asterisk after 247 of them and, if one looks at the footnote, it says, "Winner Under the Aspin Amendment." That is the mentality that is being displayed here: The "winner." Winning a few dollars.

We are talking about people in desperate need throughout the country. We are not talking about spreading the wealth on a general revenue basis unless we come here with a general revenue bill.

This is the tragic mentality here on the floor. Rather than focusing on that need, we call it the winners under the Aspin amendment. "I win under the program so I cannot afford to vote against it."

The CHAIRMAN. The time of the gentleman from Connecticut (Mr. MOFFETT) has expired.

(On request of Mr. DELLUMS and by

unanimous consent, Mr. MOFFETT was allowed to proceed for 2 additional minutes.)

Mr. DELLUMS. If the gentleman will yield further, I have heard several of my colleagues make the very same statement, that they think there is mischief in this particular amendment, that it does not go to the need that is clearly focused in this particular piece of legislation, but they cannot politically do anything about it because now there is a document printed which says their district is a winner, whether their district needs the money or not. Based upon the stated need of the legislation, I think that is tragic.

I did not come here to play parochial games, and I do not think any of us are elected to play parochial games. We are elected to do the national business of 215 million American people, and I do not think, provided with this kind of data, that anyone wins in the long run. Who loses? The poor people of New York?

I am saddened by the gentleman from Wisconsin, who picks out New York, because many of the more conservative Members of Congress over the last 2 or 3 years have beaten New York to death. And to see my liberal colleague taking on New York and making it another whipping boy on the floor of this House greatly saddens me.

Madam Chairman, I urge my colleagues to reject this amendment. It has no basis in this bill.

Mr. LEVITAS. Madam Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Madam Chairman, we have heard some very eloquent, indeed passionate, pleas on behalf of this amendment and in opposition to this amendment. Perhaps passion will carry the day. But I think it is appropriate to get a little logic and fact in the argument.

I am not sure logic or fact will carry the day, but I think at least for the record they ought to be here.

First of all, let us talk about the sectionalism argument that the gentleman from California and others have referred to. The support of the Aspin amendment should not be based on sectionalism.

Last Wednesday in this very body the gentleman from California (Mr. HANNAFORD) offered an amendment which would strike out the dual formula of the community development block grant programs.

That particular amendment might have favored the congressional district I represent in the State of Georgia and might have favored the South in general. But I voted against the Hannaford amendment because the aging cities in the Northeast need that additional assistance. In that instance, I felt they are entitled to that additional assistance, and I was prepared to support that position out of equity and national purpose so I voted against the Hannaford amendment, which would have benefited the Sun Belt.

But there comes a point where a little bit of equity needs to be injected in these programs, and we must recognize that an unemployed person in Iowa is as much unemployed as an unemployed person in New York City. What this present program, the one that we now have, ignores is the fact that the people who are suffering in pockets of unemployment in rural areas around this Nation are being totally ignored. I think the time has come to inject some equity into this program.

Madam Chairman, let us focus on the program we are talking about, the so-called title II countercyclical aid program that was forced down the throats of this body during the last Congress. This is a countercyclical program to aid those communities that are experiencing a decline because of the recession.

Does this program accomplish that? The gentleman from Pennsylvania (Mr. MOORHEAD) very constructively proposed that we need to have a countercyclical program, and I fully agree with the gentleman. But let us see what the General Accounting Office, an impartial arm of this Congress, said about this program, not some other program, to help cities, towns, and States, and to help the unemployed people in those areas. Let me quote the testimony of the General Accounting Office before our subcommittee:

> At the present time the manner in which the unemployment rate is used in the allocation formula appears to shift funds toward areas that are suffering from secular decline and have long-term high unemployment rates. Our preliminary analysis indicates that this may be the situation. However, further work is needed before a definitive conclusion can be drawn.

And they give us further evidence of that as follows:

> Our presumption is that the legislation was intended to concentrate on problems associated with the business cycle, rather than the long-term decline of areas. If so, and if our preliminary conclusions are borne out, the Congress may wish to reconsider the use of the unemployment rate as a basis for allocating funds. If the Congress also wishes to address the matter of assistance to jurisdictions experiencing secular decline, we believe a formula could be designed which would more directly recognize that problem.

Madam Chairman, that is what the General Accounting Office has said; that is not what I said. That is a fact. If we want to clutter our minds with facts, that is a fact we can use to begin to clutter our minds when we make this decision.

Mr. MOORHEAD of Pennsylvania. Madam Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from Pennsylvania.

Mr. MOORHEAD of Pennsylvania. Madam Chairman, I agree entirely with the gentleman when he says that the unemployed individual in Iowa suffers just as much as the unemployed individual in Pennsylvania, New York, or California. But if there are fewer unemployed in Iowa, then there should be less money because there are fewer people to take care of.

I do agree with the gentleman when he says that there may be some imperfections in the formula that can be cured, but the subcommittee did not attempt to cure the problem of unemployment formula; it went to an entirely different basis. The full committee recognized that perhaps we can improve this legislation and, therefore, directed the Secretary to come back with recommendations next year.

The CHAIRMAN. The time of the gentleman from Georgia (Mr. LEVITAS) has expired.

(By unanimous consent, Mr. LEVITAS was allowed to proceed for 3 additional minutes.)

Mr. LEVITAS. Madam Chairman, I thank the gentleman from Pennsylvania (Mr. MOORHEAD) for his constructive comments. I think that the subcommittee did endeavor to deal with this problem of secular decline. I believe that is what the formula of the gentleman from Wisconsin (Mr. ASPIN) does.

Let me just make the point that there are a lot of Members in this body who think that this program ought to be ended completely, not extended in any form, and that there is no need to continue this program as a countercyclical program.

There is an argument, on the other hand, that the cities and counties and some States have already budgeted this money for the next fiscal year, and that we need to sort of relieve their pain by slow withdrawal, as though we would phase out this program and treat it as we would a methadone program which might be used to get somebody off heroin. Maybe that is a justification for this program.

However, if we are going to continue the program, let us make it a program that really has some equity in countercyclical distribution. The cities, the counties, and the States of this Nation do need additional fiscal assistance, in my judgment. The problem of unemployment needs to be addressed. The present unemployment rate is far too high.

Madam Chairman, all I am suggesting to the Members is this—and I believe this is based on the facts—No. 1, this is not an effective economic stimulus. There are much better ways to get money out into the economy to help the unemployed. We are talking about overall unemployment rates.

But where is the money going? It is going to local governments. It is not going to the unemployed generally; it is going to State and local governments. So there are better ways to stimulate the economy. In terms of dealing with the unemployment trend, quite clearly the present unemployment rate formula is not working.

There are areas of this Nation where there are suffering human beings who cannot get jobs, who could benefit from this program, and are being totally ignored by a system which we have now built into title II.

Madam Chairman, all I am speaking of—and I really despair that the facts will carry the day—is that if we look at the facts, the present title II program should be done away with. We should

replace it with a better, more effective program, and I urge the Members to support my position.

Mr. BROOKS. Madam Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from Texas.

Mr. BROOKS. Madam Chairman, there has been some talk about this legislation's being supported by the President and some talk about the President's taking an adverse position toward this amendment. The President has proposed this program as being part of the economic stimulus package, and the Aspin amendment is totally consistent with that proposal.

The same number of dollars will be pumped into the economy on the Aspin proposal as would be pumped into it under the Wydler proposal. They are both triggered by the same factor.

The CHAIRMAN. The time of the gentleman from Georgia (Mr. LEVITAS) has expired.

(On request of Mr. BROOKS and by unanimous consent, Mr. LEVITAS was allowed to proceed for 1 additional minute.)

Mr. BROOKS. Madam Chairman, will the gentleman yield further?

Mr. LEVITAS. I yield to the gentleman from Texas.

Mr. BROOKS. Madam Chairman, to continue, the amendment would pump into the economy the same amount of money, being $1.25 billion up to $2.25 billion, depending on the level of unemployment.

Both are exactly the same, and I would say that the Aspin amendment, for that reason, is certainly not adverse to the President's economic stimulus package. It is just that it would make the distribution of those economic stimuli more equitable.

Mr. LEVITAS. Madam Chairman, I thank the gentleman for his comment and I agree that the Aspin amendment puts out the money the President has requested by economic stimulus.

I think the Aspin amendment will actually get more money out quicker because it gets into the hands of those communities which are able to distribute it more rapidly.

Mr. JENRETTE. Madam Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from South Carolina.

Mr. JENRETTE. Madam Chairman, I thank the gentleman for yielding.

To my distinguished chairman I would point to the letter from the Secretary of the Treasury, from which the gentleman from New York (Mr. WYDLER) read earlier.

I would like to read the last sentence very briefly:

> Therefore, any amendment to the Committee bill that would revise the local allocation formula from one based on unemployment to one based on tax effort would be contrary to the purpose of the legislation and, thus, would be undesirable.

Madam Chairman, I do not know who would speak for the administration any stronger than the Secretary of the Treasury. It is one of the three programs that the President wants to stimulate the economy, and I hope that the Aspin amendment will be defeated.

Mr. BLOUIN. Madam Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Madam Chairman, I ask unanimous consent that I may be permitted to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Iowa?

There was no objection.

The CHAIRMAN. The gentleman from Iowa (Mr. BLOUIN) is recognized for 10 minutes.

Mr. BLOUIN. Madam Chairman, my colleagues, the gentlemen from California and Connecticut, who are my very good friends, have tried a very interesting and politically wise ploy of trying to divide this House on this amendment along urban and rural lines.

I thought it ought to be made abundantly clear that the Aspin amendment simply does not follow that test.

Madam Chairman, of the 31 major urban centers in this country, 24 of them receive more dollars totally under the Aspin amendment, the Aspin formula, the subcommittee-approved approach, than under the approach finally approved by the committee. I think that is significant, because I think it proves the fallacy of the argument that is being put forth.

Madam Chairman, this amendment was not devised or was not dreamed up in an effort to pit one element of this country against another. It was not devised in an effort to shift money needlessly to one segment of the country instead of another.

It was devised to overcome the inequities of unemployment statistics which the present program is required to follow.

Madam Chairman, I do not know how many people in this body follow the problems of unemployment statistics; but when we get into that can of worms our eyes are opened pretty quickly. They are the most inaccurate and in many cases totally unacceptable ways of determining hurt that anyone could possibly devise.

In the majority of the States of this country those statistics simply do not reflect accurate recessionary hurt. In the majority of local communities, big and small, those statistics simply do not reflect hurt.

Madam Chairman, a tax effort approach is not perfect. The tax effort approach has some inherent inequities in it.

Mr. FASCELL mentioned very clearly that where there is a State that has decided not to carry its own weight, and where there is a State that has put an arbitrary, constitutional, or legal limit on the millage levy and said, we will not provide any more services that cost more beyond this level, they are hurt under the tax effort.

Mr. FASCELL. Lack of a millage CAP by itself does not mean anything, because if you do not have 100 percent valuation and assessment which we mandate by State law, if you are only assessing at 1, 10, 20, or 30 percent of actual value, then you are not doing anything, either because taxes collected under those conditions is not a true indicator of effort.

Mr. BLOUIN. What is the Florida millage?

Mr. FASCELL. Our CAP is 20 mills on 100 percent valuation.

Mr. BLOUIN. The millage rate in my own hometown in Iowa is 150 mills on 30 percent valuation.

Mr. ASPIN. Madam Chairman, will the gentleman yield?

Mr. BLOUIN. I yield to the gentleman from Wisconsin.

Mr. ASPIN. Madam Chairman, I am happy the gentleman from Iowa raised that point, because I did want to point out earlier, although the gentleman from Florida (Mr. FASCELL) did not give me a chance when he was in the well, that the system of assessed evaluation means absolutely nothing. What we are talking about is the amount of taxes raised. You can have a low percentage of assessment and a very high rate or you can have a high assessment and a low rate. But the formula that we are talking about under the tax effort formula, is the total taxes collected—dollars—over total income—dollars—and that is the tax effort under the formula, not the assessed value.

Mr. BLOUIN. I believe the point made by the gentleman from Wisconsin is very well made.

The unemployment rate which is now being used to determine the formula for the distribution of these funds is not an accurate reflection of the impact of the economic recession on State and local governments across this country. In some large urban areas, the unemployment rate does not reflect the serious, ongoing, economic problems that exist in that area. They generally average a higher unemployment rate; as a result, they generally will have higher needs. But under the tax effort you will find that in almost every one of those communities their backs are up against the wall in terms of effort over income and are helped even more, because of that basic underlying problem that exists in those centers. So instead of ignoring that point in the determination of New York City, it helps the city far more than the committee version.

Instead of ignoring the problems of San Francisco, or Chicago, it gives them more dollars to work with, not less.

Because we realized the inherent problems that exist in those centers.

I think that is a positive feature of this approach that has not been brought out totally.

The gentleman from New York (Mr. ROSENTHAL) said earlier that this amendment does violence to the program. I believe that is the farthest point from the truth that has been made today. The gentleman from New York (Mr. ROSENTHAL) is a good member of this committee and I enjoy very much serving with him. But, contrary to his remarks this amendment brings equity to

the majority of the States, 27, and they are a majority of the areas in this country. Certainly 247 congressional districts do better under the Aspin approach. That is, because they are losers under the formula that exists. Certainly the emphasis ought to be placed on areas with high unemployment. But the problem is that statistics are not available to select areas of high unemployment in rather sparsely populated centers in this country. Because of this we end up holding the short end of the stick. Not rural areas, but across this Nation in various pockets, with every program that uses the unemployment formula according to the way you distribute dollars.

It is better than nothing. It is better than going home without any package at all—not in my area, but it is better for the majority of the country. But the Aspin approach is so far superior to it that it bothers me immensely to see so many misguided and misrepresented comments made about it, and I hope we put some of those to sleep.

Mr. JENRETTE. Madam Chairman, will the gentleman yield?

Mr. BLOUIN. I yield to the gentleman from South Carolina.

Mr. JENRETTE. I thank the gentleman for yielding.

I just hope that when this body acts today it will act with the caution that the gentleman from New York (Mr. WYDLER) commented on yesterday and again today. Monkeying with this formula might put us out of business, and I would hate to see us running around to see what area gets how much, which district gets how much, as a criterion for how we vote. This is a need bill, not a revenue sharing formula, and I think we should go where the need is.

Mr. BLOUIN. I agree with my colleague that we should not destroy this bill. I intend to vote for it no matter what amendment is passed, because I think the economy needs the stimulus. But we do not want to bow and kneel in front of the Senate, because one Member of that body said that without my formula it is not going to happen. If we are going to do that, we might just as well become a subcommittee of the Senate and forget what we are doing, just abolish the system of this dual-House approach and go along with what they want, and we will save ourselves a lot of time.

Mr. WYDLER. Madam Chairman, will the gentleman yield?

Mr. BLOUIN. I yield to the gentleman from New York.

Mr. WYDLER. I thank the gentleman for yielding.

The gentleman said that unemployment should be taken into account, and then he went on to his next statement saying that, because we do not have very good statistics in very small communities, maybe we should not do it, and maybe we should totally ignore it, throw it out, and bring in another formula altogether. I do not think that is a sensible approach, if I may suggest to the gentleman. I suggest we use the figures we have now. They are not the worst figures in the world by any means. They are pretty good figures in most instances. But what I am suggesting—and I have it right in the bill; it is there now—is that the Secretary of the Treasury is going to look into the way to improve the formula within fiscal year 1978 and give us a plan to make it a better plan, and possibly it will be a combination of the unemployment and the tax effort. Maybe we can combine the two. But I do not think we should endanger the whole program here today for everybody by trying to come in with a totally new formula which I do not think very many people understand, and which I do not think anybody can really test too well.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. BLOUIN was allowed to proceed for 1 additional minute.)

Mr. BLOUIN. I thank my colleague, the gentleman from New York. I appreciate his concerns. The trouble is that the formula today in the bill ignores the unemployed and the need in many, many areas of the country.

Mr. ASPIN. Madam Chairman, will the gentleman yield?

Mr. BLOUIN. I yield to the gentleman from Wisconsin.

Mr. ASPIN. I thank the gentleman for yielding.

I think the point is right that the House should pass its own bill, and we will work whatever we can in the conference. I do not think we have to automatically pass what the Senate wants or what the Senate recommends or what the rumor is that the Senate wants.

The second point to remember is that this is not a formula that has just come up out of thin air. This is the formula worked out by the subcommittee. There is a lot of effort and staff effort that has gone into this. In fact, if the normal progression had been accomplished, the amendment I am offering is the formula which should have been in the bill. That is what came out of the subcommittee, and because of the shuffle over how many quarters it is to be spent, we lost it in the full committee. But this is the recommendation of the subcommittee.

Mr. ANDERSON of Illinois. Madam Chairman, I move to strike the requisite number of words.

Mr. GILMAN. Madam Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from New York.

Mr. GILMAN. I thank the gentleman for yielding.

Madam Chairman, I rise in support of H.R. 6810, providing countercyclical anti-recession assistance to State and local governments and in opposition to the Aspin amendment. Countercyclical grants of this nature have shown to provide State and local governments much needed help in avoiding service cutbacks, employee layoffs, tax increases, and other actions impeding these governments' chances of coping with the deleterious effects of recession.

Of the various formulas offered for allocating Federal funds to ease the fiscal crunch of recession, the committee's formula, as provided in H.R. 6810, is in my opinion the most well-reasoned and most equitable method for distributing those funds.

As my colleagues know, under present law, funds are allocated to State and local governments based on a formula of unemployment rate times revenue sharing entitlement. The committee bill continues this formula.

Moreover, the revised funding mechanism for this program approved by the Committee would authorize $125 million per quarter plus $30 million for each 0.1 percent by which the national unemployment rate exceeds 6 percent. This new formula would in effect approximately double the amount of money available to financially hard-pressed State and local communities. Such a responsive device to accelerating unemployment after entitlements have been provided, is a much needed addition to current Federal assistance to State and local governments.

The need for immediate increased funding is underscored by the fact that because of continuing high unemployment, fiscal 1977 appropriations are virtually exhausted. Mr. Chairman, the program that H.R. 6810 will continue, has been extremely helpful in directing the money to where the need is. According to research complied by the National League of Cities, nearly 75 percent of the funds allocated to local governments for the first 3 quarters has gone to localities with unemployment in excess of 8 percent and over 85 percent to places with unemployment over 7 percent.

The local governments in my own 26th Congressional District in New York would stand to lose almost half of their entitlements under the amendment introduced by my colleague from Wisconsin (Mr. ASPIN). Other districts in New York would also find those funds to which they are entitled severely trimmed if the committee allocation formula is not retained.

Accordingly, I urge my colleagues to vote in favor of H.R. 6810 as reported by the committee and in opposition to the Aspin amendment.

Mr. ANDERSON of Illinois. Madam Chairman, we heard the charge made a few minutes ago by the gentleman from California that somehow those of us who are supporting the Aspin amendment are doing so simply because we want to spread the money around and that we are taking a very narrow regional parochial view of this whole problem. It seems to me that if we look at this supposedly impartial testimony that was presented to the subcommittee by the General Accounting Office, the reason why we are supporting the Aspin amendment is that the GAO said that this program on the basis of their review was not meeting the goals of the program, and that the funds were not being effectively targeted.

I think that it is the supporters of the committee bill, rather than the supporters of the Aspin amendment, that want to spread the money around, because I am told by a member of the committee,

the gentleman from Illinois (Mr. CORCORAN) that out of the 39,000 jurisdictions that are eligible under the program that 24,000 of them are getting amounts of between $100 and $200.

Now, how effective is that going to be in meeting the cyclical problem of unemployment and the structural problems of unemployment that afflict many of the cities of the Northeast?

I do not mind coming into the well and helping New York State. I did earlier in the week when we adopted the dual formula under the Housing Act which we passed in this body. I think we are entitled to a little skepticism when they are going to target 25 percent of the money for one single State and do so at the expense of more than one-third of the remaining States. If that be paranoid, make the most of it.

Madam Chairman, let me say why I am supporting the Aspin amendment. It is because I have always been a supporter of the concept of countercyclical revenue sharing as an antirecession program. What we are trying to do something about here is to deal with the taxing and spending policies of local governments, that when they are impacted by the initial stages of a recession that then we have to compound that recession still further. That is what we are trying to aim at in this program.

We are never going to solve the problems of long-term cyclical unemployment that afflict many of the cities of this Nation with this bill. We are distorting the entire purpose of the legislation when we stand up here and argue that unemployment is the sole measure by which we should judge the wisdom or the lack of wisdom of the amendment of the gentleman from Wisconsin.

The objection has been made, let us be a little more specific now, that under the Aspin formula there is some money that might go into certain areas that have lower unemployment rates than other areas that would be bypassed; but this argument, I think, and again if it be repetition, I think it is important that we do it, it ignores completely in many of these areas that high unemployment rates are cyclical, they are long-term, and this program was not designed to meet that problem.

On Monday, as I look at the list of suspensions, we are going to have the youth unemployment bill. We are going to have other legislation that will try to deal with the unemployed youth of our Nation and with some of the other structural problems of unemployment that are going to be met. I will support many of these measures, but I do not think we should try to convert this program, which is designed to be antirecessionary in nature, into something that it was never intended to be.

So it is not simply paranoid or regional feelings that lead me to support the gentleman from Wisconsin.

Madam Chairman, I yield to my friend, the gentleman from New York (Mr. WYDLER). I understand and admire the very able and articulate fashion in which the gentleman has defended New York State, which would benefit tremendously and handsomely and generously by this legislation.

Mr. WYDLER. Madam Chairman, I appreciate those kind remarks.

It is true the gentleman offers a redeployment formula. That is a fact. I do not like suggesting that the gentleman is getting 22 percent.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

(By unanimous consent, Mr. ANDERSON of Illinois was allowed to proceed for 1 additional minute.)

Mr. WYDLER. Madam Chairman, if the gentleman will yield further, I suggest that the gentleman is supporting the Aspin amendment, because the gentleman's district gets 42 percent.

Mr. ANDERSON of Illinois. Madam Chairman, I make no apology when I look down the list and see 22 out of 24 congressional districts in the State of Illinois would do better under that amendment. I make no apology for the way I am supporting it; but I hope that I have been able to demonstrate that I am trying to support the basic concept of countercyclical revenue sharing. That is why I am for the amendment.

I am not too impressed by the argument of the gentleman from New York (Mr. ROSENTHAL) that even under the Aspin amendment New York City would do a little bit better than they would under the committee bill approach.

When we consider that almost a quarter of the funds would pour into the treasury in New York State, I am sure that maybe the gentleman's friend, Governor Carey, would find it a little bit easier to meet the fiscal needs of New York City with other moneys and other programs if he were to benefit so generously as a result of the largesse of the Federal Government.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

(On request of Mr. WYDLER and by unanimous consent Mr. ANDERSON of Illinois was allowed to proceed for 1 additional minute.)

Mr. WYDLER. Madam Chairman, will the gentleman yield?

Mr. ANDERSON of Illinois. I yield to the gentleman from New York.

Mr. WYDLER. The gentleman stated during the course of his statement that he made here to the committee that it distorts the situation to have unemployment as the sole determinant of where the money should go under this program. I have great respect for the gentleman's fairness. Does not the gentleman think that it would greatly distort it to have it go solely under a tax effort formula?

Mr. ANDERSON of Illinois. Of course, I think that question was answered previously by the gentleman from Wisconsin himself, who indicated that unemployment is going to continue to be a very important part of this bill, but the fact is that when recession hits and revenues decline, and cities are faced with the problem of deciding whether to cut back on services and/or raising taxes, that is when this bill is designed to help, by putting the money in where it is going to be spent; send the money where they will spend the money. That ought to be the slogan by which we operate under this bill—send it to where they will spend it.

Mr. MAGUIRE. Madam Chairman, I move to strike the last word, and I rise to speak against the amendment.

Madam Chairman, the gentleman from Georgia (Mr. LEVITAS) earlier asked that we focus on the facts. I would like to recite a few facts which I think will be of interest to the Members.

The following five rather well-to-do communities would come out under the Aspin formula and under the committee formula in the following way:

First, Greenwich, Conn., with an unemployment rate of 4.3 percent, would get zero funds under the committee proposal; it would get $111,000 under the Aspin proposal.

Brookline, Mass., with a 5.1 percent unemployment rate, would get $7,000 under the committee proposal and $103,000 under the Aspin proposal.

Shaker Heights, Ohio, with a 5.2 percent unemployment rate, would get $1,000 under the committee proposal and $26,000 under the Aspin proposal.

Montgomery, County, Md., with a 3.3 percent unemployment rate, would get zero under the committee proposal and $522,000—more than half a million dollars—under the Aspin proposal.

Beverly Hills, Calif., would get 12 times the amount of money under the Aspin proposal that it would get under the committee bill.

Lest anyone think those are special cases, let me give the Members the figures for all of the communities with unemployment rates below 6 percent. Under the committee bill, those communities with unemployment rates under 6 percent—and let us remember that this legislation would not even exist if we had a national unemployment rate below 6 percent—those communities under the committee bill would get 4.7 percent of the funds, leaving for the balance of communities with unemployment rates above 6 percent, which is what this legislation is designed for, to get 95.3 percent of the money. Under the Aspin proposal, those communities with unemployment rates below 6 percent would get 24 percent of the money, and only 76 percent would go to the remaining communities.

Now, the gentleman from Illinois (Mr. ANDERSON), for whom I have great respect, indicated that he felt it would be a distortion of original legislative intent if we did not adopt the Aspin proposal, but I think if we look back over the history of this program, and look at the way it was originally constituted, we find that the committee proposal is closer in terms of how funds will actually be allocated.

The fact of the matter is that we are trying to deal with need. That is the object of this program. So, I do not think that anyone who wants really to look at the purpose of the program can come to any other conclusion but that the committee bill is the one we must adopt.

I agree with the gentleman from Iowa (Mr. BLOUIN) that this should not be discussed as urban versus rural or any other simple categories. There are some big cities that will have lesser need than others. There are some rural areas that will have greater need. What we ought

to focus on is the unemployment rate. What we ought to focus on is targeting these moneys to where they will do the most good.

We end up with other absurdities if we adopt the Aspin amendment. Local governments are under pressure when the private sector goes into recession, and do we really want to punish those localities that cut corners and reduce levels of expenditures and keep their taxes down? Do we really want to punish them by using a tax effort formula? For example, are we going to raise taxes for large numbers of senior citizens who are living on fixed incomes in order to qualify for additional Federal aid? I would suggest that we keep our minds and our votes riveted on the proposition that this is a need-oriented program. There is not any other way of parsing the argument, when we finally come down to it. Need is what this program is designed for, and that is what it ought to do.

Mr. ASPIN. Madam Chairman, will the gentleman yield?

Mr. MAGUIRE. I yield to the gentleman from Wisconsin (Mr. ASPIN).

Mr. ASPIN. I thank the gentleman for yielding.

Madam Chairman, the point the gentleman is making about unemployment rates unfortunately is again based on the very premise under which the whole bill is being questioned, namely, that those unemployment rates in those rural areas are not worth the paper they are printed on.

The CHAIRMAN. The time of the gentleman from New Jersey (Mr. MAGUIRE) has expired.

(On request of Mr. ASPIN and by unanimous consent, Mr. MAGUIRE was allowed to proceed for 2 additional minutes.)

Mr. ASPIN. Madam Chairman, if the gentleman will yield further, the gentleman says that the amendment would give more money to those places which are under 6 percent unemployed. But the problem is because that is how they are listed now in the unemployment rates, as being under 6 percent unemployed.

The point is that in these rural areas there is a lot of unemployment, and it is not being counted because the unemployment statistics are totally crummy. This formula is supposed to give it where the unemployed are.

Is the gentleman telling me that 22 percent of the unemployment in this country is in New York State? Is 22 percent in New York State?

Mr. MAGUIRE. Madam Chairman, I will reclaim my time.

I wonder if the gentleman is one of those who earlier, in the public works bill, pressed to use unemployment rates of the smallest possible local units for the formula in that legislation. I find it very ironic that at least some Members of this body, who are now opposing the unemployment method of calculation here, earlier voted in the public works bill to include pockets of poverty within localities through use of an unemployment indicator.

I do not know why we should have it any differently in this instance.

Mr. ASPIN. If the gentleman will yield, it is not the members of this subcommittee the gentleman is talking about. The members of the subcommittee would like to send the money where it is needed. But we do not do it on an unemployment basis, because that does not reflect where the need is.

Mr. FOUNTAIN. Madam Chairman, I move to strike the requisite number of words.

Madam Chairman, there have been a lot of legalistic arguments here, which reminds me of lawyers in the courtroom trying to confuse the jury. I think there has been some of that here, in an effort to confuse the Members of the House as to just what we are doing.

First, let me say that the Aspin amendment is the amendment adopted overwhelmingly by the subcommittee, which I have the honor of chairing. It was adopted after we took testimony from the appropriate agencies of the Government, from economic experts, and from State and local governments, and after several months of close consultation and collaboration with officials and experts in the Department of the Treasury, the Department of Commerce, the Department of Labor, the GAO, and elsewhere.

Frankly, I was surprised when questions were raised in the subcommittee hearings about the adequacy of unemployment figures. I had been under the impression that unemployment rates were reliable for Federal assistance formulas. I now know that is not the case.

I have heard unemployment mentioned over and over again by opponents of the Aspin amendment, opponents who come from States which benefit unfairly from the use of unemployment figures in the title II program.

Let us get something straight: This program does not help the unemployed in the private sector and it was not intended to do so. This is virtually a duplicative revenue-sharing program; it is another revenue-sharing program on top of the revenue-sharing program we passed last year.

I had the opportunity of chairing the subcommittee which brought that legislation to the floor, and the subcommittee's recommendations were enacted into law.

Madam Chairman, unemployment is a problem with which the Federal Government must deal. The Federal Government should deal with it. It is, in fact, dealing with it in a number of other pieces of legislation.

But unemployment is not a relevant measure of the budgetary needs and responsibilities of local and State governments. Moreover, the unemployment problem is in the private sector, not in the local governments.

So let us talk sense and stop confusing the issues and the purposes of this particular legislation.

I want to commend the gentleman from Iowa (Mr. BLOUIN) for bringing to our attention the thought that the House of Representatives ought to do its own thinking and pass what we believe is appropriate legislation. We should not have this crammed down our throats by the other body.

The worst feature of the committee bill—and I am speaking of the full committee bill and of the title II program—is the irrational use of unemployment rates to determine which units of government will receive money and how much they will receive. Without that improper use of a weak and volatile figure, my strongest criticism of the committee bill would be that it continues a duplicative revenue-sharing program.

In view of the enormous growth in recent years both in the number of separate grant programs and in total Federal aid, it is poor public policy to continue to proliferate the grant structure and thereby cause confusion, more bureaucratic redtape, and higher administrative costs. These are things that I think we have a responsibility as Members of Congress, individually and collectively, to take into account; and the time has long since passed for us to start doing it.

What the President has said about the need for streamlining the structure of the Federal Government applies equally to the present haphazard, overlapping, and duplicative grant structure.

It has been well documented, Madam Chairman, that the quality and the reliability of unemployment rates below the national levels are simply not adequate for a fair distribution of Federal funds to local and State governments.

We do not have acceptable unemployment figures below the State level, and even the State figures are not reliable on a monthly basis. The Commissioner of Labor Statistics—this has already been mentioned but it deserves repetition—told the subcommittee that the unemployment rates for communities of less than 50,000 population may be no better than "random numbers."

The CHAIRMAN. The time of the gentleman from North Carolina (Mr. FOUNTAIN) has expired.

Mr. FOUNTAIN. Madam Chairman, I ask unanimous consent that I may be permitted to proceed for 5 addtional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

Mr. HORTON. Madam Chairman, I do not want to object, but reserving the right to object, I would like to ask the chairman of the committee as to whether he intends to limit debate. We have been going on now for approximately 2 hours.

I understand the House is going to complete its work today at 3 o'clock, and I would hope that we could get finished with all the amendments today.

Mr. BROOKS. Madam Chairman, if the gentleman will yield, we have several other members of the committee who wish to make some comments, including the gentleman from South Carolina (Mr. JENRETTE) and myself. There may be some other Members who wish to speak. I thought certainly that we should give the members of the committee time to speak, and I would like to make a few comments on this before we move to close debate.

Madam Chairman, I would hope that we could finish this by 1 30, but with all the Members I see standing up, I am not sure that we can.

Mr. HORTON. Madam Chairman, further reserving the right to object, there are several amendments pending, and there are quite a few Members on the floor who wish to speak on this amendment. It appears to me as though we are not going to be able to finish by 3 o'clock.

Madam Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

Mr. HOWARD. Madam Chairman, reserving the right to object, I shall not object, but I would just like to state that I believe the members of the committee certainly should be entitled to speak. I have listened to the debate here, and I was able to watch some of the debate in my office. I have noted that several Members have been able to speak for 12 or 13 minutes; some of the Members have requested additional time and have spoken for 10 minutes. I believe the members of the committee ought to have the opportunity.

However, I do believe that other Members who have a vital interest in this and whose constituents are hurt most by the Aspin amendment also ought to be permitted to speak. So I would like to suggest to the chairman of the committee that we could move to limit debate or put some limitation on the time after these Members who are not on the committee and who oppose the Aspin amendment have had an opportunity to speak.

Mr. BROOKS. We could make the motion to limit debate. It could be agreed to by unanimous consent, or we could move it.

Madam Chairman, if the gentleman will yield further, is there disposition to close all debate by 1:45, reserving the last 10 minutes, 5 minutes to the gentleman from South Carolina (Mr. JENRETTE), and 5 minutes to me, we having had none?

Is there objection to that?

Mr. HOWARD. Madam Chairman, I would object to such a request.

The CHAIRMAN. There is presently pending a unanimous-consent request to proceed for 5 additional minutes.

Mr. HOWARD. Madam Chairman, I withdraw my reservation of objection.

Mr. JOHN L. BURTON. Madam Chairman, reserving the right to object, and I shall not object, but at some time I would like to know whether it would be proper to have this amendment referred to the Committee on Standards of Official Conduct to see whether there are any enticements in it to Members to vote for it, because it is enticing me to a farethee-well, and I definitely would like a ruling.

Madam Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina (Mr. FOUNTAIN) to proceed for 5 additional minutes?

There was no objection.

Mr. FOUNTAIN. Madam Chairman, I would like to say that I think the gentleman is right in saying that his proposed amendment ought to have the opportunity to be heard.

Let me repeat what the Commissioner of Labor Statistics told the subcommittee in his testimony. He said the unemployment rates for communities of less than 50,000 may be no better than "random numbers."

Yet, it is these arbitrary numbers that determine which of our local communities receive title II funds and the amount of that assistance.

Madam Chairman, the Commissioner of Labor Statistics has warned that "Congress has legislated requirements for local area unemployment rates that are years ahead of the data base available."

This is not a responsible arrangement.

The title II program uses 4.5 percent as a "full employment" yardstick in computing the "excess" unemployment rate that determines the amount of payments for State and local governments. Even if these rates were reliable for local governments, they would not be good indicators of a recession since the very high rates for many older central cities reflect conditions of long-term decline.

Prior to the 1974–75 recession, for example, the unemployment rate was above 6 percent for such cities as Cleveland, Philadelphia, Washington, D.C., New York, and Los Angeles, and above 10 percent for San Francisco and Detroit.

The limitations of unemployment rates pertain not only to the poor quality of the data, but to their usefulness as well. While unemployment figures can be useful for some purposes, they are not a good indicator of the budgetary needs of State and local governments because the estimated rates are not comparable between governmental units. Their inclusion in formulas for distributing Federal assistance leads to serious distortions and inequities.

For example—and I believe the gentleman from Illinois, made reference to this—there are high unemployment cities that do not have the budget responsibility for costly services such as welfare, health and education. These service costs are usually State or county responsibilities.

To illustrate this point, local governments do not participate at all in welfare costs in 38 States. They are required to pay a substantial share of the welfare costs in only eight States, most notably in New York where the counties and New York City pay half the non-Federal share.

The objective of the subcommittee formula is to put the money where the fiscal responsibilities really are. This cannot be done by relating Federal payments to a measure like unemployment which, even if accurate, would tell us absolutely nothing about a community's program and budget responsibilities. I think we would all agree that there is no logic or justification, in rewarding a city for welfare payments made to its citizens, if those payments are actually the budgetary responsibility of an overlying county or the State.

In addition, focusing exclusively on unemployment and ignoring the present record level of employment throughout the Nation creates a false picture of the fiscal situation, even in those States and local governments where unemployment remains high.

I could continue at length about the arbitrary and discriminatory effects of using unemployment rates to allocate funds in a program that is essentially another form of general revenue sharing. I am surprised that Members of Congress and other public officials from States such as Iowa, Kansas, Wyoming, South Dakota, North Dakota, and New Hampshire have not protested the complete exclusion of their State and local governments from this program. These States receive no payments simply because their estimated unemployment rates are below the arbitrary and meaningless 4.5% cutoff. The fact that unemployment tends to be understated in rural States due to the way the rates are estimated is not taken into account. Moreover, some industrial States have received very little funding because the irrelevant and faulty unemployment rates assigned to them are relatively low.

In place of the faulty unemployment rates, the subcommittee bases the State and local distributions on two objective and readily available measures—taxes collected and tax effort, which are now used in the general revenue sharing program.

Madam Chairman, the subcommittee selected these factors because they are the best available measure of the size of each jurisdiction's service responsibilities and the extent to which each government taxes its citizens for the support of public services.

Mr. FASCELL. Madam Chairman, will the gentleman yield?

Mr. FOUNTAIN. I yield to the gentleman from Florida.

Mr. FASCELL. Madam Chairman, the formula for tax effort, however, on the top part of it, for taxes, does not include school taxes; is that not correct?

Mr. FOUNTAIN. It does not include school taxes for local government allocations, although the funds distributed within each State do include taxes for education.

Mr. FASCELL. In my district that is an ad valorem figure.

Mr. FOUNTAIN. To continue, Madam Chairman, while these measures are certainly not ideal, they are far more objective, equitable, and representative of local fiscal needs than unemployment rates or other currently available data.

As such, they are likely to target funds most effectively to those governments that can absorb additional Federal assistance for current purposes and, therefore, help accomplish the President's economic stimulus objective.

To borrow a phrase sometimes used by President Carter, this program in its present form is a disgrace to this Nation. I am certain that the irrationality and unfairness of the title II program was not brought to the President's attention when he agreed to make it part of his economic stimulus package.

Madam Chairman, I thank the Members for listening and I urge them to support the Aspin amendment.

Mr. MINETA. Madam Chairman, I

move to strike the requisite number of words, and I rise in opposition to the Aspin amendment .

Madam Chairman, I would like to rise in support of the bill presented by the Committee on Government Operations that is now before us, but against the amendment proposed by my colleague, the gentleman from Wisconsin (Mr. ASPIN).

I guess I still relate very strongly to my experiences in local form of government, having been the mayor of a city of some 575,000 people. I believe we have to take into consideration a distinction that has to be maintained, and that I think is the purpose of this program. The distinction is this: There are two kinds of unemployment that have been brought to our attention: The structural or secular unemployment in local governments and the other one is cyclical unemployment. In terms of secular or structural unemployment, we have programs such as CETA, unemployment compensation, vocational education, youth unemployment programs, apprenticeship programs, and many others. But, in terms of dealing with cyclical unemployment this is the only antirecession type of program. It is a formula that is based on trying not to take a shotgun approach to assist local government but to target in on those areas that are in trouble. Its allocation formula is highly targeted to provide the most money to those jurisdictions where the impact from the recession has been the most severe.

As a result of the program, over 70 percent of the funds allocated so far have gone to jurisdictions with unemployment over 8 percent. Equally important, virtually no money has gone to jurisdictions with very low unemployment which have not suffered because of the recession. Not a dime goes to jurisdictions with full employment; that is, unemployment of less than 4.5 percent. And less than 5 percent of the funds have gone to places with unemployment of less than 6 percent.

President Carter in his economic stimulus package requested an extension of this antirecession program in recognition of the fact that although the recession has eased, its effects linger on in many communities throughout the Nation. The bill before us today is in response to that request.

Yet the amendment proposed by my colleague, the gentleman from Wisconsin (Mr. ASPIN) would totally negate the antirecession nature of this program.

This amendment would substitute local tax effort, based on 1974 figures for local property tax and per capita income figures of 1972, and would substitute that local tax effort for local unemployment which is calculated on the most current quarter in the allocation formula. How those 1974 figures and those 1972 figures are more accurate or better to use than the unemployment allocation formula with the latest figures in terms of unemployment, I do not understand. Tax effort bears no relationship to recession-related fiscal distress.

As a result, under a tax effort formula, that is now being proposed, 10 percent of the funds would go to jurisdictions with full employment. A whopping 25 percent of the funds would go to places with unemployment below 6 percent.

Mr ASPIN. Madam Chairman, will the gentleman yield?

Mr MINETA. I would be more than pleased to yield to my colleague, the gentleman from Wisconsin.

Mr. ASPIN. Madam Chairman, the point is that the unemployment statistics in those so-called local unemployment areas are so bad.

The point that we are questioning is those unemployment statistics. The gentleman says 25 percent goes to low unemployment areas. That assumes that the unemployment statistics are any good.

Mr. MINETA. As a member of the Committee on the Budget, we had the Bureau of Labor Statistics before us. They develop monthly unemployment data for every county in this country. There is some concern that the figures for communities under 25,000 may be inaccurate or even unreliable, but for those communities we then use the county figure which is accurate.

Mr. FASCELL. Madam Chairman, will the gentleman yield?

Mr. MINETA. I yield to the gentleman from Florida.

Mr. FASCELL. I thank the gentleman for yielding.

They are certainly no more inaccurate than using a fraction in determining tax effort, the top half of which ignores more than 50 percent of the tax effort, and the bottom fraction which is based on an income determination of 1974 income taxes updated by some statistical model, the nature of which we do not even know.

Mr. MINETA. That is correct. I agree with that position.

I suggest that giving antirecession funds to jurisdictions with full or relatively high employment is simply a waste of the taxpayers' money, and it is clearly not consistent with the purpose of the program that was enacted last year.

The problem with using tax effort in an antirecession allocation formula, Madam Chairman, is that the level of a jurisdiction's tax effort can mean many things other than fiscal need.

For example, in a place like Montgomery County, Md., one of the wealthiest counties in the country, a high tax effort is a sign of affluence substantial enough to support high taxes to pay for high quality services.

In a place like Buffalo or Newark, on the other hand, the city tax effort is not necessarily an indicator of needs, because each of these cities cannot raise its taxes beyond a ceiling imposed by the State government.

And yet under the tax effort allocation, the Montgomery Counties of the country do substantially better, while the Buffaloes and the Newarks—clearly among the very hardest hit and suffering from the greatest need—lose substantially.

The second point I would like to make in opposition to the Aspin amendment, Madam Chairman, is a very practical one. The Senate has already passed an extension of this program which is very similar to the House committee bill. On the important question of the distribution formula, the Senate bill and the House committee bill are identical. Furthermore, the Senate conferees are not likely to look kindly upon a totally different formula for the program.

So if we are interested in seeing this program continued, I suggest that it makes all good sense for us to adopt the House committee's version of the bill today.

Toward that end, I urge my colleagues to oppose the Aspin amendment and vote to extend the program as President Carter has requested.

Mr. JENRETTE. Madam Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Madam Chairman, I shall not take the full 5 minutes, because I think everything that ought to be said or can be said has been said. But I do want to point out—and I will try to be very brief—that it has been said already, however, that this is one of three programs that the President has asked that we act on to stimulate the economy. I have heard today about how it is going to help New York City. If it does, so be it. If it helps the State of New York, a lot of people from the South have gone to New York and have helped bring about some of the problems that New York City is facing today. So I have no opposition to helping the State of New York or the city of New York.

But everybody is going around and looking at the formula and seeing which area or which formula they will receive more money under. I say to the Members that is not the purpose of this bill. I know the political realities, but that is not the purpose. It is targeted. It is revenue need and not another revenue sharing sort of program.

I will say to my colleagues as they go to vote—and I hope we vote in just a few minutes—that I hope that they will look at this as a targeted need for money and not just allocating it on a person-by-person basis. New York gets 24 percent, if that figure is correct. But let us look at the Aspin amendment. Areas with zero to 4.5 percent unemployment would get 10 percent, or would be eligible for 10 percent of the funds under that formula regardless of need. How can there be equity in giving 10 percent where there is no need. Also 24 percent of the funds would go to governments that have between 4.5 and 6 percent unemployment. That would leave 76 percent of the rest of the funds to go to other areas, regardless of how much they are in need. So that is the flaw in the amendment.

Let me say this: The unemployment data has been talked about quite a bit. Beginning in May 1977, according to a letter that I received from Mr. Shiskin, 600 acres of 25,000 to 50,000 population will have unemployment data available.

The Department of Labor, therefore, is moving to provide sufficient data on unemployment. Let me say this as well: This committee bill that I have had the pleasure of working on with my friend, the gentleman from New York (Mr. WYDLER), and the gentleman from North Carolina (Mr. FOUNTAIN) and all of the subcommittee—and I am happy to be on the subcommittee—mandates a study. It mandates a study by the Treasury Department and the Department of Commerce so that after this period is over, the study will be available, and then we can make needed changes. I worked very hard through the leadership to see that this bill came up before the tax conference report so that we on this very fine committee could have our say. Therefore, I would encourage the members of the committee to vote against the Aspin amendment, and let us go on with the other amendments and try to help bring about a stimulus for the economy.

Mr. ASPIN. Madam Chairman, will the gentleman yield?

Mr. JENRETTE. I yield to the gentleman from Wisconsin.

Mr. ASPIN. I thank the gentleman for yielding.

Does the gentleman believe that the formula based on unemployment is a good one?

Mr. JENRETTE. No; it is not perfect.

Mr. ASPIN. The gentleman agrees that this bill provides 22 percent to New York City. Would the gentleman then conclude that 22 percent of the unemployment in this country is in the State of New York?

Mr. JENRETTE. No; I would not.

Mr. ASPIN. So the formula is obviously bad.

Mr. JENRETTE. Well, it is no worse than that we have been working with called tax effort. They are improving the unemployment data. Unemployment data is in the law now, and I think it is better to go that way.

Mr. WYDLER. Madam Chairman, will the gentleman yield?

Mr. JENRETTE. I yield to the gentleman from New York.

Mr. WYDLER. I thank the gentleman for yielding.

I just want to congratulate the gentleman for the tremendous work he did on the committee and on the full committee on this bill. I might just say we keep hearing those figures thrown around about New York State. The amazing fact, as has been stated time and time again today, is that under the Aspin amendment, New York City gets more money than under the committee bill.

Mr. JENRETTE. I thank the gentleman for that contribution.

Madam Chairman, I yield back the remainder of my time.

Mr. BROOKS. Madam Chairman, I move to strike the requisite number of words. I rise in support of the amendment.

Madam Chairman, this amendment addresses itself to one of the most serious defects in the current program.

We have been distributing $1.25 billion, and it can go up as much as another $2.25 billion with this bill—this Federal money has been handed out largely on the basis of unemployment figures that are regarded by the people who put them out as unreliable or nonexistent by that very agency.

The Commissioner of the Bureau of Labor Statistics told the Intergovernmental Relations Subcommittee:

> Major deficiencies exist in the unemployment data the Bureau is forced to come up with under this legislation. This legislation is really years ahead of the Bureau of Labor Statistics' ability to produce required statistics at reasonable levels of accuracy.

Madam Chairman, at those same subcommittee hearings, a representative of the General Accounting Office said:

> If this is really supposed to be an antirecession program—

And I am quoting the GAO—

> Congress may wish to reconsider the use of the unemployment rate as a basis for allocating funds.

Supporters of the current program tell us we need more time to study the formula to see how it works before we change it. They provide for such a study in the committee bill.

Madam Chairman, that study has already been conducted. The Intergovernmental Relations and Human Resources Subcommittee has come up with a better formula. It it not only better, more equitable and objective, but one that uses accurate, available data.

We do not need to wait another year and a quarter and spend another $2.25 billion under a formula that is obviously faulty before we try to improve it. We can do it right now by adopting the amendment of the gentleman from Wisconsin.

Mr. KREBS. Madam Chairman, I move to strike the requisite number of words.

Madam Chairman, I will not take the 5 minutes.

I want to confess right now that my congressional district stands to lose somewhat under the Aspin amendment, but I hope that my motives will not be questioned anymore than the motives of anybody else.

I think we have had a little too much discussion about parochialism in this debate. I do feel that the criteria for determining where this aid should go is really faulty on its face. I say this not only for some of the reasons that have been so well articulated by the gentleman from California (Mr. DELLUMS) and others. I submit that the test in anybody's mind as to what a recession is all about is in terms of employment versus unemployment. I, however, am concerned that we are using a criteria that is totally nongermane. To point out how nongermane this criteria really is, and I am very surprised that none of my fiscally conservative colleagues have bothered to mention this, is the fact that what we are really doing here is to assume that high taxes are necessarily virtuous and that low taxes necessarily means that a government is being operated in a less efficient manner. I would hope that the very opposite is true. I would hope that we are not going to embark on a course that is going to penalize those communities which have put their house in order fiscally and who have tried very hard to keep the tax rate of their communities as low as possible.

So, on those grounds, Madam Chairman, and on many of the grounds that have been stated by prior speakers, I urge this committee to vote down this amendment.

Mrs. FENWICK. Madam Chairman, will the gentleman yield?

Mr. KREBS. I yield to the gentlewoman from New Jersey.

Mrs. FENWICK. Madam Chairman, I would like to associate myself with the gentleman's remarks, and to thank him.

Mr. ROSENTHAL. Madam Chairman, will the gentleman yield?

Mr. KREBS. I yield to the gentleman from New York.

Mr. ROSENTHAL. Madam Chairman, I want to point out again the question of where the money is going. I would like to read to the committee some of the testimony of Secretary of the Treasury Bloomenthal. He said:

> It has, however, successfully targeted funds to those areas where the highest unemployment rates occur. Seventy-five percent of the funds available to localities have been paid to areas with unemployment rates in excess of 8 percent. I think that's a pretty good indication that it has, in fact, worked to put the money where it is most needed.
>
> In addition, disbursements have favored those urban areas under particular fiscal pressure. The large, central cities with the highest unemployment rates have consistently received larger per capita allocations than the suburbs and surrounding counties which have been less hard hit during this difficult period.

Mrs. BROOKS. Madam Chairman, I ask unanimous consent that debate on this amendment and all amendments thereto close at 1:45 p.m.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

Mr. HOWARD. Madam Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. BROOKS. Madam Chairman, I move that all debate on the Aspin amendment and all amendments thereto conclude by 1:45 p.m.

The CHAIRMAN. The question is on the motion offered by the gentleman from Texas (Mr. BROOKS).

The motion was agreed to.

The CHAIRMAN. Members standing at the time the motion was made will be recognized for 50 seconds each.

The Chair recognizes the gentleman from Pennsylvania (Mr. MOORHEAD).

Mr. HOWARD. Madam Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. Evidently a quorum is not present.

The Chair announces that pursuant to clause 2, rule XXIII, she will vacate pro-

ceedings under the call when a quorum of the Committee appears.

Members will record their presence by electronic device.

The call was taken by electronic device.

QUORUM CALL VACATED

The CHAIRMAN. One hundred Members have appeared. A quorum of the Committee of the Whole is present. Pursuant to clause 2, rule XXIII, further proceedings under the call shall be considered as vacated.

The Committee will resume its business.

The Chair recognizes the gentleman from Pennsylvania (Mr. MOORHEAD).

Mr. MOORHEAD of Pennsylvania. Madam Chairman, we have a clear choice: another general revenue-sharing bill or a bill that is carefully targeted to areas of need, with an automatic cutoff whenever the Nation recovers from the present recession and the need is no longer there.

I urge the support of the Members for the committee bill.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. FORD).

Mr. FORD of Michigan. Madam Chairman, I rise in opposition to the amendment.

Although I have communities in my district that would appear to be benefited by this amendment, the truth is that no community that I represent would be benefited to any great extent or to an extent that would justify the adoption of this amendment.

It is inconceivable that the Senate would agree to the Aspin amendment and if it is adopted it will have the effect of delaying or killing this legislation.

Madam Chairman, members of the committee, we need this program now; this money is needed in Michigan to aid hard-pressed communities where unemployment is high now. Michigan, which has been leading the Nation in unemployment for years, would receive some $35 or $36 million less under the Aspin amendment than under the committee bill. I urge a no vote on this amendment and a yes vote on the passage of the bill when this amendment is defeated.

The CHAIRMAN. The Chair recognizes the gentleman from Indiana (Mr. BENJAMIN).

Mr. BENJAMIN. Madam Chairman, I rise in support of the position of the Subcommittee on Intergovernmental Relations and Human Resources of the Committee on Government Operations and the amendment now pending to change the allocation formula to account for the tax effort of State and local governments.

In attempting to be a statesman, I find it incumbent to think about my State. Indiana, the 13th State in population, would receive 0.47 percent of the funds allocated under the committee bill. On the other hand, it would receive 1.71 percent of the funds proposed to be allocated by the pending amendment. In dollars, for the last quarter of fiscal year 1977—July–September—this would mean approximately $10.2 million versus $2.5 million and $0.9 million more for the metropolitan section of northwest Indiana.

I do not enjoy these fraticidal debates and I do not care to characterize this as another New York versus the Nation epic. Rather, I would like to ask the distinguished representatives from New York for their understanding. By our recent passage of the Emergency Unemployment Compensation Extension Act of 1977 (H.R. 4800), now Public Law 95–19, and the Public Works Capital Development and Investment Act (H.R. 11), hopefully soon to become a public law. The final versions of these bills sought to accommodate some of the unemployment problems of the Empire State. I am sure that we will continue to recognize and work toward the resolution of the unemployment problems of New York. But likewise, we must be considerate of the rest of the Nation and local government and its attendant problems.

As the testimony of Mr. Harry S. Havens, Director, U.S. General Accounting Office, delivered March 2, indicates, excess unemployment is not a good approximation of the recession's impact. He further notes that a more precise measure is needed to distinguish between cyclical and chronic problems. This bill is fashioned as the Intergovernmental Antirecession Assistance Act and its aim is at the effect of a recession on the local community and local government, not a panacea to chronic unemployment which must yet be handled by this Congress.

Many of my more articulate colleagues have already addressed the positive as well as the negative positions on this issue. I will not be repetitive except to reemphasize. Let us focus on the real issue—the necessity of the bill. If it is to retain needed local government services and not compound the recession by the unnecessary discharge of governmental employees, then the pending amendment should be adopted as the better treatment of fund allocation. If it really should be an answer to chronic unemployment, then the committee bill should be maintained intact. In my compartmentalized mind, I believe that the former is the more accurate description of the issue.

With this in mind, I now add my voice and support to those of my colleagues in support of the subcommittee amendment requiring future allocations to be made based on a formula of each government's tax collections and tax effort.

The use of such a formula would insure the effective targeting of funds to those governmental bodies most in need and it would prevent the perpetuation of the present capricious and inequitable system.

The Congress expressed a legislative goal last year. We have not met that goal with the legislation as drafted. We know why we have failed. If we are to extend this act and continue funding we must acknowledge our error and correct it.

I call upon the committee to support and adopt the amendment now pending.

(By unanimous consent, Mr. BLOUIN yielded his time to Mr. DELLUMS.)

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. DELLUMS).

Mr. DELLUMS. Madam Chairman, I rise in opposition to the amendment, but I would like to point out that I think the gentleman from Wisconsin (Mr. ASPIN) does have a point. There are flaws in using data that are the basis of this legislation. The tax effort certainly is not the way to do it.

I think, for example, in Indian reservations we literally kill the Indians by using that formula.

Madam Chairman, I think the cleanest data available are the percentage employed in the total population.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin (Mr. ASPIN).

The question was taken and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. ASPIN. Madam Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—yeas 127, noes 216, answered "present" 1, not voting 88, as follows:

[Roll No. 231]

St Germain	Tucker	Weaver
Staggers	Udall	Whitley
Stark	Van Deerlin	Wilson, Tex.
Steiger	Vanik	Winn
Stratton	Volkmer	Wright
Stump	Walker	

The Clerk announced the following pairs.

On this vote:

Mr. Teague for, with Mr. Dent against.

Mr. Bevill for, with Mr. Kazen against.

Mr. Nichols for, with Mr. Dingell against.

Mr. Risenhoover for, with Mr. LaFalce against.

Mr. Whitley for, with Mr. Staggers against.

Mr. Volkmer for, with Mr. Sikes against.

Mr. Archer for, with Mr. Brown of Ohio against.

Mr. Badham for, with Mr. Burke of Florida against.

Mr. Broyhill for, with Mr. Cederberg against.

Mr. Del Clawson for, with Mr. Conable against.

Mr. Collins of Texas for, with Mr. Fish against.

Mr. Gradison for, with Mr. Kemp against.

Mrs. Heckler for, with Mr. Lujan against.

Mr. Hillis for, with Mr. Marks against.

Mr. Marriott for, with Mr. Rudd against.

Mr. Pressler for, with Mr. Florio against.

Mr. Quie for, with Mr. Ford of Tennessee against.

Mr. Sebelius for, with Mr. Stark against.

Mr. Steiger for, with Mrs. Burke of California against.

Mr. Frenzel for, with Mr. Seiberling against.

Messrs. ALLEN, BYRON, and BAUCUS changed their vote from "no" to "aye."

So the amendment was rejected.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. LEVITAS

Mr. LEVITAS. Madam Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. LEVITAS: Page 25, strike out lines 1 and 2 and insert in lieu thereof the following:

That this Act may be sited as the "Special Fiscal Assistance to Certain State and Local Governments Act of 1977".

Mr. LEVITAS. Madam Chairman, this is a very simple amendment. This amendment simply changes the name of the program. It does not have a substantive effect as far as the allocation of funds is concerned. It has been readily acknowledged by both the proponents and the opponents of the Aspin amendment that what we are talking about is a special program of additional fiscal assistance to those State and local governments that need it.

Mr. BROOKS. Madam Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from Texas.

Mr. BROOKS. Do I understand that this amendment will simply change the name? To what?

Mr. LEVITAS. The "Special Fiscal Assistance to Certain State and Local Governments Act of 1977."

Mr. BROOKS. I have no objection to that.

Mr. WYDLER. Madam Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from New York.

Mr. WYDLER. I do not understand the nature of the amendment. The act now is called the "Intergovernmental Antirecession Assistance Act of 1977." That is the program under which the President has suggested we direct the funds as a stimulus to the economy as an antirecession measure. Actually, if we change the name in any way, it would seem to me that the name should in some way retain the fact that it is an act directed against unemployment in high unemployment areas of the Nation. That would be a correct definition of the act. I think the gentleman is trying to put the House on here a little bit.

Mr. LEVITAS. I am quite serious about this. It has been conceded by every person who has discussed this particular legislation, both during 1976 and 1977, that this is a program which will provide additional financial assistance to those needy cities and counties and States where there is high unemployment. It is a special 1-year fiscal assistance program. It has been clearly demonstrated not to be a permanent program. I think even my distinguished friend from New York would not quarrel with me on that point.

I think, in fairness, it is to make certain that the American public is not misled into thinking that this is a countercyclical program. Let us call it what it is. I think that in the event this amendment is accepted, I would be inclined not to offer the next amendment which I have, relating to the formula.

Mr. WYDLER. I am tempted by that offer, but on the other hand I think that would be an excellent idea, but I really have to ask the gentleman a question. This says, "Special Fiscal Assistance to Certain State and Local Governments Act." There are no certain States or local governments other than the ones that the formula may from time to time apply to. This is not an act limited to any particular State; it is limited by formula. It is not limited to any specific areas or counties. It is very misleading.

Mr. LEVITAS. As the gentleman knows, the bill as it is now written will provide no financial assistance to a number of States. It will provide no financial assistance to a number of local communities, and I do not see any reason why we just should not say what this bill does. There is nothing wrong with it. It is financial assistance to certain State and local governments. In fact, one of the arguments the gentleman was making before was that there are certain places which have greater needs and, therefore, we have to supply their needs. That is all this amendment does. It does not change the substance of the bill.

Mr. WYDLER. On the contrary, I think when we try to make it sound, as in the language of this title, certain areas, certain States, certain local governments are excluded from the provisions of the act, we are misleading the Congress, the people and the country. No one is excluded by words in the act. They have a formula which may not apply at this

particular moment to the gentleman's State or some other State, but that might apply next year.

Mr LEVITAS. Let me say that there are provisions in the general revenue sharing formula which I have in my next amendment, which would apply to every State and every jurisdiction.

The CHAIRMAN The time of the gentleman from Georgia has expired.

(On request of Mr. BROOKS and by unanimous consent Mr LEVITAS was allowed to proceed for 30 additional seconds.)

Mr. BROOKS. Madam Chairman, will the gentleman yield?

Mr. LEVITAS. I yield to the gentleman from Texas.

Mr. BROOKS. It is true that this changes the name of the act, and that is all it does?

Mr. LEVITAS. That is all in world it does.

Mr. BROOKS. It does not change the formula and does not change that 22 percent going to New York at all?

Mr. LEVITAS. Not at all. It would be a great inducement to me not to offer the next amendment.

Mr. ROSENTHAL. Madam Chairman, I move to strike the requisite number of words.

Madam Chairman, I wonder if I could ask my distinguished colleague, the gentleman from Georgia (Mr. LEVITAS) what his motivation is in offering this amendment other than attempting to persuade us not to sit still for his next amendment.

Mr. LEVITAS. If the gentleman will yield, I will say that there are two reasons. First of all, as I said, it does not affect the 22 percent that goes to New York at all.

Mr. ROSENTHAL. The gentleman has said that two times already.

Mr. LEVITAS. Really, in deference to the gentleman from New York, who is a leading proponent of consumer legislation, so that the gentleman will not be confused in any way, I am trying to call this program what it is. It is not a countercyclical program. There is nothing wrong with there being special financial assistance. I think it is needed. I support this legislation. But I think we ought to call it what it is, and that is the purpose of my amendment.

Mr. ROSENTHAL. Madam Chairman, I thank the gentleman for his observation. I think the gentleman is somewhat unhappy with the result of the vote this afternoon and because of some petulance he would like to change the title. I think the majority view is to keep the title as it is. It is a national program, countercyclical in nature, dealing with antirecession components of unemployment. The title that has been given to it already is the same title as the other body has seen appropriate to give it, and I do not think we should change the title of the bill based on the petulance of either proponents or opponents of amendments.

Madam Chairman, I would urge the defeat of the amendment.

Mr. MOORHEAD of Pennsylvania. Madam Chairman, would the gentleman yield?

Mr. ROSENTHAL. I yield to the gentleman from Pennsylvania (Mr. MOORHEAD).

Mr. MOORHEAD of Pennsylvania. I thank the gentleman for yielding.

Madam Chairman, I would like to ask the gentleman if it is not correct, as indicated in the report, that "the program is to terminate if the national unemployment rate drops below 6 percent."

So it is clearly an antirecessionary bill, because it automatically terminates if the recession terminates.

Mr. ROSENTHAL. The gentleman is absolutely correct.

Madam Chairman, I think we should not change the title of bills depending upon whether amendments win or lose.

Mr. BROOKS. Madam Chairman, I move to strike the requisite number of words.

Madam Chairman, I do not see any objection whatsoever to changing the name of the bill. It is not going to change the formula or the amount of money that the various recipients would receive.

Madam Chairman, I would ask for a vote on the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Georgia (Mr. LEVITAS).

The question was taken; and on a division (demanded by Mr. LEVITAS) there were—ayes 26, noes 48.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. OBEY

Mr. OBEY. Madam Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. OBEY: Page 27, strike out line 25 and everything that follows through page 28, line 10, and insert in lieu thereof the following:

(b) Section 203(c)(1) of such Act is amended by striking out "paragraphs (3) and (5)" and inserting in lieu thereof "paragraph (4)".

(c) Section 203(c) of such Act is amended by striking out paragraph (3) and redesignating paragraphs (4) and (5) as (3) and (4).

(d) Section 203(c)(3)(B) of such Act is amended by—

(1) inserting "or assigned" after the word "determined", and

(2) striking out the parenthetical phrase and inserting in lieu thereof "(in the case of a local government for which the Secretary of Labor cannot determine a local unemployment rate, he shall assign such local government the local unemployment rate of the smallest unit or subunit of local government for which he has determined a local unemployment rate and within the jurisdiction of which such local government is located, unless

"(i) the Governor of the State in which such local government is located has provided the Secretary of Labor with a local unemployment rate for such local government, and

"(ii) the Secretary of Labor finds that such local unemployment rate provided by the Governor has been determined in a manner consistent with the procedures and methodologies used by the Secretary of Labor in determining local unemployment rates,

in which case the Secretary of Labor shall assign such local government the local unemployment rate provided by such Governor)".

(e) Section 203(c)(3)(C) of such Act is amended by—

(1) striking out "for the one-year period beginning on July 1, 1975" and inserting in lieu thereof "for the most recently completed entitlement period, as defined under section 141(b) of such Act"; and

(2) striking out the parenthetical phrase.

(f) Section 203(c)(3) of such Act is amended by striking out subparagraph (D) and redesignating subparagraph (E) as (D).

(g) Section 203(c)(3)(D)(i) of such Act is amended by striking out "Social and Economic Statistics Administration" and inserting in lieu thereof "Bureau of the Census"

(h) Section 203(c)(3) of such Act is amended by striking out "For the purpose of paragraph (4)(D), the Secretary of Labor shall, notwithstanding any of the provisions of law, continue to make determinations with respect to the rate of unemployment for the purposes of such title VI."

(i) Section 206 of such Act is repealed.

Mr. OBEY (during the reading). Madam Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD, and that I might be permitted to explain it.

The CHAIRMAN. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. OBEY. Madam Chairman, this amendment that is being offered by myself and by the gentleman from Kentucky (Mr. PERKINS) is a very simple amendment. Very simply, what it does is this: It changes the way rural areas and smaller communities are treated under this program without injuring larger ones. I know that there are many of my colleagues who share my concern that smaller communities have been unfairly denied funding under this program because unemployment data does not get computed for them.

Currently, money is distributed only to areas designated prime sponsors. Communities outside prime sponsor areas are lumped together in computing the so-called balance-of-State unemployment rate. If this average balance-of-State rate is 4.5 percent or less, none of these small communities will get any money, even though their own unemployment rate may be far above the 4.5 percent level. In my own district, for example, out of 17 counties, 15 of them had unemployment rates above 4.5 percent and 9 of them had been above 6 percent for the last calendar quarter of 1976—some as high as 12 to 15 percent. Yet, under current law and under the bill as reported from committee, these counties received no funding in the most recent release of funds. This quirk in the current legislation throws all these struggling rural communities in the same balance-of-State pot with well-to-do rural communities. The unemployment rate for prosperous communities is averaged in with the high unemployment areas and no one in those areas receive funds. That is grossly unfair.

My amendment brings the House bill into conformance with the Senate bill on this one narrow point. It makes it possible for the program to use county by county unemployment data which is now being computed by the Bureau of Labor Statistics. Rather than bunching large numbers of rural counties and towns together and determining eligibility and

allocations on a fictionalized aggregate unemployment rate which exists for no unit of Government, my amendment provides that the most accurate unemployment data be used. That would be the county-by-county data. Rural counties and small cities and towns will then have a fair opportunity to be eligible for assistance based on actual conditions of unemployment in their areas. Inaccurate though that data may be, it is better than the present technique which is admittedly out and out fiction. This change is supported by the Secretary of Labor.

My amendment simply gives rural communities a chance to be treated like all other areas for which unemployment data is now available. It is grossly inequitable for small counties and towns that have unemployment rates two or three times the national average to be denied assistance simply because other communities, some hundreds of miles away, which are also small, are fortunate enough to have low unemployment rates. If this program is really designed to help local governments that are in trouble, then let us be sure the money gets through to the areas that critically need it.

Mr. WYDLER. Madam Chairman, will the gentleman yield?

Mr. OBEY. I yield to the gentleman from New York.

Mr. WYDLER. Madam Chairman, I have examined the gentleman's amendment, and by the amendment the gentleman does intend to deal with some of the problems in the current program relative to the unemployment figures of small communities. I think this is a constructive amendment, that it can prove helpful, and I have no objection to it on this side.

Mr. BROOKS. Madam Chairman, will the gentleman yield?

Mr. OBEY. I yield to the gentleman from Texas.

Mr. BROOKS. Madam Chairman, I have no objection to this amendment, as I stated earlier, and I will gladly accept it. I believe it will do nothing that is constructive or completely destructive of this legislation.

Mr. OBEY. Madam Chairman, I thank the gentleman for accepting the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin (Mr. OBEY).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. CORRADA

Mr. CORRADA. Madam Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. CORRADA:

Page 26, line 1, strike out "(a)".

Page 26, line 12, strike out the comma and insert in lieu thereof a period and a close quotation mark.

Page 26, strike line 13 and everything that follows through page 27, line 18.

At the end of bill, add a new section:

SEC. 8. The Public Works Employment Act of 1976 (42 U.S.C. 6735) is amended by adding at the end thereof the following new section:

"AUTHORIZATION OF APPROPRIATIONS FOR PUERTO RICO, GUAM AND THE VIRGIN ISLANDS

"SEC. 216. (a) IN GENERAL. There is hereby authorized to be appropriated for each of the five succeeding calendar quarters (beginning with the calendar quarter which begins on July 1, 1977) for the purpose of making payments under this title to Puerto Rico, Guam, American Samoa, and the Virgin Islands, an amount equal to 1 percent of the amount authorized for each such quarter under Section 202(b).

"(b) ALLOCATIONS.—

"(I) The Secretary shall allocate from the amount authorized under subsection (a) an amount for the purpose of making payments to such governments equal to the total authorized for the calendar quarter multiplied by the applicable territorial percentage.

"(2) For the purposes of this subsection, the applicable territorial percentage is equal to the quotient resulting from the division of the territorial population by the sum of the territorial population for all territories.

"(3) For purposes of this section—

"(A) the term "territory" means Puerto Rico, Guam, American Samoa and the Virgin Islands.

"(B) the term "territorial population" means the most recent population for each territory as determined by the Bureau of Census.

"(b) the provisions of sections 203(c) (4), 204, 205, 206, 207, 208, 209, 210, 211, 212 and 213 shall apply to the funds authorized under this section.

"(c) PAYMENTS TO LOCAL GOVERNMENTS.— The governments of the territories are authorized to make payments to local governments within their jurisdiction from sums received under this section as they deem appropriate."

Mr. CORRADA (during the reading). Madam Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Puerto Rico?

There was no objection.

Mr. CORRADA. Madam Chairman, I rise in support of the amendment to H.R. 6810, to include the territories—Puerto Rico, Guam, the Virgin Islands, and American Samoa—at a level of 1 percent of the total amount authorized nationally in the countercyclical program.

One percent is a modest amount to be set aside for the territories. The number of poor people living in Puerto Rico represents over 6 percent of the number of poor living in the United States. The total number of unemployed in Puerto Rico represents over 2 percent of the total number of unemployed in the United States. The population of Puerto Rico represents roughly 1.4 percent of the U.S. population. Despite these relatively higher percentages, Puerto Rico and the territories would receive, under this amendment, only 1 percent of the funds authorized for countercyclical assistance.

Based on figures from the Congressional Budget Office this 1 percent setaside would equal approximately $4 million for the territories in each of the next five quarters. A similar amendment has already passed the Senate and is contained in the countercyclical provisions of the tax bill. Furthermore, the 1 percent for the territories would not in any way reduce the amounts authorized to other States under the bill. Thus, no State would suffer as a result of this amendment.

The 1-percent set-aside would still leave the territories with an allocation far below what they would be eligible to receive if they were treated as a State. By correspondence to me dated April 8, 1977, the U.S. Department of Treasury indicated that payments to Puerto Rico alone, if it were treated as a State under the general revenue sharing formula, would be in excess of $83 million. In the case of Puerto Rico, estimates of general revenue sharing payments were used since we do not participate in the Federal revenue sharing program

Looking at it another way, the bill authorizes $515 million for all the States in the first quarter of the program. This translates on a national per capita basis to payments of approximately $2.70. Under the bill in its present form, the per capita allocation for Puerto Rico would be approximately 10 cents. Under the 1-percent set-aside, the per capita allocation would be only about $1.70, still far below the national average.

This amendment would also serve to clear up certain inequities contained in the allocation presently set forth in the bill. Under the existing committee bill the territories would receive less than $300,000 per quarter. This converts to roughly 10 cents per person in the territories. Part of the reason this allocation is so low is that the local government units of the territories were inadvertently excluded from participation in the countercyclical program. Since local government units generally are to receive two-thirds of all the countercyclical funds going to any State, this exclusion was especially costly to the territories. The amendment would eliminate this inequity. Local government units of the territories could share fully and equally with the territory governments.

The proposed amendment is simple and straightforward. It would make all restrictions contained in the bill, such as nondiscrimination, labor standards, and so forth applicable to payments going to the territories. Further, the amendment would avoid any concerns about the consistency and validity of data for the territories relating to unemployment rates, tax receipts, and personal income estimates, some of which may be difficult to conform to national data standards.

Mr. Speaker, the territories suffer substantially and directly from the U.S. recession. We desire to be and are, included in other components of the Carter administration's economic recovery program, in such Federal assistance efforts directed at development such as the local public works bill and the Comprehensive Employment and Training Act programs, all of which directly benefit Puerto Rico and will help the island toward some equitable share in the national economic recovery effort.

The amendment to H.R. 6810, which I support would provide one more tool in the national arsenal to fight the evils of poverty, of deep unemployment, of municipal governments and cities struggling to keep up with the needs of their citizens for basic services when and if a national recession should reoccur. We wish this situation did not exist in Puerto Rico, in any case, but the sad fact is that it does, and at a level more severe than

almost any other political jurisdiction under the American flag.

For reasons of equity and sound economic policy, I urge the adoption of the amendment.

Mr. BROOKS. Madam Chairman, will the gentleman yield?

Mr. CORRADA. I yield to the distinguished chairman of the committee.

Mr. BROOKS. Madam Chairman, I want to thank the gentleman very much for yielding.

This legislation will give Puerto Rico more than what 28 of the States are getting in total dollars, and it does not go to local communities; it goes only to the major communities.

However, if the gentleman from South Carolina (Mr. JENRETTE), the gentleman from New York (Mr. ROSENTHAL), and the gentleman from New York (Mr. WYDLER) will accept the amendment, I would not object. I will accept it so we can proceed with the legislation.

Mr. JENRETTE. Madam Chairman, will the gentleman yield?

Mr. CORRADA. I yield to the gentleman from South Carolina.

Mr. JENRETTE. Madam Chairman, I certainly support the amendment, and I have the assurance of the gentleman from New York (Mr. ROSENTHAL) that he will support the 1 percent set-aside. If my colleagues do not oppose the amendment, I see no reason why we should not accept it.

Mr. STEERS. Madam Chairman, will the gentleman yield?

Mr. CORRADA. I yield to the gentleman from Maryland.

Mr. STEERS. Madam Chairman, I would just like to clarify what the gentleman from Puerto Rico (Mr. CORRADA) said with reference to his amendment as resulting in a set-aside. However, he also said that it would not decrease what the other States would get, and unless it increases the total amount that this bill involves, I cannot understand how the gentleman could get more without the rest of us getting less.

Mr. CORRADA. It is because the authorization of the 1-percent set-aside would be over the level of authorization for the entire program.

The CHAIRMAN. The time of the gentleman from Puerto Rico (Mr. CORRADA) has expired.

(By unanimous consent, Mr. CORRADA was allowed to proceed for 1 additional minute.)

Mr. CORRADA. To continue, Madam Chairman, the amount of the 1-percent set-aside would depend on the future unemployment rate. Since the unemployment rate is expected to decline, there should be sufficient budget amounts in the President's program to fund fully any amounts, including the 1-percent set-aside, authorized by this legislation.

Mr. STEERS. Madam Chairman, if the gentleman will yield further, I would appreciate a little further explanation.

Why should not my State or any State pursue the same principle and have a set-aside for that State, with the same qualifications and for the same reasons?

Mr. CORRADA. I will just state to the gentleman that it perhaps might be proper to do so. However, basically the amendment that I am proposing would only allow Puerto Rico and the territories much lower amounts than the national average, even though we have been adversely affected by the recession to a greater degree than any other State and we are now staggered by a 20-percent level of unemployment.

We are merely trying to do something that will help alleviate our case without keeping anything the States would receive under this program.

Mr. BROOKS. Madam Chairman, I move to strike the requisite number of words.

Madam Chairman, I would like to ask the gentleman from New York (Mr. WYDLER) whether they object to it or not.

Mr. WYDLER. Madam Chairman, if the gentleman will yield, I do not object to the amendment. Emotionally, I am tempted to be for it.

The problem with the amendment in my own mind is the effect it might have on the budget.

Madam Chairman, I do not know whether there is anyone here from the Committee on the Budget; but since they are talking about adding on funds, I do not know what the budgetary situation might be. I am afraid——

Mr. BROOKS. Madam Chairman, I will yield no further to the gentleman from New York (Mr. WYDLER) when we are voting for legislation like this.

Mr. WYDLER. Then, Madam Chairman, I am not answering any further.

Mr. BROOKS. Pardon me. Madam Chairman, I would state in reply to my friend, the gentleman from New York (Mr. WYDLER), that when he votes for legislation like this, he should not be nitpicking about an extra 1 percent.

Madam Chairman, if the Chair would put the question, I have no objection. I would think that that might dispose of this matter now.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Puerto Rico.

The amendment was agreed to.

The CHAIRMAN. Are there further amendments?

Hearing none, the question is on the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The CHAIRMAN. Under the rule, the committee rises.

Mr. WAGGONNER. Madam Chairman, I was seeking recognition by the Chair.

The CHAIRMAN. The Chair will advise the gentleman that the Chair had put the question on the committee amendment in the nature of a substitute. There were no further amendments and, under the rule, the committee rises.

Mr. FOUNTAIN. Madam Chairman, I would like to say that I was standing and was prepared to make a statement about an amendment which I was going to offer but can no longer offer because I was not recognized.

The CHAIRMAN. Without objection, the Chair will vacate the proceedings so as to permit the gentleman from North Carolina (Mr. FOUNTAIN) to make a statement.

There was no objection.

The CHAIRMAN. The gentleman from North Carolina (Mr. FOUNTAIN) is recognized for 5 minutes.

Mr. FOUNTAIN. Madam Chairman, I thank the Chair.

I was planning to offer an amendment to strike section 7 of the committee bill which directs the Secretary of the Treasury to conduct an investigation that has already been made as part of the subcommittee's comprehensive examination of the title II program. The subcommittee has already developed a true and reliable antirecession formula to take care of future recessions.

However, in view of the hour and the mood of the Members, I shall not put the House through the exercise of voting on it today.

Instead, Madam Chairman, I do want the House to take note of the fact that my amendment would have added a new title IV to the State and Local Fiscal Assistance Act for the purpose of providing aid during periods of national recession. This is a logical and desirable addition to the basic general revenue sharing legislation.

This new program, which would have been authorized for a 5-year period beginning October 1, 1978, represents an innovative approach to helping offset the revenue losses State and local governments experience when the economy turns down and purchasing power falls off.

Payments would be activated by two consecutive quarterly declines of private sector real wages and salaries; that is, dollars adjusted for inflation—provided that these declines parallel or follow two consecutive quarterly declines in real gross national product. Two consecutive quarterly declines in real GNP is generally accepted as the definition of a recession.

The amount of funds authorized for national distribution would be determined by two steps: First, calculating the dollar decline in real wages and salaries each quarter in relation to a base period—which is defined as the average amount of real wages and salaries for the four quarters preceding the first quarter of decline, and second, multiplying the resulting dollar decline by 3.5 percent to represent the potential tax loss experienced by State and local governments due to the recession. The 3.5-percent figure, was selected by examining four past recessions to determine the amounts of money that various percentages would have provided. We believe it would permit the Appropriations Committee sufficient leeway to conform payments to the Government's fiscal policy at the time.

Once started, antirecession payments would continue for all quarters in which real wages and salaries are less than in the base period. In other words, Federal assistance would be paid until the econ-

omy recovered to its previous state of health immediately before the recission. This means payments would have been continued in the past recession for several quarters after the economy turned around.

At that time, both gross national product and real wages and salaries began to decline in the first quarter of 1974, and continued to decline until the end of 1975 for GNP, and through the first quarter of 1976 for wages and salaries.

However, it took until the fourth quarter of 1976 for real wages and salaries to reach the 1973 base period that preceded the recession. For those 9 quarters, the 3.5 percent factor would have produced an authorization ceiling of about $4.6 billion for antirecession payments.

Once the amount of money for distribution has been determined, the State and local allocations would be made on the basis of relative tax collections and tax effort, as in the Aspin amendment.

The subcommittee concluded that this kind of program is desirable both on its own merits and as a way of counteracting pressures for the further extension of the unneeded and duplicative title II program at the end of fiscal year 1978.

Unless we cap this program, it may never end. If the Congress wishes to provide higher payments for general revenue sharing, we should put the additional money into that program. If we are sincere about desiring to help State and local governments in times of recession, we should adopt my amendment when it is offered.

This Nation has a great many unsolved social problems that will require large amounts of money. Passing out more revenue sharing under a mislabeled and duplicative program will not help solve those problems. And, of course, our resources are not unlimited, unless we count as resources the huge deficits we are piling up for future generations.

There is no question that we have unemployed people in this Nation, and we must do everything possible to find jobs for those who want to work. But, the unemployment rate does not even remotely indicate a national recession.

What it does indicate is the existence of pockets of unemployment in certain areas and structural changes in the labor force.

For example, the Commissioner of Labor Statistics has brought to the subcommittee's attention that the principal explanation for the high national unemployment rate is the increasing proportion of women joining the labor force. At the present time, about 47 percent of the women 20 years and over are in the labor force compared with far lower rates in past years. However, the comparable figure is 95 percent in Sweden. Consequently, if this trend were to continue here, it is conceivable that we would never again see a national unemployment rate below 6 percent, even in the most prosperous of times.

The solution to the unemployment problem lies in identifying the unemployed and devising intelligent policies and targeted programs to help those individuals.

Clearly, unemployment today is not high in the public sector, and a so-called countercyclical program such as title II is not an appropriate answer to high unemployment today when there is no national recession.

I think it is time to talk sense to the American people and to stop the practices of giving away the taxpayer's money through falsely labeled programs.

Mr. WYDLER. Madam Chairman, will the gentleman yield?

Mr. FOUNTAIN. I yield to the gentleman from New York.

Mr. WYDLER. Madam Chairman, I just want to say I think the subcommittee chairman has done a most conscientious and hard-working job in trying to come up with a formula under great pressure, which was not caused by his own action.

I am going to work with the gentleman as best I can to try to come up with a better formula but I hope the gentleman will consider unemployment as some part, at least, of the factor in any new formula that we devise.

Mr. FOUNTAIN. Madam Chairman, if I may say to the gentleman from New York, that portion of the bill that says that the study should be made by the Secretary of Commerce and the Secretary of the Treasury, that study has already been made very thoroughly by the Subcommittee on Intergovernmental Relations, they have been working with the Secretaries of Commerce, Treasury, and Labor, so actually that part of the bill, it seems to me, is rather perfunctory, but it is in it, and we will take a look at it.

Mr. WAGGONNER. Madam Chairman, I move to strike the last word.

Madam Chairman, I would like to ask a question of the distinguished floor manager of the bill, the gentleman from Texas (Mr. BROOKS). I am referring to page 8, section 6, entitled "Nondiscrimination" of the committee report. The purpose of the question is to try to be sure that the nondiscrimination provisions are made to coincide with those provisions which are a part of the revenue sharing legislation. This is the question that I would like to have clarified:

The committee report indicates that a recipient Government is exempt from the nondiscrimination provisions if it demonstrates with clear and convincing evidence that the program was not funded, directly or indirectly, with moneys allocated under this act.

Mr. BROOKS. Madam Chairman, will the gentleman from Louisiana (Mr. WAGGONNER) yield so that I may reply to him?

Mr. WAGGONNER. I would be most happy to yield to the gentleman from Texas.

Mr. BROOKS. Madam Chairman, the nondiscrimination provision included in H.R. 6810 incorporates the nondiscrimination provisions of the general revenue sharing statute passed last year. The section prohibits the use of funds made available under the countercyclical program in any discriminatory activity or program of a State or local government.

The nondiscrimination provision does not apply where any State or local government can demonstrate by clear and convincing evidence that the program or activity alleged to be discriminatory is not funded in whole or in part with funds available under this legislation. The words "directly or indirectly" do not appear in either this legislation or the general revenue sharing legislation. They were inadvertently included in the section-by-section analysis in the report on this legislation. That language is not intended in any way to affect the provision contained in the legislation itself.

Mr. WAGGONNER. Then it more properly should read "in whole or in part" since it was intended that we add that language, is that correct?

Mr. BROOKS. That is correct.

Mr. WAGGONNER. I thank the distinguished gentleman from Texas.

Mr. EDWARDS of California. Madam Chairman, I opposed the amendment when it was offered by Mr. ASPIN to H.R. 6810. The purpose of these countercyclical funds is to maintain basic services during times of high unemployment. Funds are distributed based on a formula which takes into account the unemployment rates of the various States and localities. This is the approach favored in the committee bill. Mr. ASPIN, on the other hand, has offered an amendment which provides for the use of a formula based on the tax effort of the State and local governments. The trouble with this approach is that an area's taxing effort does not accurately reflect the impact of a recession on the State and local government. This amendment would be detrimental to many parts of the country which suffer from high unemployment but which do not tax heavily enough for the Aspin formula.

For example, in my own district, this amendment would give local government $1.5 million less than under the committee formula. I urge the Members to reject the amendment.

Mr. LAGOMARSINO. Madam Chairman, there are a dozen reasons why H.R. 6810, the Counter-Cyclical Assistance Act, is a bad bill, but I will limit myself to just two. First, it is not needed. Second, the program does not work.

This bill is being sold to us as a cure for a recession which ended almost 2 years ago. Newly reported figures for the past seven quarters indicate that the current economic recovery is the strongest business cycle upturn since 1950 in terms of basic employment and output growth. Real GNP in the past seven quarters has grown 10.2 percent. Total employment has grown 6.9 percent. The pace of this recovery outstrips that experienced in any of the four previous recessions we have had in the past quarter century.

To take just two examples, in our two most basic industries: March auto sales reached a 12.6 million annual rate, practically a record high. This figure is 42 percent higher than the 1975 rate, and 25 percent above even last year's healthly total of 10.1 million cars. Also in March, the annual rate of new housing starts

was 2.1 million, nearly double the 1975 rate of 1.1 million.

So we are in the position of prescribing surgery for a patient well on the way to recovery.

My second point is that even in bad times this surgery is misapplied. According to the report of the subcommittee which heard this bill, the program has simply not been effective in curing the ills for which it was devised. The subcommittee found that countercyclical aid is not an antirecession cure, and does not reduce unemployment. In fact the subcommittee felt so strongly about the failures of the program that it recommended that it be scrapped and a new one devised.

Well I agree with their diagnosis, if not with their cure. The fact is, we do not need this program. The General Accounting Office, in looking into the conduct of last year's program, found that of 21 recipient governments surveyed as of February 7, only 6 had spent any of their funds. In fact, of the 20,000 governments receiving payments in the first three-quarters of the program 9,000, or almost half, received a total of $1,000 or less.

Consequently, GAO believes the bill, rather than curing our economic ills, could have an inflationary impact on the economy by the time it finally takes effect. In fact, many of the governments receiving funds under this program have simply deposited them in the bank.

At a time when rising prices have shrunk real income for wage earners and those on fixed pensions, it seems absurd to lay out up to $2¼ billion in revenues we do not have. The real result, rather than providing antirecession aid, could be a renewal of the boom and bust cycle which got us into this fix in the first place. I urge a no vote.

Mr. ZEFERETTI. Madam Chairman, I want to add my voice of support for the passage of the Intergovernmental Antirecession Assistance Act of 1977.

The bill extends the countercyclical aid program, which has proven vital to our local governments during the past year and is an integral part of President Carter's economic stimulus program.

The major thrust of this legislation is two-fold: To provide funds for getting thousands of our unemployed off the unemployment roles and into productive jobs, and to enable our local communities to maintain essential public services without drastically increasing taxes.

The original legislation passed last year, the Public Works Employment Act, has proved to be a constructive element in steering our economy out of a period of deep recession and on the road to recovery. It has helped to reduce our unemployment, it has helped in preventing the further deterioration of vital public services and it has provided funding for the construction of sorely needed public works projects such as schools and libraries.

There are those who will argue that countercyclical aid is inflationary and that it merely provides funding for "make-work" projects that are short-term in nature. Let me remind those critics that unemployment is extremely costly to the American people. We are currently spending nearly $20 billion yearly on the costs of unemployment, which accounts for a tremendous drain on the Federal Treasury. In addition, most of the jobs resulting from this program have been in the private sector. The overall effect has been an input of more consumer dollars back into circulation, stimulating economic recovery and providing still more jobs.

The formula of using local unemployment rates as the key element in the program assures that the assistance is targeted effectively to those areas that need it most, and I applaud the retention of this provision.

However, countercyclical assistance will continue to provide aid to State and local projects, generating many useful jobs while at the same time providing better governmental services to our citizens at the local level. This program has been successful in meeting those needs and I am confident that, with a vote of approval from this distinguished body, it will continue to stimulate and strengthen this Nation's economy.

Mr. DE LUGO. Madam Chairman, I rise in support of the amendment offered by the gentleman from South Carolina.

This amendment, which conforms to the language in the Senate bill, authorizes a 1 percent set aside for the U.S. territories under the countercyclical program. It would not take away funds from any other State or local government, and it is similar to the distribution formulas that Congress has enacted for the offshore areas in a number of other Federal programs.

This amendment would help meet the needs of these U.S. territories that have been hard hit by recession. It would replace the existing distribution formula, which, unfortunately, is not based on need or equity.

By providing assistance to the hard-pressed governments of these areas, it would reaffirm that the Federal Government has a responsibility to promote the economic recovery of the U.S. territories during periods of severe recession, as well as the several States.

In supporting the Senate amendment which is substantially the same as the one presently before this body, Senator MOYNIHAN called the 1 percent set aside "a modest proposal" in light of the high unemployment in these areas and the economic havoc caused by the recent recession.

Under this amendment, the Virgin Islands would receive less than $1 million a year to supplement its efforts to maintain vital public services during times of severe economic downturn. It is a reasonable amendment, and I strongly urge its adoption.

Mr. MURPHY of New York. Mr. Speaker, the countercyclical assistance authorizing legislation before us is a program of aid to State and local governments which have been very hard hit by recession. It is critically needed by New York State and New York City, and is probably the only measure which will enable the city to avoid serious budgetary problems in fiscal year 1978.

In the city, this bill would allow us to reopen libraries which have been closed for far too long. It would allow us to rehire up to 1,500 police men and women whose absence has been one of the major spurs to increased crime in the city. The countercyclical program is a key part of Mayor Beame's program, and is an equally key part of President Carter's package of aid to the States and cities.

Congressman ASPIN's amendment, while I am certain it is well-intended, has some unfortunate and extremely damaging aspects which would destroy the intent of the program.

Countercyclical means just that: It is intended to counter the problems engendered by a declining economy. In the same fashion, an improving economy would demand less countercyclical application of funds.

The Government Operations Committee investigated the alternatives most thoroughly, and reported out a bill which depends on an allocation formula based on, among many other factors, a fluctuating unemployment data base. The Aspin amendment would remove that factor, and in its place substitute a tax-base effort criteria schedule which has one very obvious defect of inflexibility among others.

I continue to hear grumblings that New York City will receive about 22 percent of this money. There is a very basic reason for this: We suffer from a great deal more than 22 percent of the problems of recession. We are the largest city in the Nation with over 9 million people, which is more than many entire States. Our unemployment rate is among the highest in the country, due to a raging recession which has affected the entire national economy. Again, I note the countercyclical nature of the legislation is to place the assistance where it is most needed, in areas of high unemployment. This cannot be determined by the tax base, which is by definition, a subjective assessment of value based on prior wages and market values rather than an objective view of current economic conditions.

I would also like to point out that the Aspin amendment, while it seems superficially to give more money to New York City, in reality it does so at the expense of the State, which receives considerably less, proportionally. Thus, the city's share of State countercyclical funds is sizably reduced—again defeating the entire purpose of countercyclical legislation.

The committee has expended considerable time and effort to devise a fair, rational, and reasonable bill in this time of economic reorganization. I can find no reason to alter those recommendations through a hasty amendment.

Mr. CONYERS. Mr. Speaker, I rise in strong support of the extension of the countercyclical program. Regardless of the optimistic economic indicators and predictions, by official rates the country is still at an unacceptable 7 percent unemployment rate and in the city of Detroit 10.7 percent, or 50,000 workers, still need a job. I regret to say that recession is still alive and well in Detroit, and the $20 million the city was granted in antirecession funds is largely responsible for the modest gains Mayor Coleman Young has been able to point to.

In his recent budget message, Mayor Young does indicate a real improvement in city services and finances, but reminds us that the level of services is not yet back to that of 2 years ago. Other incom-

ing Federal aid will be inadequate to meet the remaining 600 person shortfall in police ranks, or the $3 million underfunding of the public transportation system, or the rehabilitation of unlivable public housing units, or the 40-plus vacancies in the recreation department.

I have no doubt that many other recession-stricken areas are still below "restoration levels" of basic city services to their citizens. Widespread unemployment and struggling inner-city businesses are still undercutting the already declining municipal tax bases. Extra compensation and welfare cases are still draining city treasuries.

In May 1975, the Senate Government Operations Subcommittee on Intergovernmental Relations heard Mayor Young testify that "Detroit is in the strangling grip of a major depression," the subcommittee staff study claimed that:

> The recession has had an absolutely devastating effect on State and local government budgets.

Unlike the Federal Government which can easily borrow or print money, localities through tax increases and slashed services bear the brunt of recessions they did not create. Countercyclical aid is a critical component of urban economic recovery—a recovery which is far from attained.

The CHAIRMAN. Are there further amendments? If not, the question is on the committee amendment in the nature of a substitute, as amended.

The committee amendment in the nature of a substitute, as amended, was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Ms. HOLTZMAN, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 6810) to amend and extend title II of Public Law 94-369, to establish a new title to the State and Local Fiscal Assistance Act of 1972, and for other purposes, pursuant to House Resolution 560, she reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment to the committee amendment in the nature of a substitute adopted by the Committee of the Whole? If not, the question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The question was taken.

Mr. WYDLER. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 243, nays 94, not voting 95, as follows:

[Roll No. 232]

The Clerk announced the following pairs:

On this vote:

Mr. Sikes for, with Mr. Teague against.

Mr. Wright for, with Mr. Montgomery against.

Mr. Kazen for, with Mr. Archer against.

Mr. Staggers for, with Mr. Badham against.

Mr. Tucker for, with Mr. Burgener against.

Mr. Carney for, with Mr. Burke of Florida against.

Mr. Fish for, with Mr. Del Clawson against.

Mr. Gradison for, with Mr. Collins of Texas against.

Mrs. Heckler for, with Mr. Frenzel against.

Mr. Kemp for, with Mr. Marriott against.

Mr. Marks for, with Mr. Rudd against.

Mr. Steiger for, with Mr. Sebelius against.

Mr. Lederer for, with Mr. Winn against.

Mr. Dent for, with Mr. Whitley against.

Mr. Fuqua for, with Mr. Dan Daniels against.

Mr. Heftel for, with Mr. Nichols against.

Mr. Russo for, with Mr. Bevill against.

Until further notice:

Mr. Hubbard with Mr. Anderson of California.

Mr. Ireland with Mr. Gibbons.

Mr. St Germain with Mr. Leggett.

Mr. Skelton with Mr. Metcalfe.

Mr. Stratton with Mr. Cederberg.

Mrs. Burke of California with Mr. Quie.

Mr. Hillis with Mr. Price.

Mr. Dingell with Mr. Quillen.

Mr. LaFalce with Mr. Broyhill.

Mr. Harsha with Mr. Weaver.

Mr. Smith of Iowa with Mr. Walker.

Mr. Edwards of Alabama with Mr. Vanik.

Mr. McCormack with Mr. Udall.

Mr. Conable with Mr. Lujan.

Mr. Pike with Mr. Pressler.

Mr. Florio with Mr. Brown of Ohio.

Mr. Corman with Mr. Hall.

Mr. Clay with Mr. Ichord.
Mr. Jenkins with Mr. McKay.
Mr. Volkmer with Mr. Risenhoover.
Mr. Charles Wilson of Texas with Mr. Holland.
Mr. Traxler with Mr. Watkins.
Mr. Stump with Mr. Van Deerlin.
Mr. Stark with Mr. Roberts.
Mr. Fithian with Mr. Runnels.
Mr. Ford of Tennessee with Mr. Glickman.
Mr. Jones of Alabama with Mr. Roncalio.

Messrs. EVANS of Indiana, DERWINSKI, and RAILSBACK changed their vote from "yea" to "nay."

So the bill was passed.

The result of the vote was announced as above recorded.

The title was amended so as to read: "A bill to amend and extend title II of Public Law 94-369, and for other purposes."

A motion to reconsider was laid on the table.

PERMISSION FOR COMMITTEE ON HOUSE ADMINISTRATION TO FILE REPORT ON H.R. 5400

Mr. THOMPSON. Mr. Speaker, I ask unanimous consent that the Committee on House Administration may have until midnight tonight to file a committee report on the bill H.R. 5400.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

PERMISSION FOR COMMITTEE ON MERCHANT MARINE AND FISHERIES TO HAVE UNTIL MIDNIGHT, SATURDAY, MAY 14, 1977, TO FILE REPORTS

Mr. YOUNG of Missouri. Mr. Speaker, I ask unanimous consent that the Committee on Merchant Marine and Fisheries may have until midnight, Saturday, May 14, 1977, to file certain reports.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

ONE-THIRD OF OUR FIRSTLINE CARRIER FLEET OBSOLETE?

(Mr. MILFORD asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. MILFORD. Mr. Speaker, yesterday, in response to a reporter's question, President Carter stated that the Navy's A-7E aircraft were obsolete, overpriced, and that the Navy would be better off to rely on the replacement model.

I am astonished at Mr. Carter's apparent lack of knowledge about our Navy's aircraft inventory. Also about his lack of knowledge of the Navy options for present and future aircraft procurement.

Apparently President Carter is not aware that 25 to 30 percent of our present Navy first-line carrier fleet consists of A-7 aircraft. Surely the President is not telling the world that nearly one-third of our firstline Navy aircraft are obsolete.

Further, the President said the decision not to order new A-7's "was based on the fact that we have superior aircraft to replace it."

The only airplane I have heard mentioned to replace the A-7 is the A-18, and that airplane is still in the design stage. If every factor works to the very best—which seldom happens in new aircraft development—we will not see an A-18 on a carrier for at least 5 years.

Mr. Speaker, I would like to take a look at the President's remarks on the A-7E aircraft one by one, along with the U.S. Navy's own evaluation of that aircraft.

The President states that the A-7E is "obsolescent." Vice Adm. Frederick C. Turner, Deputy Chief of Naval Operations for Air Warfare, in an exchange before the Senate Appropriations Committee on March 10 of this year, had this to say:

Senator INOUYE. Is it not true that in the A-7E the Navy has a light attack aicraft capable of carrying very large loads of air-to-surface weapons to distant targets for which the weapon control systems in the airplane provide highly accurate target impacts?

Admiral TURNER. The A-7E is a very capable light attack aircraft with excellent range and payload characteristics. It is capable of carrying and delivering most of the Navy's air-to-ground ordnance with extremely high accuracy.

Now, Mr. Speaker, let us hear what Admiral Turner had to say in the same hearings which might apply to President Carter's remarks that "as far as our return on very scarce military dollars invested it (the A-7E) was not the best investment to make."

In the Senate hearing this exchange took place:

Senator INOUYE. It is my understanding also that the unit price of the A-7E is low—as combat aircraft costs go these days—so that this aircraft does in fact offer a high measure of target destruction potential for the dollar investment? In other words, is the A-7E very cost-effective?

Admiral TURNER. With a flyway cost of approximately $5 million, the A-7E is the least expensive carrier-based tactical aircraft in production today. In view of its demonstrated capability and reliability, the A-7E would have to qualify as a very cost-effective and very satisfactory light attack aircraft.

That same hearing also addressed another point which the President mentioned in his press conference.

In the press conference, the President said:

I don't believe our defense capability will be damaged by not going ahead and acquiring this plane (the A-7E).

The hearing transcript, still with Admiral Turner, shows this exchange:

Senator INOUYE. Did the Navy appeal or reclama the decision to cancel the procurement of the A-7E?

Admiral TURNER. Yes, sir; the Navy did submit a reclama to the OSD decision to terminate the A-7E procurement. The Navy requested the procurement of the six aircraft which were deleted from the FY-78 budget. That reclama further stated a requirement for the procurement of 36 A-7Es subsequent to the FY-77 buy to preclude a light attack force level shortfall.

Mr. Speaker, what all this indicates to me is that we in the Congress and the American people are not getting the true story about the Navy's airpower status and needs.

The heart of the matter is that the Navy has steadfastly maintained that it has an absolute minimum requirement for 36 A-7E aircraft to fill the complement of a 12-carrier fleet until the A-18 becomes operational.

Let me cite you some recent history which shows how the A-7E has suffered at the hands of two administrations, with little or no regard for the Navy's real need or the real need of our national defense. This story also illustrates the capricious nature of recent defense "planning."

In January 1976, the Five Year Defense Plan called for 120 new A-7E's to meet the 36 aircraft minimum, including attrition and reconnaissance requirements.

Then, in May 1976, for reasons other than national defense, a series of games started with these plans when a 10-percent cut was imposed, reducing the procurement to 108, and in November it was cut again—this time to 54.

During December alone, the procurement was cut back to zero, increased to 36, and then cut back to 6.

In January 1977, it was cut back to zero again.

This Congress has to take a very skeptical and doubting view of such excursions. The United States either has a defense plan, or it does not. From the looks of this situation, it does not—at least, not where the A-7E is concerned.

If there is such a plan, it is much too vulnerable to the capricious political expediencies of every small political breeze which blows.

This Congress must know what is really needed for national defense, what the plan is, and how to follow it, in spite of the political whims of every administration.

Mr. Speaker, now I would like to address the issue of the replacement airplanes for the A-7E.

According to a report in the Aerospace Daily, on March 21, 1977, internal Navy documents indicate the Navy has very serious reservations about the A-18 attack aircraft.

In fact, according to this report, internal Navy studies indicate that the A-18 attack version of the F-18 fighter is "less capable than the present Vought A-7E in all areas except aerodynamic performance" and that the "A-18 cannot meet mission requirements for the 1980's in terms of strike capability, electronic warfare survivability and mission flexibility."

In the same reports, there are serious questions raised about the cost of the A-18, should such an aircraft ever come about.

Mr. Speaker, I would like to have this entire report appear at the end of my remarks.

The real question which I believe is pertinent here is what happens if the President prevails and the A-7E program is cancelled and the Vought production line is shut down?

The Navy says we are short 36 A–7E's right now, and it has already been established that the A–7E is the only light attack aircraft on our carriers today.

If the line is closed, and even one of those aircraft is lost in combat in the next 5 or more years, there will be no way to replace it.

If we should have a major military confrontation and lose A–7E's in large numbers, then—without the Vought line open and producing airplanes—we are left completely without the ability to replenish our losses.

Mr. Speaker, none of this makes sense from a cost standpoint or from a national defense standpoint.

Someone, somewhere, is playing some very dangerous games.

The Aerospace Daily report follows:

NAVY STUDIES FIND A–18 LESS CAPABLE THAN A–7E IN MOST AREAS

Internal Navy studies have concluded that the A–18 attack version of the McDonnell Douglas F–18 Hornet fighter is less capable than the present Vought A–7E in all areas except aerodynamic performance and cannot meet mission requirements for the 1980s in terms of strike capability, electronic warfare survivability and mission flexibility, The Daily has learned.

The analyses were completed by Air Test and Evaluation Squadron Five, China Lake, Calif., last October, and have been circulated around the Pentagon for the past month. The A–18's key shortcomings, according to the report, are its limited weapons carriage, outmoded electronic countermeasures (ECM) suite and inadequate internal fuel capacity.

These shortcomings threaten the viability of more than just the attack version, moreover, since the whole F–18 program depends on the procurement of the full Navy request for 800 aircraft in order to achieve an acceptable program unit cost. Out of those 800, the Navy plans to procure 430 fighter versions, 310 attack aircraft and 60 trainers. An additional 11 aircraft are in the development program. Total program cost is estimated at $12.8 billion, including inflation.

Based on the latest Selected Acquisition Report (SAR) dated Dec. 31, that works out to a program unit cost of $16 million in "then year dollars" for the F–18, which puts it uncomfortably close to the $20.5 million for the Grumman F–14. (The latter figure is based on the revised plan for 521 F–14s at a total cost including inflation, of $10.56 billion.)

The issue came to a boil last Wednesday during closed-door hearings before the House defense appropriations subcommittee. Congressmen favoring the A–7 grilled Robert Parker, acting director of Defense Research and Engineering, about the rumored deficiencies in the A–18. Among those leading the questioning was Rep. Bill Chappell Jr. (D–Fla.).

Their goal was to keep the A–7 program alive, at least until the Pakistani sale could be resolved, but they succeeded in restoring only six of those aircraft to the FY '78 DOD budget after earlier attempts to put in 24 and then 12 were voted down in the subcommittee by substantial margins.

A–7 UNIT COST COULD DROP TO $4.5 MILLION

Unit cost of the A–7 this year is running less than $5 million, but it could drop down to $4.5 million if Congress finally approves an FY '78 request for 12–24 more. Conversely, it will rise well above $6 million if the FY '78 buy is held at six aircraft.

In the past the pro-A–7 faction, concentrated in the Texas congressional delegation, has been limited essentially to the economic argument that closing the production line would amount to driving a major airframe contractor, Vought, out of business. The new revelations give them some technical ammunition.

Probably the most damaging argument to come out of the test and evaluation report is that the inadequate internal fuel capacity will dictate external fuel tanks and this, in turn, will limit performance. The high fuel consumption of the aircraft's two low bypass ratio afterburning turbofan engines means that for most missions three external tanks will be needed, leaving only two air-to-ground stations.

But to meet the survivability requirements of those missions four weapons stations will be needed, allowing carriage of only one external tank This, according to the internal Navy studies, results in a calculated mission radius that is 25–35 percent less than for an A–7E with the same weapon loads and no external tank.

Furthermore, the Navy testing team doubted that a centerline tank could be added because of catapult clearance problems and added that the A–18 has not been designed for aerial refueling.

The A–18 will have to carry anti-radiation missiles to defend itself against surface-to-air missiles in addition to bombs to complete its mission. Yet there are no Shrike or Standard Arm interfaces, which means the A–18 must depend on the availability of the high-speed anti-radiation missile (HARM). The aircraft will have only limited capability to carry laser-guided bombs (one per rack) and no capability to carry Walleye, mines, pods or dispensers.

In the electronic warfare area the evaluation team was particularly critical of what it called the A–18's "outmoded" ECM suite consisting of the ALR–45, ALR–50, ALE–39 and ALQ–126. These systems were said to be only marginally effective against a small portion of the future threat.

The A–18 is eventually due to get the newer technology ALR–67 radar warning receiver and advanced self-protection jammer (ASPJ), but the Navy study team complained that the aircraft as now designed will not be compatible with these systems. The team said that ECM and ARM were even more important than aerodynamic performance for survival in combat, and that the present ECM suite was "totally inadequate." The proposed solution was to build in the necessary ECM and defense suppression now—specifically the ASPJ and ALR–67—so that the aircraft could meet the threat of the 1980s.

DAVIS-BACON ACT

The SPEAKER. Under a previous order of the House, the gentleman from Minnesota (Mr. HAGEDORN) is recognized for 5 minutes.

Mr. HAGEDORN. Mr. Speaker, the Assistant Administrator of the Wage and Hour Division of the Department of Labor has more influence over construction rates in this country than does any other single individual. As the individual designated by the Secretary of Labor to carry out the Secretary's duties under the Davis-Bacon Act, he has the power to compel the expenditure of hundreds of millions of unnecessary public dollars every year. Through a variety of administrative techniques, he has the power to manipulate public construction costs to an extent inevitably impacting upon construction costs in the private sector. There is simply no way that wage rates imposed upon the 30 percent of construction in this country that is public can fail to influence remaining construction markets. Dr. Armand Thieblot, in a study for the Wharton School of Business, concluded that—

If it is easy to pass along higher wage costs as it is to the price-inelastic government construction user, then higher wage demands will not be as strongly resisted. The greater the proportion of Davis-Bacon work in an area, the higher the wage scale will be.

Mr. Speaker, in the RECORD of May 11, I suggested a number of new interpretations of the Davis-Bacon Act being pursued by the Department of Labor designed to insure that "prevailing wages" are established as near as possible to the highest wages in given areas. At this point, I would like to insert a memorandum by an attorney, Mr. Carl Trieshmann of Smith, Currie & Hancock in Atlanta, Ga., wherein he notes specific examples of how the Department contorts the basic premises of Davis-Bacon to justify wage determinations far in excess of actual "prevailing" wages. I call these examples to the attention of my colleagues as being illustrative of what the Department is doing on a daily basis to insure needlessly high public construction costs.

MARTA I

MARTA I is a shorthand designation for the first case where the assistant administrator sought to raise construction costs for the Metropolitan Atlanta Rapid Transit Authority's rapid rail system. In this particular case, he sought to conduct a survey of construction projects of a similar character to the at-grade construction projects MARTA was advertising for bids as part of the early days of construction of the rapid rail system. The MARTA contracts involved were to clear and grade various segments of the proposed right-of-way with minimal tunneling or heavy concrete work. In short, these particular projects were very similar to at-grade highway construction and did not involve any actual track laying.

More than 90% of the wage data from the projects surveyed by the assistant administrator and used to establish the wage rates for the MARTA contracts in this particular case was derived from water pollution control and sewage treatment plant projects. These projects entail heavy concrete work, elaborate and extensive mechanical, electrical, and plumbing systems, and can in no way be viewed as comparable to the clearing and grading of right-of-way which MARTA was undertaking.

MARTA requested that the assistant administrator review and reconsider his wage decision but he did not offer any meaningful response. As a result, MARTA as well as the Georgia Highway Contractors Association appealed his decision to the Wage Appeals Board. As a result of this appeal, the Wage Appeals Board ruled in favor of MARTA and GHCA and directed that the Labor Department redetermine the wage rates for these projects and exclude water pollution control and sewage treatment plant projects in such redetermination.

MARTA calculated that had the assistant administrator's decision been upheld, it would have added a minimum of One-Hundred Million Dollars to the construction costs of MARTA's rapid rail system.

MARTA II

MARTA II is another case involving wage rates applicable to the construction of the aerial portion of MARTA's rapid rail system. Rather than utilizing manipulated survey data to raise construction costs as he had attempted in MARTA I, the assistant administrator endeavored to achieve his same desired result of increasing the wage rates above and beyond those which actually pre-

vailed in Fulton and DeKalb Counties by characterizing the aerial construction as "building" construction. "Building" construction is normally applied by the Department of Labor to building structures, such as Federal office buildings, high-rise apartments, and similar structures. The assistant administrator took the position that the aerial portions of the MARTA system, best perceived or understood as a series of bridges, were "buildings" and the wage rates to be paid for this aerial construction were those paid for "building" construction in Fulton and DeKalb Counties.

The Georgia Highway Contractors Association and the Associated General Contractors, Georgia Branch, requested the Department to reconsider its decision to characterize the aerial construction projects as "building" and requested that he conclude that they are "heavy" construction projects. "Heavy" construction projects are those that are neither "buildings", "residential construction", or "highways." The Assistant Administrator refused to alter his initial decision on the aerial construction projects.

GHCA and AGC then appealed his decision to the Wage Appeals Board and was completely successful. The Wage Appeals Board ruled that the aerial structures were not buildings, but were "heavy" construction projects like bridges, and, therefore, the "building" wage rates were inappropriate for these projects. As a result of this decision, the Assistant Administrator was directed to issue "heavy" wage rate schedules for these projects resulting in savings of millions of dollars for aerial construction costs connected with the MARTA rapid rail system.

COBB COUNTY I

Cobb County I is a shorthand reference to another case involving the Assistant Administrator's efforts to unnecessarily increase by millions of dollars the cost of constructing water pollution control plants. Previously, water pollution control plants which were Federally financed carried two wage rate schedules. One schedule was designated "building" and the other schedule was designated "heavy". Contractors were to pay "building" structures built in connection with the water pollution control plant project, and pay "heavy" wage rates for the nonbuilding aspects of the water pollution control plant projects. Because of the nature of such projects, the "Building" portion accounted for less than 20% of the total project; the remainder being "Heavy" construction.

The Assistant Administrator decided that water pollution control plant projects were really "building" projects and eliminated the "heavy" wage rate schedule. Thus, contractors bidding on water pollution control plant projects would do so knowing that they would have to pay the much higher "building" wage rates for the entire project where, before, such rates were paid on less than 20% of the total project.

The Georgia Utility Contractors Association requested reconsideration of this decision, but to no avail. GUCA then appealed the decision to the Wage Appeals Board and won. The Assistant Administrator was instructed by the Wage Appeals Board to issue both "building" and "heavy" wage rate schedules for the particular water pollution control plant project there involved and to do so on all other water pollution control plant projects throughout the country.

Had this decision not been reversed by the Wage Appeals Board, the increased cost on the single project involved in this case would have exceeded one million dollars. The total cost of the Federal Government would have been in the tens and perhaps hundreds of millions of dollars if the decision had been sustained and become the "law" for all other water pollution control plant projects to be constructed in all fifty states.

Unfortunately, the Assistant Administrator's decision in Cobb County had previously been made on a similar project in Gwinnett County, Georgia. His decision in Gwinnett County was not appealed timely and the contract was awarded to a contractor on the basis of the single "building" wage rate schedule basis. Interestingly, Gwinnett County initially requested bidders to submit two bids, one bid based on the "building" wage rate schedule alone, and the other bid to be based utilizing the "building" and "heavy" wage rates. The difference between the low bids was $300,000. In short, the low bidder utilizing the "building" and "heavy" wage rate schedules was $300,000 lower than the low bidder utilizing only the "building" wage rates. However, because the decision was not timely appealed, the County was left with no alternative but to award the contract to the low bidder who used only the "building" rates. The water pollution control plant project awarded by Gwinnett County cost three hundred dollars more than it should have cost due solely to the Assistant Administrator's decision and an erroneous decision as subsequently demonstrated by the Wage Appeals Boards' decision.

COBB COUNTY II

Cobb County II is a case involving a second water pollution control plant project to be undertaken in Cobb County. Knowing that he cannot raise wage rates by mis-characterizing this project as a "building" project as he had tried, but failed to do, in Cobb County I, the Assistant Administrator has endeavored to manipulate through timing of surveys and the content of surveys the wage rates applicable for this project. Thus, at his instructions, the Department of Labor carried out an expedited and highly abbreviated "heavy" survey in Cobb County which has resulted in dramatic increases in wage rates on the "heavy" wage rate schedule. While the Department of Labor normally takes at least sixty (60) days to conduct a wage rate survey, this survey was conducted in less than fifteen (15) days.

Furthermore, the Assistant Administrator has decided to exclude various projects simply because they carry low wage rates notwithstanding the fact that such projects have always been included in "heavy" surveys in Cobb County previously. Thus, through selectively including and excluding projects, he has effectively raised the "heavy" wage rate schedule dramatically.

Although he has been presented with substantial wage rate data demonstrating that the "building" rates are erroneous by the County, the Assistant Administrator refuses to initiate a "building" survey to establish accurate rates for such construction. Not surprisingly the "building" rates presently issued by him are union rates and the data collected by the County clearly demonstrates that open-shop construction rates prevail in the County for "building" construction.

Clearly, while he conducted an unusually expedited and abbreviated "heavy" survey at the request of labor organizations, and without any supporting data indicating that the then existing "heavy" wage rates were inaccurate, the Assistant Administrator refuses to conduct a survey of "building" wage rates at the request of Cobb County and such refusal is made in the face of substantial data demonstrating that those "building" wage rates are wrong and do not reflect prevailing wage rates in Cobb County for that type of construction.

As a result of the wage decision issued, Cobb County and the Georgia Utility Contractors Association requested that he reconsider his decision. No meaningful action has been taken by the Assistant Administrator to correct the errors brought to his attention by the County and GUCA. Furthermore, he has issued a new decision which raises the wage rates for twelve (12) job classifications on the "building" wage rate schedule in the face of the substantial evidence presented demonstrating that the entire schedule is wrong and the rates should be lowered drastically.

EXPLANATION OF AMENDMENT TO CLEAN AIR ACT AMENDMENTS

The SPEAKER. Under a previous order of the House, the gentlewoman from Nebraska (Mrs. SMITH) is recognized for 10 minutes.

Mrs. SMITH of Nebraska. Mr. Speaker, on May 5, I had printed in the RECORD a copy of an amendment I plan to offer to H.R. 6161, the Clean Air Act amendments, when it reaches the floor of the House of Representatives.

Briefly, the amendment, if adopted, will offer relief for small gasoline refineries throughout the country which are being forced to comply with Environmental Protection Agency regulations regarding the phasedown of lead in gasoline that were designed for large refineries.

In its effort to get down to the 0.5 grams per gallon standard for lead in gasoline by October 1, 1979, the EPA has placed an almost intolerable burden on the small refinery. The cost of complying with these rules is prohibitive for most of these refineries and many might have to be closed.

As an alternative, I am proposing that small refineries—those with a production capacity of 50,000 barrels per day or less and owned or controlled by a refiner with a total capacity of 175,000 barrels per day or less—meet a lead standard per gallon of gasoline in inverse proportion to its size. The specific requirement is contained in the amendment.

The EPA itself is concerned about the effect of the phasedown regulations on small refiners and refineries. It commissioned a study to be done on the subject by Sobotka and Company, Inc. One of the findings of Sobotka was that "some small refineries or refiners will consider termination of their gasoline business and some of those that elect to do so may close their facilities unless they are granted either a complete waiver for lead limitations or unless an intermediate standard * * * is applied to them."

My amendment sets some realistic standards for the industry and meets the goals for clean air set by the Congress and enforced by the Environmental Protection Agency.

The copy of the amendment on page 13876 of the May 5 RECORD was a preliminary effort. The amendment printed in today's RECORD contains some minor, technical changes from the first version.

The most significant of these is in the definition of a "small refinery." So there would be no opportunity to abuse the new standards, a 175,000-barrel-per-day capacity limit is placed on refiners that would be eligible to have refineries included under the new regulations.

The following, then, is the amendment as I intend to offer it when H.R. 6161 is considered:

AMENDMENT TO H.R. 6161, AS REPORTED, OFFERED BY MRS. SMITH OF NEBRASKA

(New provision to be added to section 220 of H.R. 6161)

Add the following new subsection to section 220:

"(g) (1) For the purposes of this subsection—

"(A) The terms 'gasoline' and 'refinery' have the meaning provided under regulations of the Administrator promulgated under this section.

"(B) The term 'small refinery' means a refinery producing gasoline which—

"(i) was in operation or under construction on October 1, 1976, and

"(ii) has a crude oil or bona fide feed stock capacity (as determined by the Administrator) of 50,000 barrels per day or less, and

"(iii) is owned or controlled by a refiner with a total combined crude oil or bona fide stock capacity (as determined by the Administrator) of 175,000 barrels per day or less.

"(2) No regulations of the Administrator under this section (or any amendment or revision thereof) respecting the control or prohibition of lead additives in gasoline shall require a small refinery to reduce the average lead content per gallon of gasoline refined at such refinery below the lower of the applicable amount specified in table A or table B below:

TABLE A

If the gasoline production is no greater than 50 per cent of refining capacity and if the refinery capacity in barrels per day is—	The applicable amount (in grams per gallon) is—
2,000 and under	3.0
2,001–4,000	2.9
4,001–6,000	2.8
6,001–8,000	2.7
8,001–10,000	2.6
10,001–12,000	2.5
12,001–14,000	2.4
14,001–16,000	2.3
16,001–18,000	2.2
18,001–20,000	2.1
20,001–22,000	2.0
22,001–24,000	1.9
24,001–26,000	1.8
26,001–28,000	1.7
28,001–30,000	1.6
30,001–32,000	1.5
32,001–34,000	1.4
34,001–36,000	1.3
36,001–38,000	1.2
38,001–40,000	1.1
40,001–42,000	1.0
42,001–44,000	0.9
44,001–46,000	0.8
46,001–48,000	0.7
48,001–50,000	0.6

TABLE B

If the gasoline production is no greater than refining capacity and if the average gasoline production of the refinery (in barrels per day) for the immediate preceding calendar year was—	The applicable amount (in grams per gallon) is—
1,000 or under	3.0
1,001 to 2,000	2.9
2,001 to 3,000	2.8
3,001 to 4,000	2.7
4,001 to 5,000	2.6
5,001 to 6,000	2.5
6,001 to 7,000	2.4
7,001 to 8,000	2.3
8,001 to 9,000	2.2
9,001 to 10,000	2.1
10,001 to 11,000	2.0
11,001 to 12,000	1.9
12,001 to 13,000	1.8
13,001 to 14,000	1.7
14,001 to 15,000	1.6
15,001 to 16,000	1.5
16,001 to 17,000	1.4
17,001 to 18,000	1.3
18,001 to 19,000	1.2
19,001 to 20,000	1.1
20,001 to 21,000	1.0
21,001 to 22,000	0.9
22,001 to 23,000	0.8
23,001 to 24,000	0.7
24,001 to 25,000	0.6

"(3) Effective on the date of the enactment of this subsection, the regulations of the Administrator under this section respecting fuel additives (40 C.F.R. Part 80) shall be deemed amended to comply with the requirement contained in paragraph (2)."

FORTY-SIX CONGRESSMEN CO-SPONSOR TRIBLE HOMEMAKER RETIREMENT BILL

The SPEAKER. Under a previous order of the House, the gentleman from Virginia (Mr. TRIBLE) is recognized for 10 minutes.

Mr. TRIBLE. Mr. Speaker, 30 to 50 million American homemakers are rapidly approaching retirement age without any type of retirement plan. These hard working men and women compose approximately one-third of our adult population. Unfortunately, they face the dismal prospect of old age without any source of outside income.

I am pleased to reintroduce with 46 cosponsors H.R. 4649, the Trible homemaker retirement bill. This bill would permit every homemaker in America who is not now participating in a retirement plan to own an individual retirement account—commonly known as an IRA.

The cosponsors are: Representatives CLIFFORD ALLEN, BILL ARMSTRONG, ROBERT BADHAM, HERMAN BADILLO, ROBERT BAUMAN, CALDWELL BUTLER, LAWRENCE COUGHLIN, PHILIP CRANE, RICHARD GEPHARDT, WILLIAM GOODLING, CHUCK GRASSLEY, MICHAEL HARRINGTON, MARJORIE HOLT, ROBERT KASTENMEIER, JACK KEMP, THOMAS KINDNESS, PETER KOSTMAYER, RAYMOND LEDERER, MARILYN LLOYD, TRENT LOTT, BARBARA MIKULSKI, ROBERT NIX, MARY ROSE OAKAR, RICHARD OTTINGER, JERRY PATTERSON, SHIRLEY PETTIS, JOEL PRITCHARD, J. DANFORTH QUAYLE, ALBERT QUIE, JOHN ROUSSELOT, PATRICIA SCHROEDER, GLADYS SPELLMAN, FORTNEY STARK, NEWTON STEERS, ARLAN STANGELAND, DAVID TREEN, GUY VANDER JAGT, ROBERT WALKER, G. WILLIAM WHITEHURST, CHARLES WILSON of Texas, and DON YOUNG.

THE PRESENT STATE OF THE LAW

At the present time, any self-employed person who earns wages and is not participating in a retirement plan may own an IRA. IRA's are generally available from banks, savings and loan associations, insurance companies, mutual funds, and other financial institutions. Once a person establishes an account, he or she can make annual contributions to the account of up to $1,500 or 15 percent of the first $10,000 of earned income.

For Federal income tax purposes, contributions to an IRA are fully deductible from the gross income of the wage earner. In addition, the annual earnings on the investment in the account are tax sheltered. Taxes are paid on the IRA only when money is withdrawn from the account. These tax benefits can increase after tax retirement income by as much as $13,289 per year. An investment in an IRA will usually return 35 percent more after tax income than the same investment without the tax benefits of an IRA.

Last year, the Congress passed the so-called "spousal IRA." This law extended IRA benefits to a selected group of homemakers under five very narrow conditions.

To qualify, a homemaker had to: First, not be a participant in a retirement plan; second, earn no wages; third, have a spouse who could own an IRA; fourth, have a spouse who elected to invest in an IRA; and, fifth, have a spouse who was willing to reduce the contribution to his or her IRA from a maximum of $1,500 to $875. Quite simply, there are very few homemakers who can meet all five of these tests.

My bill would eliminate the last four tests. To qualify to own an IRA, a homemaker would have to meet only the first test. If a homemaker is not participating in a retirement plan, he or she could own an IRA.

Each homemaker could participate in an IRA under the same limits on plan contributions as any other self-employed worker. They would not be treated as half-citizens. They could contribute up to $1,500 to their IRA's.

HOW THE BILL WORKS

Today, there is only one reason why homemakers who want an IRA cannot get one: homemakers are not paid wages for their work in the home. The law now requires earned income before anyone can have an IRA. Consequently, homemakers cannot participate because the law defines their labor as being economically worthless.

I think this is an irrational provision in the law which should be eliminated. You and I are both well aware of the great worth of the American homemaker's work. Yet, in spite of our common agreement, homemakers cannot own an IRA because they do not draw a paycheck for their work in the home.

My bill would amend the present law and allow homemakers to count as their own income the compensation of their spouse. In other words, the bill recognizes the economic value of a homemaker's work.

H.R. 4649 would not make an arbitrary distinction between homemakers who earn wages and those who do not. If a homemaker earns wages and does not participate in a retirement plan, the homemaker would have the same opportunity to own an IRA as a homemaker who does not earn wages. Both homemakers could elect to count as their own

income the compensation of their spouses.

In terms of the mechanics of an IRA, H.R. 4649 would make no changes. The law would remain the same except for the addition of homemakers as a group of persons who can own IRA's.

WHY THE TRIBLE BILL

Allowing homemakers to own an IRA is basically a question of fairness. Ask yourself, is it fair that the largest group of workers in America should be deprived of the opportunity to prepare for their retirement? Should self-employed workers who are paid wages be treated differently from self-employed workers who are paid the services in kind? Finally, should homemakers be forced to depend solely on their spouse's retirement plan?

My answer to each of these questions is no. Homemakers should have the opportunity to plan for their retirement. They should not be discriminated against just because they are not paid in cash. If their spouse earns wages, they should be given the same treatment as other self-employed workers. As the law now stands, it discriminates against homemakers.

Further, as a matter of sound planning for the future, we must accept the ultimate reality—homemakers will reach retirement age and will need retirement income. Our population is growing older and older. In the not too distant future, we will have 40 to 50 people over 65 for every 100 people in the work force. We cannot ignore this fact. If we accept the premise that someone will ultimately have to provide the retirement income for these citizens, only one question remains unanswered: Who will provide the retirement income for homemakers? There are only three possible sources—business, Government, or the homemakers, themselves.

Presently many businesses extend their health insurance policies to the spouses of their employees. In the near future, businesses may begin providing retirement benefits in the same way. However, we do not have the time to wait and see if this trend develops. Even if it does begin, large numbers of homemakers will still not be able to participate in a retirement plan. Something more comprehensive is needed. Just as there are pressures now for a comprehensive national health insurance, we can expect pressures for a comprehensive retirement system managed by the Government and funded through higher taxes.

I believe we should not depend on Government to provide retirement income for our homemakers. The cost of dependence on Government would be almost prohibitive. Social security is now on the brink of bankruptcy. The situation can only get worse. Our population growth has nearly come to a stop, but the number of persons reaching retirement age is increasing rapidly. When the baby boom generation of the post-World War II and Korean war era reaches retirement, as much as 40 cents of every payroll dollar could go to social security. The present estimates for 1985 are 27 cents of every payroll dollar. With this much tax money going to retirement income, the money available for other Government programs will shrink.

Further, Government social programs are traditionally more expensive, less efficient, and more impersonal than comparable private programs. If we act now, we will not force our homemakers onto welfare lines. Passage of my bill would offer them a third alternative, self-help, which would permit them to avoid the impersonality of a mountain of redtape and the inefficiency of the bureaucracy while keeping the cost of administration down and the benefits up.

COSTS AND BENEFITS

Mr. Speaker, this is a bill in which there can be no losers, only winners. The only unanswered question is the magnitude of the benefits. Passage of this legislation will open up the IRA market to millions of potential investors. Projecting how many homemakers will actually choose to invest in an IRA is difficult, if not impossible. However, the effects from their investments should be the same. The benefits should expand in direct proportion to the number of homemakers who do participate.

For many homemakers, this will be the first opportunity to prepare for retirement. For others, it will be a way to improve their retirement savings. At the very least because of this bill, homemakers will be able to live with dignity in their retirement years. Without the opportunity to invest in an IRA, most homemakers will enter retirement with little or no income and many will be forced to stand in welfare lines.

Passage of this bill could save the Government billions of dollars. By investing in an IRA, homemakers will be shifting the cost of their retirement years from the Government to themselves. Homemakers over the age of 65 will soon compose almost one-sixth of our adult population. If homemakers are not given sufficient incentives to save for their retirements, these costs will have to be borne by Government. The demand for services will not lessen. The only issue in doubt is whether the homemaker or the Government will pay the costs of income maintenance, health care, institutionalization, and other retirement needs. If homemakers pay for at least a portion of these services through their IRA investments, the long-term savings to the governments should more than offset the revenue lost from the tax deduction and deferral features of an IRA.

Homemaker investment in IRA's should also benefit the poor. In the future, there will be a relatively fixed amount of money which Government can spend on retirement programs. Thus, a shift of homemakers from dependence on Government to self-reliance for retirement income will mean that fewer people will be dividing up the Government retirement pie. In the long run, this should mean a higher level of benefits and services for those who are unable to save for their retirement.

Further as contrasted with social security and non-IRA savings for retirement, the income from a homemaker IRA will be taxable when the homemaker begins to draw funds from the account. This tax money will offset some of the revenue lost from the original investment in the account. It will also provide a much needed source of Government revenue when nearly a third of our adult population will be retirement age with little or no taxable income.

Investments in IRA's should increase the aggregate level of savings. From increased savings, we can expect spillover benefits which may far outweigh the initial revenue loss. For example, greater savings can lead to more capital investment which, in turn, could reduce unemployment, produce real economic growth, lower interest rates, and, ultimately, raise Government revenues.

There are also intangible social benefits which must be weighed. How much is it worth to point people in the direction of greater self-reliance and less dependence on Government? How much is it worth to know homemakers will no longer have to choose between no retirement protection and leaving home to find a job where he or she can acquire pension rights? And how much is it worth to finally recognize in the law that the homemaker's work does have economic value?

The answers to these questions are not easy, but they demand an answer. American homemakers should have an equal opportunity to prepare for their retirement.

Further, as a matter of equity, it is unfair to treat homemakers differently from corporate employees or self-employed wage earners with IRA's. All of these individuals have a need for retirement income but homemakers are the only ones who have to pay taxes on the earnings from their retirement plans.

There is no reason to discriminate against homemakers. They work just as hard and will need retirement income just as much as employees of business and government. If homemakers should pay taxes on their retirement contributions and earnings, so should all other workers. It is unfair to single out homemakers for special treatment.

The time to act is now, before too many homemakers get too close to retirement age to save for their retirements. We need to encourage homemakers to help themselves. Otherwise, future generations will be taxed to the point of breaking just to provide homemakers with a minimum level of income. It is unfair for us to shift the cost of homemakers' retirements to our children. We should accept the responsibility today.

SCRAPPING WELFARE

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. MILLER) is recognized for 5 minutes.

Mr. MILLER of Ohio. Mr. Speaker, as one very much concerned with the state of our Nation's welfare program, I have long advocated a revamping of the system.

It is time we made this program more responsive to those in actual need and less subject to abuse by those who view it as a permanent source of income to which they are entitled regardless of their ability to work.

In this regard, I would like to call to your attention an editorial which appeared in a recent edition of the Zanesville, Ohio, Times-Recorder which I feel outlines the issue very well.

SCRAP IT

Scrapping of our nation's present welfare system and replacing it with a new one as proposed by President Carter Monday is commended as long as the new one is not worse than the one we have.

The President, who said a study has shown the present system "is worse than we thought," has proposed throwing it out and putting in a multi-tiered program to provide jobs for those who can work, cash for those who can't and income tax credits for the working poor.

The Carter plan includes:

Up to two million public service jobs designed to give access to a job to every family with children and a family member able to work.

Earned income tax credit for the working poor, possibly higher than present levels or supplemented with cash.

"A decent income" for those who can't work, with the benefits now provided by Aid to Families with Dependent Children, Supplemental Security Income and food stamps consolidated in one cash payment. The payment would be the same for all recipients nationwide except where adjusted for cost-of-living differences.

He said the initial cost of the revised system he will propose will not cost any more than the present system, now budgeted at $23.6 billion for fiscal 1978.

The welfare monster needs to be conquered though the nation will continue to need some program to care for those who are disabled, cannot work or are unemployed due to conditions beyond their control.

Even the most ultra-conservative would agree that Americans have an obligation to care for their sick and disabled citizens. Jesus taught charity as He walked on earth.

But as the system is redesigned safeguards must be included to be sure that those who can work and for whom jobs can be located are forced to do so instead of lazily relying on welfare.

Safeguards must be woven into the system to prevent or at least control fraud. There must be more investigation of all welfare recipients and applicants to assure qualification and need.

The Carter plan, as noted previously, includes two million public service jobs designed to give access to a job to every family with children and a family member able to work.

Swelling the public payroll does not seem like the best answer. Tax credits to industry and other companies that could earn it by expanding and adding to their payrolls would be preferred. Private industry will make every job count while governmental agencies have been known from the city to the federal levels to create jobs only to use up grant money when there are actually no duties involved and no "work" to be performed.

Guaranteed annual wages are not conducive to production since there are many who would work harder to earn more and even perform two jobs a day if necessary to make ends meet but would not if guaranteed a certain income. It would continue to reduce the initiative to work harder and get ahead.

Some persons will turn down jobs because it will reduce their welfare checks or disqualify them for handouts. What a sham of justice and abuse of welfare.

There are those who will turn down jobs offered through the employment services because they are "below my level" while they do not seem to consider accepting welfare, food stamps and so forth as being "below" their level.

There are too many persons sitting back raking in the various forms of welfare, special benefits, subsidized rent and so forth who could be out working, producing and earning their own way.

They should be earning an income and helping, through their taxes, to support the welfare system for those truly sick and too disabled to work instead of draining from the funds.

As the United States has turned more and more into a welfare state with snowballing socialistic programs it has become apparent that, as President Carter said, the system should be scrapped and a new one written.

Maybe if they'd cut it all out for a while those who can work would be forced to do so leaving the nation more able to help those who cannot.

The President's aim is good, as long as it doesn't give birth to a still bigger welfare monster.

It could happen.

ELK HILLS REVISITED

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. Moss) is recognized for 5 minutes.

Mr. MOSS. Mr. Speaker, during the last Congress there was a great hue and cry over the Navy's petroleum reserves, notably Elk Hills, Calif., numbers of Members, some still here and others since departed for other climes, hymned Elk Hills to the sky as one major potential solution to the energy crisis. These protestations mushroomed into a series of pieces of proposed legislation, all calling for an openup of Elk Hills to commercial exploitation. Hundreds of thousands of barrels of oil daily from this Navy reserve would save us from freezing to death in the dark, from cowering before Arab oil cutoffs, from imminent dissolution of the republic, from ghosties and ghoulies of various shades, hues, and sizes.

A few of us, skeptical as usual in the face of such vehemence, asked some pertinent questions. We asked about antitrust implications of Elk Hills and any openup. Who would get the oil? What would it go for? Where would it go? Would the Nation benefit? Would energy shortages truly be alleviated? Would national defense readiness be harmed?

Our answers came slowly but definitively. We discovered that for years commercial interests had tried to open up Elk Hills. That this reserve was the last remaining reliable reserve of energy the Navy had. That for years an antitrust investigation had been conducted into the stranglehold Standard Oil of California, Socal, had obtained on this oil field. That if an openup occurred, Socal would garner the best of the yield from this field. That Navy did not want to open up, and had for years had its budget squeezed to prevent it from getting the field ready for exploitation. That the oil would reach only our three west coast States, the only energy self-sufficient area of the Nation. That energy-starved portions of America would get none of the oil retrieved. That Elk Hills oil would do little or nothing to alleviate growing energy shortages besetting the Nation. That it would do nothing to prevent our growing dependence on Arab oil imports.

As the outcry for an Elk Hills openup mounted in the Congress, aided and abetted by industry lobbyists, some well-meaning but wrong-headed media people and friends of industry in Congress, myself and a few like-minded Members provided our opposing conclusions openly, in and out of Congress. To no avail. Congress whooped through an Elk Hills openup with only three Members, including myself, in opposition. On that day, I predicted the openup was a farce, would be reversed, and would be determined in short order to be an industry plum that would not aid the Nation one whit. Time has proved me correct.

Since the openup, Socal has taken its own 20 percent of the reserve's production, and has successfully bid upon and obtained at least another 20 percent. Since it sets prices in most California oilfields, it is not difficult for this company to obtain much of the rest of all production. As a result, as was predicted, much of Elk Hills production is becoming Chevron gasoline, to the immense profit of that company.

Now another element of the predictions is about to come true. Another flood of crude oil is about to flow, not to where it is needed in the United States, but to west coast States through the Alaska pipeline and tankers. Elk Hills production now looms as an embarrassment as well as a surplus. With 2 million-plus barrels daily of North Slope crude about to drench California, why produce 140,000 barrels daily from Elk Hills? Therefore, the Carter administration, to its credit, is about to seek legislation to cut back the Elk Hills flow; another event predicted by that lonely three that day in the House.

Where, I wonder, are the eloquent seers of yesterday, who so lugubriously predicted that we lived in the last gaudy days of the republic's noon, and would soon lapse into darkness, decline and barbarism if Elk Hills were not opened? Where are the monuments to their foresight and vision? Lead me to them, for I and admiring multitudes would worship humbly at the shrine of their success.

If ever a piece of congressional action and legislation illustrated how wrong a body of legislators can be, the Elk Hills openup is the prime illustration. In future, when the next public bellow goes up over Elk Hills or any other irreplaceable national resource, when we are told that we must act hastily or all is lost, let us remember that some special interest stands to gain at the public expense.

Finally, even if the openup is reversed, once the field is opened it cannot be shut down as one would turn off a faucet. Oilfields must be shut down gradually, maintaining pressure, or the field would be ruined. Therefore, for some years, 30,000 barrels daily must continue to be produced, whether we need it or not. And of course, all that oil must continue to be sold commercially, lost to the field and gained by private industry. Another monument to foresight.

HOUSE ACTION ON CUBA MISUNDERSTOOD

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. BINGHAM) is recognized for 5 minutes.

Mr. BINGHAM. Mr. Speaker, unfortunately the press has reported the House action yesterday approving the Ashbrook amendment in a manner that, I believe, misstates the actual meaning and effect of that amendment for possible resumed trade with Cuba and Vietnam.

It is true that the amendment mentions both trade and aid to Vietnam and Cuba. But it prohibits only the use of funds authorized by the Foreign Assistance Act—that is, foreign aid funds—for that purpose. Since any resumption of trade with Cuba or Vietnam would presumably not, in any case, involve use of any foreign aid funds, as a practical matter the amendment precludes only aid, not trade.

It is unfortunate that trade and aid were lumped together in a single amendment since they are quite separate kinds of relations, about which most Members of the House, I believe, have different views which could not be reflected in a single vote on both trade and aid. Certainly the House is firm in its view that the time has not arrived when aid to Cuba or Vietnam is appropriate. But House approval of the Ashbrook amendment is, I believe, neither a fair indication of House views on simple commercial trade with Cuba and Vietnam, nor a binding prohibition on such trade, even if sustained by the Senate.

CADELL POLL: AID TO ELDERLY FIRST AREA WHERE GOVERNMENT SPENDING SHOULD BE INCREASED

The SPEAKER. Under a previous order of the House, the gentleman from Florida (Mr. PEPPER) is recognized for 5 minutes.

Mr. PEPPER. Mr. Speaker, as chairman of the House Select Committee on Aging and as a 76-year-old citizen, I have been especially concerned with the problems facing the Nation's 22.3 million elderly. For too long the elderly have suffered the indignity of a confused and confusing bureaucracy, the indignity of mandatory retirement, the indignity of a system which favors costly and often needless institutionalization, the indignity of nursing homes which are too often tinderboxes, and the indignity of stereotypes which dictate that to be old is to be feebleminded and worthless.

Yet we all realize that the resources that the Federal Government has for efforts to help older persons are limited and that priorities must be set. Consequently, I was pleased to note a recent finding by Patrick Cadell, the President's pollster, that the public supports increased aid to the elderly over increased Government spending in any other area. As we consider the legislative changes that are so important to the lives of elderly people, it is important to keep in mind the support for these kinds of changes among the Americans who have elected us. If this poll is any indication, they expect us to take such steps as passage of legislation.

I believe we must end mandatory retirement—either H.R. 65, which would end age discrimination in both the public and private sectors or H.R. 1115 which would apply only to the Federal Government and be an extremely important first step.

We should increase the Federal Government's efforts to encourage alternatives to institutionalization which frequently are less costly and always are a more humane way of life, as provided in H.R. 1116 now awaiting action.

I am hopeful that these measures and others such as H.R. 1127, which would extend medicare to include eyeglasses, hearing aids, and dentures will be enacted.

The time has come for the Congress to match the American people's desire for a greater Federal role on behalf of the elderly with action.

For the benefit of my colleagues, I am inserting the important information from this poll in the RECORD:

AREAS FOR BUDGET INCREASES

Our next two questions asked people to place price tags on their concerns. The following table shows the areas where respondents think government spending should be increased, along with comparative figures from Report 3. Overall, there has been very little change from a year ago. The top six concerns are still the same: aid to the elderly and health care are way out front—although they have traded places—followed in the same order as last time by education, prevention of crime and drug abuse, Social Security, and control of air and water pollution.

The Cambridge report—second quarter 1976
[In percent]

	First	Second	Third	Total	R3—1975 II
Military spending and national defense	10	2	3	15	11

SLAUGHTERING PORPOISES IS NOT DEFENSIBLE

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. KOCH) is recognized for 5 minutes.

Mr. KOCH. Mr. Speaker, today the Merchant Marine and Fisheries Committee is holding hearings on a bill just introduced by its chairman, JOHN MURPHY of Staten Island, which would amend the Marine Mammal Protection Act to raise the limit on the number of porpoises that can accidently be killed by the American tuna fishing fleet from the present limit for 1977 of 59,050 set by the National Fisheries Service to 78,000 for the remainder of this year.

I strongly oppose any change in the present limit on the number of porpoises that can be killed, and I favor a rapid transition to a kill limit approaching zero, because tuna can be fished efficiently without killing porpoises if captains adopt slightly modified techniques that have already been effectively demonstrated. I am inserting into the RECORD a letter to the editor from the May 4, New York Times in which three scientists who have studied the tuna-porpoise problem in depth attest to the needlessness of killing porpoises to catch tuna.

One boat is described in the letter that "encircled 45 schools of porpoises and tuna, caught over 1,000 tons of tuna and caught and released unharmed 30,233 porpoises, with a mortality of only 16." If all the boats in the tuna fleet employed the same system, there would be no need to argue over how many thousand porpoises should be killed each year.

Another pertinent point made by the three scientists is that the present position of the tuna industry is very shortsighted. The schools of valuable tuna are easily located because they swim underneath schools of porpoises which swim on the surface and can be spotted by the fishermen. By slaughtering porpoises, they are methodically killing the goose that laid the golden egg.

I am also inserting an editorial from this morning's Times that aptly points out that the 78,000 limit for the remainder of 1977 proposed in Chairman MURPHY's bill is higher than the 85,000 limit for all of 1977 requested by the owners of the fishing fleet in hearings before Congress last year.

One thing I wish to make clear is that I am sympathetic to the plight of the American tuna industry, an industry which provides thousands of precious jobs. Moreover, it is disturbing that while our fleet is tied up in port over the por-

poise-kill controversy, much more ruthless foreign fleets are enjoying the lack of American competition and making no effort at all to conserve porpoises. But this is one situation where a reasonable solution is already available which will not unduly damage the competitive position of the American fleet. Then, our next task will be to persuade foreign tuna fleets to embrace the same practices so that the schools of friendly and highly intelligent porpoises will not disappear from our oceans forever.

The letter and the editorial from the Times follow:

[From the New York Times, May 4, 1977]

PORPOISES AND OUR TUNA FLEET: NEEDLESS PERILS

To the Editor:

As scientists actively involved in research on the tuna/porpoise problem we are appalled at the tragic irony in the present situation, a situation which may lead not only to the loss of the American tuna fishing fleet but also to the ultimate loss of the porpoise population involved.

Schools of adult yellowfin tuna aggregate under schools of certain kinds of porpoises in the eastern tropical Pacific, perhaps because tuna and porpoise both feed on the same kinds of small prey. The porpoises can be easily spotted and herded and the tuna stay beneath them. Fishermen set their nets around both tuna and porpoise, and then sink a portion of the rim of the net to set the porpoises free over the top while retaining the tuna.

By the fall of 1976, after some years of effort, improved net designs and new behavioral techniques for releasing porpoises from the nets resulted in almost perfect porpoise safety records for some boats. One ship, observed by scientists throughout a single fishing trip in October-November, encircled 45 schools of porpoises and tuna, caught over 1,000 tons of tuna and caught and released unharmed 30,233 porpoises, with a mortality of only 16. We have observed these techniques and dived in the nets far at sea to observe the porpoises, which under this improved system are able to wait safely in the center of the net and then go quietly out the net opening like cattle going through a gate.

The irony is that fishing has been halted, leaving the porpoises to the mercy of unregulated, unmotivated and unimproved foreign fleets, just when a reasonably good way of fishing safely "on porpoise" has been developed.

The American fishermen by now are highly motivated to adopt the new net designs and techniques. They are well aware that they need to preserve the porpoises, and the new techniques are safer for the crew, more efficient and cost-effective. The fishing industry, however, seems reluctant to defend itself on the basis of the new capability, perhaps lest regulations become even tighter before every boat has acquired the new gear and mastered the new techniques. Also, they have been confident of net improvements in the past which were only partially successful; now perhaps they fear they will not be believed in any case. Furthermore, some of the environmental opponents of the industry are ignoring or dismissing the highly successful results of last year's research, perhaps because it is not helpful to their own position.

As a result, an industry is dying and a major piece of ocean is in for more ecological damage than ever. As scientists, citizens and porpoise admirers we urge the Government and the public to find a mechanism for the reasonable management of what has become a remarkably irrational situation.

KAREN PRYOR, PHILIPPE VERGNE,
Biologists, Porpoise Rescue Foundation,
WARREN STUNTZ,
Program Manager, Tuna/Porpoise Behavior Study, University of California at Santa Cruz.

New York, April 26, 1977.

[From the New York Times, May 13, 1977]

LET THE PORPOISES LIVE

The House of Representatives is being asked to rush through a bill that would permit increased killing of porpoises by the nation's tuna fishing fleet. The haste is held necessary to get the tuna boats back into profitable operation following a self-imposed docking in protest against Government regulations.

No doubt the fleet has lost money in the past two and a half months. Its owners have been arguing that they lose money even when they do sail because of the time and effort taken to hold down the number of porpoises, or dolphins, that are trapped and suffocated in their great tuna nets. That is arguable; but the kill quota that would be legislated by Representative John Murphy of Staten Island is higher even than the industry demanded. Testifying in Congress last year, the fleet owners asked for license to kill 85,000 of these highly intelligent and attractive creatures in all of 1977. The Murphy bill would let 78,000 be killed in the remaining seven months.

Under the Marine Mammal Protection Act, the useless and unnecessary killing of porpoises—which accompany schools of tuna and thus, ironically, help the fishermen locate their quarry—is to be gradually reduced to "insignificant levels approaching a zero mortality." Representative Murphy would not only reverse the downward trend; he would also have Congress rather than the scientists of the National Fisheries Service set the necessary limits.

Alerted to the danger of this misguided legislation, the Administration is now said to be preparing its own bill. Until it is drawn, Mr. Murphy and his colleagues should hold their fire. They should at least compare his proposal to that of a Government that seems committed to carrying out the original and admirable long-term intensions of Congress itself.

LEGISLATION FOR RENEWAL OF OVERDUE ADJUSTMENT IN BANKING SYSTEM

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. HANLEY) is recognized for 5 minutes.

Mr. HANLEY. Mr. Speaker, an imbalance has existed within the financial institutions structure of this Nation vis-a-vis the status of mutual savings banks. Despite the duality of our banking system in other regards, there is not any provision which will allow a State-chartered mutual savings bank to solicit or be granted Federal chartering privileges.

On other occasions in the past both this House in its wisdom and our sister body have both moved to redress this disparity of opportunity. However, fate or circumstance has always seemed to intervene and frustrate this effort at establishing equity.

Mr. Speaker, the bill which I introduce today may well be a vehicle for the renewal of this long overdue adjustment in the banking system. Hopefully, the House Banking, Finance, and Urban Affairs Committee through its Financial Institutions Supervision, Regulation, and Insurance Subcommittee can deal with this matter expeditiously and fairly.

Not that there is not some historical resistance to this Federal chartering, Mr. Speaker. There has been opposition in the past. However, a fresh look at this matter will disclose that refinements and stricter conditions have met the major objections of the past.

Unlike prior Federal charter proposals, this one would clearly restrict Federal savings banks to those States which charter mutual savings banks. Moreover, no institution which is not a State mutual savings bank at the time of its conversion to Federal charter could call itself a Federal mutual savings bank. The FHLBB could not charter de novo any institution to be called a Federal mutual savings bank.

Section 3 "grandfathers" the service powers and investment authority of converting State mutual savings banks but imposes a limitation on the extent of equity, corporate bond, and consumer loan investments.

Section 6 is a necessary technical amendment which would provide positive Federal authority for State-chartered savings banks to convert to Federal charter.

This bill differs from its predecessors not only in that it limits Federal mutual savings bank charters to institutions that were State mutual savings banks at the time of conversion, but in addition would confer no new powers on converting savings banks. Indeed, the recommended grandfather clause in section 3 would limit investment alternatives to some extent because State-chartered institutions would not be subject to the 5-year floating average.

The Congress should enact legislation to provide a Federal charter alternative for existing State-chartered mutual savings banks. Such action would complete the dual banking system, correct a long-standing inequity in the Nation's financial structure and provide significant long-run benefits to consumer savers and home mortgage borrowers.

Mutual savings banks operate as State-chartered institutions in 17 States and do not have the option of being chartered and regulated by the Federal Government. Commercial banks, savings and loan associations, and credit unions, by contrast, have long had the choice of being chartered and regulated by the various States or by the Federal Government.

The benefits to the public of such a dual chartering system in promoting progressive financial legislation and regulation, financial innovation, increased competition, and improved services in financial markets are widely recognized. There is no logical reason to deny mutual savings banks, and the consumers and communities they serve, equal access to the benefits of a dual system that are

available to all other depository institutions.

Providing a Federal alternative and the benefits of a dual system for existing State-chartered mutual savings banks is widely supported. There is no known opposition to this noncontroversial public-interest goal. Providing a Federal alternative could easily be accomplished, moreover, by a few simple amendments to the Federal savings and loan law. These amendments would, in effect, give existing State-chartered mutual savings banks the option of converting into Federal savings and loan associations.

Those savings banks which might choose to exercise this option would be known as Federal mutual savings banks and would be permitted to maintain certain assets and consumer services available to them at the time of conversion, in order to make a Federal alternative a real possibility. Federal mutual savings banks would not be authorized in those States which do not authorize State-chartered mutual savings banks.

These simple amendments to provide a dual system for existing State-chartered mutual savings banks would confer no new powers. The availability of existing Federal savings and loan powers—especially with regard to branching and full access to the Federal Home Loan Bank System's advances mechanism—could be attractive to some State-chartered savings banks. Future changes in Federal savings and loan powers, moreover, would apply equally to Federal mutual savings banks, and would provide continuing incentives for progressive savings bank legislation and regulation at the State level.

By establishing a progressive framework for the future evolution of savings banking within a dual system, a Federal alternative for existing State-chartered savings banks would strengthen their long-run viability and reduce future pressures to convert into commercial banks. The preservation of strong mutual thrift institutions in the financial system is the best long-run guaranty that consumers will earn the maximum long-run return on their deposit savings, and that the Nation's critical housing credit needs will be met.

These long-run benefits to the public argue strongly for congressional action to provide a Federal charter alternative for existing State-chartered mutual savings banks. In view of the widespread support for a Federal alternative, there is no reason to delay any longer in extending the dual banking system to mutual savings banking.

Providing a Federal charter alternative for existing State-chartered mutual savings banks is the least controversial issue in the entire area of structural reform for depository institutions. This is clearly evident in the extensive record of hearings on the Senate-passed Financial Institutions Act of 1975, on the Fine study "discussion principles" and on the committee print of the Financial Reform Act of 1976, which all provided such an alternative. This record reveals no opposition to a Federal alternative for State-chartered savings banks and widespread support for such a provision.

It is particularly significant that a Federal alternative for existing State-chartered savings banks has been supported in recent testimony before the House Banking Committee by the major trade associations of the commercial banking, savings and loan, credit union, home building, and real estate industries.

The American Bankers Association in December 1975, testified:

> The Association does not oppose Federal chartering of mutual savings banks but would limit the availability of Federal charters to states which specifically authorize the formation of mutual savings banks.[1]

The National Association of Home Builders in March 1976, testified:

> We are also, of course, in support of granting mutual savings banks the power to obtain Federal charters. . . .[2]

The National Savings & Loan League in March 1976 testified:

> We are in agreement with extending the principle of the dual system of both Federal and State charter options now applicable to commercial banks and savings and loan associations to mutual savings banks. . . . Such a system applied to mutual savings banks, will in our opinion, significantly strengthen the mortgage market. . . .[3]

The United States League of Savings Associations in December 1975 strongly endorsed dual chartering systems and testified:

> We believe the public has been well-served by the dual system of chartering and examination . . . we remind the Subcommittee that the differing types of financial institutions—savings and loan associations, commercial banks, mutual savings banks and credit unions—need differing types of supervision.[4]

The National Savings & Loan League in March 1976 testified:

> The League also supports the conversion of mutual savings banks to Federally-chartered institutions. . . .[5]

The Credit Union National Association in March 1976, testified:

> The proposal for Federal chartering of mutual savings banks opens the door for even more competition in the consumer credit and savings market.[6]

The record of recent testimony before the House Banking Committee also shows that a Federal alternative for savings banks is supported by the Federal regulatory agencies. For example:

The Federal Reserve Board in January 1976 testified:

> We support the proposal which would permit Federal chartering of mutual savings banks.[7]

The Chairman of the Federal Deposit Insurance Corporation in March 1976 testified:

> I have previously testified for the Corporation in general support of the objectives and provisions of the Senate-passed Financial Institutions Act, particularly those provisions which would enlarge the asset and liability powers of thrift institutions [and] provide a Federal charter option for mutual savings banks. . . . Naturally, the Corporation would favor those same provisions in the House bill. . . .[8]

Support for a Federal alternative for savings banks was also expressed in recent testimony before the House Banking Committee by the Conference of State Bank Supervisors and by individual State banking regulators. For example:

The Conference of State Bank Supervisors in March 1976, testified:

> CSBS supports the Federal charter option for mutual savings banks in those 17 states in which they operate today under state charter, or in other states in which state administrations and legislatures may in the future choose to enact enabling legislation relative to mutual savings banks.[9]

The New York State superintendent of banks in March 1976 testified:

> The existence of a Federal option for savings bank chartering is an essential part of the dual banking system. . . . I support this Federal chartering and conversion option for mutual savings banks.[10]

Consumer groups have supported a Federal alternative for savings banks.

The Kennedy, Johnson, Nixon, and Ford administrations have supported a Federal alternative for savings banks.

The House Banking Committee has supported a Federal alternative for savings banks. In 1967, the committee voted to report the Federal Savings Institutions Act (H.R. 13718), which provided such an alternative.[11] A Federal alternative for savings banks was again recommended by the committee's staff in August 1973, in a comprehensive report on financial institutions.[12]

The Senate voted in December 1975, to provide a Federal alternative for savings banks when it passed the Financial Institutions Act of 1975 by an overwhelming margin.

Finally, it is highly significant that a Federal alternative for savings banks was recommended by three major study groups charged with examining the overall efficiency of the Nation's financial system in recent years—the privately sponsored Commission on Money and Credit in 1961; President Kennedy's Cabinet Committee on Financial Institutions in 1963; and the Hunt Commission in 1971.[13]

PERSONAL EXPLANATION

(Mr. CAPUTO asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CAPUTO. Mr. Speaker, I was necessarily absent during the late afternoon yesterday on account of official business previously scheduled in my congressional district in New York. During that period three rollcalls were taken, and I wish to state my position with respect to them.

On rollcall No. 227, a motion to recommit the International Economic Development Assistance Act, for the purpose of prohibiting aid to Vietnam and to Cuba, I would have voted "yes."

And on rollcall No. 228, for the passage of that measure including the prohibition, I would have voted "yes."

On rollcall No. 229, on the passage of the rule for the consideration of H.R. 6810, the Intergovernmental Antirecession Assistance Act of 1977, I would have, of course, voted to permit the consideration of that legislation.

SEPARATE VIEWS, DINGELL-BROYHILL, AND OTHERS, ON H.R. 6161, CLEAN AIR ACT AMENDMENTS, MOBILE SOURCES

(Mr. FORD of Michigan asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FORD of Michigan. Mr. Speaker, I am pleased to insert in the CONGRESSIONAL RECORD the separate views of Representatives JOHN D. DINGELL, JAMES T. BROYHILL, DAVID E. SATTERFIELD III, CLARENCE J. BROWN, BOB GAMMAGE, DAVE STOCKMAN, BOB KRUEGER, SAMUEL L. DEVINE, FRED B. ROONEY, JAMES M. COLLINS, THOMAS A. LUKEN, MARC L. MARKS, PHILIP R. SHARP, LOUIS FREY, JR., MARTY RUSSO, EDWARD R. MADIGAN, CHARLES J. CARNEY, and W. HENSON MOORE, who are members of the House Interstate and Foreign Commerce Committee and disagree with the committee's action on certain sections of title II of H.R. 6161, the Clean Air Act Amendments of 1977, as reported by the committee. The sections of the bill that the Dingell-Broyhill separate views discuss concern mobile source emission control standards, related sections dealing with emissions, the automobile parts and warranty sections of H.R. 6161, and other matters.

On behalf of Representatives DINGELL and BROYHILL, and many of us in the House who are supporting the Dingell-Broyhill legislation, H.R. 4444, to be the basis of their amendment on the House floor, I urge my colleagues to study the following views contained in House Report 95–294, as filed with H.R. 6161, Thursday, May 11, 1977:

SEPARATE VIEWS OF REPRESENTATIVES JOHN D. DINGELL, JAMES T. BROYHILL, DAVID E. SATTERFIELD III, CLARENCE J. BROWN, BOB GAMMAGE, DAVE STOCKMAN, BOB KRUEGER, SAMUEL L. DEVINE, FRED B. ROONEY, JAMES M. COLLINS, THOMAS A. LUKEN, MARC L. MARKS, PHILIP R. SHARP, LOUIS FREY, JR., MARTY RUSSO, EDWARD R. MADIGAN, CHARLES J. CARNEY, AND W. HENSON MOORE ON H.R. 6161—CLEAN AIR ACT AMENDMENTS OF 1977

Our views are directed to Title II, mobile source issues, contained in H.R. 6161, Clean Air Act Amendments of 1977, as ordered reported by the Commerce Committee. We must disagree with certain sections of Title II.

The nation must be assured that the strictest and most feasible clean air, environmental and consumer protection standards for control of automobile pollution be enacted and regulated with strong enforcement by the Federal Government and the States.

Strict environmental and consumer protection regulations for air pollution control must be balanced with the urgent national need to secure energy savings and consumer savings with regard to the use, purchase and maintenance of automobiles.

Jobs in the auto manufacturing, supply, distribution, service, and sales industries must be protected to maintain a strong American economy.

Proven auto emission control technology must be utilized on new vehicles to ensure in-use compliance with clean air standards and the emission control schedule must be properly timed to allow for final engineering and testing of advanced control systems to be introduced in the early 1980's, as testified to by both emission control equipment and automobile manufacturers.

The public health and welfare of the American people, the strength of the total U.S. economy, and the requirements for energy conservation demand this balance on automobile emission control standards as Congress acts on amendments to the Clean Air Act of 1970.

The strength of the American economy also depends on the viability of the network of businesses, both large and small, that are engaged in auto parts supply and maintenance work. There must be fairness and continued competition in the aftermarket parts business and freedom of choice for consumers regarding the maintenance of their motor vehicles.

The Committee bill, its auto emission section and certain other automotive related sections which we will address do not provide balance nor properly consider these important points, their interrelationship, and overall impact on the economy, the total environment, employment, or energy conservation objectives.

Therefore, we disagree with certain sections of the Commerce Committee's bill and views regarding Title II, Amendments Relating Primarily To Mobile Sources, of H.R. 6161, the Clean Air Act Amendments of 1977, as ordered reported by the Committee.

AUTO EMISSIONS ACTION TO DATE

The House is aware that when the Dingell-Broyhill bill was offered as the basis of an amendment to H.R. 6161 in the Commerce Committee April 27, it resulted in a 21 to 21 tie vote, certainly not a conclusive vote. Rightfully, the full House will vote on these issues which affect the entire nation. We strongly urge adoption, by the widest vote margin, of the Dingell-Broyhill amendment on the Floor when the clean air legislation is scheduled.

Our colleagues will recall that the slightly less stringent, 1976 version, of the Dingell-Broyhill auto emission amendment only lost by three votes when it was offered in the Committee. Later, on the Floor of the House, September 15, 1976, the amendment was overwhelmingly adopted, 224 to 169, a 55 vote margin. The Clean Air bill was not enacted.

PROMPT ACTION BY CONGRESS REQUIRED

It is essential that new statutory auto emission standards be swiftly enacted for the 1978 auto production model year. The production timetable must start on schedule with the normal summer manufacturing cycle upon which much of the nation's economy, industry and jobs depend. The 1979 model year manufacturing cycle also depends on prompt action. Any delays by Congress, such as those of 1976, on the Committee bill and the Dingell-Broyhill amendment may lead to the necessity to act on only an automotive related measure with stationary scource emission control issues to be considered at a near future date.

DINGELL-BROYHILL

We favor the provisions contained in H.R. 4444, the Mobile Source Emission Control Amendments of 1977, as introduced by Representatives Dingell and Broyhill and well over 100 other House Members. We favor this bill which will be the basis of an amendment to be offered on the Floor of the House to H.R. 6161.

ENVIRONMENTALLY SOUND

The balanced auto emission section of the Dingel-Broyhill bill we favor is environ-

mentally sound. The standards are somewhat tighter in the schedule this year due to promising technological capabilities of auto manufacturers and automobile emission control parts suppliers.

ENERGY SAVINGS

The emission schedule in Dingell-Broyhill would continue to produce fuel efficiency in motor vehicles and overall energy savings for the country while the Committee/Administration schedule could waste fuel, conservatively estimated to be 2.41 billion gallons a year, or 140,000 barrels of oil per day, based on government analyses, "Data and Analysis for 1981–1984 Passenger Automobile Fuel Economy Standards," Summary Report, February 28, 1977, prepared by the Department of Transportation, National Highway Traffic Safety Administration, Office of Automotive Fuel Economy, and the "Analysis of Effects of Several Specified Alternative Automobile Emission Control Schedules Upon Fuel Economy and Costs," February 1977, prepared by five agencies, the Department of Commerce, Department of Transportation, Energy Research and Development Administration, Environmental Protection Agency, and Federal Energy Administration. There are further estimates that indicate the fuel penalty may be double this estimate.

CONSUMER SAVINGS

Savings for consumers also is accomplished under Dingell-Broyhill inasmuch as the more stringent standards of the Committee bill would require higher initial purchase costs of $350 per car, according to testimony by Mr. Douglas Costle, Administrator, EPA, in Commerce, Energy and Power Subcommittee hearings on auto fuel economy, April 25, 1977. In addition, EPA's support data, the March 21, 1977, "Cost/Technology Analysis," revised April 11, also indicates that under the Committee bill standards, maintenance costs to consumers might be increased as much as $100 per vehicle.

JOB CERTAINTY

Jobs in the automotive industries would be protected under the standards in Dingell-Broyhill as customers would find the fuel efficient, clean burning, reasonably priced, and dependable vehicles produced under such standards more desirable and acceptable.

TECHNOLOGY

The Dingell-Broyhill schedule and its more gradual phase-in of tighter standards permits automobile and emission control parts manufacturers to maximize efforts to produce innovative fuel and emission control devices and systems.

PUBLIC HEALTH PROTECTION

The new cars in the model years affected under Dingell-Broyhill would be cleaner burning with the reduction from the current emission standards and would result in assured protection for public health.

Therefore, we *strongly disagree* with the Section 203 provisions on automobile emission standards in H.R. 6161 which substantially affect both automobile fuel efficiency and consumer costs in an adverse manner. Meanwhile, there are no proven benefits to health with the unnecessarily stringent emission standards of the Committee bill.

We urge that the following schedule of auto emission standards contained in Section 2 of H.R. 4444 be enacted:

Dingell-Broyhill

	HC (gpm)	CO (gpm)	NO_x (gpm)
1978–79	1.5	15.0	2.0
1980–81	.41	9.0	2.0
1982 and thereafter	.41	9.0	[1] 1.0–2.0

[1] Suspension or waiver for NO_x based on EPA Administrator decision that a NO_x standard above 1.0 would not endanger public health but would produce fuel and consumer savings.

HC—Hydrocarbons.
CO—Carbon monoxide.
NO_x—Oxides of nitrogen.
gpm—Grams per mile.

LABOR SUPPORT

The Dingell-Broyhill schedule of emission standards in H.R. 4444 reflect the agreement reached by Representatives Dingell and Broyhill and Senators Riegle and Griffin, S. 919, and Mr. Leonard Woodcock of the United Auto Workers.

Supporting this schedule and the entire Dingell-Broyhill-UAW measure are the AFL–CIO, foreign and domestic auto manufacturers, auto dealers, auto parts suppliers, garagemen, service station owners, transportation businesses, and numerous other supplier industries and automotive consumer organizations.

This agreement provides that automobiles manufactured during model years 1978 and 1979 meet the same emissions standards applicable for model year 1977, that is: 1.5 grams per mile hydrocarbons, 15.0 gpm carbon monoxide, and 2.0 gpm oxides of nitrogen. For 1980 and subsequent model years the hydrocarbon standard requires a full 90 percent reduction from the levels emitted in model year 1970, or .41 gpm hydrocarbons. For 1980 and subsequent model years the carbon monoxide standard is 9.0 gpm. For 1980 and 1981 the oxides of nitrogen standard is 2.0 gpm.

REVISION FOR NO_x

For 1982 and subsequent model years the NO_x standard is 1.0 gpm but latitude is granted to the EPA Administrator to revise up to 2.0 gpm for periods of two or more model years if he determines in a suspension proceeding that such standard should be revised due to (1) the lack of available, practicable, emission control technology to meet such standard during such period, (2) the cost of compliance with such standard, (3) the impact of such standard on motor vehicle fuel consumption. However, no such revision may be made if the Administrator determines that it would endanger public health.

NEW TECHNOLOGY PERMITTED

Additionally, the Administrator may waive the standard of 1.0 gpm NO_x up to 2.0 gpm during any period of four or more model years beginning with the model year 1982 if he determines that a waiver is necessary to permit the use of an innovative power train technology that can produce a substantial energy saving compared to conventional power trains. No waiver may be granted if the Administrator determines it would endanger public health.

UPDATED 1977 INTEGRATED ANALYSIS UNAVAILABLE

Representatives Dingell and Broyhill, in March 11, 1977, request to President Carter and several Administration departments and agencies, asked for an updated, fully integrated comparative analysis of the fuel consumption, consumer cost and health data impacts of the various auto emission schedules under consideration in Congress.

It was requested that the April 8, *1976*, Interagency Analysis of Several Specified Alternative Automobile Emission Control Schedules, prepared by EPA, FEA, and DOT, be updated to reflect the comparative differences of proposed emission schedules. It was asked that data from the February, 1977, analysis of fuel consumption and consumer costs, previously cited in our views, be utilized in a new study for Congress.

No integrated study was done.

On April 18, EPA Administrator Costle, before the Health and Environment Subcommittee released, following the President's review, the Administration's proposed auto emission schedule *without* sufficient supporting data. Only assumption papers from EPA were delivered to the Committee shortly before the action on auto emissions April 27, but the data was not integrated nor did it include a comparative analysis relative to any benefits to be derived by the Administration proposal.

Nevertheless, we can draw from certain information contained in EPA data and testimony and from various analyses, and other government documents, recently released to Congressmen Moss and Dingell, and make the determination that the advantages of the Dingell-Broyhill emission control schedule are certain and provide more assurance of protection for the nation and the public interest.

This is the same EPA that last year supported a five year freeze of the standards and abolition of 0.4 grams/mile for nitrogen oxides. (It also is the same EPA that later, along with the White House in 1976, came out in support of the Dingell-Broyhill emission schedule.)

That afternoon, April 18, 1977, EPA presented this new (1977) position at a hearing before the Subcommittee on Health and Environment of the House Committee on Interstate and Foreign Commerce. Then markup began.

The auto industry, labor, environmentalists and other Federal agencies were *not* given an opportunity to comment on the new EPA-Administration position, *nor* were Committee Members given an opportunity to question other Federal agencies to see if they supported EPA.

THE FEDERAL AGENCIES CHALLENGE EPA'S NEW POSITION BEHIND CLOSED DOORS, BUT NOT IN PUBLIC

Congress has sought over the past several years to achieve openness in government. No where is this concept so important than when Congress and the public is debating over highly technical health and safety issues that could impact severely on our economy. We need to know the pros and cons of each position so we can make informed judgments.

However, it appears that, once again, we are being treated with a so-called "uniform" Administration position with EPA establishing that position. Divergent views within the Administration appear to be suppressed as indicated in this April 18, 1977 DOT memorandum to the "FILE":

"5. Within the Administration there is not yet a policy on the auto emission control schedule. The Environmental Protection Agency has proposed a schedule that holds the current Federal standards through 1978, switches to the current California standard of 0.41/9.0/1.5 for 1979 and 1980, then drops to the statutory HC and CO standards and 1.0 NOx standard for 1981 and 1982, and then goes to the statutory 0.4 NOx in 1983. There would also be waiver provisions on the NOx standard to permit diesels to be used in their NOx emissions are about 1.0 gpm or below. The EPA position paper went to Stuart Eizenstadt who circulated it to Treasury, DOT, Schlesinger, CEA, OMB, CEQ, and FEA for review and comment on March 26, 1977. Eizenstadt requested comments by March 29, 1977, and by April 1, EPA had the comments and was responding to them.

"The Environmental Protection Agency, presents the case for pushing emission controls to the limit from the point of view that air pollution is bad for health, reducing emissions will reduce air pollution, that it

is possible to reduce emissions from automobiles, that the cost of emission control is only a small percentage of the overall cost of purchasing and operating cars. This general position is supported by the inclusion of a number of technical and economic analyses reflecting EPA's substantial expertise.

"Other agencies within the Administration are reluctant to challenge the EPA position except on separate technical issues. DOT has taken exception to the EPA estimates of fuel economy penalty. CEQ staff disagrees strongly with EPA's projections of air quality, and FEA and HEW staff take exception to the EPA assessment of health effects. OMB staff are dissatisfied with EPA's technical justification in support of tighter emission standards. Commerce staff are usually concerned about the technological optimism of EPA's analyses, in regard to pace of development and cost to industry. I do not know that CWPS or CEA have any concern over the cost/benefit relations; but it would not surprise me to learn that they do. *Nevertheless, with EPA taking the lead in developing the Administration's position and controlling the correspondence and with the political leadership of the other affected agencies seeing a non-win situation for themselves, there is not much prospect of either (a) an objective discussion of the issues for a Presidential decision or (b) an Administration position much different from EPA's going in position.*

"Congress is faced with the requirement to act on the 1978 model year emission standards or take the blame for shutting down the auto industry. In the simplest analysis, it can either set standards that the industry can certainly achieve with little penalty (fuel economy, cost, disruption) or set standards that require the industry to stretch (with the attendant possibility of failure) and continue the need for further Congressional action. There is also the possibility that Congress would return to EPA the substantial administrative discretion that it withdraw by taking onto itself the decision to establish specific emission standards, but this does not seem likely, except in minor ways." (Emphasis supplied)

OMB OPINIONS CONSISTENT WITH DINGELL-BROYHILL

This point is further substantiated by an undated memorandum from Mr. Donald E. Crabill of OMB (the Office of Management and Budget) to Ms. Kitty Shirmer of the Domestic Council. He states that he review "Mr. Eizenstadt's memorandum of March 26" and makes a number of comments concerning the mobile source issue on pages three through seven as follows:

Automobile strategy

1. *General:*

Air quality is a murky science at best. The memo gives no feeling for the uncertainties involved, and presents specific numbers with no context. An example is the NOx discussion stating that 32 million people are affected vs. the 40 million for less stringent standards. Air quality violations are based upon the worst level recorded at the worst monitoring sight in the region. This means that in some cases only a small proportion of the population of the region actually are subjected to violations.

One major point absent in the discussion is that by 1985 the contribution of the automobile to oxidant and NO_2 air quality violations is small (less than 20%) even at the current (1.5/15/2) auto standards. It is the stationary sources which are projected to cause 80 percent of the problem.

If HEW and EPA have a considered scientific judgment on the adequacy of a standard, it should be presented. If not, a topical discussion such as the discussion of the NO_2 standard is questionable. On such a level one might equally argue that considering background HC levels and reactivity of various hydrocarbons, the oxidant standard is too high.

2. *The HC Standard:*

By 1990 (13 years, not 30 years) the two worst cities (Los Angeles and Houston) will account for 67 percent of all projected air quality violations and an additional 23 percent will come from 8 cities which have a high proportion of stationary sources.

By 1999 (22 years, not 30 years) violations in areas outside of Los Angeles and Houston will be minimal. This could be achieved by 1990 if a tough stand were taken on growth rates and degree of control of stationary sources.

We have no objection to the EPA recommendation.

3. *The NOx Standard:*

Only four regions are currently in violation of the NOx standard and will continue to be so even if the statutory standards are enacted.

Additional air quality violations will only occur at high growth rates for a 2 gm./mile standard. Even then the cities are projected to be within 5 percent of the standard by 1990. This is beyond the error margin of such calculations.

The discussion gives no idea of the trade-off between CO and NOx control with the three-way catalyst teechnology. In order to go to 1.0 NOx the CO standard may need to be above the statutory level.

Diesel NOx exemption—it is stated that diesels can achieve .41/3.4/1.0 NOx for 100,000 miles. This is in opposition to the Feb. 17 memo which says that the diesel would not be produced at these levels of standards. DOT, FEA, and ERDA believe this number for NOx should be in the 2.0 to 1.5 gm./mile range.

We recommend an exemption for alternative engines of 1.5 gm./mile NOx.

We recommend a 1.0 gm./mile NOx standard if the CO standard is allowed to be 9 gm./mile.

4. *The CO Standard:*

The discussion indicates that deterioration is a problem. This is currently true but will not be so from the year three-way catalysts will be required. The air/fuel controls of the three-way catalysts will greatly limit deterioration. A 9 gm./mile standard with the three-way catalyst will be roughly equivalent to a 3.4 gram/mile standard with current technology.

Makes no mention of EPA's regulatory fix for adjustment of carburetors.

Makes no mention of EPA's test procedure possibly over-stating the CO emission during operation in problem areas.

We recommend the 9.0 gm./mile level with a 1.0 gm./mile NOx standard.

EPA and OMB recommended standards by year:

	EPA Proposal
1978	1.5/15/2
1979	.41/9/1.5
1980	.41/9/1.5
1981	.41/3.4/1.0
1982	.41/3.4/1.0
1983	.41/3.4/.4
1984	.41/3.4/.4
1985	.41/3.4/.4
	OMB Proposal
1978	1.5/15/2
1979	1.5/15/2
1980	.41/9/2.0
1981	.41/9/1.0
1982	.41/9/1.0
1983	.41/9/1.0
1984	.41/9/1.0
1985	.41/9/1.0

3. *Cost and Fuel Economy Impacts:*

These figures are a dramatic departure from EPA's public paper of Feb. 17th. The new figures have not been subject to scrutiny by FEA, DOT, ERDA and Commerce and support EPA's position. Specifically:

.41/9/1.5 by 1979 will cause a 10–14% fuel economy penalty as three-way catalysts could not possibly be in production by then—1979 certification starts in 6–8 months.

.41/3.4/.4 (statutory) in 1983 previously was said to cost $160–480 more than the $330 (240 sticker and 90 maintenance) which EPA now maintains is the cost. Also, the current memo states there is minimal fuel economy penalty associated with this standard in 1983. The previous EPA position was 4–13% penalty.

The EPA standards cost $140 (not $105) more than the UAW proposal according to this new analysis. Previous costs differentials were higher.

The employment and sales impacts mentioned are losses and unemployment and should be clearly stated as such.

No mention is made of the total cost of compliance to Federal emissions, safety and fuel economy standards which are estimated to add $964 to the 1985 new car sticker price.

We do not believe a vastly more complex automobile, including electronic fuel injection and other electronic controls, will cost only $9 additional maintenance per year. This is innovative, sophisticated equipment. It will probably cost more than $9 just to figure out what is wrong.

The actual alternatives should be presented—a simple three-way system without additonal oxidation catalyst at .41/3.4/1.5 or .41/9/1.0. and a much more costly and sophisticated system with electronic fuel injection and an oxidation catalyst which may get to .41/3.4/.4.

4. *Ensuring Vehicles Compliance In-use:*

This is a moot point as any standard considered will force three-way catalyst technology which will limit CO deterioration. HC deterioration has never been a serious problem. At best, inspection and maintenance will help in the short-term until the three-way catalyst technology is fully introduced.

The reduction from I&M from either current technology with a 3.4 gram/mile standard or three way catalyst technology with a 9 gram/mile standard is of questionable necessity. There are at these levels, 7 violations of the 8 hour CO standard projected in the worst area (New York City) as early as 1985.

The reduction if there is no I&M for hydrocarbons is only 1 or 2% less than with I&M and the actual air quality impact in any given region is only a few less hourly violations per year.

I&M programs will have no impact on NO_x emissions as the test procedure covers only HC and CO.

We concur that the program will be unpopular.

This will particularly be the case when it is realized that there is not a great CO problem, that oxidant violations are only reduced by a few hours per year and that the expense will be on the car owners. Last year's Conference bill limited manufacturer's warranty to 18 months or 18,000 miles down from 5 years or 50,000 miles which is still only half of the true useful life of an auto.

No mention is made of the current suits before the Supreme Court by State governors who question the constitutionality of EPA ordered I&M programs and any way want to avoid having them.

The funding level for this program could be very substantial. EPA's modest proposal last year for 15 cities with start-up costs only was $10 million.

For 25 cities this number would be more than doubled. To fully fund 25 programs would cost several hundred million dollars annually.

Additionally, EPA suggests that the program repay car owners for failed emission control parts. This is then to be repaid by manufacturers. It is likely to be difficult to accomplish the second phase, leaving the States, with EPA grants, to a possible yearly liability of hundreds of millions if not billions of dollars.

No mention is made of all the regulatory and bureaucratic impact I&M would have.

We recommend that the EPA proposal be rejected in total. (End of OMB memo)

The Congress has not seen this memorandum. Indeed, until a few days ago when Congressmen Moss and Dingell insisted on being provided background data in DOT, FEA, and EPA files, we did not know of these OMB concerns and critiicsms.

THE DOT ALSO IS CRITICAL OF EPA

On March 29, 1977, the Chief, Energy and Environment Division, Mr. Richard L. Strombotne, sent a memorandum to his superiors entitled, "Comments on EPA Recommendations on Clean Air Act Amendments." The DOT memorandum follows:

MARCH 29, 1977.

Comments on EPA Recommendations on Clean Air Act Amendments

Chief, Energy and Environment Division, TST-46

Executive Assistant, S-2

Per your request, we have reviewed EPA's recommendations on the Clean Air Act Amendments and have the following observations and comments, limited to the recommendations on automobile emission standards for future years.

The schedule of automobile emission standards proposed by EPA, namely,

	HC (g/mi)	CO	NO_x
1978	1.5	15	2.0
1979–1980	0.41	9.0	1.5
1981–1982	0.41	3.4	1.0
1983 and thereafter	0.41	3.4	0.4*

*NOx waiver between 1.0 and 0.4 gpm.

may have important implications for fuel economy.

First, we disagree with EPA's position that "the full statutory standards of 0.41/3.4/0.4 can very probably be met without incurring fuel economy penalties relative to what could be achieved if today's standards were retained." We believe that a fuel economy penalty of five percent or more in the early 1980's is most likely for a variety of technical reasons, including the need to develop and implement a durable NOx reduction catalyst with very high NOx conversion efficiency so that engine detuning will not be necessary.

Second, a NOx standard below 1.5 g/mi will probably be an important disincentive to manufacturers to use diesel engines to improve fuel economy.

Note that the EPA proposal on NOx standards to "allow cars meeting the 1.0 gpm level but failing to meet 0.4 gpm to be sold subject to a NOx charge equivalent to the economic value of not complying with the 0.4 standard (up to $60–$140 per car) offers a point of departure for an option that would eliminate both objections made above. *The option I suggest is to change the ceiling to 1.5 gpm rather than 1.0 gpm.*

RICHARD L. STROMBOTNE.

Mr. Strombotne also provided some very revealing comments in an April 18, 1977, DOT memorandum as follows:

6. I have touched bases with EPA's staff in Washington and in Ann Arbor, with CEQ, OMB, and FEA, and have received and reviewed copies of relevant documents from GM and the American Petroleum Institute. Moreover, I have been involved in this issue for several years. I consider the following to be a fair summary of the political economic, and technical isues.

7. Technical Issues—Emission Control

Both EPA and DOT technical staffs believe that there will be significant advances in emission control technology but differ in their assessments of the pace of development of technology for the industry as a whole. In general the EPA technical staff considers it very likely that the automobile manufacturers and their suppliers will overcome all of the obstacles and difficulties associated with advanced engine and emission controls so that even the statutory standards can be met with no fuel economy penalty by the early 1980's, say 1983 or 1984. The DOT technical staff tends to the view that the advanced engine controls will probably permit an 8 to 10 percent improvement in fuel economy at current emission standards, that the fuel economy improvement will be reduced or eliminated as emission standards are tightened, and that one cannot count on all the technical breakthrough identified by EPA. Lower NOx standards require lower combustion temperatures resulting in lower efficiency.

The automobile manufacturers do not have a uniform view on this issue (Ford is more optimistic than General Motors) but are consistent in pointing out their need to have good solid experimental data on complete emission control systems that pass EPA's entire emission compliance procedure, including 50,000 mile durability tests, before they can be sure of the technology and that they cannot afford to spectualate as the government does.

8. Technical Issues—Air Quality

EPA projects air quality in future years based on (a) measurements of various pollutants in past years (b) estimates of emissions in past and future years and (c) models of the relationships between emissions and ambient concentration of pollutants in the air. The general picture is that emissions from the fleet of cars will decline as older, dirtier cars are replaced by cleaner cars. Nevertheless, almost every feature of the EPA projection procedures for oxidant, carbon monoxide, and NO_2 concentrations is controversial from the scientific point of view. For example, in the case of photochemical oxidants, according to the critics, EPA measures ozone rather than photochemical oxidant, selects a high value of oxidant concentration for the base year rather than a representative value, has two different methods of projecting oxidant concentration which give widely differing results, uses a high value for the rate of growth of VMT, and does not take the spread of urban areas into account. In addition, EPA has widely varying estimates of the grams per mile emission of hydrocarbons from automobiles. The EPA technical staff acknowledge many of the criticisms and are trying to resolve them in some cases.

The net result is that the air quality benefits of automotive emission control are highly uncertain with much greater variation in the results due to changes in assumptions about growth rates, the effectiveness of inspection and maintenance programs, and the type of projection technique that can be attributed to changes in auto emissions alone.

9. Technical Issues—Health Effects

Here, too, there is great controvery. Little is known about the dose-response relationships for oxidant, carbon monoxide, and NO_2 for various susceptible groups in the population and their potential exposure, although EPA has made much progress in developing the methodology for analyses. While the national ambient air quality standards have come under attack as being too strict and as not being strict enough, the National Academy of Sciences, a few years ago, concluded that there was no basis for changing the National Ambient Air Quality Standards.

10. Economic Issues

About three years ago the NAS concluded that costs and benefits of air pollution control at that time were approximately equal, subject to wide uncertainty in the benefits of controlling air pollution. More recently this analysis has been criticized to the effect that the marginal costs and marginal benefits are the more significant decision criteria, the analysis has been revised with new data, and the conclusion drawn that marginal costs of air pollution control already exceed marginal benefits.

As to the costs and benefits of future emission standards, EPA's estimates are generally in the range of $250 to meet the statutory standards above the cost of meeting current standards. In addition, for a car with fuel economy of 20 mpg and using 5,000 gallons of gasoline over its 100,000 mile life, the effect of a 5 percent penalty in fuel economy due to emission controls would cost the owner an additional $190 at 75¢ per gallon. For the 100 million national car fleet the aggregate numbers run into the billions of dollars. While the additional costs are relatively certain, the additional benefits are relatively uncertain and appear to be less than the costs.

EPA's own economic analyses of cost-effectiveness of different emission control techniques have concluded that tightening the NOx standard from 1.0 gpm to 0.4 gpm is the least cost effective method of all the alternatives considered and that tightening the NOx standard from 2.0 gpm to 1.0 gpm is in the middle range of cost-effectiveness.

(End DOT memo)

DINGELL-BROYHILL COMPARED TO COMMITTEE/ADMINISTRATION

Section 2 of the Dingell-Broyhill bill, relating to auto emissions, will be offered as the basis of the Dingell-Broyhill amendment to the Committee bill on the Floor, and it differs from the Committee emission schedule in four areas.

1 The Committee bill, containing the Administration's much too stringent proposal, establishes new HC, .41, and CO, 9.0, standards in model year 1979, a year too soon in terms of the manufacturing industry's capability to change engineering plans and retool for that year's fleet of cars. Adequate lead-time for designing, engineering, building prototypes, retooling, testing, and preparing applications for EPA on 1979 models has been lost due to delays in enactment of new emission standards. The 1979 levels must remain identical to the 1977 and 1978 standards, that is, 1.5 HC, 15.0 CO, and 2.0 NOx, if we are to avoid disruption within the automobile industry.

2. The next difference occurs in model year 1981 on CO with the Committee bill imposing the unnecessary 3.4 CO standard, which jeopardizes the nation's potential for improved gasoline savings and smaller and more efficient engines and provides no needed improvements in air quality nor protection for public health. The 9.0 CO standard, permanently imposed under Dingell-Broyhill, model 1980 and onward, is sufficient for clean air according to the previously noted governmental studies. (Motor Vehicle Goals)

3. The next difference also occurs in 1981 with the Committee bill containing the new 1.0 NOx standard while Dingell-Broyhill establish the 2.0 NOx standard through model year 1981 before reducing the standard to 1.0 in 1982. This again maximizes fuel effi-

ciency under the Dingell-Broyhill schedule with national energy savings. Also, according to manufacturers of the three-way catalytic converter, this advanced technology emission control device will not be available for mass auto production until model year 1982 and be fully developed and tested to meet the 1.0 NOx standard, the advanced catalytic converter is discussed in further detail elsewhere in our views. Beginning in 1982 with the 1.0 NOx level, under Dingell-Broyhill, that level could be administratively suspended or waived up to, but not in excess of, 2.0 NOx, *if public health would not be endangered.*

4. The last major difference concerns model year 1983 when the EPA Administrator has testified, April 18, Health and Environmental Subcommittee, that he would, under the Administration proposal now in the Committee bill, reduce the NOx standard to 0.4 if he makes the judgment by 1980 that the reduced standard is necessary. Administrator Costle testified, "As you know, there are indications that a more stringent (0.4) NOx standard may be needed. *However*, the health data are not sufficiently firm at this stage to make an absolute commitment to this level of control." Doubt remains as to the health requirements or other trade off justifications for a standard as low as .4 NOx. If the Committee/Administration emission schedule is enacted, it appears certain that EPA is definitely leaning in favor of imposing the 0.4 NOx standard despite conflicting studies warning that this reduced standard is not necessary for public health and that it is beyond being cost-beneficial.

For comparative purposes, a complete listing of the emission control schedules is contained at the end of our views on auto emissions.

RATIONALE FOR DINGELL-BROYHILL AUTOMOBILE EMISSION CONTROL STANDARDS

1978–79 standards

Each of the auto emission schedules approved in legislation during the 94th Congress by the Senate, the House, and the Conference Committee provided for standards of 1.5/15/2.0 for 1978 models. Congress recognized in the 1976 Conference Amendments to the Clean Air Act that the statutory standards required by the current law for 1978 models were unnecessarily stringent and infeasible. Government agencies, the motor vehicle manufacturers, the Committee, and the Dingell-Broyhill standards are in agreement that the current 1977 emission standards continue for 1978.

Realistically, as this bill will not be enacted into law until June or perhaps July of this year, the 1978 standards also should be carried through 1979. Inasmuch as the year-long EPA certification process for the 1979 model cars begins in mid-summer this year, there is already an inadequate lead-time for designing, planning, engineering, testing, building of prototypes and retooling for 1979 models if standards are changed for that year. Such a situation not only will result in disruption within the automobile industry, but may also result in sustantial unemployment to automotive workers. As we have recently observed, the effect of such an occurrence is to produce significant adverse impacts throughout our national economy. It is just not worth the risk.

The public interest, business and labor will best be served by an extension of the 1977 standards through the 1979 model year. Also, keeping standards of 1.5/15/2.0 for 1979 would allow the nation to continue to maximize fuel economy gains which is consistent with President Carter's objective to conserve energy.

We urge that this total impact be considered as we must enact 1979 emission levels identical to the 1978 standards in the Dingell-Broyhill measure in order for certainty within the total industry, including its parts suppliers and the various transportation modes that ship autos to the marketplace—all of which are affected by this cycle.

We regret the emission schedule proposed by the Administration, April 18, now contained in the Committee bill, does not reflect this necessary certainty for the American economy and jobs. It must be recalled that a year ago on this legislation both the Health and Environment Subcommittee, the full Committee, and the full House agreed, that it was necessary to continue the revised 1978 standards through model year 1979. The time frame is now substantially tighter than it was at that time—the auto industry is a whole year closer now to the required testing, certification and production deadlines for 1979 models.

1980–81 standards

Autos already have made major contributions towards attaining our clean air goals. As older cars are replaced with new, cleaner burning cars, the pollution clean up by autos rapidly progresses.

Beyond 1979, as the domestic and foreign manufacturers have recently testified at Congressional hearings, the disadvantages in meeting excessively stringent standards include fuel economy penalties, higher costs to the consumer (increased equipment and maintenance costs), and at least initially, poorer driveability and performance and reduced model availability. The impact of these disadvantages, which would result if auto emission standards were tighter than the Dingell-Broyhill standards, must be weighed against the fact that analytical data available shows there also would be statistically insignificant improvements in the nation's ambient air quality. Congress has previously agreed that the statutory standards must be changed. New standards must truly be cost-beneficial and implemented at the proper time when advanced automotive emission control technology is available.

For 1980 and subsequent models, hydrocarbons (HC) will be controlled at the .41 gpm level called for by current law. The Federal Motor Vehicle Goals Study, or "300 Day Study," clearly indicates that it would make very little difference in air quality gains to wait the year or two it would take to integrate technology which would alleviate the fuel economy penalty in moving to more stringent hydrocarbon control. However, of the three pollutants, automotive hydrocarbon emissions are strongly implicated in smog formation; and if any clean-up should be accelerated, it is agreed that hydrocarbon control should be given the priority, as it is in the Dingell-Broyhill emission schedule.

The carbon monoxide (CO) standard for 1980 and subsequent models should be 9.0 grams/mile. The recent "300 Day Study" of the Department of Transportation shows that air quality goals can not only be met, but exceeded with this standard, and that only minimal improvement would result from the statutory 3.4 gpm standard. For example, as compared with 1971–73, projected 1990 air concentration levels of CO would be 80 percent lower with a 9.0 grams/mile standard, or 83 percent lower with a 3.4 grams/mile standard. On the other hand, imposing the lower standard would put a particular burden on cars with small engines, and those are the ones that will be needed to achieve desired fuel economy goals. It should also be noted that use of a more stringent standard is not an effective way to solve the problem of cars which are not properly maintained in use, and thus emit high CO levels.

Recent evidence indicates that California's carbon monoxide standard of 9 gpm, which has been adopted by the California Air Resources Board for the long term, is not only adequate for that State, which has the most serious air pollution problem, but is more than adequate to protect public health for the rest of the nation. This is significant, because this CO level permits the operation of three-way catalyst technology to achieve low NOx levels while still providing more fuel-efficient operation.

1982 and subsequent standards

With regard to NOx, the ultimate level which represents the best tradeoff between fuel economy and air quality will fall within the 1 to 2 gram per mile range. Not enough is known at this point to specify the precise standard. Therefore, the Administrator of EPA would be given the authority to adjust the standard within this range. There is substantial argument over what level of NOx control is needed for public health reasons. When vehicles are controlled to levels as stringent as 2 grams per mile NOx, as they are today, stationary sources become the major NOx emitters. The Motor Vehicle Goals or "300 Day Study" identified five strategies to control NOx in the atmosphere, each of which would be more cost-effective than reducing auto emissions below 2 grams per mile.

There are many unsettled questions regarding the control of oxides of nitrogen (NOx). Recent technological developments (such as those used by Volvo) indicate that the recommended level of 1.0 grams/mile can be achieved, but much additional work is needed if that technology is ever to be made sufficiently applicable to a wide range of cars. In fact, there is some question whether that standard will actually be needed to protect public health. Therefore, the EPA Administrator, for the model years 1982 and beyond, should be given authority to revise the NOx standard, up to 2.0 grams/mile, unless he determines that upward revision would endanger public health.

NOx standards below 1.5 or 2.0 also present special problems for many engines, such as diesels, stratified charge, lean burn, and several others, which can help conserve energy. As a matter of fact, a NOx standard below that level would probably prohibit the use of these innovative technologies. Thus, Dingell-Broyhill propose that the EPA Administrator be given authority to set a NOx level up to 2.0 grams/mile for specific categories of cars if that is necessary to allow them to be built and sold and, further, if they could achieve substantial energy savings. Here again, the higher NOx level would not be permitted if the Administrator determines that would endanger public health.

It is essential that the standards be set for at least two year intervals to ensure certainty in the manufacturing cycle.

HEALTH

The auto emission standards were set in 1970 on the basis of information then available on the relationship between auto emissions and air quality. Since that time, new information has come to light that casts doubt on the need for such stringent standards. In fact, evidence continues to mount from prestigious scientific bodies and eminently qualified scientists which questions both the basis and need for the present statutory auto emission requirements. Following are a number of relevant excerpts and findings from highly competent scientific and medical studies.

First, the NO_2 ambient measurement techniques were found to be in error, and instead of 43 regions being in violation of the NO_2 ambient standards, less than 10 were found to be a problem. (1973 Hearings, p. 552). Second, a study by a panel of the Committee on

Motor Vehicles of the National Academy of Sciences concluded, "Present Federal emission requirements for 0.41 gm/mi. (HC) and 0.4 gm/mi. (NO_x) seems more restrictive than need be by a factor of about three.

Third, a 1975 Yale Medical School study concluded that the CO and NO_x standards were too stringent, also by a factor of four.[1] Fourth, a study undertaken by Columbia University—MIT—and Harvard for the National Science Foundation concluded that, "Recent corrections to measurements of ambient NO_2 levels indicate that the statutory NO_x emission standard may be more stringent than is necessary to achieve NO_2 ambient air quality standards nationwide in 1985."[2] A study dated March 22, 1976, by Professor S. Fred Singer, University of Virginia Department of Environmental Sciences, found that costs and benefits of achieving 1975 standards are about even, but going beyond that *costs exceed benefits* by up to $13 billion.[3]

Excerpts from a new Yale University Study of NO_x include "an emission standard for NO_x of 1.0 grams per mile would eliminate excess incidences of acute respiratory disease by 1981 . . . or have roughly the same effect as the 0.4 grams per mile standard.

"The California 1975 and Federal 1977 automotive emission standard of 2.0 grams per mile would result in an acute respiratory illness rate of only approximately 5 percent that of 1973 by 1984."[4]

Regarding health effects, ". . . any excess morbidity of chronic lung disease, *if it occurs at all*, due to air pollution in a typical U.S. industrial town (Ansonia, CT) is exceedingly difficult to document *with objective data*." (Emphasis added.)

"In conclusion, we have found no evidence that outdoor air pollution with particulates, NO_2 and O_3 at levels ranging from well below to slightly higher than current primary air quality standards bears a demonstrable relation to morbidity of chronic lung diseases in three communities.

"Even if air quality throughout the United States were improved to match that found in rural Lebanon, Connecticut, any resulting improvement in respiratory health might be minimal, and objective evidence of such an improvement will be very difficult to obtain."[5]

The EPA/Committee proposal for auto emission standards in H.R. 6161 is said by Mr. Costle to be based on "increasing evidence" of adverse health effects from NO_x. The only evidence he cited was the World Health Organization study not yet published—but which he admitted was based on data five or more years old.

The WHO study draft summary does *not* support EPA. In fact, its own disclaimers refute, rather than support, the EPA conclusions.

Excerpts from this six-page summary are as follows:

"5.3 *General population exposures*

Several studies have been reported in which an attempt has been made to relate pulmonary function to nitrogen dioxide exposure. However, the results of all of these studies have either failed to demonstrate a significant difference in lung function between the groups exposed to different levels of nitrogen dioxide, or have been confounded by the fact that relatively high concentrations of other pollutants were present.

This also applies to studies conducted to correlate the frequency of acute respiratory disease and chronic respiratory illness with concentrations of nitrogen dioxide.

For example, a study to evaluate the effects of nitrogen dioxide on the incidence of acute respiratory disease in children and their parents living near a large point source of this pollutant demonstrated an excess rate of respiratory illness in comparison with a control group. However, the probable contribution of other pollutants such as sulfuric acid aerosols, nitric acid fumes, and suspended nitrates made it difficult to attribute this excess to the presence of nitrogen dioxide.

Similarly, because of relatively high expoeure to other air polluents, It has not been possible to associate observed increases in the frequency of chronic respiratory illness with a measured level of nitrogen dioxide.

"6. *Evaluation of health risks*

As it has not yet been shown that the concentrations in ambient air oxides of nitrogen, other than nitrogen dioxide, have any significant biological activity, a guideline for the protection of public health has been developed only for nitrogen dioxide."[6]

Further, no one has demonstrated the need for a .4 NO_x standard—as evidenced by the fact that even the Committee bill requires further study before the standard would go to .4. EPA has acknowledged that stationary sources already contribute the majority of NO_x in many cities and that further reductions can be achieved at lowest cost by control of stationary sources.

During the Health and Environment Subcommittee hearings in 1975, and again in 1977, it was generally agreed to by the testimony that a .4 NO_x standard was not technologically feasible in the foreseeable future. The Senate Committee bill has already abandoned .4 grams per mile as a standard and goes no lower than 1.0 grams per mile. Furthermore, only catalytic converter technology appears to have possible potential in later years to meet a .4 NO_x standard, while other methods—lean burn, diesel, stratified charge—are unable to do so.

Thus, retaining the potential for a .4 NO_x standard would inhibit development of these other innovative and fuel efficient engines. This is precisely contrary to the purpose of the Act stated elsewhere in this report, i.e., to encourage improvement of technologies with significant fuel economy and emissions control potential.

In the Dingell/Broyhill amendment, on the other hand, we impose the 1.0 NO_x in 1982, but again, due to EPA's admitted uncertainty on health and air quality, and due to the Administration and nation's energy conservation demands, Dingell/Broyhill provide for that NO_x standard to be suspended or waived up to, but not in excess of, 2.0, if it will not endanger public health and would save fuel and economic cost. This procedure also provides automakers incentive for more research and test cars if they know there are provisions in the law to permit their manufacture of a new system.

Moreover, there is no basis for concluding that a .4 NO_x standard (along with .41 HC and 3.4 CO) can be met, even with catalyst technologies.

The Interagency Task Force on Motor Vehicle Goals Beyond 1980 cited earlier has concluded that the 9.0 CO standard proposed by Dingell/Broyhill would adequately protect public health enabling the U.S. to achieve compliance with the national ambient air quality standard for carbon monoxide.

In light of these studies, there is little justification for the extreme CO and NO_x standards contained in the Committee bill.

FUEL WASTE OF H.R. 6161

There is a waste of motor fuels under the Committee/Administration emission standards, which have no proven cost-benefit. This is concluded from specific information pertaining to gasoline consumption by light duty motor vehicles as discussed by the several government analyses cited and the Administration agency memoranda obtained by Congressmen Moss and Dingell.

Fuel penalty estimates of the Committee standards range from eight to 20 percent compared to current emission levels. EPA's own penalty estimate is as high as eight percent, based on its March 21, 1977 Impact Of Several Alternative Automobile Emission Control Standards Upon Fuel Economy And Costs, revised, April 11, 1977. DOT's estimates are at least five percent or higher, based on recently obtained DOT documents. OMB's high 13 percent penalty estimate is based on other obtained Administration documents. The manufacturer estimates are as high as 20 percent fuel penalties as cited in DOT's February 28, 1977, "Data And Analysis For 1981–1984 Passenger Automobile Fuel Economy Standards."

The more stringent California emission standards for 1977 of .41 HC, 9.0 CO and 1.5 NOx, are penalizing fuel economy of that fleet of cars compared to the current Federal, 49-state fleet. The California penalty is found to be as high as 12 percent with model availability, especially the more fuel efficient cars, restricted from the state due to the tighter standards in effect.

Therefore for purpose of analysis, we assume that fuel penalty estimate, based on the Committee bill, to be in the range of 10 percent. That fuel penalty would be mainly for automobile model years 1981 through 1985. We have computed fuel losses through 1985 as the statutory program on mandated auto fuel mileage standards under the Energy Policy and Conservation Act of 1975 extend through 1985 while the proposed auto emission schedules reach new statutory standards, with waivers or suspensions, early in the 1980's and are in effect for the future model years unless Congress revises the law.

Again, the range of a 10 percent fuel penalty assumption also is concluded by referring to data from the Administration documents which include auto manufacturer fuel loss reports filed with the government to fulfill governmental agency requirements.

The Department of Transportation, "Data and Analysis for 1981–1984 Passenger Automobile Fuel Economy Standards," February 28, 1977, the Executive Summary, "Impact of Emission Standards," states, *"Emission standards more stringent than current values (1.5/15.0/2.0) could, however, reduce engine-related fuel economy improvements. The extent of such effects will be a function of the time phasing of the stand-*

[6] "This summary is an extract from "WHO Environmental Health Criteria 5: Oxides of Nitrogen" which is now being prepared for publication. It is a preprint issued for the use of national focal points for the WHO environmental health criteria programme and national experts, and is subject to editorial changes. The criteria document on oxides of nitrogen is a report of a WHO Task Group and does not necessarily represent the views or the policy of the Organization."

ards, as well as a function of the engine and emission control technologies employed."

The Dingell-Broyhill schedule would set a certain and attainable timetable for more stringent emission standards which would not adversely affect fuel economy to the degree by which H.R. 6161 would penalize fuel efficiency and the nation's balanced objectives for clean air and energy conservation.

The DOT analysis was prepared to aid the Department as it is required by authority under EPCA, to establish mandatory auto fuel mileage standards, by July 1, 1977, for model years 1981–1984, reaching the statutory standard of 27.5 for 1985.

We agree with DOT that there will be substantial downsizing, weight reduction, stream-lining, wider spread use of radial tires, improved gasoline, spark ignited engines and drivelines, greater use of electronics and increased production of the fuel efficient diesel engine, which will contribute to national fuel savings, *but, nevertheless,* and as the DOT analysis states, "This projected improvement is, however, not only a sensitive function of particular drivetrain/vehicle combinations, but also is *subject to the required emission level.*" The DOT analysis further states, "In both the spark ignition engine improvement and dieselization cases, there is an *added risk* associated with the timing of future emission control standards." (Emphasis added.)

A fuel economy/emission control table comparing 1.0 NOx to 0.4 NOx, in the DOT analysis quotes manufacturer estimated fuel losses ranging as high as a "20 percent" fuel loss stated by one automaker while two other major manufacturers could not submit a loss figure. The inability to supply such loss figures results from the fact that the companies have been unable to identify specific technologies which might be available to attain 0.4 NOx on projected mass produced vehicles.

This is one-half of the highest range estimate, if 0.4 NOx were mandated in 1983 under the Committee/Administration proposal which appears most likely based on EPA comments and testimony. Using the 10 percent penalty, and comparing the Dingell-Broyhill 1.0 NOx standard (beginning in 1982) with the Committee/Administration probable standard of 0.4 NOx (beginning in 1983) results in the following fuel penalty, 1983–1985:

11.56 billion gallons of gasoline—1983 through 1985.

This figure is derived by comparing the 1.0 to the .4 standard for model years 1983, 1984 and 1985.

The calculation is made on the assumption that there will be continued annual new car sales of 10 million units each of which can be expected to attain a useful lifetime of 100,000 miles. Using the new car fleet expected average fuel economy data contained in the five-agency analysis: 24.7 miles per gallon in model year 1983; 26.2 mpg in 1984; and 27.1 mpg in 1985; the total gasoline consumption of the Dingell-Broyhill car for model years 1983–85 would be 115.6 billion gallons. Assuming the 10 percent fuel penalty of the Committee/Administration car and its .4 NOx standard for those model years the fuel consumption of H.R. 6161 would be 126.5 billion gallons, or a waste of 11.56 billion gallons relative to the Dingell-Broyhill standards.

The calculation again is based on data from the Administration's, February, 1977, "Analysis Of Effects Of Several Specified Alternative Automobile Emission Control Schedules Upon Fuel Economy And Costs," as prepared by the five agencies.

Furthermore, while the above calculation refers to the fuel loss of model years 1983–1985, analysis based on the February, 1977, five agency, interagency study yields additional fuel losses for model years 1981 and 1982. For example, in 1981 the Dingell-Broyhill proposal remains at 2.0 NOx while H.R. 6161 reduced to 1.0. This would result in a fuel penalty of 3.16 billion gallons of gasoline for model year 1981. In 1982, the Dingell-Broyhill standards remain slightly less stringent than the Committee/Administration proposal which results in a .7 billion gallon penalty for H.R. 6161 for model year 1982. The cumulative fuel penalty associated with the Committee/Administration proposal for model years 1978–1985 is in excess of 15 billion gallons of gasoline, or 2.41 billion gallons of gasoline a year, or 5.87 million gallons of gasoline a day, or 140,000 barrels of oil per day.

The government analyses available to Congress, although none are integrated to aid the Congress, are overly optimistic in cases where fuel economy estimates are lower than those high estimates we have pointed out. The previously noted OMB memo, and others cited, make this point as do the manufacturers of automobiles and auto emission parts. The three-way catalytic manufacturers have testified their product may meet the tighter 1.0 NOx standard by 1982 for full fleet production. The automakers have testified they cannot meet the 0.4 NOx standard that likely would be imposed under the Committee bill by 1983 and cite fuel penalties of the 1.0 NOx level.

The technology is not there and the fuel penalty and consumer costs of the Committee's stringent standards are unnecessary as there are no proven major air quality gains to be achieved and, if there are any, they are minimal.

EMPLOYMENT

Full employment of the nation's automotive industry work force depends greatly on the availability of supplies for the industry, and supplies for its product—oil and gasoline—once it leaves the manufacturing process. Another major factor that dictates the stability of the work force is automobile sales. Employment in the automotive aftermarket business also is dependent on these factors as are numerous other financial and service industries.

Increased fuel costs due to the oil embargo and reduced purchasing power due to inflation combined in 1973–1975 to produce a drastic decline in auto sales. The result was assembly-line shutdowns, layoffs, job dislocations, inventory surpluses, cancelled orders to suppliers, and a spiral of nonproductivity and unemployment. This affected not only the auto industry, but also allied industries, such as steel, rubber, glass, etc. In fact, the economic health of the entire country was strained.

Energy penalties and/or higher consumer costs would result, due to too strict emission standards, in the inflationary spiral drastically increasing with consequent reduction in consumer purchasing power and employment—all which could create new unnecessary economic burdens and agonizing unemployment and welfare problems.

Autos, still the major source of transportation for the majority of Americans, must remain affordable, dependable and be made more fuel efficient even with tighter emission control standards of the Dingell-Broyhill measure. However, the too severe and unnecessarily stringent standards contained in the Committee bill could deter consumers and cause major downturns in the economy. Incentives and encouragements must be protected and provided for Americans to purchase the newer, clean burning and fuel efficient smaller vehicles in order to conserve energy to meet our national energy goals and to remove the older, pollution-prone vehicles from traffic to meet our national clean air standards. This would have an advantageous impact on employment opportunities.

TEST CARS AND AUTO EMISSIONS

Getting an automobile from the test laboratory to production and for sale nationwide in interstate commerce and conform with all Federal regulations—is not an overnight possibility nor, necessarily, a possibility in one, two, five years, or more.

While automakers—both foreign and domestic—may have a dozen or more test cars for emission controls or fuel mileage research programs and may occasionally find one vehicle that produces greatly lowered pollution emissions or increased fuel economy, the massive amount of investment required by that automaker may not produce a car that will work in the real world nor clear all Federal regulations. General Motors just reported that it has concluded—at an estimated cost of over $100,000—that the rotary engine, famed earlier as a potentially great fuel saver, is not economically suited for mass production. Continued testing showed that its anticipated fuel economy gains and control of pollution exhaust did not test out as had been hoped. It has been shelved by GM. Research and investment by automakers continues into several alternate engine models and drivelines to develop improved fuel economy and lower emissions.

Volvo, when it met California emission levels in certification last summer for its 1977 model car, including its sophisticated and expensive total emission control system (Lambda-sond) on its base priced, $6500, in-line four cylinder car, did reach reduced emission levels but not consistently below 1978 statutory standards of .41 hydrocarbons, 3.4 carbon monoxide and .4 oxides of nitrogen. When it was certified to meet the California standards of .41 HC, 9.0 CO and 1.5 NOx, it did so at a small fuel economy improvement compared to its sister 1976 model cars, but still at almost a ten percent fuel economy penalty when compared to the foreign and domestic U. S. Federal fleet of cars meeting 1.5 HC, 15.0 CO and 2.0 NOx for 1977 model cars.

Volvo, in confirming that it did not meet the statutory standards last summer and that it had not attempted to do so in the California test, replied to several in Congress in the following manner:

"As Volvo and others in the auto industry have stressed obtaining low emission levels from relatively few test vehicles, even during certification testing, is a different matter than insuring that all vehicles from a particular year's production will achieve the same results, which is what current federal requirements demand. A manufacturer must in effect, guarantee that the emission performance of each and every vehicle will fall below the standards, and no manufacturer is likely to do so unless convinced that adequate margins exist between test results and the regulated emission levels, so as to insure that all production vehicles will comply given required in-use maintenance."

Some still would argue that Volvo did meet the tight statutory standards for 1978. The Volvo did not. It could not have been certified by the Environmental Protection Agency for the 50,000 mile durability test. Volvo's development is to be commended for coming close, but "coming close" does not satisfy standards in Federal law. Volvo has again publicly confirmed that their California certification car of last summer did not pass the statutory standards test by EPA. Volvo testified March 9, 1977, before the Commerce Committee's, Health and Environment Subcommittee:

"In discussing the emissions results to date, it is important to note that the very low emissions figures which have recently been quoted for the Volvo Lamda-sondTM system are the average results from four 4,000-mile certification test vehicles with 4 cylinder in-line engines. It should also be

noted that during the 50,000-mile durability portion of the EPA test procedures the durability vehicle equipped with Lamda-sondTM exceeded the statutory limits according to the Federal certification procedure, thus *we could not* (emphasis added) have been certified to the statutory emissions levels."

Volvo began development of what became its sophisticated 1977 model year emission control system in 1972. It incorporates electronic fuel metering, electronic fuel injection and, at that time, the relatively unknown three-way catalytic converter and oxygen sensor device in the exhaust system, to name a few of the 1977 car's components. It took Volvo five years to get that vehicle ready for its 1977 test, a test that Volvo has said was not intended to be aimed at meeting the 1978 Federal standards of the Clean Air Act, but just to meet the less stringent California levels.

Volvo sells four and six cylinder cars in the "upper price classes" ($6500—$11,000). Its total emission system is estimated to cost from $500 to $600.

Volvo, in the Health and Environment Subcommittee hearings testified that its system was working on the in-line four cylinder engine in its small, four passenger car, but was much more difficult to adapt to the "VEE (V–6 and V–8) type engine because of basic configuration."

Volvo went on to say to the Subcommittee:

"In order to provide the stability necessary to optimize emission control systems, Volvo has recommended that U.S. exhaust emission levels be set at 0.9/9.0/2.0 gms/mi HC, CO and NOx respectively for model years 1978–1982. We still believe this is a reasonable compromise to achieve clean air and good fuel economy with a variety of powerplants."

This important testimony by Volvo, and testimony by other auto manufacturers further confirms the automotive engineering community's, and others', agreement for the need of the 9.0 CO and 2.0 NOx standards contained in the Dingell-Broyhill (H.R. 4444) legislation to amend the Clean Air Act. The Dingell-Broyhill standards are only slightly tighter than Volvo's recommendation for these same model years and are tighter due to our understanding of the technological achievements by the industry at large in the past year and the need to control hydrocarbons by our more stringent .41 HC standard to begin in 1980.

We point out that there remains uncertainty and lack of confirmed health data for the standard to go as low as 1.0 NOx or as low as .4 NOx. Even the Administration's schedule does not impose a .4 NOx standard due to the uncertainty and calls for further study of the issue. In the Dingell-Broyhill schedule we impose the 1.0 NOx in 1982, but again, due to uncertainty on health and air quality, and due to the Administration and nation's energy conservation demands, we provide for that NOx standard to be suspended or waived up to, but not in excess of, 2.0, if it will not endanger public health and would save fuel and economic cost. This procedure also provides automakers incentive for more research and test cars if they know there are provisions in the law to permit their manufacture of a new system. Innovative technology, such as the Volvo system, stratified charge, lean-burn, and other systems, may be developed and placed in mass production. This may then lead to greatly improved, cleaner burning, fuel efficient and cost effective systems on automobiles to protect consumers, the economy, the environment, energy conservation objectives, and have a resulting wholesome impact on automotive industry employment.

DIESEL SAVINGS

It is important to note that auto manufacturers testifying before both the Health and Environment Subcommitee on clean air and before the Energy and Power Subcommittee on auto fuel economy recently, agreed to the need for the NO_x suspension or waiver proceeding by EPA under the Dingell-Broyhill emission schedule for 1982 and beyond. Automakers, both foreign and domestic, who produce or plan to produce, diesel engines for their models, testified to the need for the Dingell-Broyhill 1.0 NO_x standard in 1982 and future model years to include the waiver to allow for the energy savings of the diesel engine to be realized and for the diesel to be put into mass production. Emission testing by manufacturers and government agencies of the various small and large diesel engines concludes that the NO_x standard should not be set below 1.5, or the diesel would be lost for mass production. They have, in fact, urged that the NO_x standard remain at 2.0. The diesel can claim up to a 25 percent fuel efficiency improvement above the spark ignited, gasoline powered vehicle, but that savings could be lost for the nation if diesels are outlawed or not encouraged for mass production.

The Committee bill would have the effect of outlawing diesels under 4,500 pounds which are, of course, the most fuel efficient diesels. Both small and large diesels, including the GM Oldsmobile diesel to be introduced in model year 1978 at current emission standards, would be lost under the Committee's proposed standards and authority for EPA to lower the NO_x level to 0.4. The 1978 model GM Oldsmobile diesel is projected to weigh less than 4500 pounds. Diesels cannot now attain 0.4 NO_x and could not be certified under EPA durability test procedures at 1.0 NO_x. Dingell-Broyhill encourages increased production of diesels and their related fuel economy improvement. The Committee bill does not.

Several manufacturers, Volvo, Toyota, Volkswagen, GM and others do have diesel plans. Mercedes, Peugeot, and others have diesels in production and the vast majority are diesels under the 4,500 pound class. They would be lost under the Committee bill.

CATALYTIC CONVERTER

The catalytic converter makers, who have undertaken development of the three-way converter to control auto emissions, stated in the March 9, 1977 Commerce, Health and Environment Subcommittee's clean air hearings that the systems that they have tested, which include the three-way catalyst, would not be ready for mass production until 1982 and then only—and we quote them—"if the whole system (emission system) holds together." (Page 91 of Health and Environment Subcommittee transcript, 3/9/77)

They further said that using a 19 to 1 loading of rhodium, which is the mine ratio, that the three-way catalyst would have only an 80 percent efficiency which would allow NO_x to be controlled down to a level of 1.0 grams per mile NO_x. (Page 182)

Any further reduction in NO_x would have to employ a system of exhaust gas recirculation (EGR) which all the catalytic converter manufacturers agreed before Representative Paul Rogers' Health and Environment Subcommittee would result in a fuel penalty. (Pages 180–183)

This testimony confirms that the earliest that even a 1.0 NO_x standard could be attained across the board on a mass production basis without a substantial potential for a large number of failures is in model year 1982 which is exactly the NO_x standard provided in the Dingell-Broyhill auto emission schedule.

RHODIUM SUPPLY AND THE CATALYTIC CONVERTER

Rhodium is an essential component in the manufacture of three-way catalysts. This metal, combined with platinum, creates the catalytic agent that interacts with exhaust gases reducing the emissions of oxides of nitrogen, carbon monoxide, and unburnt hydrocarbons.

Rhodium is a member of the platinum group metals. It varies in concentration so that a deposit may contain almost no rhodium, as in the Stillwater igenous complex in Montana, or it may be found in concentrations as high as one part rhodium to fifteen parts platinum in the Soviet Union.

The platinum metals group, including rhodium, are found in significant reserves in three countries: the Republic of South Africa, the Soviet Union, and Canada. According to the U.S. Bureau of Mines, South Africa contains approximately 70 percent of the world's reserves of platinum group metals which includes 80.9 percent of the rhodium reserves. The Soviet Union has approximately 26 percent of the reserves, including 17.3 percent of the rhodium. Canada, the third largest with 3 percent of the reserves, which includes 1.7 percent of the rhodium. The rest of the reserves are scattered among seven other countries. Only Canada, and its limited supply, can be considered reliable in the immediate or long-term future. The foreign sources are not reliable.

In 1976, consumption of platinum groups metals by the United States surged upward by 30 percent over 1975. The auto industry maintained its position as the largest user of these metals. Sales of platinum and palladium (another member of the platinum group metals) to the automotive industry for use in emission control catalysts in 1976 were nearly double the 1975 level, accounting for more than half of the platinum and more than one-quarter of the palladium sold in the United States. In sum, the automotive industry accounted for 41 percent of all platinum group metals consumed.

To meet this demand the U.S. imported 2.9 million troy ounces of platinum group metals in 1976. This constitutes a 50 percent increase over 1975 and represents one-half of the world's production.

World production of rhodium in 1976 was approximately 140,000 troy ounces. U.S. demand in the same year was 64,000 troy ounces. Assuming, for the sake of argument, that catalyst manufacturers could reduce the amount of rhodium needed for an effective three-way catalyst (down to a nineteen part platinum, one part rhodium—the mine ratio), according to the EPA, the absolute minimum increase in demand would be 27,000 ounces. This would raise U.S. demand to 91,000 troy ounces of rhodium or 65 percent of the world's production of rhodium. This would create a demand pull situation resulting in explosive increases in the price of rhodium.

Additionally, production of rhodium takes much longer than platinum or palladium. Typically, platinum and palladium emerge from the refinery a few weeks after entry. Rhodium may require refinery residence time of up to a year. This difference in processing time may result in a slower accumulation of rhodium to meet the large increases in demand created by three-way catalyst production. This potential lag may aggravate the inherent supply limitations of rhodium. The supply lag may well accentuate the effect of demand pull on price in as much as automotive applications of rhodium will not only guarantee a continuing demand of this metal, but will annually increase demand as auto production increases. The supply lag would argue for a two year extension of present auto emission control standards (Dingell-Broyhill), to allow the platinum group metals processes to take steps to meet the increased demand for rhodium due to its use in the three-way converters.

A method to alleviate the demand in primary sources of platinum is to recycle the used platinum and thus increase the supply by secondary metal production. In the past, secondary metal production of platinum group metals has provided American users with as much as 10 percent of their supply. The year 1976 saw secondary

production decrease by one-third of 1975 levels to 190,000 troy ounces. Formerly, sales of platinum group metals have been made to industries whose use of the metal allowed for extensive recycling. The problem of dispersion with a concomitant reduction of available recyclable metals is most pronounced in the use of the platinum group metals in automotive exhaust catalysts. Industry estimates of 60 percent recyclable platinum group metals in used catalytic converters necessitate study of systems to recover and recycle used converters. The automobile industry is the single largest user of platinum metals. The reduction of its demand on primary sources of platinum would aid the effort to reduce the dependence on potentially unstable sources for platinum group metals. The logistics of setting up a recovery and recycling system would require at least two years (and probably longer) to implement such a plan. Access to technology that would enable recycling of platinum group metals for automotive applications is possessed by at least five firms other than the two that dominate the automotive catalyst industry. The widespread access to recycling technology would assure sufficient competition in the supply of aftermarket, replacement catalysts. The potential for competition depends upon market entry costs, availability of supplies, marketing options, and the durability of the advanced three-way catalytic converter technology yet unproven in mass automobile production.

Rhodium poses problems of supply and demand that require close coordination that only a longer term phased-in emission schedule could provide. The Dingell-Broyhill schedule is the balanced and proper timetable.

	HC	CO	NO_x
I. H.R. 4444 Dingell-Broyhill; S. 919, Riegle-Griffin, 1977:			
1977	1.5	15.0	2
1978	1.5	15.0	2
1979	1.5	15.0	2
1980	.41	9.0	2
1981	.41	9.0	2
1982 and thereafter	.41	9.0	[1] 1
II. Administration—Commerce Committee 1977:			
1977	1.5	15.0	2
1978	1.5	15.0	2
1979	.41	9.0	2
1980	.41	9.0	2
1981	.41	3.4	[2] 1
1983 and thereafter	.41	3.4	[2] 1
III. S. 253—1977, Conference Report 94th Congress:			
1977	1.5	15.0	2
1978	1.5	15.0	2
1979	.41	3.4	2
1980	.41	3.4	2
1981 and thereafter	.41	3.4	1
IV. S. 252, Muskie, 1977:			
1977	1.5	15.0	2
1978	1.5	15.0	2
1979	.41	3.4	[4] 2 [5] 1
1980 and thereafter	.41	3.4	1
V. Dingell-Broyhill (Train). 1976:			
1977	1.5	15.0	2
1978	1.5	15.0	2
1979	1.5	15.0	2
1980	.9	9.0	2
1981	.9	9.0	2
1982 and thereafter	.41	3.4	[6]

[1] Suspension or waiver allowing NO_x to be set up to 2 if EPA determines that such action is necessary to allow production of innovative power train technologies, such as lean burn, diesel, stratified charge, and others, if it will not endanger public health.

[2] Possible waiver to 1.5 for "large diesels."

[3] 1 unless by 1980 the EPA Administrator determines, based on health effects, that 0.4 is necessary by model year 1983. If 0.4 is determined to be necessary, vehicles meeting 1 will be charged an amount equal to the economic value of not complying with the 0.4 standard. Diesels may obtain a waiver to the NO_x charge if they can meet the 1 standard for 100,000 mi.

[4] On 90 percent of fleet.

[5] On 10 percent of fleet.

[6] EPA Administrator would have had administrative authority to set NO_x standard for 1982 and thereafter.

HIGH ALTITUDE EMISSIONS

We disagree with the Committee's Section 215, High Altitude Performance Adjustments, and support the provisions of H.R. 4444, Section 5, to correct this matter.

The EPA high altitude automobile certification regulation, which went into effect with the commencement of model year 1977 and which requires manufacturers to certify separately all light duty vehicles sold for principal use in counties above 4000 feet, has created a significant disruption in the new car market in high altitude areas of the country.

Due to the high cost of certification, relative to the comparatively small size of the high altitude market (2–3% of the national market), the manufacturers have concluded that it is economically practicable to certify only about 50% of their normal product offerings. In addition, EPA's required high altitude emission control equipment causes available models to be priced significantly higher than their low altitude counterparts. The reduced availability of items which would otherwise be offered as standard equipment often forces high altitude customers to pay as much as $500 more for comparable high altitude vehicles. There has been a marked reduction in fuel economy and a negative impact on performance and driveability experienced in high altitude vehicles.

Despite the severity of these problems, the current EPA regulation offers little in the way of improving air quality in the high altitude metropolitan areas to which it applies. Due to the large influx of tourist vehicles into these areas, the percentage of cars equipped with high altitude controls is minimal.

In short, the EPA high altitude certification regulation has created a serious anticompetitive situation for high altitude dealers relative to low altitude dealers while at the same time offering negligible improvement in air quality for which it was designed. Because of the adverse impact which has already been experienced, the Dingell-Broyhill amendment, based on H.R. 4444, Section 5, would require EPA to conduct further investigation into the merits of high altitude certification and to determine a more equitable approach to the problem of high altitude emissions. This section contains the criteria to be examined by the EPA Administrator prior to the promulgation of any new regulation. These criteria include the economic impact which would be experienced by consumers, new car dealers, and the automobile industry, the availability of emissions control technology, and the probable impact on air quality in areas to which any such regulation would apply.

We urge the House to adopt Dingell-Broyhill.

DINGELL-BROYHILL CORRECTS AFTERMARKET PARTS AND SERVICE WARRANTY PROBLEMS

We disagree with the provisions in H.R. 6161 regarding automobile warranty and motor vehicle parts certification, Section 209, and support the provisions, Sections 6 and 9 of H.R. 4444, to be offered on the Floor as a part of the Dingell-Broyhill amendment to the Committee bill.

The Clean Air Act of 1970 mandates warranty provisions on the vehicle manufacturer. The Act's five-year/50,000 mile performance warranty presents a serious threat to the independent automotive aftermarket and service industry and to the millions of consumers that utilize the products and services of that industry to maintain and operate their cars and trucks. It also impacts on employment in this small business industry. The law mandates both a production and performance warranty to the ultimate consumer, that the emission control system installed by that manufacturer will comply with applicable standards for that length of time. The production warranty went into effect shortly after the passage of the Clean Air Act. The performance warranty provisions of Dingell-Broyhill deal effectively with the industry and consumer problems while the Committee bill only superficially attempts to deal with the issues.

Under the law, the performance warranty, which has not been implemented, is mandated to become effective once the Administrator of the Environmental Protection Agency develops a quick tailpipe test correlatable with the Federal test procedure.

Although both the Committee bill and our measure deals only with the performance warranty, it is important to note here briefly that the provisions of the production warranty which are already in effect adequately protect the consumer with mandated durability enforced through EPA recall. Under the production warranty 207(a) of the Act, the vehicle manufacturer must warrant that the emission control system is designed, built and equipped in a manner that will enable it to comply with emission regulations which exist at the time the vehicle was first sold and that it is free from defects in materials and workmanship that would cause the system to fail to conform with applicable regulations for its useful life, which is defined in the Act as five-years or 50,000 miles, whichever occurs first. Enforcement of this production warranty is through a general recall order by EPA after a finding that a "substantial" number fail to comply with applicable standards. This is very similar to the actions taken today on safety-related devices by the Department of Transportation and neither we nor the independent automotive aftermarket industry have any objection to the production warranty provisions. They effectively control the durability and the reliability of emission control systems and protect the consumer.

PERFORMANCE WARRANTY

The performance warranty provisions require the vehicle manufacturer to repair, at his cost, every vehicle on the road that fails an emissions inspection, so long as the vehicle owner has complied with the maintenance and operations instructions mandated by the vehicle manufacturer for 5 years/50,000 miles. These maintenance and operations instructions are the critical points insofar as the independent automotive aftermarket and the consumer are concerned. The cost of the performance warranty will be built into the price of the vehicle. The owner is not going to jeopardize his position with respect to keeping that warranty valid and will return to the franchised dealer of the vehicle manufacturer, not only for warranty work, but also for non-warranty routine maintenance work performed at the same time, thus effectively shutting off the independent aftermarket from those they now serve. Currently, the 75–80% of the service work in the United States is done by the independent industry.

The consumer no longer would have the freedom of choice to use the parts and services he wishes, and the 1970 Act's performance warranty would create a monopoly for the vehicle manufacturer and their franchised dealers in parts and service. The vehicle manufacturers have stated that, when faced with the tremendous liability under the performance warranty, they will be forced to insist on only the use of their parts and service to maintain the vehicle and the validity of that warranty. We believe it is legitimate for the vehicle manufacturer to demand some control over the liability he may face down the road if the vehicle does fail an emissions inspection.

The vehicle manufacturers maintenance instructions under the performance war-

ranty which will be required to be followed by the consumer to prevent voiding the warranty will have a major impact on the car-owning public. The vehicle owner is obligated to have stipulated parts replaced and have service performed at the vehicle manufacturer's designated intervals, at his or her own expense. Should the vehicle fail to comply with an applicable emission standard under the performance warranty, it is not the obligation of the vehicle manufacturer to repair the emission control system if the required maintenance has not been performed at the established time. (Section 207(c)(3) of the Clean Air Act of 1970 authorizes the manufacturer to stipulate maintenance instructions for the performance warranty).

These maintenance instructions will have the effect of causing car owners to have all servicing—whether related to the warranties or not—performed by their franchised dealers, which is a serious inconvenience and poses a serious problem for both the car-owning public and the independent automotive aftermarket and service industry.

Congress obviously agreed that the anticompetitive and anticonsumer aspects of the performance warranty should be altered during the last session when the House overwhelmingly voted to reduce the performance warranty to 18 months, 18,000 miles.

SMALL BUSINESS COMMITTEE HEARINGS AND RECOMMENDATIONS

The Small Business Committee held extensive hearings and studied the impact of the performance warranty for almost a year prior to issuing its Report No. 93-1628. After carefully reviewing the warranty provisions of the Clean Air Act, the Small Business Committee found the performance warranty when implemented would be anticonsumer, anticompetitive, and unnecessary to the protection of clean air. It must be noted that neither of the legislative committees that developed the Clean Air Act of 1970 had the opportunity to hold hearings on the warranty provisions of the Act which might have highlighted the monopolistic and anticonsumer aspects of the law.

Of course, the antitrust laws prevent vehicle manufacturers from requiring that only their parts be used to replace those they know will wear out prior to the expiration of the five-year, 50,000 mile warranty, or from requiring that the servicing of these parts be performed only by a franchised dealer. However, because of the potential liability the vehicle manufacturers would face when the quick tailpipe test of EP Ais approved, they must protect themselves. It is reasonable that the validity of these warranties be conditioned on the use of original equipment manufacturers—OEM—parts or their "equivalent," and the use of franchised dealers or a "qualified service outlet," and then reserve to the manufacturer the right to determine what is an "equivalent" part and a "qualified service outlet." In all likelihood, neither "equivalent" parts nor "qualified service outlets" will be acceptable to the vehicle manufacturer. It is clearly inequitable for the vehicle manufacturer to be held responsible for parts and service over which he has no control.

The Small Business Committee heard from representatives of the vehicle manufacturers, automotive aftermarket, repair garages, service stations, EPA, the Federal Trade Commission, and the antitrust division of the Department of Justice during their hearings. All their testimony and the documentation compiled convinced all 19 members of the House Small Business Committee who unanimously agreed that "the performance warranty of the Clean Air Act is anticonsumer, anticompetitive, and unnecessary to the maintenance of clean air." The Committee noted, "the Clean Air Act of 1970 performance warranty provision, would enable the vehicle manufacturers to accomplish what the free workings of a competitive market have prevented." That is, a monopoly on parts and service.

One of the major recommendations of the Small Business Committee in their report was "that the performance warranty of the Clean Air Act should be reduced to a period comparable to that presently established by the competitive forces operating in the open marketplace, such as for 12 months or 12,000 miles, whichever comes first."

DEPARTMENT OF JUSTICE STATEMENT TO EPA, MARCH 16, 1976, REGARDING CLEAN AIR ACT WARRANTIES

In response to an EPA proposal of November, 1976, to substantially alter the production warranty, by regulation, into something equivalent to a performance warranty, the Justice Department noted that they were "not convinced that expanding the warranty—in effect, transforming it into a performance guarantee—will lead to an improvement in its cost effectiveness. The potential cost of extending the present production warranty to control emissions subsequent to vehicle purchase will, in all probability, far outweigh the potential benefits."

The Justice Department also pointed out that ". . . in addition to the direct cost to the consumer of such a performance guarantee, the social costs associated with the competitive disadvantage that potentially could be imposed on a sizable class of vehicle service businesses is a particular concern of the Department of Justice. This would come about if the warranty is honored only by manufacturer-affiliated dealers. Then, vehicle owners can be expected to take their vehicles exclusively to dealers for all emission related repairs and service. Independent garages and service stations that may be equally skilled in making such repairs will be placed at a disadvantage relative to dealers. Without a comprehensive (five year/50,000 mile) warranty, non-dealers would succeed or fail depending upon their ability to compete in the marketplace next to dealers; however, the presence of the five-year/50,000 mile warranty would make it next to impossible for non-dealers to attract customers for emission related repairs, regardless of their price and their quality of work . . ."

The department charged ". . . the federally-mandated warrantly would have severe implications for the long run viability of independent garages and service stations. Indeed, it would effect a significant increase in concentration in the service industry to the point where substantial adverse impact on the price of service and repair could be expected. In any event, the impact on the concentration would be directly related to the comprehensiveness of the warranty . . . it would become impossible for the independent service station and garage to compete with the service departments of dealers that are franchised by the national automobile manufacturers. Concentration in the automobile aftermarket would increase substantially and the advantages of free competition would be lost."

The department continued by pointing out, ". . . presumably, regulations will be promulgated to require that once an automobile is brought into a shop for repairs under the warranty, it would not leave until it met federal emission standards. A warranty of this nature, however, can be expected to result in enormous cost to the consumer."

In regard to allowing the independent aftermarket to do warranty work and be paid by the manufacturer, the Justice Department noted, ". . . if the manufacturer were required to honor a performance guarantee regardless of the indentity of the repair shop, the supply cost of the warranty could be expected to inflate rapidly. Although such a requirement would eliminate the disadvantage one class of business would be put at relative to another, the manufacturer would be put in a situation in which it could exercise no effective cost control. In this event, not only would the perverse consumer incentive described earlier be present, but perverse repair shop incentives could also be expected. That is, with the knowledge that the manufacturer would be required to honor any work done, the repair shop could charge, in effect, anything it wanted to for services rendered. Once the vehicle owner purchased a comprehensive warranty, he could be expected to be indifferent to the price of repairs and service. At the very least under these conditions the price of new vehicles would skyrocket."

Additionally, the Justice Department statement recommended that the agency (EPA) promulgate ". . . a list of emission control devices that would be covered under the production warranty. This list should be limited to those devices that would not have been included in the vehicle if the Clean Air Act had not been passed."

EPA ACTIONS

On November 16, 1976, in docket FRL 630-2, issued an advance notice of proposed rulemaking on the production warranty in the Federal Register which would ". . . be applicable in some cases where no specific defect was identified; in essence becoming a type of performance warranty." The proposal also contained a listing of roughly 165 parts and systems which would be considered as emissions related components and a list of 67 failure modes, most of which are driveability and fuel economy, under which a consumer could supposedly claim an emissions defect. This is precisely the problem that the Department of Justice identified in its comments.

COMMENTS BY CHAIRMAN ROGERS, SUBCOMMITTEE ON HEALTH AND ENVIRONMENT, REGARDING THE PERFORMANCE WARRANTY

In a recent letter to the aftermarket industry dated April 25, 1977, Chairman Rogers noted, "As you may know, I originally opposed the rollback of the Clean Air Act performance warranty from five-years/50,000 miles to 18 months/18,000 miles. However, I have been persuaded that the current provisions of the Clean Air Act might appear to lack adequate safeguards for free competition by the aftermarket parts and service industry and for the consumer."

We appreciate Chairman Rogers' recognition of the anticompetitive and anticonsumer aspects of the performance warranty of the Clean Air Act of 1970 and only disagree with the Chairman in that the bill reported from his Committee gives only temporary relief to the situation and, even in the face of the findings of the Small Business Committee and Justice Department, would mandate the problem again be studied by another Federal agency and for Congress to once again act in three years, to protect the consumer and the independent parts and service industry.

WARRANTY PROVISIONS OF H.R. 6161

We firmly believe that the provisions included in H.R. 6161 that deal with the anticonsumer and anticompetitive impacts of the Clean Air Act of the 1970 performance warranty are inadequate and fail to carry out their stated purpose, simply because they contain only temporary relief of the problem and rely on Congress taking up the issue again and acting at the end of a three-year span.

H.R. 6161 reduces the performance warranty to 18 months, 18,000 miles for a period of only three years at which time it automatically reverts to five years and 50,000 miles, unless Congress acts to the contrary. It additionally mandates a two-year Federal Trade Commission study analyzing the performance warranty and its effects on competition.

We contend that more than enough study of the issue has taken place. All 19 members of the House Small Business Committee unanimously agreed that the performance warranty of the Clean Air Act once implemented, would be ". . . anticonsumer, anticompetitive, and unnecessary to the maintenance of clean air." There is no justification for only reducing the warranty for only a three-year period and mandating yet again another study of the issue. The facts are clear and the warranty should be permanently reduced to respond to those facts.

H.R. 6161, even in light of the Justice Department recommendation noted earlier regarding a definition of emission control device or system, would nevertheless mandate the FTC study to include ". . . an analysis of alternative definitions of the term 'emission control system or device' for the purposes of the performance warranty and the effect such definitions might have on competition, health and welfare and the durability of components which may affect emissions."

Since the Clean Air Act of 1970 was passed, one of the major questions has always been, what is an emission control device or system? Once again, we believe this issue has been studied to death and that the Justice Department recommendation regarding a definition should be followed—not just another study mandated.

The Committee measure would ". . . permit the actual remedying of the nonconformity to be performed by any person engaged in the business of repairing or servicing motor vehicles, by any class or category of such persons, by the owners of such vehicles or engines, by any other individual, or by any combination thereof, at the option of the owner in accordance with regulations promulgated pursuant to Subsection (b)(5)."

The measure also stipulates that EPA will establish orderly procedures for the implementation of a system where the manufacturer would reimburse the independent industry for performing its warranty work. As noted earlier in our comments, the Justice Department stated the following regarding such a proposal, ". . . if the manufacturer were required to honor its performance guarantee regardless of the identity of the repair shop, supply costs of the warranty could be expected to inflate rapidly . . . at the very least under these conditions, the price of new vehicles would skyrocket."

Very few in the independent aftermarket industry have ever wanted or urged that they be allowed to do warranty and recall work and be reimbursed for such work by the vehicle manufacturer. The Committee bill is, in effect, a proposal for "national health insurance for cars" and would create an unmanageable problem and enormous costs to the consumer. The question involved in the performance warranty of the Clean Air Act is not the ability of the independent aftermarket industry to do the vehicle manufacturer's warranty work, but the right for independent parts and service to be used to repair and maintain the vehicle unencumbered by consumer ties to the dealers which have been created by the present provisions of the Clean Air Act. Most of those in the aftermarket industry believe that any warranty work which is paid for by the manufacturer should be done by the manufacturer. We agree.

Under the 1970 law, the maintenance of the vehicle is *not* paid for by the vehicle manufacturer, and is not considered warranty work as such. The consumer has and will continue to be the person who pays for the proper maintenance of his vehicle. There is no such thing as "free manufacturer-paid maintenance." The manufacturer has and will continue to do what is necessary to honor his economic and Clean Air Act-mandated warranty commitments to the consumer at his own facility, but this does not include free maintenance work on the vehicle.

WARRANTY PROVISIONS OF H.R. 4444, DINGELL-BROYHILL, SOLVES CONSUMER AND INDUSTRY PROBLEMS

In response to findings of the House Small Business Committee and the Justice Department, H.R. 4444, the basis of the Dingell-Broyhill amendment to H.R. 6161, effectively and permanently would solve the anticonsumer and anticompetitive situations inherent in the performance warranty, prior to its implementation.

Dingell-Broyhill would permanently reduce the performance warranty to 18 months/18,000 miles from its current 5 years/50,000 miles, unless Congress, at a later date, acts to extend the warranty. This is 6 months longer than the 12 months/12,000 miles recommended by all 19 members of the Small Business Committee and is completely acceptable to all of the independent automotive aftermarket and service industries and to automobile dealers and manufacturers.

Dingell-Broyhill sets up an EPA certification program for independent aftermarket parts and provides that no warranty shall be invalid on the basis of any part used in the maintenance or repair of a vehicle, if such part is certified that it will not result in a failure of the vehicle or engine to comply with emission standards. This certification proposal will help the independent automotive aftermarket parts industry to deal with its problems, but the service and maintenance problems would remain. To date, no effective means has been found to solve the service and maintenance problems other than a reduction of the warranty. The ill-conceived approach of forcing the manufacturer to accept and pay for both parts and service regarding warranty work was discussed earlier.

Dingell-Broyhill, specifically in line with the Justice Department recommendations, indicates that the vehicle manufacturer has the right to do his own "warranty work" as long as it is being paid for by the manufacturer. As noted earlier, this is not objected to by the independent aftermarket industry. This provision does not, and is not intended to, speak at all to "maintenance work" required to maintain the warranty. Once again, that always has been, and will continue to be, paid for by the consumer. That is not considered "warranty work"; it is "maintenance" of the vehicle to maintain the warranty. There is a vast and very important difference between "warranty" and "maintenance" work.

Dingell-Broyhill, in harmony with the Justice Department recommendation which stated that the EPA should promulgate a list of the emission control devices that would be covered under the warranty and limit such devices to those that would not have been included on the vehicle if the Clean Air Act had not been passed, defines "an emission control device or system" as "a catalytic converter, thermal reactor, or other component installed on or in a vehicle for the sole or primary purpose of reducing vehicle emissions. Such term shall not include those vehicle components which were in general use prior to model year 1968."

This Justice Department recommendation and the subsequent recognition of that recommendation in our definition in Sec. 9 of H.R. 4444 is in direct conflict with the EPA's attempt, 2 years ago, to indicate that over 430 component parts and systems were emission related devices or systems, and its more recent November 1976 list which contains roughly 165 component parts and systems. When such ridiculous things are included in the EPA list as hoses, clamps and pipes, gaskets and seals, pulleys, belts and idlers and electrical connections to name just a few, it can be easily seen that the agency has gone well beyond the limits of reasonableness regarding what should be considered as an emissions-related device or system.

It is also noteworthy that during debate of the Clean Air Act performance warranty provision in the Senate last year unquestionably the most knowledgeable Member of the United States Senate regarding antitrust matters, Senator Philip Hart, was in firm support of reduction of the performance warranty to 18 months/18,000 miles as the only solution to the problem. Also, the American Automobile Association, the world's largest automotive consumer organization, on behalf of its 14 million members urged, . . . "that the warranty not be implemented until it is proven that it is not a burdensome and expensive illusion."

In light of the extreme complexity of this issue, the following are the 10 most often asked questions regarding the performance warranty and the answers to those questions:

Question 1. If we reduce the length of the performance warranty as in H.R. 4444 to 18 months/18,000 miles, how can Congress assure that the vehicle manufacturer will continue to produce durable emission systems?

Answer. Vehicle manufacturers will still be required to produce a durable system in order to pass the 50,000 mile EPA certification test under the production warranty. We propose no change in the length of the production warranty. Under the production warranty the EPA not only certifies that the car's emission control system will last for 50,000 miles, but if a substantial number of systems fail during their on-the-road operation, the EPA can recall the entire lot for repair at the manufacturer's expense. Reduction of the performance warranty will not let the manufacturers "off the hook" regarding the requirement to produce a durable emissions system. On the contrary, the potentially huge liability that would be incurred by the manufacturer in the case of a large recall provides a substantial economic incentive to manufacturers to produce reliable and durable emission control systems.

Question 2. Doesn't the performance warranty guarantee that the emissions system will perform for 5 years-50,000 miles?

Answer. No, it only attempts to define who will pay for repairs if the system does not perform.

Question 3. Will consumers lose the protection they now enjoy under the performance warranty?

Answer. No, consumers do not now have, nor have they ever had, any protection under the performance warranty. In fact, only the EPA, the industry and some concerned attorneys even know this warranty is planned. It has never been implemented because the EPA has not yet developed a correlatable "short test." If it is not significantly altered before it is implemented, consumers will react as they did to the seat belt interlock requirement when they are told that their cars *must* be maintained only at the expensive dealership during their first five years or 50,000 miles of operation of the vehicle.

Question 4. How does the production warranty work to protect the consumer?

Answer. When the EPA is notified or discovers through its own testing program that five or more systems have malfunctioned due to defects in materials or workmanship (as opposed to improper maintenance), it will instigate an investigation which could lead to a recall of all of that model vehicle or engine type. This recall authority protects the consumer against shoddy workmanship or the possibility that the engines actually produced do not duplicate the engine originally certified. EPA has already had emission recalls under the production warranty.

Question 5. Why doesn't Congress just in-

sist that the manufacturers accept parts and labor from anyone as satisfying the maintenance requirements of the performance warranty?

Answer. Because the vehicle manufacturer has a legitimate right to protect itself from extremely large potential liabilities under the warranty by demanding that adequate replacement parts be used and that they be properly installed. While the issue was being fought out in the courts, consumers would protect their interests by following the maintenance instructions to the letter and the aftermarket small business would be crippled, perhaps fatally. In addition, it is likely the courts would sustain the manufacturers on this point. It is difficult to believe that the courts would hold that the vehicle manufacturers could be held liable for service work done outside the franchised dealership where a mechanic may have either put on the wrong part or put it on upside down.

Question 6. Why not just delegate the authority to correct this problem to the EPA?

Answer. Because the EPA has not shown any sensitivity to this problem, and because it would just be ducking the issue on the part of the Congress. Also, EPA could not deal with the antitrust problems associated with the warranty. EPA thinks the problem can be corrected with a parts certification program. It can't.

Question 7. Won't a parts certification program completely solve the problems of the aftermarket industry?

Answer. No. In fact, the House Small Business Committee found that the certification program itself was anticompetitive. Their objections: the great cost of even self-certifying will destroy many smaller manufacturers; the vehicle manufacturers could control certification to limit competition; there are expensive problems of due process; and it would require at least partial exemption for the industry from present antitrust laws. The aftermarket industry has been working with EPA since 1972 trying to develop a workable parts certification program. The EPA effort to get a parts certification program off the ground has been hampered by EPA's proposal to include 430+ parts in its definition of the emissions system two years ago, and more recently, 165 parts and components.

Question 8. What evidence exists that the present 50,000 mile performance warranty has added to the cost of the cars, and has proved anticompetitive, or has induced business away from the independent parts and service industry?

Answer. There can be no answer to these questions until the 5 year/50,000 mile performance warranty is implemented by the EPA. The fact is that there is no present 5 year/50,000 mile performance warranty. The Act provides that when the "short test" is developed, EPA shall issue regulations implementing the performance warranty. However, both the House Small Business Committee and the Justice Department, after studying the issue, are firmly convinced that the warranty would be anticompetitive and anticonsumer.

We have heard from many different sources that the problems posed by the warranty have not occurred even though the warranty has been on the books for seven years. The reason for this is too often overlooked. There can be no problem until the EPA implements the warranty, and this has not been done as of this date.

Question 9. It has been seven years since the 5 year/50,000 mile performance warranty was written into law. What percentage of the service work performed in the nation is done by the independent garage industry?

Answer. This question is closely intertwined with the previous question. The 5 year/50,000 mile performance warranty has been a part of the Clean Air Act for seven years, but, and this is vitally important, it has not been in operation for a single day. Because it has not been implemented by the EPA, there can be no valid comparisons of the respective shares of aftermarket business before such implementation. At the present time, without the performance warranty in effect, free market competitive conditions have the aftermarket doing 75 to 80% of all the repair work in the nation. After implementation of the performance warranty, the consumer loses his freedom of choice, and a government-mandated monopoly replaces that free competitive market. Immediate remedial legislative action to eliminate this monopolistic effect is vitally needed and is contained in H.R. 4444, the Dingell-Broyhill proposal.

Question 10. Since the performance warranty has not yet been implemented by EPA, is it a "real" problem to the aftermarket and consumers?

Answer. Indeed, the problem hangs over the head of the independent automotive aftermarket waiting to strike once the EPA develops the short test required for implementation of the warranty. Once the performance warranty is implemented, at 5 years/50,000 miles, the result would be disaster for the independent garagemen and a monopoly over all parts and services by the vehicle manufacturers. The consumer will suffer tremendously both from substantially increased costs of his vehicle and his loss of freedom of choice as to who services his vehicle and what parts are used. The economic fact of life is that the vehicle manufacturer, once he is faced with the tremendous legal obligation of the performance warranty, must include the cost of that obligation in the price of the vehicle, and the consumer who must pay that price has no choice except to return to the vehicle manufacturer not only for warranty work, but for all his maintenance and service, since to do otherwise might void his warranty. The consumer cannot risk the loss of his substantial investment, regardless of any niceties in the law which he will not understand, nor will care to understand.

There is no question in our mind that significant and fully supportive evidence has already been developed by action in the Congress last year, by the House Small Business Committee, and by the Justice Department this year to reduce the performance warranty permanently to 18 months/18,000 miles, as is done in Dingell-Broyhill. There is no sound reason why the warranty should be reduced temporarily as in H.R. 6161, while yet again another study (which will undoubtedly come to the same conclusions) be conducted and Congress finds itself in the position of having to deal with the issue again in three years, in order to protect the consumer and eliminate a Federally-mandated monopoly on parts and service to the vehicle manufacturer.

INSPECTION AND MAINTENANCE

EPA has had authority since the 1970 amendments to the Clean Air Act to require emission control inspection and maintenance. While such a program would be unnecessary and wasteful in some areas of the country, there are indications that an emissions inspection effort in larger polluted metropolitan areas would assist in improving air quality. We cannot, of course, mandate such a program until we are certain that adequate and reliable technology is available to insure to consumers that such inspections can and will be conducted with promptness and accuracy. It is our understanding that EPA is not yet fully convinced that such technology is ready for application. Consequently, we would not want to force EPA to institute a program too early and cause great inconvenience to the public without commensurate air quality benefits.

On the other hand, we strongly feel that the EPA should move forward in this area with reasonable and due speed to institute emission inspection programs where they could have beneficial effects on air quality. For this reason, a part of the Dingell-Broyhill Floor amendment will include a provision which will insure that EPA moves as rapidly as possible in its promulgation and implementation of emission inspection programs.

DELETE CALIFORNIA STANDARDS FOR OTHER STATES

We disagree with the Committee's Section 221, Preemption of State Law, which would permit other States to adopt the more stringent California emission control standards for automobiles. As this section also was added by the Health and Environment Subcommittee after the introduction by Dingell and Broyhill of H.R. 4444, the Mobile Source Emission Control Amendments, we did not know that this section would become a part of the Committee bill. It must be deleted.

There is a substantial history for federal preemption of emission standards except for California. The reasons were so compelling that the Congress wrote federal preemption into the Clean Air Act and has maintained it through the several amendments to the Clean Air Act.

Automobiles are a major item in interstate commerce, both new and used. The entire manufacturing and marketing system which has produced low cost personal transportation is based on the uninterrupted and uninhibited flow of motor vehicles in interstate commerce. Almost every family has a major investment in a motor vehicle, and any inhibition to free traffic in used cars diminishes this investment.

To permit California to be an exception to this process has been possible only because of its unique geographical situation, isolated on all sides from any large metropolitan area or even heavily populated areas. Therefore, the temptation to buy cars back and forth across state lines has been minimal.

On the other hand, allowing a state like New Jersey to have automobile emission standards different from the surrounding states would create havoc in the policing of the administration of new and used car sales. New Jersey dealers would undoubtedly lose many sales to the surrounding neighborhoods. In addition, since it has not been possible to make all cars meet the California standards, model selection would be diminished for New Jersey dealers as opposed to their competitors across the state lines. California has accommodated this situation, again because of its isolation, but dealers, nonetheless, are handicapped perceptibly by not having the full range of models.

From the manufacturing and marketing point of view, the situation is equally unsatisfactory. Ordering, shipping, and transshipping of vehicles in the face of a variety of state laws creates additional costs and severe inconvenience to consumers.

States adopting the California standards would be adding to unnecessary fuel usage. The 1977 California fleet carries a fuel penalty of at least 11 percent vis-a-vis its federal counterparts—which amounts roughly to a 2 mile per gallon penalty. Such increased fuel usage should be justified by some benefit to public health. Such benefits cannot be established on the basis of any health data available at this time.

We urge the House to delete Section 221 from H.R. 6161.

CONCLUSION

For the forgeoing reasons we urge adoption by our House colleagues of Dingell-Broyhill on the House Floor and urge our colleagues to assist in our efforts to ensure that it is finally and promptly enacted into law.

Separate Views, to be included in the Commerce Committee report to accompany H.R. 6161, Clean Air Act Amendments of 1977, of:

John D. Dingell, James T. Broyhill, David E. Satterfield, III, Clarence J. Brown, Bob Gammage, Dave Stockman, Bob Krueger, Samuel L. Devine, Fred B. Rooney, James M. Collins, Thomas A. Luken, Marc L. Marks, Philip R. Sharp, Louis Frey, Jr., Marty Russo, Edward R. Madigan, Charles J. Carney, and W. Henson Moore.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. RONCALIO (at the request of Mr. WRIGHT), for today, on account of official committee business.

Mr. STUMP, for today, on account of official business.

Mr. CORMAN (at the request of Mr. WRIGHT), for today, on account of official business.

Mr. MARRIOTT (at the request of Mr. RHODES), for today, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. SAWYER), to revise and extend their remarks, and to include extraneous matter to:)

Mr. HAGEDORN, for 5 minutes, today.

Mrs. SMITH of Nebraska, for 10 minutes, today.

Mr. TRIBLE, for 10 minutes, today.

Mr. MILLER of Ohio, for 5 minutes, today.

(The following Members (at the request of Mr. YOUNG of Missouri) to revise and extend their remarks and include extraneous material:)

Mr. MOSS, for 5 minutes, today.

Mr. BINGHAM, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. PEPPER, for 5 minutes, today.

Ms. HOLTZMAN, for 60 minutes, today.

Mr. KOCH, for 5 minutes, today.

Mr. HANLEY, for 5 minutes, today.

Mr. BURKE of Massachusetts, for 5 minutes today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. BADILLO, and to include extraneous matter, notwithstanding the fact that it exceeds two pages of the RECORD and is estimated by the Public Printer to cost $1,691.

Mr. FORD of Michigan, and to include extraneous matter, notwithstanding the fact that it exceeds two pages of the RECORD and is estimated by the Public Printer to cost $1,851.50.

(The following Members (at the request of Mr. SAWYER), and to include extraneous matter:)

Mr. CRANE.

Mr. SARASIN.

Mr. SHUSTER.

Mr. ANDERSON of Illinois.

Mr. KASTEN.

Mr. LAGOMARSINO in two instances.

Mr. BROOMFIELD.

Mr. GILMAN.

Mr. GRASSLEY.

Mrs. HOLT.

Mr. STEERS in two instances.

Mr. DORNAN.

Mr. HYDE.

Mr. MILLER of Ohio in four instances.

Mr. DERWINSKI in two instances.

Mr. MCCLOSKEY.

(The following Members (at the request of Mr. YOUNG of Missouri) and to include extraneous material:)

Mr. ROSENTHAL.

Mr. TEAGUE.

Mr. MIKVA.

Ms. OAKAR.

Mr. AKAKA.

Mrs. SCHROEDER.

Mr. GINN.

Mr. WIRTH.

Mr. EILBERG in 10 instances.

Mr. SIMON in two instances.

Mr. LEDERER.

Mr. EDWARDS of California.

Mr. JACOBS.

Mr. VANIK.

Mr. PICKLE in 10 instances.

Mr. GONZALEZ in three instances.

Mr. ANDERSON of California in three instances.

Mr. HAWKINS.

Mr. JOHNSON of California.

Mr. LONG of Maryland.

Mr. AMMERMAN.

Mrs. COLLINS of Illinois.

ADJOURNMENT

Mr. YOUNG of Missouri. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 2 o'clock and 53 minutes p.m.), under its previous order, the House adjourned until Monday, May 16, 1977, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1484. A letter from the Architect of the Capitol, transmitting his report of expenditures during the period October 1, 1976 through March 31, 1977, pursuant to section 105(b) of Public Law 88-454, as amended; to the Committee on Appropriations.

1485. A letter from the President and Chairman, Export-Import Bank of the United States, transmitting a report on loan, guarantee and insurance transactions supported by Eximbank during March 1977 to Communist countries, to the Committee on Banking, Finance and Urban Affairs.

1486. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 2-35, "To allow the celebration of Dr. Martin Luther King, Jr.'s birthday on Fridays when it falls on Saturdays," pursuant to section 602(c) of Public Law 93-198, to the Committee on the District of Columbia.

1487. A letter from the Deputy Assistant Secretary of Defense (Administration), transmitting notice of four proposed new records systems for the Office of the Secretary of Defense, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

1488. A letter from the Secretary of Health, Education, and Welfare, transmitting the second annual report on the Health Maintenance Organizations program, pursuant to section 1315(a) of the Public Health Service Act, as amended; to the Committee on Interstate and Foreign Commerce.

1489. A letter from the Secretary of Health, Education, and Welfare, transmitting a report on national standards for community mental health centers, pursuant to section 304(b) of Public Law 94-63; to the Committee on Interstate and Foreign Commerce.

1490. A letter from the Executive Director, Federal Communications Commission, transmitting a report on the backlog of pending applications and hearing cases in the Commission as of February 28, 1977, pursuant to section 5(e) of the Communications Act, as amended; to the Committee on Interstate and Foreign Commerce.

1491. A letter from the Chairman, Federal Power Commission, transmitting copies of publications entitled "Statistics of Interstate Natural Gas Pipeline Companies, 1975," and "Hydroelectric Power Resources of The United States Development and Underdeveloped 1976" to the Committee on Interstate and Foreign Commerce.

1492. A letter from the Chief Justice of the United States, transmitting the proceedings of the Judicial Conference of the United States held on March 10 and 11, 1977 (H. Doc. No. 95-154); to the Committee on the Judiciary and ordered to be printed.

1493. A letter from the Comptroller General of the United States, transmitting a report on the examination of financial statements of the Rural Telephone Bank, Department of Agriculture, for the 15-month period ended September 30, 1976, pursuant to section 106 of the Government Corporation Control Act, as amended (FOD-77-02, May 12, 1977) (H. Doc. No. 95-155); jointly, to the Committees on Government Operations, and Agriculture, and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mrs. CHISHOLM: Committee on Rules. House Resolution 569. Resolution providing for the consideration of H.R. 1139. A bill to extend through fiscal year 1982 certain child nutrition programs under the National School Lunch Act and the Child Nutrition Act of 1966 (Rept. No. 95-304). Referred to the House Calendar.

Mr. MURPHY of New York: Committee on Merchant Marine and Fisheries. H.R. 3348. A bill to amend the act of July 2, 1940, as amended, to increase the amount authorized to be appropriated for the Canal Zone Biological Area; with amendment (Rept. No. 95-305). Referred to the Committee of the Whole House on the State of the Union.

Mr. UDALL: Committee on Interior and Insular Affairs. H.R. 4746. To extend certain authorities of the Secretary of the Interior with respect to water resources, research, and saline water conversion programs, and for other purposes; with amendment (Rept. No. 95-306). Referred to the Committee of the Whole House on the State of the Union.

Mr. MEEDS: Committee on Interior and Insular Affairs. H.R. 6752. A bill to amend the Water Resources Planning Act (79 Stat. 244) as amended; with amendment (Rept. No. 95-307). Referred to the Committee of the Whole House on the State of the Union.

Mr. MURPHY of New York: Committee on Merchant Marine and Fisheries. H.R. 6823. A bill to authorize appropriations for the U.S. Coast Guard for fiscal year 1978, and for

other purposes; with amendment (Rept. No. 95–308). Referred to the Committee of the Whole House on the State of the Union.

Mr. THOMPSON: Committee on House Administration. H.R. 6936. A bill to amend the Federal Election Campaign Act of 1971 to extend the authorization of appropriations contained in such act, (Rept. No. 95–309). Referred to the Committee of the Whole House on the State of the Union.

Mr. KASTENMEIER: Committee on the Judiciary. H.R. 6666. A bill to amend the Legal Services Corporation Act to provide authorization of appropriations for additional fiscal years, and for other purposes (Rept. No. 95–310). Referred to the Committee of the Whole House on the State of the Union.

Mr. REUSS: Committee on Banking, Finance and Urban Affairs. H.R. 2777. A bill to provide for consumers a further means of minimizing the impact of inflation and economic depression by narrowing the price spread between costs to the producer and the consumer of needed goods, services, facilities, and commodities through the development and funding of specialized credit sources for, and technical assistance to, self-help, not-for-profit cooperatives, and for other purposes; with amendment (Rept. No. 95–311). Referred to the Committee of the Whole House on the State of the Union.

Mr. PERKINS: Committee on Education and Labor. H.R. 4287. A bill to promote safety and health in the mining industry, to prevent recurring disasters in the mining industry, and for other purposes; with amendment (Rept. No. 95–312). Referred to the Committee of the Whole House on the State of the Union.

Mr. PERKINS: Committee on Education and Labor. H.R. 6111. A bill to amend the Juvenile Justice and Delinquency Prevention Act of 1974, and for other purposes; with amendment (Rept No. 95–313). Referred to the Committee of the Whole House on the State of the Union.

Mr. PERKINS: Committee on Education and Labor. H.R. 6138. A bill to provide employment and training opportunities for youth; with amendment (Rept. No. 95–314). Referred to the Committee of the Whole House on the State of the Union.

Mr. PERKINS: Committee on Education and Labor. H.R. 6761. A bill to provide for the development and implementation of programs for youth camp safety; with amendment (Rept. No. 95–315). Referred to the Committee of the Whole House on the State of the Union.

Mr. REUSS: Committee on Banking, Finance and Urban Affairs. H.R. 6951. A bill to amend the Council on Wage and Price Stability Act to extend its termination date, and for other purposes; with amendment (Rept. No. 95–316). Referred to the Committee of the Whole House on the State of the Union.

Mr. MURPHY of New York: Committee on Merchant Marine and Fisheries. H.R. 5493. A bill to extend until October 1, 1980, the appropriation authorizations for the Seal Beach, Great Dismal Swamp, and San Francisco Bay National Wildlife Refuges (Rept. No. 95–317). Referred to the Committee of the Whole House on the State of the Union.

Mr. THOMPSON: Committee on House Administration. H R. 5400. A bill to establish a universal voter registration program, and for other purposes; with amendment (Rept. No. 95–318). Referred to the Committee of the Whole House on the State of the Union.

Mr MURPHY of New York: Committee on Merchant Marine and Fisheries. H.R. 4140. A bill to extend the provisions of the Fishermen's Protective Act of 1967, relating to the reimbursement of seized commercial fishermen, until October 1, 1980 (Rept. No. 95–319). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BAUCUS:

H.R. 7163. A bill to provide housing and community development assistance for Indians and Alaska Natives; to the Committee on Banking, Finance and Urban Affairs.

By Mr. BRODHEAD (for himself, Mr. BROYHILL, Mr. EDWARDS of Oklahoma, Mr. CARR, Mr. GEPHARDT, Mr. PRICE, Mr. SOLARZ, Mr. STEERS, Mr. PATTERSON of California, Mr. BLANCHARD, Mr. STARK, and Mr. BEDELL):

H.R. 7164. A bill to prohibit Members of the House of Representatives from soliciting or accepting gifts of money for their personal use; to the Select Committee on Ethics.

By Mr. COHEN (by request):

H.R. 7165. A bill to provide comprehensive services for the blind; to the Committee on Education and Labor.

By Mr. COHEN:

H.R. 7166. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on ways and Means.

By Mr. DRINAN (for himself and Mr. OBERSTAR):

H.R. 7167. A bill to strengthen the warning label required on cigarette packages, extend such warning to cigarette advertisements, and for other purposes; to the Committee on Interstate and Foreign Commerce.

H.R. 7168. A bill to amend the Federal Food, Drug, and Cosmetic Act to authorize the regulation of tobacco products under that act in the same manner as food is regulated under that act; to the Committee on Interstate and Foreign Commerce.

H.R. 7169. A bill to establish a health protection tax on cigarettes, and for other purposes; to the Committee on Ways and Means.

H.R. 7170. A bill to regulate smoking in Federal facilities and in facilities serving interstate common carrier passengers, and for other purposes; jointly, to the Committees on Interstate and Foreign Commerce, and Public Works and Transportation.

By Mr. FOLEY (for himself, Mr. POAGE, Mr. JEFFORDS, Mr. AKAKA, Mr. AMMERMAN, Mr. BALDUS, Mr. BEDELL, Mr. BOWEN, Mr. BRECKINRIDGE, Mr. BROWN of California, Mr. COLEMAN, Mr. DE LA GARZA, Mr. HUCKABY, Mr. JENRETTE, Mr. JONES of North Carolina, Mr. JONES of Tennessee, Mr. KREBS, Mr. MATHIS, Mr. MOORE, Mr. PANETTA, Mr. RICHMOND, Mr. ROSE, Mr. SKELTON, Mr. THORNTON, and Mr. VOLKMER):

H.R. 7171. A bill to establish more responsive programs for the benefit of farmers and consumers of farm products; to extend and improve the programs conducted under the Agricultural Trade Development and Assistance Act of 1954, as amended; and for other purposes; to the Committee on Agriculture.

By Mr. FOLEY (for himself, Mr. WHITLEY, and Mr. WEAVER):

H.R. 7172. A bill to establish more responsive programs for the benefit of farmers and consumers of farm products; to extend and improve the programs conducted under the Agricultural Trade Development and Assistance Act of 1954, as amended; and for other purposes; to the Committee on Agriculture.

By Mr. FOLEY (for himself, Mr. AMMERMAN, Mr. BEDELL, Mr. NOLAN, and Mr. ROSE):

H.R. 7173. A bill to authorize the marketing of saccharin under section 409 of the Federal Food, Drug, and Cosmetic Act; to the Committee on Interstate and Foreign Commerce.

By Mr. FORD of Michigan (for himself, Mr. BLANCHARD, Mr. BONIOR, Mr. BRODHEAD, Mr. CARR, Mr. DIGGS, Mr. DINGELL, Mr. KILDEE, Mr. MOSS, Mr. NEDZI, Mr. RUPPE, and Mr. TRAXLER):

H.R. 7174. A bill to amend the Toxic Substance Control Act to provide for a method of effectively responding to toxic chemical contaminations, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. EILBERG (for himself, Mr. EVANS of Georgia, Mr. FISH, and Mr. SAWYER):

H.R. 7175. A bill to amend the Immigration and Nationality Act to revise the procedures for the admission of refugees, and for other purposes; to the Committee on the Judiciary.

By Mr. GOLDWATER:

H.R. 7176. A bill to amend the Internal Revenue Code of 1954 to provide an additional itemized deduction for the use of a passenger automobile in a carpool; to the Committee on Ways and Means.

By Mr. HAGEDORN:

H.R. 7177. A bill to amend title 38 of the United States Code to make certain that recipients of veterans' pension and compensation will not have the amount of such pension or compensation reduced because of increases in monthly social security benefits; to the Committee on Veterans' Affairs.

By Mr. HAMMERSCHMIDT:

H.R. 7178. A bill to protect the public from traffickers in heroin and other opiates, and for other purposes; jointly, to the Committees on Interstate and Foreign Commerce, the Judiciary, Banking, Finance, and Urban Affairs, and Ways and Means.

By Mr. HANLEY:

H.R. 7179. A bill to improve the flow of funds for mortgage credit, to expand competition and the dual banking system, and to provide improved consumer services; to the Committee on Banking, Finance and Urban Affairs.

H.R. 7180. A bill to amend title XVIII of the Social Security Act to authorize payment under the medicare program for certain services performed by chiropractors; to the Committee on Ways and Means.

By Mrs. HECKLER:

H.R. 7181. A bill to insure that recipients of veterans' pension and compensation will not have the amount of such pension or compensation reduced, or entitlement thereto discontinued, because of increases in monthly social security benefits; to the Committee on Veterans' Affairs.

By Mr. JACOBS:

H.R. 7182. A bill to extend post exchange privileges to veterans with service-connected disabilities rated at 50 percent or more; to the Committee on Armed Services.

By Mr. KASTEN:

H.R. 7183. A bill to amend the Communications Act of 1934 with respect to the renewal of licenses for the operation of broadcasting stations; to the Committee on Interstate and Foreign Commerce.

By Mr. KOCH:

H.R. 7184. A bill to amend the Social Security Act to authorize international agreements with respect to social security health insurance benefits; to the Committee on Ways and Means.

By Mr. McCLOSKEY:

H.R. 7185. A bill to establish an Agency for Consumer Advocacy in order to secure within the Federal Government effective protection and representation of the interests of consumers, and for other purposes; to the Committee on Government Operations.

By Mr. MARLENEE:

H.R. 7186. A bill to modify the project for the Fort Peck Dam, Mont., to require the

Secretary of the Army to repave, upgrade, and extend the roads which provide access to Fort Peck Lake, and for other purposes; to the Committee on Public Works and Transportation.

H.R. 7187. A bill to modify the project for the Fort Peck Dam, Mont., to require the construction and maintenance of a rock breakwater; to the Committee on Public Works and Transportation.

By Mr. GARY A. MYERS:

H.R. 7188. A bill to amend the Internal Revenue Code of 1954 to allow a married individual whose spouse has a small amount of earned income to qualify for the deduction provided for retirement savings for certain married individuals; to the Committee on Ways and Means.

By Mr. NEAL:

H.R. 7189. A bill to amend the Internal Revenue Code of 1954 to exempt small manufacturers and producers from the excise tax on firearms; to the Committee on Ways and Means.

By Mr. PATTERSON of California:

H.R. 7190. A bill to provide for limited public financing of congressional general election campaigns through the matching of private contributions, and for other purposes; to the Committee on House Administration.

By Mr. RICHMOND (for himself, Mr. ABDNOR, Mr. AMMERMAN, Mr. EVANS of Delaware, Mr. MOLLOHAN, and Mr. SCHULZE):

H.R. 7191. A bill to amend the Internal Revenue Code of 1954 to exempt nonprofit volunteer firefighting or rescue organizations from the Federal excise taxes on gasoline, diesel fuel, and certain other articles and services; to the Committee on Ways and Means.

By Mrs. SCHROEDER (for herself, Mr. CARR, Mr. DOWNEY, Mr. WON PAT, and Mr. KASTEN):

H.R. 7192. A bill to provide for legal assistance to members of the Armed Forces and their dependents, and for other purposes: to the Committee on Armed Services.

By Mr. SIMON:

H.R. 7193. A bill to require the Secretary of Labor to establish a pilot program for the provision of guaranteed employment opportunities in selected counties of the United States; to the Committee on Education and Labor.

By Mr. STEERS:

H.R. 7194. A bill to amend the Internal Revenue Code of 1954 to provide cost-of-living adjustments to the adjusted gross income limitation on the exclusion for certain disability payments; to the Committee on Ways and Means.

By Mr. CHARLES H. WILSON of California (for himself and Mr. MILLER of California):

H.R. 7195. A bill to amend title 10, United States Code, to authorize the use of health maintenance organizations in providing health care; to the Committee on Armed Services.

By Mr. WIRTH (for himself, Mr. BAUCUS, Mr. MCCLOSKEY, Mr. PATTISON of New York, and Mr. MOORHEAD of California):

H.R. 7196. A bill to regulate commerce to assure increased supplies of natural gas at reasonable prices for consumers, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. GRASSLEY:

H.J. Res. 464. Joint resolution proposing an amendment to the Constitution of the United States with respect to the right to life; to the Committee on the Judiciary.

By Mrs. FENWICK:

H. Con. Res. 221. Concurrent resolution to express the commitment of the American people to human rights and a thorough discussion of all violations of the Helsinki Final Act at the Belgrade Conference on European Security and Cooperation; to the Committee on International Relations.

By Mr. HAWKINS:

H. Con. Res. 222. Concurrent resolution to authorize the printing of a revised edition of "The Capitol," as a House document; to the Committee on House Administration.

By Mr. JACOBS:

H. Con. Res. 223. Concurrent resolution to repeal the Parkinson Law as it applies to Federal Government activity; to the Committee on Government Operations.

By Mr. DELANEY (for himself and Mr. NEAL):

H. Res. 570. Resolution concerning committee hearings on the future telecommunications policy of the Nation; to the Committee on Interstate and Foreign Commerce.

By Mr. DOWNEY:

H. Res. 571. Resolution requesting a proclamation commemorating the 50th anniversary of Col. Charles A. Lindbergh's historic solo flight from New York to Paris; to the Committee on Post Office and Civil Service.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

143. By the SPEAKER: Memorial of the Legislature of the State of Rhode Island and Providence Plantations, requesting that Congress call a convention for the purpose of proposing an amendment to the Constitution of the United States with respect to the right to life; to the Committee on the Judiciary.

144. Also, memorial of the Legislature of the State of New York, relative to the importation of cattle from Canada; to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. HOWARD:

H.R. 7197. A bill for the relief of Laurice Saniuk; to the Committee on the Judiciary.

By Mr. NEAL:

H.R. 7198. A bill for the relief of John Czarnecki; to the Committee on the Judiciary.

AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 6161

Offered by Mrs. SMITH of Nebraska:

(New provision to be added to section 220 of H.R. 6161.)

Add the following new subsection to section 220: "(g)(1) For the purposes of this subsection—

"(A) The terms 'gasoline' and 'refinery' have the meaning provided under regulations of the Administrator promulgated under this section.

"(B) The term 'small refinery' means a refinery producing gasoline which—

"(i) was in operation or under construction on October 1, 1976, and

"(ii) has a crude oil or bona fide feed stock capacity (as determined by the Administrator) of 50,000 barrels per day or less, and

"(iii) is owned or controlled by a refiner with a total combined crude oil or bona fide stock capacity (as determined by the Administrator) of 175,000 barrels per day or less.

"(2) No regulations of the Administrator under this section (or any amendment or revision thereof) respecting the control or prohibition of lead additives in gasoline shall require a small refinery to reduce the average lead content per gallon of gasoline refined at such refinery below the lower of the applicable amount specified in table A or table B below:

TABLE A

If the gasoline production is no greater than 50 per cent of refining capacity and if the refinery capacity in barrels per day is—	The applicable amount (in grams per gallon) is—
2,000 and under	3.0
2,001–4,000	2.9
4,001–6,000	2.8
6,001–8,000	2.7
8,001–10,000	2.6
10,001–12,000	2.5
12,001–14,000	2.4
14,001–16,000	2.3
16,001–18,000	2.2
18,001–20,000	2.1
20,001–22,000	2.0
22,001–24,000	1.9
24,001–26,000	1.8
26,001–28,000	1.7
28,001–30,000	1.6
30,001–32,000	1.5
32,001–34,000	1.4
34,001–36,000	1.3
36,001–38,000	1.2
38,001–40,000	1.1
40,001–42,000	1.0
42,001–44,000	0.9
44,001–46,000	0.8
46,001–48,000	0.7
48,001–50,000	0.6

TABLE B

If the gasoline production is no greater than refining capacity and if the average gasoline production of the refinery (in barrels per day) for the immediate preceding calendar year was—	The applicable amount (in grams per gallon) is—
1,000 or under	3.0
1,001 to 2,000	2.9
2,001 to 3,000	2.8
3,001 to 4,000	2.7
4,001 to 5,000	2.6
5,001 to 6,000	2.5
6,001 to 7,000	2.4
7,001 to 8,000	2.3
8,001 to 9,000	2.2
9,001 to 10,000	2.1
10,001 to 11,000	2.0
11,001 to 12,000	1.9
12,001 to 13,000	1.8
13,001 to 14,000	1.7
14,001 to 15,000	1.6
15,001 to 16,000	1.5
16,001 to 17,000	1.4
17,001 to 18,000	1.3
18,001 to 19,000	1.2
19,001 to 20,000	1.1
20,001 to 21,000	1.0
21,001 to 22,000	0.9
22,001 to 23,000	0.8
23,001 to 24,000	0.7
24,001 to 25,000	0.6

"(3) Effective on the date of the enactment of this subsection, the regulations of the Administrator under this section respecting fuel additives (40 C.F.R. Part 80) shall be deemed amended to comply with the requirement contained in paragraph (2)."

SENATE—*Friday, May 13, 1977*

(Legislative day of Monday, May 9, 1977)

The Senate met at 9:45 a.m., on the expiration of the recess, and was called to order by Hon. JAMES B. ALLEN, a Senator from the State of Alabama.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

For beauty of sight and sound and thought, we give Thee thanks, O Lord. For the world without and that deeper world within, we give Thee thanks. May the beauty of the world without nourish the thoughts and prayers of our inmost being that we may live in a miniature of Thy Kingdom. Accompany us with Thy blessing and with the spirit of service until the day is done.

We pray in the Redeemer's name. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., May 13, 1977.

To the Senate.

Being temporarily absent from the Senate on official duties, I appoint Hon. JAMES B. ALLEN, a Senator from the State of Alabama, to perform the duties of the Chair during my absence.

JAMES O. EASTLAND,
President pro tempore.

Mr. ALLEN thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of yesterday, Thursday, May 12, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

REPUBLICAN ENERGY INITIATIVE

Mr. BAKER. Mr. President, on yesterday, the Republican policy committee released to the press a "Republican Energy Initiative." There can be no doubt in anyone's mind that America faces a serious energy challenge, the impact of which will affect jobs, national security, and our overall way of life.

The President addressed the Nation 2 weeks ago regarding this challenge and some of his ideas will be reflected as points of agreement in our initiative. We commend the President for bringing this issue more forcefully to the minds of the American people and for sending specific legislative proposals to the Congress.

There are, however, many basic differences and improvements which we feel can be made to the President's proposals. The Republican plan calls for an increased domestic production in regard to new technologies and fossil fuels, rather than increasing dependence on foreign energy sources. Our plan calls for less, rather than more, governmental regulation of America's productive energy capacity. Our plan calls for no punitive taxes on the American consumer, but for excess profits taxes on oil companies and other energy producers. Generally, we express a faith in American technology to produce, and the American people to conserve, that was not reflected in the administration's proposals.

I particularly want to thank my colleagues, Senator TOWER, chairman of the Republican policy committee, and Senator HANSEN, chairman of the Energy Subcommittee, for their work on this effort.

Mr. President, so that the ideas of the Republican conference might be more widely disseminated, and so that the American people may more fully understand our position on the Nation's energy needs, I ask unanimous consent that these remarks and the "Republican Energy Initiative" be made a part of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PREFACE TO THE SENATE REPUBLICAN ENERGY INITIATIVE

To maintain a healthy and expanding economy, we believe we must expand our overall supply of energy. Conservation alone, important as it is, will not provide the vital industrial growth that future generations will depend upon for jobs, security and a better life. A "no-growth" energy policy consigns our children and their children to a bleak future indeed.

It is to President Carter's credit that he has dramatized the energy crisis, so that there are very few left today who do not believe that the problem is real.

The solutions the Administration offers, however, call for further regulation, further bureaucratization, further governmental intervention into every facet of the energy problem.

The results of the Administration proposals, if fully put into effect, will almost certainly be:

The loss or denial of jobs for millions;

An increased dependence on imported oil, brought by giant tankers across a vulnerable ocean route around the Cape of Good Hope;

In summers to come, long lines of waiting cars at every service station; in wintertime, closed schools and factories in the Northeastern states and elsewhere;

An increase in price levels for all commodities; serious shortages of food and agricultural products; further inflation.

We make these gloomy predictions because of the internal contradictions in the Administration program. While the recommendations on energy conservation have merit, the Administration's proposals on energy sources are self-defeating:

The Administration encourages an increase in domestic supplies of oil, while failing to remove the dual price system and other controls that make exploration and extraction economically unfeasible or impossible.

The Administration encourages the expansion of oil-refining capabilities, at the same time failing to remove the roadblocks to increasing those capacities.

The Administration deplores the shortages of natural gas, but instead of removing the artificial system of allocations and the economic and regulatory disincentives to its production and sale, it proposes additional complex formulas governing sales and pricing in intrastate as well as interstate commerce.

No provisions are made for accelerating the building of deepwater ports to receive liquified natural gas or crude oil; there is no improved program for facilitating the construction of needed pipelines, whether for crude oil, natural gas, or coal slurry.

The Administration strongly encourages the shift from oil and natural gas to coal and expresses a hope for greater coal production; however, it calls at the same time for stronger (and more expensive) anti-pollution and environmental controls on coal use and production.

The Administration expresses great hopes for the expanded possibilities of nuclear energy; at the same time it has closed down all further development of the breeder reactor, despite its ability to vastly extend our limited uranium resources.

The Administration proposals, despite their pious hopes for increased energy resources, call for more of the same measures that created our national inability to respond swiftly and adequately to the problems created by the OPEC oil embargo.

The only practical way in which solutions can be found for our energy crisis is by greater reliance on competitive pricing and on the resilience, resourcefulness and the drive of our market system when confronted with difficult challenges.

We look on the present challenge with confidence. With a determined effort, the expectations for the future can be good. Energy sources are present in this nation, as is the genius to devise new sources. We recognize the extent of the problem and the need for action. We can now proceed to get our house in order for the next hundred years of economic strength and human freedom in this nation.

SENATE REPUBLICAN ENERGY INITIATIVE

No one should mistake the energy problem for what it is—a fundamental crisis that threatens Americans and America's way of life.

We look on this challenge with relish. With a determined effort, expectations for the future are good; energy sources are present in this nation, as is the genius to devise new sources. We recognize the extent of the problem and the need for action. We can now proceed to get our house in order for the next hundred years of economic strength and human freedom in this nation.

Above all, the energy problem is a people problem. Shortages and soaring costs hurt people, often striking at those least able to protect themselves.

Republicans specifically reject the standby gasoline tax, although we do accept the premise that Americans must move to the more efficient automobile.

In those millions of cars lined up at gas stations throughout the nation that fateful

winter of 1974 were millions of people. The most grievous statistics of this past winter's natural gas shortage were the hundreds of thousands of Americans whose lives were disrupted because the plant where they worked closed, the school their children attended shut down, and the drugstore they used to buy medicine had to lock its doors early.

We, as Republicans, believe that people of this nation come first as we work with the President to forge an energy policy.

Any proposed energy plan under which the rich get richer, the poor poorer, or the consumer victimized invites social tension and erodes the vitality not only of our free enterprise system, but of representative and democratic government.

Republicans believe that the nation's energy needs can be met without creating social injustice. We pledge ourselves to that end.

Meeting future energy needs alone is not the goal of our package. We also must meet other tests:

Fairness to all Americans;

Restraining inflation;

Protecting our environment;

Strengthening the national defense;

Building a fundamentally strong and stable economy;

Reducing unemployment, making use of the maximum potential of the private sector; and

Conserving non-renewable resources for those who come after us.

Regulations once devised to help people have long outlasted their usefulness. These rules have caused much of our present energy problem and now hurt the very people they were designed to help.

The Republican Party does not believe that punishing the consumer with prices unrelated to real costs will provide any better solution to long term energy demands than the artificially low prices of the past have given us.

Excessive use of energy, quickened by outmoded regulation, must end. We have seen already improper use of some energy resources, such as natural gas, and view with alarm shortages now occurring in the supply of insulation materials. The trend is clear and dangerous. Ending unwise use, and excessive consumption, a condition that Americans have accepted too easily and for too long, is one of the cornerstones of our policy.

In short, the Republican Party believes that the American people can make decisions that will eventually solve the energy problem better than any regulator. We recognize that an artifically high world market price for oil now exists and we reject merely allowing "free market forces" to operate when the market is, indeed, not free.

We advocate a transition to a market free of regulation, but we realize that this transition's length depends upon how soon a true world market price for energy resources emerges.

During this transition we propose that that portion of our population that cannot protect itself be protected through government policies outlined in this Republican Energy Initiative.

We emphasize in this document the central importance of the automobile in American life and accept the need for mandated efficiency standards for gas consumption. We reject a complicated system of taxes and rebates, however, to change consumption habits by Americans. In that same spirit, we reject the notion that any American should be able to buy his way out of our national need to conserve. We also propose tax credits to encourage consumers to become more careful in their energy use and we advocate incentives to industries to produce not only more energy, but insulation and other energy-saving products.

The Senate Republican Conference recommends the following energy initiatives be undertaken by the United States:

DEDICATION

The people of the United States dedicate themselves to the task of solving the energy problem through energy development, energy conservation, and a rational use of the best energy sources for each job we confront.

REGULATION

Regulation that looks at the past to fix the future, or interferes with the right of free choice, is a major cause of excessive demand. Supply shortages, unrealistic prices, market dislocation, and failure of certain alternatives to be developed all stem in large part from out-dated regulation.

We must return to a competitive market in energy. The collective decisions of Americans will make better energy policy than any system of regulations or allocations through a government agency.

The dislocations of the past quarter of a century will not be resolved quickly. Returning to a competitive energy market should be hastened. During the transition period the Congress must ensure that any excess energy profits are reinvested by the energy industry to find and produce yet more energy, or taxed with revenue returning to the consumer.

To maintain a healthy and expanding economy, we believe we must expand our overall supply of energy. Conservation alone, important as it is, will not provide the vital industrial growth that future generations will depend upon for jobs, security and a better life. A "no-growth" energy policy consigns our children and their children to a bleak future indeed.

CONSERVATION

Inexpensive and easily obtained domestic oil and gas resources as well as Federal controls over the price of energy have resulted in inefficient and wasteful energy consumption patterns in the U.S. Improvements must be made in how much energy this Nation uses to sustain its economic growth and how well that energy is used. We, therefore, should:

Support an Energy Extension Service to facilitate implementation of energy conservation measures at the State and local level.

Support comprehensive public education programs with a conservation message, including programs specifically directed at schools.

Support the implementation of all current energy conservation laws.

Intensify Government energy conservation research, development, and demonstration programs.

Require an effective effort to reduce all Federal, State, and local government energy use.

Require Government to adopt appropriate energy efficiency criteria as part of its procurement policies.

Expedite development of a building efficiency performance standard by HUD.

Provide tax credits for insulation, retroactive to January 1, 1977, and for other energy-saving equipment.

Enlarge the program of direct grants to pay for insulating houses of low-income families.

Encourage utilities, by appropriate State standards, to insulate homes and to recover their costs through monthly utility billings to those homes.

Support stringent new product appliance efficiency standards and, where necessary, strengthen the standards now on the books.

Require energy efficiency labeling for all major consumer appliances.

Encourage through loans or loan guarantee programs the use of waste heat and process steam to generate electricity.

Consider programs to stimulate energy efficiency in industrial production such as target setting, loans for energy improvements, tax credits, voluntary energy audits of individual companies, and provisions of information to small companies.

Implement load management techniques and incorporate those rate structures which will ensure the most efficient use of electric power.

Enforce and strengthen EPCA fuel efficiency standards.

Support Government funding for research and development of advanced automobile propulsion systems, including but not limited to combustion engines which do not burn petroleum products and electric vehicles.

Support the creation of an Under Secretary for Conservation within the Department of Energy.

Support the designation of an Assistant Secretary in DOC, HUD, DOE, DOI, DOT, and DOD, and appropriately designated officials in GSA and the Postal Service, to be responsible for conservation.

MASS TRANSIT

The transportation sector consumes 26% of our total national energy input and 53% of the petroleum we use. Our life style is highly dependent upon flexible, easily available, and inexpensive transportation. It is possible to achieve significant energy savings in the transportation sector without reducing the convenience and flexibility to which we have become accustomed. We, therefore, should:

Encourage programs to increase load factors on transportation modes with excess capacity (e.g., car pools, public transportation).

Place priority for Government funding on energy efficient public transport, bus and rail rather than on less energy efficient modes.

PETROLEUM

The sharp decline in domestic oil and gas production at a time when demand is rising is clear proof that present Federal policies toward energy production are not working. The system of oil and gas price controls has served to encourage wasteful overutilization of oil and gas, and at the same time has served as a disincentive to increased production. Federal price controls on crude oil and petroleum products produced in the U.S. are a major contributor to our growing dependence on foreign sources of oil. We have the resources, the technology, and the experience to become less dependent on foreign sources.

Gradually, through a self-executing formula so as to minimize the impact on the American consumer, prices should be allowed to increase to replacement costs. We, therefore, should:

Decontrol the price of newly discovered oil, enhanced recovery oil, and economically marginal oil.

Institute tax incentives to capital recovery and formation for exploration and development.

Remove price and allocation controls from all refined products.

Remove roadblocks to increasing U.S. crude oil refining capacity.

Provide for equitable distribution of West Coast surplus of Alaskan crude oil.

Provide adequate safeguards to prevent unacceptable environmental damage from oil discharges, and provide for compensation for damages that do occur.

Encourage and facilitate construction of deepwater ports.

Accelerate the development and implementation of a National Energy Emergency Preparedness Plan and a viable Strategic Petroleum Reserve.

Support a strong research and development effort by the Federal Government, in close cooperation with the States and the private sector, to exploit the vast energy reserves contained in oil shale and tar sands.

OUTER CONTINENTAL SHELF

The Outer Continental Shelf of the United States offers great potential oil and gas reserves for an energy intensive nation. The public stands to benefit in many ways from an environmentally responsible, accelerated OCS development. We believe that increased Federal offshore oil and natural gas production is an attractive option for significantly increasing domestic energy production. We, therefore, should:

Avoid legislation to overhaul the Outer Continental Shelf Lands Act, as the present public law is suitable for maximizing OCS development.

Reinstitute the accelerated leasing and development of OCS oil and gas resources under existing authority.

Continue to encourage coastal State, public and private participation as a means of assisting the Federal Government in its role of developing OCS resources.

Make cash bonus and royalty requirements covering OCS leasing more flexible so that more concerns will be involved in exploration and development of offshore resources.

NATURAL GAS

Demand for natural gas, our Nation's premium fuel, remains at record levels. However, a critical supply shortage in the interstate marketplace has developed, because producer sales of natural gas in interstate commerce have been subject to excessive Federal regulation since 1954. Due to economic and regulatory disincentives which have restrained the sale of natural gas outside of the State of production, disparities between the unregulated intrastate market and the regulated interstate market have developed. As a result, the interstate natural gas supply situation has reached crisis proportions. We, therefore, should:

Remove Federal regulations over the wellhead sale of new, onshore natural gas in interstate commerce and phase in the decontrol of new sales from the outer continental shelf.

Permit new wells in old reservoirs to be allowed new natural gas treatment only if it can be shown that such new wells are necessary to increase deliveries and to promote increased overall production of natural gas.

Streamline the regulatory process with respect to the transportation and distribution of natural gas.

Ensure early delivery of natural gas from Alaska at the lowest reasonable cost.

Establish curtailment priorities for essential residential, commercial, agricultural, and industrial users.

WINDFALL PROFITS TAX

A return to competitive market pricing of energy and energy commodities must take place in order to remove the distortions that currently exist in the domestic and international energy marketplace. The current two part system of U.S. Government and OPEC pricing of oil, together with disparities in interstate and intrastate natural gas markets, has resulted in ever increasing levels of foreign energy imports and ever depressing levels of domestic oil and natural gas production.

Allowing phased-in free market pricing to stimulate domestic oil and natural gas production may result in excessive revenues over a period of time while domestic energy supply and demand once again come into balance. In order to ensure proper utilization of these large cash flows, we recommend implementation of a windfall profits tax which would be applied when producers fail to reinvest any excess revenues into expanded domestic energy exploration and development. This tax, with a credit for "plowback" of available capital, will assure American consumers that the price they pay for energy is being invested towards United States energy self-sufficiency.

ELECTRICITY

The U.S. is moving perilously close to a protracted electrical supply crisis. Increased industrial activity and shortages of natural gas are pushing demand for electricity to record levels. In 1976, the demand for electricity was 6.3 percent higher than in 1975. It is unclear to what extent conservation can reduce the rate of growth in demand, and it is unclear whether utilities are now in a position to provide for a continued growth in demand of similar proportions. Efforts must be undertaken now to improve the efficiency of electrical generation and end use and to facilitate and accelerate the construction of new electrical generating capacity, including hydroelectric, to avoid power shortfalls in the next decade. Because of the limited number of sites available for new hydroelectric facilities, there are only two fuels capable of meeting these large new electrical demands—coal and uranium. Both are prime fuels; neither can be considered alone. We, therefore, should:

Coal

Expedite coal resource development on Federal land.

Increase Federal funding for research, development, and utilization of U.S. coal resources, including mining technology.

Stimulate the development of plants which convert coal to gas and coal to oil.

Support Federal policies to expedite the improvement of existing rail and water systems as well as the development of reliable and efficient alternative coal transportation systems.

Promote conversion to coal based on sound economic and engineering principles keeping the economic impact on the consumer in mind.

Stimulate conversions by investment tax credits or other tax incentives.

Accelerate research, development, and demonstration of pollution control technology and research on efforts to understand how natural and man-made pollutants are produced and dispersed.

Nuclear power

Support private industry initiatives or quasi-private corporation plans for financing and building new enrichment capacity, and commit to such new capacity now.

Accelerate schedule for demonstration of a nuclear waste repository.

Expedite program to evaluate adequacy of and plans to develop domestic uranium resources on public and private lands.

Reduce time to build and license nuclear power plants by encouraging States to preselect sites and by eliminating duplication in reviewing standardized plant designs.

Continue research, technical development and demonstration of nuclear fuel reprocessing and continue efforts to secure binding international agreements between nations which taken together provide sufficient assurance that plutonium will be used safely internationally.

Move forward with current plans to build a breeder demonstration plant in order to understand the technical, economic, licensing and operational problems inherent in such technology.

Maintain the leadership of the U.S. in export sales of nuclear power plants and materials in order to preserve and ensure effective nonproliferation.

SOLAR ENERGY AND ADVANCED TECHNOLOGIES

For more than two years there has been an intense focus on the ability of new and advanced technologies to meet our growing energy needs, both in the near term and the long term. It is very clear, however, that most advanced energy technologies cannot be considered as major contributors to energy supplies for the immediate future.

Nevertheless, since this Nation will need a broad based energy supply system in the long term, the research and development programs undertaken now are our only hope of having a secure energy future. We, therefore, should:

Continue strong and comprehensive Federal solar research, development, demonstration, and commercialization programs where such efforts are insufficiently supported in the private sector.

Institute a system of tax credits to stimulate installation of solar heating, cooling, and hot water systems for residential and public buildings.

Institute a system of tax credits to stimulate the use of solar energy systems, including solar thermal, solar electric, wind electric, etc., to remote applications where conventional fuels are inconvenient and expensive to use.

Advocate reasonable Government support to facilitate the entry into the market place of nearly commercial technologies, including biomass/organic waste generation of fuels.

Continue and expand current Federal research and development efforts to develop commercially competitive geothermal energy systems.

Support increased levels of funding for fusion R&D, especially for demonstration reactor systems, which will result in an earlier test of their long term commercial viability.

Support conservation of helium as a critical resource necessary for commercialization of fusion reactors and other advanced energy systems requiring superconductive magnets and components.

Support Federal and promote private research and development efforts aimed at exploiting hydrogen as an energy source.

Proceed with a program for determining the feasibility of using an alcohol blend in motor fuel, with alcohol which is made from surplus farm and forest products, waste material, and other like sources, through further research and pilot plant operations.

CONCLUSION

While all Republican Senators may not endorse every recommendation of the preceding proposal, we pledge to work diligently with the Administration and Democratic majority in the Senate to come to grips with implementing a national energy policy.

Nobody can predict the nature or magnitude of our next energy crisis, but we must be prepared. Further delays can only increase our danger, and indicate to the world that the United States can no longer take care of itself.

We believe our proposal represents a course that is prudent and possible, as well as paramount to our national interest and, perhaps, our national survival.

The 95th Congress must act.

ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I yield back my time under the order.

The ACTING PRESIDENT pro tempore. The distinguished Republican leader is recognized.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, there are four nominations on the Executive Calendar beginning with the Department of Justice. I ask unanimous consent that the Senate go into executive session to consider the nominations on the Executive Calendar beginning with the Department of Justice.

The ACTING PRESIDENT pro tempore. Without objection, the Senate will go into executive session.

Mr. STEVENS. Mr. President, we have no objection to the nominations under the Department of Justice, the Asian Development Bank, and the Inter-American Development Bank.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the nominations be considered and confirmed en bloc.

The ACTING PRESIDENT pro tempore. Without objection, the nominations will be considered en bloc and will be confirmed en bloc—Calendars Nos. 208, 209, 210, and 211.

Mr. ROBERT C. BYRD. Mr. President, I ask that the President be immediately notified of the confirmation of the nominations.

The ACTING PRESIDENT pro tempore. Without objection, the President will be notified of the confirmations.

The nominations considered and confirmed are as follows:

DEPARTMENT OF JUSTICE

Anthony G. Dirienzo, Jr., of Connecticut, to be U.S. marshal for the District of Connecticut for the term of 4 years

ASIAN DEVELOPMENT BANK

Lester E. Edmond, of Florida, to be U.S. Director of the Asian Development Bank, with the rank of Ambassador.

INTER-AMERICAN DEVELOPMENT BANK

Ralph Anthony Dungan, of New Jersey, to be Executive Director of the Inter-American Development Bank for a term of 3 years, and Eugene Jay Finkel, of the District of Columbia, to be Alternate Executive Director of the Inter-American Development Bank.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate resume legislative session.

The ACTING PRESIDENT pro tempore. Without objection, the Senate will return to legislative session.

Mr. ROBERT C. BYRD. Mr. President, I have no further need for my time under the order.

Mr. STEVENS. Mr. President, I yield 5 minutes of the minority leader's time, or such amount as he needs of the minority leader's time, to Senator HEINZ, who has a special order already.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. At this time, according to the previous order, the Chair recognizes the distinguished Senator from Pennsylvania (Mr. HEINZ) for not to exceed 20 minutes.

Mr. HEINZ. Mr. President, I thank the distinguished Senator from Alaska for yielding.

OUR PRISONERS IN BOLIVIA: AN AMERICAN TRAGEDY

Mr. HEINZ. Mr. President, I bring to the attention of colleagues a serious problem involving violations of human rights and due process of law that has an impact ultimately on all American citizens.

Currently there are 33 Americans in prison in the country of Bolivia. They are imprisoned on drug charges. Many of them were arrested simply because they were in the same room as someone—not necessarily an American—who possessed drugs. The result has been group arrests on charges of trafficking in drugs, even of those who, by everyone's admission, including that of Bolivian authorities, are innocent.

More important, however, are the abuses, both legal and physical, to which these young Americans have been subjected. Of the 33 Americans, only 5 have actually had their cases decided and been sentenced. By the time the sentences were handed down, two of them had already served longer than their sentences, and two others had only a few months to go. None, however, have been released.

The other prisoners, some incarcerated since 1974, have yet to have their cases disposed of. Such extended delays have made a mockery of Bolivian due process and have affected the hopes of these young people and their families who have been supporting them in prison at considerable expense. Cases where there is no evidence linger on without summary decision, and cases where evidence exists move no faster, leaving the prisoners in a judicial limbo, incarcerated with no finding of guilt and no definitive sentence and no specific time at which judgment can be expected.

Moreover, conditions in Bolivian prisons, not unexpectedly, leave much to be desired. Sanitation facilities are primitive, the prisoners must bear the cost of their confinement, and some prisoners have, according to their families, been subjected to physical abuse, including beatings.

As serious as these problems, however, is the charge that our State Department has not been diligent in dealing with these problems. The families of the prisoners, who have had frequent contact with American officials, both in Washington and in Bolivia, are bitterly disappointed that our ambassador and his staff have not taken a more active role in seeking the release of the prisoners and in providing aid and comfort to them. These families have charged that the embassy has been deficient in fulfilling their lawful responsibilities and have shown little sympathy for the plight of the prisoners.

Every American citizen has the right to expect the full help of our Government when they run into trouble abroad, but it appears that the State Department has virtually abandoned 33 imprisoned Americans to fend for themselves in the labyrinth of a foreign "legal" system.

The families of the prisoners have made public charges in this regard which I feel impact seriously on the reputation of the State Department, the credibility of our foreign policy, and our Nation's commitment to its overseas citizens. The situation demands an investigation—which is one of the requests of the families—and I fully support such action. Assistant Secretary of State Todman is touring Latin America now and has added Bolivia to his itinerary. In fact, Mr. President, I believe he is there today, and he is there, in part, to investigate this situation and the complaints to which I have referred. I look forward to this report when he returns.

Along that same line, a number of Senators from States which have prisoners in Bolivia have joined me in writing Secretary of State Vance to make sure he is aware of the real importance of this issue to us and the concern with which we view the charges that have been made public. Our letter both urges that our Government take steps to insure more expedited handling of the cases and that this effort be carried out at a higher level of Government than has thus far been the case. I have also cabled a copy of this letter to Assistant Secretary Todman in La Paz, in anticipation of his arrival there.

I intend to keep pressing Secretary Vance to personally intervene in this matter and make sure that these 33 American citizens receive all the help our Government can properly offer.

Mr. President, I ask unanimous consent that the text of the letter to Secretary Vance be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., May 11, 1977

Hon. CYRUS VANCE,
Secretary, Department of State,
Washington, D.C.

DEAR MR. SECRETARY: We are writing to express our deep concern over the treatment

of Americans imprisoned in Bolivia on narcotics charges, and the inadequate action by the State Department, particularly our representatives in Bolivia, on behalf of the prisoners.

Several facts stand out in what has by now become a long story. There is no question that 33 prisoners have been denied due process under Bolivian law. Most have been incarcerated for more than a year without any disposition of their cases. Some, when finally convicted and sentenced, had already been jailed longer than their sentences. Others, by the admission of all parties, are clearly innocent and appear to have been arrested only because of their presence in the same room with others who were arrested for possession of narcotics.

Beyond the routinely intolerable conditions of Bolivian prisons, it is clear that some of the prisoners have been subjected to physical abuse, including beatings, and have been denied medical treatment, even when clearly needed.

What is of particular concern, of course, is the apparent failure of our embassy personnel to take action—or display much sympathy—on behalf of these prisoners. The families of those incarcerated, who have met with Ambassador Stedman and the Consul, Mr. Milburne, are bitterly disappointed that they and their staffs have not taken a more active role in seeking the release of the prisoners and in providing aid and comfort to them. These families have charged that the Ambassador and his staff have been deficient in fulfilling their responsibilities and have shown little sympathy for the plight of the prisoners, and they have presented considerable evidence to that effect. For example, they claim that Ambassador Stedman has never sought to visit any of the American prisoners.

Mr. Secretary, it is our firm belief that in this case, our Foreign Service has neglected its obligation to come to the aid of beleaguered Americans. Too much time has already elapsed without effective action. Accordingly, we believe it is now necessary that this situation be given your personal attention and that contact at the highest level of the Bolivian government be initiated.

We would appreciate your earliest possible response.

Sincerely,

John Heinz, U.S.S., Warren G. Magnuson, U.S.S., John Tower, U.S.S., Lowell P. Weicker, Jr., U.S.S., Clifford P. Case, U.S.S., Alan Cranston, U.S.S., Abraham Ribicoff, U.S.S., Frank Church, U.S.S., Richard (Dick) Stone, U.S.S., Paul S. Sarbanes, U.S.S., and Lloyd Bentsen, U.S.S.

Mr. HEINZ. Mr. President, this is a very grave matter, indeed. We are talking about a situation where it has taken 3 years, on the average, after the arrest of these citizens for sentencing to take place. Three years, whether someone is young or old, is a lifetime.

I think this is a very grave outrage to civil rights. It is a very grave injustice.

I mentioned that I was going to work very hard and insist that the State Department fulfill its share of responsibilities in solving this problem.

I am committed to doing so because if the State Department or any part of our Government becomes insensitive to injustice or to the civil rights of some Americans, even as few as 33 Americans in as distant a locale as Bolivia, then all Americans can ultimately be subjected to and threatened by the same kind of insensitivity to injustice or civil rights.

Mr. President, that concludes my statement.

ORDER OF BUSINESS

Mr. STEVENS. Mr. President, have I yielded back the remainder of the time for the minority leader?

The ACTING PRESIDENT pro tempore. Does the Senator wish to yield back the remainder of his time?

Mr. STEVENS. We do yield back the remainder of our time.

The ACTING PRESIDENT pro tempore. All time of the leadership has been yielded back.

FIRST CONCURRENT BUDGET RESOLUTION, SENATE CONCURRENT RESOLUTION 19—CONFERENCE REPORT

The ACTING PRESIDENT pro tempore. At this time, in accordance with the previous order, the Senate will proceed to the consideration of the conference report on Senate Concurrent Resolution No. 19, which will be stated by title.

The legislative clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the concurrent resolution (S. Con. Res. 19) setting forth the congressional budget for the U.S. Government for the fiscal year 1978 having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses this report, signed by a majority of the conferees.

The ACTING PRESIDENT pro tempore. Without objection, the Senate will proceed to the consideration of the conference report.

(The conference report is printed in the House proceedings of the RECORD of May 11, 1977.)

The ACTING PRESIDENT pro tempore. The time for debate on this conference report is limited to 1 hour to be equally divided between the distinguished Senator from Maine (Mr. MUSKIE) and the distinguished Senator from Oklahoma (Mr. BELLMON).

Who yields time?

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum and I ask unanimous consent that the time not be charged against either side.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. METZENBAUM). Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the following members of the staff of the Committee on the Budget be allowed to remain on the floor during consideration of and votes on Senate Concurrent Resolution 19:

John McEvoy, Karen Williams, Sid Brown, Van Ooms, Jim Storey, Dan Twomey, Tom Dine, Faye Hewlett, Mary Jane Checchi, Bob Sneed, Charles Flickner, Terry Finn, John Giles, Rodger Schlickeisen, Don Campbell, Tony Carvevale, George Merrill, Becky Beauregard, Pat Gwaltney, Mike West, Ira Tannenbaum, and Peggy Watts.

Mike Joy, on behalf of Senator Hollings; Hal Gross, on behalf of Senator Cranston; Rick Brandon, on behalf of Senator Chiles; Alan Chvotkin, on behalf of Senator Abourezk; Dick Andrews, on behalf of Senator Biden; Alan Yuspeh, on behalf of Senator Johnston; John Haynes, on behalf of Senator Anderson; and Paul Clark, on behalf of Senator Sasser.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the presence and use of small electronic calculators be allowed on the floor of the Senate during the consideration of the concurrent resolution.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. I ask unanimous consent that the Joint Explanatory Statement of the managers which accompanies the conference report on Senate Concurrent Resolution 19 be printed in the RECORD at this point.

There being no objection, the excerpt from the conference report (No. 95-134) was ordered to be printed in the RECORD, as follows:

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendment of the House to the concurrent resolution (S. Con. Res. 19) setting forth the congressional budget for the United States Government for the fiscal year 1978 (and revising the congressional budget for fiscal 1977), report that the conferees have been unable to agree. This is a technical disagreement, necessitated by the fact that the revised deficit and public debt amounts for fiscal year 1977 are lower than the corresponding House and Senate provisions and the revenue figure in the substitute is greater than either the House or Senate provision.

It is the intention of the conferees that the managers on the part of the Senate will offer a motion in the Senate to recede and concur in the House amendment to the Senate-passed resolution with an amendment (in the nature of a substitute) consisting of the language agreed to in conference. Upon the adoption of such amendment in the Senate, the managers on the part of the House will offer a motion in the House to concur therein.

The managers on the part of the House and the Senate submit the following joint statement in explanation of the action agreed upon by the managers:

The substitute language which is to be offered as described above (and which should be considered the language of the concurrent resolution as recommended in the conference report for purposes of section 302(a) of the Congressional Budget Act of 1974)—hereinafter in this statement referred to as the "conference substitute"—is as follows:

That the Congress hereby determines and declares, pursuant to section 301(a) of the

Congressional Budget Act of 1974, that for the fiscal year beginning on October 1, 1977—

(1) the recommended level of Federal revenues is $396,300,000,000, and the amount by which the aggregate level of Federal revenues should be decreased is $17,600,000,000.

(2) the appropriate level of total new budget authority is $503,450,000,000;

(3) the appropriate level of total budget outlays is $460,950,000,000;

(4) the amount of the deficit in the budget which is appropriate in the light of economic conditions and all other relevant factors is $64,650,000,000; and

(5) the appropriate level of the public debt is $784,900,000,000, and the amount by which the statutory limit on such debt should accordingly be increased is $83,600,000,000.

SEC. 2. Based on allocations of the appropriate level of total new budget authority and of total budget outlays as set forth in paragraphs (2) and (3) of the first section of this resolution, the Congress hereby determines and declares pursuant to section 301(a)(2) of the Congressional Budget Act of 1974 that, for the fiscal year beginning on October 1, 1977, the appropriate level of new budget authority and the estimated budget outlays for each major functional category are as follows:

(1) National Defense (050):
(A) New budget authority, $118,500,000,000;
(B) Outlays, $111,000,000,000.
(2) International Affairs (150):
(A) New budget authority, $9,300,000,000;
(B) Outlays, $7,300,000,000.
(3) General Science, Space, and Technology (250):
(A) New budget authority, $4,900,000,000;
(B) Outlays, $4,700,000,000.
(4) Natural Resources, Environment, and Energy (300):
(A) New budget authority, $20,700,000,000;
(B) Outlays, $20,000,000,000.
(5) Agriculture (350):
(A) New budget authority, $2,200,000,000;
(B) Outlays, $4,350,000,000.
(6) Commerce and Transportation (400):
(A) New budget authority, $20,000,000,000;
(B) Outlays, $19,400,000,000.
(7) Community and Regional Development (450):
(A) New budget authority, $8,200,000,000;
(B) Outlays, $10,800,000,000.
(8) Education, Training, Employment, and Social Services (500):
(A) New budget authority, $26,800,000,000;
(B) Outlays, $27,200,000,000.
(9) Health (550):
(A) New budget authority, $47,900,000,000;
(B) Outlays, $44,300,000,000.
(10) Income Security (600):
(A) New budget authority, $179,900,000,000;
(B) Outlays, $146,700,000,000.
(11) Veterans' Benefits and Services (700):
(A) New budget authority, $20,250,000,000;
(B) Outlays, $20,200,000,000.
(12) Law Enforcement and Justice (750):
(A) New budget authority, $3,700,000,000;
(B) Outlays, $3,850,000,000.
(13) General Government (800):
(A) New budget authority, $3,800,000,000;
(B) Outlays, $3,850,000,000.
(14) Revenue Sharing and General Purpose Fiscal Assistance (850):
(A) New budget authority, $9,800,000,000;
(B) Outlays, $9,700,000,000.
(15) Interest (900):
(A) New budget authority, $43,000,000,000;
(B) Outlays, $43,000,000,000.
(16) Allowances:
(A) New budget authority, $800,000,000;
(B) Outlays, $900,000,000.
(17) Undistributed Offsetting Receipts (950):
(A) New budget authority, —$16,300,000,000;
(B) Outlays, —$16,300,000,000.

SEC. 3. In the Third Budget Resolution for fiscal year 1977, the Congress provided for revenue and spending proposals designed to stimulate the Nation's economy in order to reduce unemployment. These proposals, together with recent indications of more vigorous economic growth in the private sector, provide evidence that the Nation's economy may be returning to the levels needed to provide jobs to millions of our unemployed.

The Congress recognizes, however, that unusual uncertainties surround the current economic outlook for 1977 and 1978—primarily, the economic impact of the stimulus proposals and the likelihood of continued economic growth in the private sector—and that additional time and information are needed to make final determinations with respect to fiscal policy for fiscal year 1978; and declares that, if economic recovery does not proceed satisfactorily during the months immediately following adoption of the First Budget Resolution for Fiscal Year 1978, it will be necessary to provide additional stimulus to the economy in appropriate amounts to be determined in the Second Budget Resolution for Fiscal Year 1978. On the other hand, if the recovery continues to show signs of long-term renewed growth, it may be desirable to reduce some of the economic stimulus provided for fiscal year 1978 in order to make more rapid progress toward a balanced budget.

SEC. 4. (a) Pursuant to section 304 of the Congressional Budget Act of 1974, the appropriate aggregate amounts for the fiscal year 1977 set forth in the first section of S. Con. Res. 10 are revised as follows:

(1) the recommended level of Federal revenues is $356,600,000,000, and the amount by which the aggregate level of Federal revenues should be decreased is $2,600,000,000;

(2) the appropriate level of total new budget authority is $470,200,000,000;

(3) the appropriate level of total budget outlays is $409,200,000,000;

(4) the amount of the deficit in the budget which is appropriate in light of economic conditions and all other relevant factors is $52,600,000,000; and

(5) the appropriate level of the public debt is $701,300,000,000, and the amount by which the statutory limit on such debt should accordingly be increased is $1,300,000,000.

(b) Pursuant to section 304 of the Congressional Budget Act of 1974, the allocations for the fiscal year 1977 made in section 2 of S. Con. Res. 10 are revised so that the appropriate levels of new budget authority and the estimated budget outlays for the various functional categories are as follows:

(1) National Defense (050):
(A) New budget authority, $108,800,000,000;
(B) Outlays, $98,900,000,000.
(2) International Affairs (150):
(A) New budget authority, $7,900,000,000;
(B) Outlays, $6,500,000,000.
(3) General Science, Space, and Technology (250):
(A) New budget authority, $4,500,000,000;
(B) Outlays, $4,600,000,000.
(4) Natural Resources, Environment, and Energy (300):
(A) New budget authority, $18,700,000,000;
(B) Outlays, $16,100,000,000.
(5) Agriculture (350):
(A) New budget authority, $2,300,000,000;
(B) Outlays, $4,500,000,000.
(6) Commerce and Transportation (400):
(A) New budget authority, $17,300,000,000;
(B) Outlays, $14,900,000,000.
(7) Community and Regional Development (450):
(A) New budget authority, $14,800,000,000;
(B) Outlays, $10,100,000,000.
(8) Education, Training, Employment, and Social Services (500):
(A) New budget authority, $30,400,000,000;
(B) Outlays, $20,900,000,000.
(9) Health (550):
(A) New budget authority, $40,600,000,000;
(B) Outlays, $39,000,000,000.
(10) Income Security(600):
(A) New budget authority, $167,700,000,000;
(B) Outlays, $137,100,000,000.
(11) Veterans' Benefits and Services (700):
(A) New budget authority, $18,900,000,000;
(B) Outlays, $18,100,000,000.
(12) Law Enforcement and Justice (750):
(A) New budget authority, $3,500,000,000;
(B) Outlays, $3,600,000,000.
(13) General Government (800):
(A) New budget authority, $3,500,000,000;
(B) Outlays, $3,600,000,000.
(14) Revenue Sharing and General Purpose Fiscal Assistance (850):
(A) New budget authority, $7,600,000,000;
(B) Outlays, $7,700,000,000.
(15) Interest (900):
(A) New budget authority, $38,000,000,000;
(B) Outlays, $38,000,000,000.
(16) Allowances:
(A) New budget authority, $800,000,000;
(B) Outlays, $700,000,000.
(17) Undistributed Offsetting Receipts (950):
(A) New budget authority, —$15,100,000,000;
(B) Outlays, —$15,100,000,000.

BUDGET AGGREGATES

The budget aggregates for fiscal year 1978 would be as follows:

Revenues.—The Senate resolution provided for revenues of $395.7 billion. The House resolution provided for revenues of $398.094 billion. The conference substitute provides for revenues of $396.3 billion and, to achieve that level, provides that revenues should be decreased by $17.6 billion.

The conference substitute (1) assumes the level of fiscal stimulus in fiscal year 1978 provided in the Tax Reduction and Simplification Act as recently agreed to by House and Senate conferees; (2) accepts the House position of a $65 million allowance for miscellaneous tax and tariff legislation; and (3) accepts the Senate position for this First Budget Resolution that the entire cost of the earned income credit be reflected as a reduction of revenue. The conferees agree that the treatment of tax credits in excess of recipients' tax liabilities shall be considered *de novo* during the development of the Second Budget Resolution later this year.

Budget Authority.—The Senate resolution provided for total new budget authority of $504.6 billion. The House resolution provided for budget authority of $502.267 billion. The conference substitute provides for budget authority of $503.45 billion.

Outlays.—The Senate resolution provided for outlays of $459.2 billion. The House resolution provided outlays of $464.477 billion. The conference substitute provides for outlays of $460.95 billion.

Deficit.—The Senate resolution provided for a deficit of $63.5 billion. The House resolution provided for a deficit of $66.383 billion. The conference substitute provides for a deficit of $64.65 billion.

Public Debt.—The Senate resolution provided for a public debt level of $789.9 billion. The House resolution provided a public debt level of $792.714 billion. The conference substitute provides a public debt level of $784.9 billion.

ECONOMIC OBJECTIVES AND ASSUMPTIONS

The fiscal policy contained in the conference substitute is designed to maintain a sustained economic recovery. Enactment of

the legislation assumed in the totals, in conjunction with a supportive monetary policy, will provide the balanced expansion necessary to move the nation steadily towards full employment and a lower rate of inflation. The economic assumptions underlying the revenue and spending ceilings contained in the conference report are as follows:

[*Calendar year; dollars in billions*]

Item	*1978*
Gross National Product:	
Current dollars	2088
Constant (1972) dollars	1393
Incomes:	
Personal income	1690
Wages and salaries	1117
Corporate profits	188
Unemployment rate (percent):	
Calendar year average	6.5
Fourth quarter	6.3
Consumer price index (percent change, year over year)	5.4
Interest rate, 3-month Treasury bills (monthly average)	5.2

FUNCTIONAL CATEGORIES

NATIONAL DEFENSE (050)

The Senate resolution provided budget authority of $120.3 billion and outlays of $111.6 billion. The House resolution provided budget authority of $117.136 billion and outlays of $109.947 billion.

The conference substitute provides budget authority of $118.5 billion and outlays of $111.0 billion. This substitute assumes that financial adjustments can be made to the Administration's budget request in order to remain within these targets. Such adjustments may include a possible slowdown in projected foreign military sales, the utilization of prior-year unobligated funds to finance a portion of the FY 1978 program, a lower inflation rate from that now assumed in the Administration's budget, and a partial absorption of the October pay raise.

INTERNATIONAL AFFAIRS (150)

The Senate resolution provided budget authority of $9.3 billion and outlays of $7.3 billion. The House resolution provided budget authority of $9.543 billion and outlays of $7.397 billion. The conference substitute provides budget authority of $9.3 billion and outlays of $7.3 billion. The conference substitute reflects a lower estimate of the activities of the Export-Import Bank than assumed in the House resolution.

GENERAL SCIENCE, SPACE AND TECHNOLOGY (250)

The Senate resolution provided budget authority of $4.9 billion and outlays of $4.7 billion. The House resolution provided budget authority of $4.930 billion and outlays of $4.737 billion. The conference substitute provides budget authority of $4.9 billion and outlays of $4.7 billion.

NATURAL RESOURCES, ENVIRONMENT, AND ENERGY (300)

The Senate resolution provided budget authority of $20.5 billion and outlays of $19.9 billion. The House resolution provided budget authority of $20.950 billion and outlays of $20.677 billion. The conference substitute provides budget authority of $20.7 billion and outlays of $20.0 billion. The decrease in outlays from the House resolution is due primarily to acceptance of a recent lower estimate for outlays from prior-year budget authority in the EPA construction grant program.

AGRICULTURE (350)

The Senate resolution provided budget authority of $2.2 billion and outlays of $3.7 billion. The House resolution provided budget authority of $2.153 billion and outlays of $4.395 billion. The conference substitute provides budget authority of $2.2 billion and outlays of $4.35 billion. The increase over the Senate outlay level is provided for reestimates by the Administration of agriculture price support programs.

COMMERCE AND TRANSPORTATION (400)

The Senate resolution provided budget authority of $19.4 billion and outlays of $19.1 billion. The House resolution provided budget authority of $20.569 billion and outlays of $20.277 billion.

The conference substitute provides budget authority of $20.0 billion and outlays of $19.4 billion. The conference substitute permits increases in funding above current policy for transportation programs and for Small Business Administration credit assistance programs. Estimated outlays of the Highway Trust Fund are reduced from those included in the House resolution to reflect a lagging rate of obligations in fiscal year 1977.

COMMUNITY AND REGIONAL DEVELOPMENT (450)

The Senate resolution provided budget authority of $8.1 billion and outlays of $10.7 billion. The House resolution provided budget authority of $8.237 billion and outlays of $10.926 billion. The conference substitute provides budget authority of $8.2 billion and outlays of $10.8 billion.

EDUCATION, TRAINING, EMPLOYMENT, AND SOCIAL SERVICES (500)

The Senate resolution provided budget authority of $27.1 billion and outlays of $27.0 billion. The House resolution provided budget authority of $22.739 billion and outlays of $27.756 billion. The conference substitute provides budget authority of $26.8 billion and outlays of $27.2 billion. The conference substitute assumes $3.8 billion in forward funding for the public service jobs program.

HEALTH (550)

The Senate resolution provided budget authority of $48.0 billion and outlays of $44.4 billion. The House resolution provided budget authority of $47.685 billion and outlays of $44.238 billion.

The conference substitute provides budget authority of $47.9 billion and outlays of $44.3 billion. The conference substitute assumes budget authority of $28.4 billion and outlays of $25.2 billion for the medicare program and budget authority and outlays of $11.5 billion for the medicaid program. The medicare and medicaid figures reflect the net effect of cost control savings and possible legislative improvements in medicaid. The conference substitute assumes budget authority of $8.0 billion and outlays of $7.6 billion for the remaining programs in the health function.

INCOME SECURITY (600)

The Senate resolution provided budget authority of $179.9 billion and outlays of $145.9 billion. The House resolution provided budget authority of $182.688 billion and outlays of $148.309 billion. The conference substitute provides budget authority of $179.9 billion and outlays of $146.7 billion.

VETERANS BENEFITS AND SERVICES (700)

The Senate resolution provided budget authority of $20.3 billion and outlays of $20.2 billion. The House resolution provided budget authority of $20.235 billion and outlays of $20.203 billion. The conference substitute provides budget authority of $20.25 billion and outlays of $20.2 billion.

LAW ENFORCEMENT AND JUSTICE (750)

The Senate resolution provided budget authority of $3.8 billion and outlays of $3.9 billion. The House resolution provided budget authority of $3.620 billion and outlays of $3.820 billion. The conference substitute provides budget authority of $3.7 billion and outlays of $3.85 billion.

GENERAL GOVERNMENT (800)

The Senate resolution provided budget authority of $3.8 billion and outlays of $3.8 billion. The House resolution provided budget authority of $3.891 billion and outlays of $3.991 billion. The conference substitute provides budget authority of $3.8 billion and outlays of $3.85 billion.

REVENUE SHARING AND GENERAL PURPOSE FISCAL ASSISTANCE (850)

The Senate resolution provided budget authority of $9.8 billion and outlays of $9.7 billion. The House resolution provided budget authority of $9.822 billion and outlays of $9.783 billion. The conference substitute provides budget authority of $9.8 billion and outlays of $9.7 billion.

INTEREST (900)

The Senate resolution provided budget authority of $43.0 billion and outlays of $43.0 billion. The House resolution provided budget authority of $1.069 billion and outlays of $43.000 billion. The conference substitute provides budget authority of $43.0 billion and outlays of $43.0 billion.

ALLOWANCES (920)

The Senate resolution provided budget authority of $0.8 billion and outlays of $0.9 billion. The House resolution provided budget authority of $1.069 billion and outlays of $1.021 billion. The conference substitute provides budget authority of $0.8 billion and outlays of $0.9 billion.

UNDISTRIBUTED OFFSETTING RECEIPTS (950)

The Senate resolution provided budget authority of —$16.6 billion and outlays of —$16.6 billion. The House resolution provided budget authority of —$16.000 billion and outlays of —$16.000 billion. The conference substitute provides budget authority of —$16.3 billion and outlays of —$16.3 billion.

REVISED CONGRESSIONAL BUDGET FOR FISCAL YEAR 1977

The Senate resolution revised the Congressional budget for fiscal year 1977 to reflect the current budget situation. The revised budget aggregates and functional spending totals reflected adjustments in revenues of a technical nature; the latest estimates of budget authority and outlays, including the effects of shortfalls in outlay projections; and withdrawal of the President's proposal for rebates to taxpayers in excess of tax liability and special payments to non-taxpayers.

The House resolution revised the Congressional budget for fiscal year 1977 to reflect the withdrawal of the rebate for taxpayers and special payments to non-taxpayers.

The conference substitute provides revenues of $356.6 billion, budget authority of $470.2 billion, outlays of $409.2 billion, a deficit of $52.6 billion, and a public debt of $701.3 billion.

Reductions in the Fiscal Year 1977 Deficit

The effect of the above revisions is to reduce the fiscal year 1977 deficit by $17.15 billion to $52.6 billion.

BUDGET AGGREGATES AND FUNCTIONAL CATEGORIES, FISCAL YEAR 1977

[In billions of dollars]

	3d budget resolution	Conference agreement
Revenues	347.7	356.6

THE CONFERENCE AGREEMENT

Mr. MUSKIE. Mr. President, the Senate today turns to consideration of the conference report on Senate Concurrent Resolution 19, the first concurrent resolution on the Federal budget for fiscal 1978.

The conference report reflects many hours of deliberation in which House and Senate conferees argued persuasively for their respective resolutions. In the end, after 3 long, difficult days, and five separate meetings of the conference, we achieved agreement.

As amended by the conference, the budget resolution provides slight increases over the Senate-passed aggregate amounts and more substantial reductions in the House-passed totals. Most notably, the higher deficit proposed by the House—$66.4 billion—has been reduced by $1.75 billion to $64.65 billion in the conference substitute. Amounts at least equal to the Senate-passed version of the budget are included in all but a few instances.

Mr. President, at the outset I wish to commend all the conferees on their dedication and commitment to the budget process. In recent weeks the congressional budget process has been tested and strained. But, it is my firm belief that the process has emerged stronger for this test. The overwhelming majority of the conferees signed the report, including the entire Senate delegation. The House conferees, with the exception of only two Members, also endorsed the report. For the first time in the history of the budget process minority Members on the House side signed the conference report.

Mr. President, the significance of this bipartisan support in both Houses speaks well of the continued viability and integrity of the budget process. I urge my colleagues to reflect the same unanimity expressed by the conferees in adopting this report.

PARLIAMENTARY SITUATION

This conference report is being submitted by the managers on the part of the two Houses in technical disagreement. The technical disagreements are very minor, and it is the intention of the conferees of both Houses to urge adoption of the substitute budget resolution described in the statement of managers which I have asked to have printed in the RECORD.

The disagreement is not over substance. It is a parliamentary technicality. This result has occurred because the Parliamentarians of the two Houses have ruled that, even on technical matters, a conference report on a budget resolution must in all its particulars remain within the range established by the action of the two Houses. Thus, where the numbers are even slightly below or above the range, the conference must report in disagreement. This is what has occurred here.

The conference agreement contains revised deficit and public debt figures for fiscal year 1977 that are lower than the corresponding provisions in either the House or Senate, and a revenue figure greater than either the House or Senate provision.

So, when the Senate votes today, we will first be voting to confirm the conference report in disagreement. A second vote will then occur to recede to the original House amendment to the Senate budget resolution, with an amendment which is spelled out in the statement of managers accompanying the conference report. Other than this two-step procedure, this consideration of the conference report can proceed as if it had been reported in agreement.

The conference report not only provides targets for the overall budget in fiscal year 1978, but also for the 17 budg-

et functions such as defense, agriculture, and so forth.

Mr. President, I believe that the conference report represents a sound and effective budget for fiscal year 1978. Although it is a tight budget, it will nonetheless provide significant help in reducing our country's continuing unemployment problem while at the same time avoiding the rekindling of inflation.

The conference agreement provides substantial real growth in defense spending and maintains a strong national defense posture. Likewise, the agreement accords a high priority to education and energy programs.

Mr. President, what follows is a brief description of the major features of the conference substitute.

MAJOR FEATURES OF THE CONFERENCE SUBSTITUTE BUDGET AGGREGATES

Mr. President, the recommended conference substitute contains aggregate budget totals for fiscal year 1978 as follows:

For revenues, the conferees agreed on a level of $396.3 billion. This is $1.8 billion below the House resolution and $600 million above the Senate resolution.

For budget authority, the conferees agreed on a level of $50.45 billion. This is $1.15 billion above the House and $1.15 billion below the Senate.

For outlays, the conferees agreed on a level of $460.95 billion. This is $3.55 billion below the House and $1.75 billion above the Senate.

For the deficit, the conferees agreed on a level of $64.65 billion. This is $1.75 billion below the House and $1.15 billion above the Senate.

For the public debt, the conferees agreed on a level of $784.9 billion. This is $7.8 billion below the House and $5.0 billion below the Senate.

A comparison of all three sets of totals—House, Senate, and conference—reveals that the conference compromise remains closer to the Senate version on outlays and represents a deficit closer to the lower Senate figure.

Mr. President, let me be candid. This agreement like any agreement between two firmly held points of view represents some compromise on both sides. I suspect that individual Members will find areas of the budget that they regard as too high or too low.

But, I ask my colleagues to remember that the purpose of a conference on the disagreeing votes of the two House is to resolve those differences. Neither side can expect to come away with its resolution intact. To shape a compromise, modifications are always necessary.

The Congressional Budget Act requires that the Congress establish national budget priorities. But the Budget Act does not indicate how difficult this might be to achieve. The Budget Act does not warn that deliberate choices among deserving programs might be acutely painful.

These challenges to the budget process became apparent in the conference on the first concurrent resolution for fiscal year 1978. But, should we have expected anything less, anything easier? The budget process, after all, is the political process with the choices within limited resources laid bare. When the process is working well, it is bound to force difficult and painful choices on all of us.

In the spirit of compromise the Senate conferees worked diligently to attain the most comprehensive resolution that would be endorsed by both the house and the Senate. Our task was not easy. Hard negotiation, and deliberate debate were essential. Difficult choices had to be made. Programmatic priorities had to be weighed and balanced against economic realities.

Mr. President, I ask unanimous consent that a table illustrating the differences between the House and Senate resolutions for fiscal 1978 and the conference substitute be printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

BUDGET AGGREGATES AND FUNCTIONAL CATEGORIES, FISCAL YEAR 1978

[In billions of dollars]

	House passed	Senate passed	Conference agreement
Revenues	398.094	395.7	396.3

950—Undistributed offsetting receipts:			
Budget authority	−16.000	−16.6	−16.3
Outlays	−16.000	−16.6	−16.3

Mr. MUSKIE. Mr. President, let me say a word about the conference debate on the national defense function in which many Senators have a special interest. There should be no doubt that the conferees, on both sides of the table are committed to the national security of the United States. Our discussion focused only on the total level of spending necessary this year to achieve that goal.

Only a difference of about $3 billion separated the two Houses. At several junctures we considered reporting in disagreement on this vital issue. That road would have been easy, Mr. President, but it might have destroyed the budget process. The conferees determined instead that to preserve the budget process and to serve the Congress they should continue to talk and to work for a compromise agreement. We believe that the spending levels contained in the conference substitute reflect a determination that our national defense, the second highest spending category in the Federal budget, will be fully maintained.

Mr. President, at this point I wish to express my appreciation and gratitude to our distinguished colleagues, Senator STENNIS, chairman of the Armed Services Committee, and Senator MCCLELLAN, chairman of the Appropriations Committee, for their assistance in working out this agreement in the interest of maintaining the integrity of the budget process.

Mr. President, I wish to assure my Senate colleagues that this compromise package contains room for enactment of many worthwhile programs. Not all legislative proposals can be enacted, not all programs can be fully funded by the Congress. In comparison with the requests from the Senate authorizing committees the conference agreement represents a reduction of $37.4 billion in budget authority and $13.4 billion in out-

lays. In comparison with the request from the Senate Appropriations Committee, the conference agreement represents a reduction of $12.8 billion in budget authority and $3.8 billion in outlays.

If Congress is to exercise a responsible fiscal policy, restraint with respect to spending must be exercised by this body. Restraint exercised by the Budget Committee, or the Committee of Conference is meaningless without restraint by at least 51 Senators and 218 Members of the House. Cooperation in this effort is essential if the budget process is to succeed.

The conference substitute is a realistic budget. It takes account of today's political and economic circumstances and makes an important contribution to the establishment of broad congressional priorities.

FISCAL POLICY

The levels of revenue and spending in the conference budget proposal reflect the choice of a policy for steady long-term growth.

The continuation of unacceptably high levels of unemployment and inflation means that a steady and continuing economic recovery must be achieved. The current recovery must be extended over a much longer period than the 34 months averaged by other peacetime recoveries since World War II. At the previous average, the present recovery would end in 1978, leaving the economy stranded with high unemployment and continuing inflation.

Mr. President, we cannot allow this to happen. The costs of failure are too high. We are determined to follow policies for fiscal year 1978 that recognize the problems of both unemployment and inflation, and therefore offer the best hope for prolonged recovery.

JOBS

Over 6½ million Americans remain out of work in spite of the drop in the unemployment rate to 7 percent in April. Indeed, the fact that a 7-percent unemployment rate is now regarded as an achievement, rather than as a problem, indicates how severe the recession has been. We cannot rest on our laurels. We must continue and strengthen our commitment to steady economic growth.

We remain about twice as far from full employment as we were at this stage of other postwar recoveries. The plain fact is that employment has grown at about the same rate during this recovery as during other postwar recoveries, but the employment we lost in the downturn was much greater this time. We therefore have much further to go before full employment can be achieved.

The conference agreement provides for a steady recovery in employment in 1978. Total employment from the end of 1976 to the end of 1978 should increase by about 5.2 million jobs as a result of the policies established in this budget resolution.

INFLATION

Inflation is a concern to all Americans. While the inflation rate has fallen from the levels of several years ago, it remains unacceptably high. Recent increases in the Wholesale Price Index and Consumer Price Index are a cause for particular concern.

To achieve a decline in inflation, however, it will be necessary to follow steady fiscal and monetary policies. We cannot stop inflation with draconian policies which throw millions of Americans out of work, any more than we can cure unemployment with higher inflation. Progress toward full employment and lower inflation can be achieved only through consistent policies aimed at continued recovery.

In addition to general fiscal restraint, the recommendations of the conference are designed to discourage specific actions which increase prices and the inflation rate in particular sectors. The conference agreement recognizes, for example, an urgent need to curb the rapid inflation in medical care costs and recommends lower outlays in the health function to reflect enactment of legislation to reduce such cost inflation.

The committee endorses the "targeted" public service jobs concept which emphasizes employment and training for the structurally unemployed—unskilled workers, young people, and welfare recipients.

THE BUDGET DEFICIT

Mr. President, the conference report is consistent with movement toward a balanced budget when this is compatible with prevailing economic circumstances.

As in the past 3 years, the Federal deficit projected in these recommendations is largely a result of unacceptably low levels of economic activity and high levels of unemployment. A weak economy shrinks Government revenues at the same time that it raises costs of unemployment compensation and other income support programs. Because large budget deficits result from a weak economy, steady economic growth must be maintained. Unacceptably large budget deficits can be eliminated only by a strong economy.

Some Members have observed that the deficit in fiscal year 1978 is larger than that in the revised fiscal 1977 budget and feel that this is inconsistent with progress toward a balanced budget. However, this conclusion is incorrect.

The increase in the year-to-year deficit, Mr. President, results from a last minute, and, in my judgment, inappropriate decision by the administration to restrict fiscal policy in fiscal year 1977, not from an increase in the deficit for fiscal year 1978. I regret the withdrawal of stimulus for fiscal year 1977, which makes stronger investment and economic growth in 1978 less likely. We should not, however, conclude that the fiscal policy for fiscal year 1978 is inappropriate simply because the administration has weakened fiscal policy for fiscal year 1977.

COORDINATION OF FISCAL AND MONETARY POLICIES

In the next 2 years, coordination of fiscal and monetary policies will become increasingly important. As the Congress maintains fiscal discipline and restrains fiscal policy, it will be necessary that monetary policy be expansionary enough to encourage the private investment required for increases in productivity and growth.

It must also be recognized that price increases may result from supply considerations such as the recent food price increases produced by the severe winter, and higher energy prices resulting from foreign and domestic policies. The last several years have taught us that fiscal and monetary measures alone cannot prevent these price increases even at unacceptably high levels of unemployment. The social costs of fighting unemployment with inflation, or inflation with unemployment, are simply too high.

Mr. President, we can reconcile this dilemma only through careful coordination of fiscal and monetary policies. However, in pursuing these policies, we must not mistake inflation caused by restricted supplies with that caused by excess demand. Price increases caused by severe winters or by unavoidable increases in energy prices should not cause us to adopt restrictive fiscal and monetary policies.

REVENUES

The conference agreement provides for 1978 revenues of $396.3 billion. This is $0.6 billion more than had been provided under the Senate resolution, but $1.8 billion less than the House figures of $398.1 billion.

The conference agreement assumes the tax reductions provided in the Tax Reduction and Simplification Act as recently agreed to by House and Senate conferees. The agreement also assumes a small $65 million allowance for miscellaneous tax and tariff legislation. The conferees also agreed to continue to treat the entire cost of the earned income credit as a reduction of revenue, but that the treatment of tax credits in excess of recipients' tax liabilities shall be considered de novo during the development of the second budget resolution later this year.

Let me now indicate the major provisions of the conference agreement in the functional categories of the budget.

NATIONAL DEFENSE

Mr. President, the conference agreement for the national defense function provides for budget authority of $118.5 billion and outlays of $111 billion. These proposed targets allow for very significant increases in defense funding over the ceilings established by Congress in the third concurrent resolution for fiscal 1977, an increase of $9.7 billion in budget authority and $12.1 billion in outlays.

The Senate conferees' major concern is that the United States maintain real growth in defense spending for the modernization of our forces and for the operational readiness of equipment. The proposed conference targets allow for a defense budget which can provide for substantial improvements in U.S. force capabilities as a means to counterbalance growing Soviet attempts to strengthen its defense forces.

The conference agreement for the national defense function was particularly difficult to attain because of the widely divergent views of the two bodies on what an adequate level of defense spending is

in view of U.S. national security needs and the relationship of these needs to domestic requirements.

Mr. President, a very delicate balance exists here, and it must be maintained in setting our national priorities. The agreement, signed by all Senate conferees, accomplishes this aim. I commend the conferees on both sides of the aisle for their cooperation and support in achieving this decision.

The first concurrent resolution targets for national defense contained in this conference agreement are based on the following assumption. Reductions in manpower and its associated costs and in investment and readiness costs will not be used as the vehicle for accommodating the targets. Rather, it is assumed that significant financial adjustments can be made to the administration's request for the defense function in order to remain within these targets. These financial adjustments may include such items as a possible slowdown in projected foreign military sales, the utilization of prior-year unobligated funds to finance a portion of the fiscal year 1978 program, a lower inflation rate from that now assumed in the administration's budget, and a partial absorption of the October 1977 pay raise. It is anticipated that these types of adjustments may constitute a major portion of the actions necessary to meet the recommended defense targets.

INTERNATIONAL AFFAIRS

In the international affairs function, the House agreed to the Senate level of $9.3 billion in budget authority and $7.3 billion in outlays.

Although this proposed target is below the administration request, it would allow for substantial increases over the congressional budget for fiscal year 1977 and over current policy levels in the area of international affairs. During the course of the summer, there is room for Congress to work its will on programs for bilateral and multilateral development assistance, for initiatives in Africa, and for a balance-of-payments loan for Portugal.

Aware that the level assumed for activities of the Export-Import Bank has been reestimated downward by the Congressional Budget Office and the executive branch since Senate Concurrent Resolution 19 passed both Houses, the conferees felt, nonetheless, constrained by the limited range between the Senate and the House levels for this function. However, the Senate conferees were of the opinion that any downward reestimate for the Export-Import Bank should be reflected in the second budget resolution. Speaking for myself, I would discourage the Senate from enacting measures with costs in excess of the net figures of roughly $8.6 billion in budget authority and $7.2 billion in outlays which would be the levels for this function if the reestimates were fully taken into account.

HUMAN RESOURCES

In the human resources area, the conference agreement on the budget resolution makes room for additional Federal efforts in several high priority programs serving the Nation's human needs. The resolution agreed to in conference maintains the Senate resolution's assumption of substantial funding increases for education programs; the veterans' medical care system and other veterans' benefits; cost-of-living increases for recipients of social security and other such payments; programs aimed at improving health care services, planning, and research; and social services grants.

Mr. President, the first budget resolution for 1978 will continue the strong congressional commitment to public service jobs for unemployed adults and strong initiatives to combat youth unemployment. The economic stimulus supplemental for 1977 will fund 725,000 CETA jobs by the end of fiscal 1978, to be targeted mainly on the long-term unemployed and persons with low income. It will also fund a major expansion of youth jobs and training programs. The conference agreement anticipates the prompt implementation of these efforts. The conferees agreed to allow for a substantial forward funding of CETA jobs into fiscal 1979—$3.8 billion in budget authority—to assure local prime sponsors that this sizable program will not encounter the funding irregularities that plagued it last year.

A major problem confronting all Americans the past several years has been the rapid inflation in health care costs. The conferees agreed with the Senate that Congress should take measures this year to bring these costs under control. Senate Concurrent Resolution 19 now assumes such an effort will yield outlay savings of $700 million for the medicare and medicaid programs.

The resolution sets an outlay figure for income security programs that is $300 million below the estimate for continuing current policy. This adjustment represents the net effect of possible administrative and legislative savings that have been proposed by the President or suggested by other committees and increases for new legislative initiatives.

PHYSICAL RESOURCES

In the area of natural resources, environment, and energy, the conferees agreed upon budget authority of $20.7 billion and outlays of $20.0 billion, increases in budget authority of $0.2 billion and outlays of $0.1 billion above the Senate-passed levels. The conference targets permit new and ongoing programs in water resources and environmental quality. The targets also would allow major increases over last year in energy research and regulation. However, the report does not assume specific increases in funding for the yet uncertain impact of the President's proposed national energy plan. Any changes needed to implement a new energy plan can be accommodated in the second budget resolution after Congress has had an opportunity to work its will on the President's proposal.

For agriculture the level of budget authority agreed upon—$2.2 billion—is the amount proposed by the Senate. With respect to outlays, the conference level—$4.35 billion—is sufficient to accommodate the latest USDA revised estimate for commodity price support programs. The Senate-passed level of $3.7 billion was based on an earlier CBO estimate and did not reflect a more up-to-date review of income support payments to farmers which are expected to be made under current law.

In the commerce and transportation function, the conferees agreed upon budget authority of $20.0 billion and outlays of $19.4 billion. These targets represent increases of $0.6 billion in budget authority and $0.3 billion in outlays above the Senate-passed figures, and were reluctantly agreed to by the Senate conferees to provide for a conference compromise satisfactory to the House. The new targets could accommodate increased appropriations for transportation, Small Business Administration, or other programs in the function. If such increases are not required, they could be reduced in setting the second budget resolution ceilings.

To fund programs for community and regional development, the conferees agreed upon budget authority of $8.2 billion and outlays of $10.8 billion, both $0.1 billion above the Senate-passed levels. The agreed-upon targets thus can accommodate the Senate floor amendment of $0.5 billion in budget authority for community development block grants that many Senators persuasively advocated. The targets also permit some increases above current policy for action, the Community Services Administration, and other urban and rural economic development programs.

In the remaining functions, the conference made, at most, relatively small adjustments to the Senate targets to achieve reasonable compromises between the marks of the two Houses.

ALLOCATIONS TO SENATE COMMITTEES UNDER SECTION 302 OF THE CONGRESSIONAL BUDGET ACT

Mr. President, section 302(a) of the Congressional Budget Act provides that the statement of managers accompanying the conference report on the first budget resolution shall include an allocation of the budget totals among the committees of the House and Senate. This is the so-called crosswalk provision.

The allocations to the Senate committees pursuant to section 302(a) are contained in pages 12 and 13 of the joint statement of managers on Senate Concurrent Resolution 19.

The conference managers have provided separate allocation tables for the House and Senate to reflect the differing committee jurisdictions in each body and to allow for the differing approaches to certain legislation that each body may elect. I point out, however, that the allocations reflect a common agreement among the conferees regarding budget priorities that would affect the allocations. Thus, while the committee allocations are different for each body, they are based on the agreements reached in conference.

I should also point out, Mr. President, that the Senate allocation table is designed to comply with the requirements of the Budget Act as set forth in section 302(a). Thus, on the Senate side, we have provided only the total budget authority and outlays assigned to each committee and have not further sub-

divided these amounts by function. This is different from the House. In the next few days, the Senate Budget Committee will provide functional details and other relevant information to each Senate committee so that they can better understand our thinking with respect to the allocations. But since this information is not called for by the terms of section 302(a), we believe it is better to convey it separately from the conference report itself.

Let me now turn to the Senate committee allocations. The allocations to Senate committees under section 302(a) are in two parts.

The first part deals with committee spending jurisdiction. In this part, the budget totals are allocated among committees on the basis of their jurisdiction over bills and resolutions that directly provide the budget authority contained in the first budget resolution. Generally, all budget authority provided through the appropriations process is allocated to the Appropriations Committees and all budget authority provided apart from the appropriations process is allocated to the appropriate authorizing committees. With certain modifications, outlays resulting from budget authority follow a similar pattern.

The second part deals with entitlement programs that require appropriations action. Amounts for these programs are allocated both to the appropriations Committee and to the relevant authorizing committees, although they are counted only once—in the Appropriations Committee spending jurisdiction total. Nevertheless, these amounts are an equally important part of the allocations to the authorizing committees.

Pursuant to section 302(b) of the Budget Act, each committee receiving an allocation under section 302(a) is to report to the Senate as soon as practicable after adoption of the budget resolution, and after consultation with the counterpart committee or committees of the House, how it would subdivide its allocation among its subcommittees—in the case of the Appropriations Committee—or among its subcommittees or programs—in the case of the authorizing committees. In the case of the authorizing committees, this report will be in two parts—one part dealing with programs over which they have spending jurisdiction and the other part dealing with entitlement programs under their jurisdiction which requires appropriations action.

Section 401(b)(2) of the Budget Act requires a reference to the Appropriations Committee in the case of any entitlement that is reported which authorizes new spending authority exceeding the allocation previously made under this crosswalk procedure. The Appropriations Committee must then report within 15 days. Appropriations may report the bill in question with an amendment which limits the total new spending authority provided under that entitlement.

Mr. President, these reports under section 302(b) of the congressional Budget Act will be used to assess the relationship between the budget resolution and individual spending bills that are considered by the Senate over the summer. While the Budget Act indicates that these reports should be made to the Senate "as soon as practicable" after the budget resolution is agreed to, I should like to stress the importance of receiving them at the earliest possible time. Until these reports are received, it will be difficult for the Senate to assess the relationship of individual legislation to the budget resolution totals. Once they are received, we shall have a basis for comparing individual bills against the targets each committee has set for itself. That is what the Budget Act intended and that should be our objective. We believe that this process will facilitate budget scorekeeping.

BUDGET PRIORITIES

Mr. President, I know that many members of the Senate will be less than fully satisfied with the results of the conference. With the overall spending limits set by requirements of fiscal responsibility, hard choices, compromises, and even disappointments, have been inevitable.

In weighing national priorities, we have had to give special consideration to the conflicting needs of national defense and our domestic social responsibilities. We have examined the claims of jobs programs, of energy demands, of environmental improvement, agricultural development, and of grants to State and local governments. We have looked at requirements in the areas of health, income security, and veterans.

Mr. President, there were needs in all of these areas which could not be met. There may be deserving programs in many areas which will not be funded. The results of the conference agreement will please no one completely. Yet the conference agreement is the result of an arduous, considered, and careful process of debate and compromise as provided by the budget process. I urge my colleagues, as they consider the conference substitute, to reflect upon the careful and delicate balance of priorities which it reflects. I remind them that the budget process is built upon the balancing of needs, upon flexibility and compromise. I urge them to support the conference agreement.

CONCLUSION

I urge my colleagues to support this conference report and to continue to work with the Budget Committee so we can continue to proceed in an orderly and responsible manner to live within the constraints of this resolution. In my view, this is the best prescription for strengthening the public's confidence in the ability of the Government to cope with and to resolve our financial problems.

I express my sincere appreciation to the ranking minority member (Mr. BELLMON), and to the other Senate conferees for their splendid efforts, cooperation, and loyal support in the conference and in bringing this report to the floor for consideration today. I express again my thanks to House Budget Committee Chairman GIAIMO and his conferees for their cooperation in reaching this agreement.

Finally, I commend the staff of the Budget Committee for their superb and indefatigable performance over the months leading up to this report. We have come to expect such efforts from them but we are, nonetheless, deeply grateful.

Mr. President, in the course of the conference discussion, an issue emerged which is of concern to the distinguished chairman of the Senate Committee on Finance. That is the treatment of the earned income credit from the budgetary point of view. It is an issue on which House and Senate conferees have been in disagreement over all of this calendar year. It was decided to postpone final resolution of the issue until later in the year, in connection with the second concurrent budget resolution, thus maintaining the Senate position at this time.

For the purpose of enlightening Members of the Senate as to the nature of that issue, I ask unanimous consent to have printed at this point in the RECORD a letter addressed to the conferees by the distinguished chairman of the Committee on Finance (Mr. LONG) so other Members may have access to it.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U. S. SENATE,
COMMITTEE ON FINANCE,
Washington, D.C. May 12, 1977.

Hon. EDMUND S. MUSKIE,
Chairman, Budget Committee, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Up to the present, the Congress has treated refundable tax credits both legislatively and in the budget process as reductions in revenues. I understand that the House Budget Committee has undertaken to change this aspect of the budget process in a way which would treat the refundable portion of those credits as outlays. I am pleased to note that the Senate Budget Committee has upheld the traditional Congressional approach to this issue and I strongly urge the Senate conferees to maintain this position.

A Change in the Congressional budget process to treat the refundable portion of tax credits as outlays rather than revenue reductions is unnecessary and undesirable for several reasons:

1. It makes the budget process less rather than more intelligible. Since the budget process deals with the total budget revenues and expenditures and the resultant deficit or surplus, there is no substantive difference in treating a refundable tax credit as an outlay or as a revenue reduction. However, since Congress has always legislatively dealt with such provisions as a part of revenue legislation, treating these credits as outlays would be inconsistent with those Congressional legislative procedures which the budget process is designed to support. In fact, such a change might obscure the total impact of a provision to the extent that part of its cost is accouned for as an outlay and part as a revenue reduction (the nonrefundable part).

2. The change proposed by the House would have some significant procedural and administrative problems. For example, if an individual had a tax liability of $200 and an earned income credit of $300, two-thirds of his credit would be accounted for as a revenue reduction and one-third as an outlay.

3. Treating refundable tax credits as outlays rather than as revenue reductions rep-

resents a fundamental change in the Congressional budget process which could hamper the ability of Congress to deal with tax legislation. The use of refundable tax credits makes it possible in dealing with tax legislation to provide more relief to certain categories of low income individuals than would be possible if we were limited to only non-refundable credits. It is possible, however, that treating refundable credits as outlays rather than as revenues could effectively preclude their use in some circumstances. If a second budget resolution allowed for a tax reduction but contained no allowance for increased outlays, it would be out of order to consider a refundable tax credit even if the Congress should decide that some portion of the total tax cut ought to go to low-income workers who bear the heaviest weight of payroll and sales taxes though they have no income tax liability.

4. The change the House proposes could even interfere with the consideration of tax legislation not dealing with refundable credits directly. For example, an increase in the minimum standard deduction reduces the tax liability of many low income taxpayers. This automatically has the indirect effect of increasing the refundable portion of their earned income credit. In such circumstances if refundable credits were considered outlays, the Congress might find itself in the position of having to avoid any tax relief to low-income individuals in order not to run afoul of the budget process.

The success of the Congressional budget process enjoyed to date is due in no small part to the fact that it has been seen as a means of enabling Congress to more effectively deal with legislation within an overall budgetary framework and not as a means of placing procedural and technical roadblocks in the way of spending and revenue legislation. For the reasons outlined above, I think the change in accounting procedures proposed by the House Budget Committee for the refundable part of tax credits is a step in exactly the wrong direction. It may be a more pleasing methodology for some theoreticians. But it makes no improvement in the operations or intelligibility of the Congressional budget process, and it places an unnecessary procedural constraint on the flexibility of the Congress in considering revenue measures benefitting low-income persons.

I hope the conferees on the budget resolution will not adopt this far-reaching and undesirable change in the budget process.

With every good wish, I am

Sincerely,

RUSSELL LONG,
Chairman.

Mr. MUSKIE. I wish to pay special tribute to Mr. Sid Brown, senior counsel, whose enormous knowledge, indefatigable energy, and unflappable competence make our work possible. Special recognition should be paid to Karen Williams as well. our committee's new chief counsel, who, in a matter of a few short months, has mastered the budget process and whose extraordinary grace under pressure has already made her a full working partner on the committee staff. I also want to recognize the contribution of Van Ooms, who became the committee's chief economist early this year. He, too, has already demonstrated his great value to the committee and is esteemed for his balance, clarity, and eloquence by committee members on both sides of the aisle.

I want to extend my thanks to each and every member of the Budget Committee staff, whose work includes not just the work on the budget and the committee's markup materials, but an analysis of every significant bill which passes through the Senate each session. Senator BELLMON and I spoke more than 60 times last year alone on major legislation. Not only did the staff help prepare those presentations, but they analyzed and prepared memoranda on hundreds of other bills as well. The Budget Committee staff is always in "adjournment rush" yet always does its job in an exemplary fashion.

Let me also pay tribute to the new staff director, John McEvoy, who succeeded to his task at a difficult time for the committee staff. Two of the five senior staff of the committee, our former staff director and our chief economist, both left the committee to accept cabinet level positions in the new administration earlier this year. But despite this 40-percent loss of senior staff, the committee has managed the markup, enactment, and conference of two complete budget resolutions in the past 90 days without missing a step.

Finally, I want to give special recognition to the spirit of cooperation and partnership which exists between the majority and minority staffs. That cooperation reflects the same bipartisan spirit which exists among the members of the committee and is facilitated by the open, cooperative, and constructive attitudes of Bob Boyd, minority staff director, and the very able staff he has assembled on the minority side. Bob's attitude, his energy, and his work have made it possible to disagree agreeably where that is necessary, but much more often to find areas of common concern where joint efforts can lead to economies, reforms, and improvements in the way our Government meets our people's needs.

This high competence, cooperation, and dedication on both sides of the Budget Committee staff are not only vital to the budget process. They are an example, I believe, to all committees.

Mr. President, in closing my remarks, again I express my deep appreciation to Senator BELLMON, the ranking Republican on the Senate Budget Committe and in conference. Without his assistance and that of his colleagues on the Republican side of the aisle, it would have been much, much more difficult, if not impossible, to resolve the major issues which arose in the conference. I am most grateful to them for their help and their understanding.

Mr. BELLMON. Mr. President, I thank our distinguished chairman for his overly kind comments. I express my personal appreciation to our distinguished chairman (Mr. MUSKIE) for the patience and sensitivity to everyone concerned that he demonstrated in getting out of a very dangerous dilemma during the conference with the House. He rendered a great service to the Senate, to Congress, and to the country by the firm, yet understanding, leadership he exhibited during this most difficult time in the history of the budget process.

Mr. President, perhaps more than in any previous budget conference report, the conferees from the Senate and House return to their respective Houses with a sense of pride and achievement. The budget process has been endangered in recent days and weeks. Yet, despite those dangers and despite sharply divided feelings about the appropriate level of defense spending, a conference agreement has been achieved. Moreover, the conference report was signed by all 10 Senate conferees—something that has not been achieved in other recent budget conferences, even when the controversies were significantly less sharply divided.

Further, it should be noted that for the first time the conference report was signed by two of the House Republican conferees. I believe this represents a major step in strengthening the budget process in the House. Republicans in both Houses must realize that the end product of the budget process in any one year will be shaped more to our liking if we are part of the process, working hard, function by function, to negotiate and choose among the priorities rather than merely taking the spectator role of voting no. Such a stance makes the minority ineffective and drives the entire budget process more in the direction of the big spenders. If fiscal conservatives always vote no, the only place votes needed to approve the resolution can be garnered is from those whose favorite programs have been treated generously.

Therefore, Mr. President, I believe that the Republicans made a significant step in the right direction when they participated more effectively and more positively in the budget process during our recent conference.

Thus, Mr. President, we have been through some rather difficult budget days, but here we are—back on the Senate floor with a conference agreement supported by conferees representing the full spectrum of views on the budget and its spending levels and its priorities.

History of past congressional budget efforts shows that in 1947 and again in the early 1950's, the process got off to a modestly successful start but in the second or third year, irreconcilable differences arose and the process failed. This time the process has not only survived but with our voting support today and with the support of the House next week, we can demonstrate that the process is even stronger for having been through these trials.

Now what is in this budget? We have revisions for fiscal year 1977 which represent reestimated spending levels and a withdrawal of the rebate program. The result is an $8.25 billion reduction in spending and a $17.15 billion reduction in the deficit—$69.75 billion reduced to $52.6 billion.

Mr. President, I believe those figures are significant enough to repeat them again. The result is an $8.25 billion reduction in spending and a $17.15 billion reduction in the deficit—$69.75 billion reduced to $52.6 billion.

For fiscal year 1978, we ended up with a budget which has less spending than the Carter budget—we have $460.95 billion in outlays versus the administration's April estimate of $462.6.

In other words, we are roughly $2 billion under the Carter budget. Moreover, our deficit figure loops different from

the Carter level simply because of economic assumptions behind revenue levels.

We take one assumption, Mr. Carter another, and that is what causes the different deficit figure. We believe the Carter level is too optimistic. The important point for my colleagues to remember is that, given equal economic assumptions, the Carter deficit is $1.65 billion higher than Congress budget, which this resolution anticipates. I trust that those who most loudly preach fiscal discipline will keep this fact in mind and express their support for this conference report by voting in the affirmative. It is hard to see how any fiscal conservative could vote otherwise.

Mr. President, I turn for a moment to the defense function in this conference report. Members are all aware of the difficulties this one area presented to the conferees. The House brought with it an unrealistically low defense target, but the polarized floor environment in the other Chamber made it more difficult than usual for the House conferees to compromise.

Parenthetically, let me say that it is never easy for the House to compromise.

Mr. President, I express my personal appreciation to our distinguished chairman, Senator MUSKIE, for the patience and sensitivity to everyone's concerns that he demonstrated in extricating us from this dangerous dilemma. The continued success of the budget process owes much to his leadership.

I also thank Senators HOLLINGS, CHILES, DOMENICI, and MCCLURE for their tenacious, persuasive efforts to keep the defense figures close to the more realistic Senate target. A measure of their success is the fact that while the conference recommendation for BA is $200 million below a halfway split, the more critical outlay target is $250 million over a 50–50 split. Nevertheless, I recognize the target recommended by the conference is very tight. It will require a concerned effort by all concerned to stay within this target. I believe, however, that if the committees involved and the Senate as a whole makes a good faith effort to live within this target, it can be done.

Mr. President, a budget process is basically one of setting priorities. In the Defense function the top priorities are clearly weapons procurement, research and development, and combat manpower. Hence, it follows that we should not make cuts in these areas in order to stay within the target recommended by the conference. I believe some savings probably can be achieved in lower priority areas and in the types of financial adjustments mentioned in the report language. I pledge to do my part in this difficult undertaking of staying within the target without cutting Defense muscle.

Mr. President, I would take this opportunity to provide some additional insights into economic policy for 1977 and 1978. I spoke more extensively on this vitally important matter when the Senate approved the first concurrent resolution last week. Mr. President, as I said earlier, the conference agreement removes room for further tax reduction initiatives from the fiscal year 1977 third concurrent resolution. Along with outlay reductions due to the shortfall in Federal spending, the budget deficit in this resolution is amended and reduced by some $17 billion.

At the same time, Mr. President, in raising the revenue floor due to removal of the rebate, it was assumed that there was no accompanying reduction in revenue projections to reflect somewhat slower economic performance. The economic data assumptions for 1978 are also unchanged from our earlier version of this resolution; the level of the economy in 1978 depends largely on how much progress the economy makes toward recovery in 1977.

Mr. President, essentially $17 billion of deficit and fiscal stimulus has been removed from 1977, and yet the economy is estimated to perform just as well as before.

I am not fully persuaded that these economic assumptions are correct, and I will comment more on this in a moment. I suggest that this remarkable adjustment in policies and expectations reflects two things: First, the great strength and potential of the private sector of our economy, and, second, a more modest assessment of the impact and importance of fiscal stimulus. More specifically, Government spending and the tax rebate apparently would not be so effective and were not so vital after all. Zealous supporters of fiscal stimulus to solve all the ills of our economy may wish to take note.

As I have stated before, I believe a tax rebate approach was the least appropriate way to boost the economy under current conditions and forecasts. But even this inefficient stimulus would have had a substantial impact according to the Congressional Budget Office. Again, according to CBO—and my staff concurs—the economic data for the first quarter was anticipated and does not warrant a stronger economic forecast at this time; it does not support an unchanged forecast in the absence of the rebate.

Mr. President, in spite of this wave of optimism, I would note that the economic assumptions and the associated revenue projections of this budget resolution are still more moderate than those of the administration. I sincerely hope that the administration's expectations are realized, but we believe it is more prudent to base our economic policies and budgetary plans on projections that appear more realistic.

Mr. President, my Republican colleagues and I continue to believe that an additional moderate reduction in tax rates would greatly improve the prospects for sustaining a strong economic recovery through the later part of 1977 and 1978. By offsetting the unlegislated automatic increase in taxes resulting from inflation, a further tax reduction would help sustain the strong trends in consumer spending and elicit the surge of business investment so badly needed to expand our productive capacity for future years. Such an expansion will reduce future inflationary pressures.

I will observe the next few months with great anticipation. If the economic data is not as favorable as the news as of 2 weeks ago, will the administration or congressional advocates ask for more fiscal stimulus in the second concurrent resolution? Most recently, reported retail sales for April actually declined very slightly from March; initial unemployment insurance claims in the first week of May showed an increasing trend. I question if a few more of these reports and then will we be asked to accommodate some new quick stimulus plan in our next budget resolution? Mr. President, I sincerely hope not. I hope the economic data continues strong. But, if we do return later this summer with an apparent need for action to strengthen the economy in fiscal year 1978, I trust my colleagues on both sides of the aisle will recall the analysis and policy proposals of my Republican colleagues. I hope we will look to the revenue side of the budget for fiscal stimulus and reconsider a permanent tax rate reduction.

Mr. President, I strongly urge my colleagues—especially those on the Republican side of the aisle here on the floor today—to support this budget. It is one that has been constructed under fire and I believe deserves the wide support of the full Senate. It will prove critically important in the months ahead as we review the authorizing and appropriating bills from the other committees. As much as at any previous time, the budget process will derive its strength from Senatorial support. I sincerely hope that support is again reflected in a strong vote of approval today.

Mr. President, again, I congratulate and thank our chairman for his very skillful leadership of the budget process and, particularly, for the very fair treatment he has accorded all Members of the Senate. I feel that the result we have before us today is largely due to his diplomatic, yet, at the same time, strong and firm leadership.

Mr. President, I ask unanmous consent that Gary Dickinson of Senator DOLE's staff be permitted access to the floor during consideration of the budget conference report.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, if the Senator will yield, I wish to comment on some of the Senator's last remarks on the state of the economy. It is interesting to note the differences between the Carter administration budget and the budget we are about to approve with respect to revenues, outlays, and deficit for 1978.

I ask unanimous consent that a table showing this be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Carter budget compared to conference agreement on Senate Concurrent Resolution 19—fiscal year 1978

[In billions]

	Carter April estimate [1]	S. Con. Res. 19 conference agreement
Revenues	$403.8	$396.3
Outlays	461.7	460.95
Deficit	57.9	64.65

[1] Adjusted to treat refundable earned income tax credits as reductions in revenue, in line with the practice followed in S. Con. Res. 19.

Mr. MUSKIE. This demonstrates, as the Senator has already said, that our outlay figure is below that of the administration. The administration revenue figure is higher in large part because of its more optimistic—perhaps overly optimistic—view of the performance of the economy.

Now, if our revenue estimates were the same as those of the Carter administration, our deficit would be $57.2 billion, as compared to the Carter April deficit of $57.9 billion. So if we were attempting to indulge in that optimism, which, in our judgment, is not justified, we could show a smaller deficit than the administration shows. I think it is important to indicate that in the record.

Mr. BELLMON. Mr. President, I join our chairman in sharing the sense of importance he has expressed. I feel the budget process owes a part of its success to the fact that we tried to be responsible and did not indulge in some of the optimistic estimates that could make our deficit figures look a lot better. But, I think, in the long run Members of Congress will come to appreciate the fact that we are not trying to play games but that we are here trying to tell it like it is, and I think the budget reflects this attitude.

Mr. MUSKIE. I say to the Senator that we are not being different just for the sake of being different. I told the President a week or two ago that what he has to understand about this budget process is that unless it is an independent process, an opportunity for Congress to exercise its independent judgment on these matters, it will not survive, it will not succeed; and when we have our differences, so long as each one believes his own position is the right one, then the process is working.

Mr. STENNIS. Mr. President, will the Senator yield to me?

Mr. MUSKIE. I yield.

The PRESIDING OFFICER. The Senator from Mississippi.

Mr. STENNIS. Mr. President, I wish to commend as well as thank the entire membership of our Budget Committee for a very signal service they are rendering and for their leadership in this matter, which comes, of course, partly from the Senator from Maine and the Senator from Oklahoma, but all have contributed.

The Senator has been generous with something he said with reference to the fact that he and I had a conference. I do not deserve any credit at all. He called me and we merely conferred over these figures. I had been preparing for debate on the military authorization bill which, I hope, will come up Monday, and I had all of these things on my mind, anyway. I merely tried to reflect these figures as they relate to our bill.

Mr. President, may I mention another matter. I want to highly commend members of the minority for supporting the congressional budget concept, for carrying on their part of their obligation and duty, and for their support. Certainly no political party can solve these budget problems absolutely. It is beyond comprehension to think that they could. It just takes a lot of hard work.

I again say I thank the Senator because of the work he has done, and it will be appreciated more and more in the years to come.

Mr. MUSKIE. I thank the Senator. The kind of consultation we were able to have in this connection is a good precedent if we are to make this budget process work, because, as I said to the Senator privately, unless every Senator takes it upon himself to help make it work, it will not work. ED MUSKIE cannot do it alone, HENRY BELLMON cannot do it alone, and JOHN STENNIS cannot do it alone. Working together, we can do it, and I repeat my gratitude to the Senator for his help.

I am happy to yield to the Senator from Idaho. I wish to express my personal appreciation to the Senator from Idaho for the assistance he has given in the committee and in the conference. He contributes to an intelligent, constructive dialog. He has a philosophy different from mine, but we found it possible, I think, to discuss matters in a way that have been resolved in the public interest, and I am most appreciative.

Mr. McCLURE. Mr. President, I thank the Senator from Maine for those kind words as well as yielding at this time.

I want to underscore what the Senator just said in regard to the distinguished Senator from Mississippi, the chairman of the Armed Services Committee, who, in spite of his modesty, I think, made a very great contribution to the deliberations that made it possible for us to come to agreement in the conference.

Mr. President, this is the sixth budget resolution in which I have been involved and which the Budget Committee has reported for approval of the full Senate. Over these 3 years, we have diligently reported and have become accustomed to working with budget authority and outlay figures for all 17 functional categories and the budget aggregates. These concepts have been complex for us all and it is only now that we are beginning to understand that it is budget authority which we must scrutinize fully to exert any influence over future year spending. Yet, there are a myriad of further complexities, two of which I wish to describe to you now, Mr. President.

First, the resolution calls for a level of public debt no greater than $701.3 billion in fiscal year 1977 and $784.9 billion in fiscal year 1978. The amount is staggering equal to one-third of our Nation's GNP. But note further that the public debt jumps $83.6 billion from fiscal year 1977 to fiscal year 1978, or $18.95 billion more than the amount of the deficit. This massive increase in the national debt is more than 18 percent of the total budgeted outlays. About two-thirds of this increase is caused by the borrowing activities of so-called off-budget agencies. Nevertheless, these agencies exert their influence in credit markets in a degree every bit as great as borrowing to cover our reported deficit. It is unwise to believe that only numbers reported in our functional targets pose a threat to fiscal soundness and integrity.

Second, Mr. President, if we were to look at the total financial obligations during fiscal year 1978 of even our "on-budget" agencies and compare those obligations with the numbers we report as "budget authority," we would find a staggering difference. This is because many agencies are able to utilize budget authority granted in previous years, offset loan repayments and asset sales against their reported obligations, and often sell securities or paper of their own to reduce reported budget authority.

For example, in function 050—national defense—obligations are $40 billion more than new budget authority requested. In function 300, natural resources, environment, and energy, obligations are about $3.2 billion greater than new budget authority—$7.1 more for function 350, agriculture; $12.6 billion for function 400, commerce and transportation; $3.1 billion for function 500, education, training, employment, and social services; $7.0 billion for function 600, income security; and $4.9 billion for function 850, revenue sharing and general purpose fiscal assistance.

Even though these numbers do not add to our national debt—they reflect revenues from other sources—they must be considered when discussing the size and scope of the Federal bureaucracy. These functions in recent years have grown enormously and one should not think the budget we present today, or any other single measure of spending, fully reflects the size and scope of government. It requires several perspectives to gain the necessary insight.

Mr. President, the technical complexities of this budget are as great as its political complexities. I raise these two issues so that we might all better focus on what we are voting on today and better understand what we are not voting on today.

Mr. President, I shall join with my colleagues on the Budget Committee in voting for this conference report not because I approve of all the figures that are in it, but because I recognize the very great difficulty that confronted the chairman of this committee and the other members of the committee in the conference in trying to arrive at an agreement with the other body, and I think the agreement that we came out with was the best possible product of that conference process.

So I support the process, and I wish it to work. I commend both the Senator

from Maine, the chairman of the committee, and the Senator from Oklahoma (Mr. BELLMON), the ranking minority member for the immense amount of work that they did on this. I am certain that they both share with me the commendations to the staff for the tremendous technical assistance that went to each of us not only in the budget markup in the initial stages but also in the conference.

Mr. President, I thank the Senator for yielding me this time.

Mr. HEINZ addressed the Chair.

Mr. MUSKIE. How much time does the Senator wish?

Mr. HEINZ. Mr. President, will the Senator yield me 10 minutes?

Mr. MUSKIE. I think we have 10 minutes remaining, and I yield 10 minutes.

I am glad to yield with an expression of appreciation to my good friend from Pennsylvania. This is his first year on the Budget Committee. He has attended faithfully and contributed effectively and intelligently to the dialog of the committee and has not been reluctant to give us support when the crucial votes come. I am most appreciative to him and delighted to yield to him at this point.

Mr. HEINZ. Mr. President, I would be happy to yield more of my time to the distinguished chairman of the committee if he wishes to continue in that vein for a while.

The PRESIDING OFFICER. The Senator has 10 minutes.

Mr. HEINZ. Mr. President, first of all, I thank the distinguished Senator from Maine, the chairman of the committee, for the absolutely outstanding work and leadership he has provided to the Budget Committee. I cannot be more sincere when I say that without his perseverence, fairness, commitment to hanging tough when called for, and willingness to compromise as need be, we might well have lost the budget process this year.

Had we done so, we would have lost, I think, a very valuable tool in trying to bring under control the various vagaries, wastefulness, and incompatibilities of the Federal budget.

Mr. MUSKIE. Mr. President, will the Senator yield briefly?

Mr. HEINZ. I am happy to yield.

Mr. MUSKIE. Mr. President, I ask unanimous consent that it be in order to ask for the yeas and nays on the second vote.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the vote occur at 12:30 p.m. today.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HEINZ. Mr. President, I also particularly commend the Senator from Oklahoma, my good friend and colleague, HENRY BELLMON, for the role he has played, which has been one of great responsibility, sticking up, time and again, for positions that might not always be conventionally popular. In my view, however, they have clearly been based not only on conviction but also on considerable depth of insight into what is good and right for the United States of America.

In my comments, Mr. President, I shall try to be as brief as possible. To begin with, there is one specific piece of legislative history I wish to reinforce with respect to a relatively modest function, function 150, because as a summer of spending goes by there may well be a tendency to forget it. Since our original markup of the First Concurrent Resolution, CBO has informed us that the level of Export-Import Bank activity will be about $700 million less than we expected in budget authority, and about $100 million less in outlays. Ideally, the conference should have been able to lower our figures automatically by this amount, but unfortunately we felt boxed in by the small range between the figures the House and Senate figures. The upshot is that the Senate's original figures of $9.3 billion in budget authority and $7.3 billion in outlays, though they remain on the record, are outdated. Our working assumption, though, should now be that the figures, respectively, are $8.6 billion and $7.2 billion. The matter can be formally corrected when we come to the Second Concurrent Resolution, and we might as well wait since some more reestimating is bound to occur. But in the meantime, not to heed the informal new figures will open the door to excessive spending, which the Budget Committee tried to rule out in its assumptions at the time the Senate bill was passed. For example, contrary to the House, it was assumed that, in addition to other reductions in the Carter request, $300 million in budget authority would be cut from foreign economic and financial assistance, and $200 million in outlays. In the April deliberations of the committee, we were quite determined that no category of spending be exempted from belt-tightening. It would be inexcusable if our painstaking decision were now undermined on technical grounds.

As for the defense function, 050, I think it is clear from the consensus that finally emerged in conference, considering the wide political spectrum represented, that reductions from the Senate figures do not in the least endanger our national security or defense posture. All bureaucracies have fat, even the Pentagon. Yet it is in defense above all that we should have efficiency. Rather than cut into any muscle, we simply made some commonsense financial adjustments, as the language of our report makes clear. In the critical investment accounts of procurement and research and development, we have assumed a real growth of at least 8 percent. This insures a defense second to none. It is my hope that in the future we will delve more into prospective manpower efficiencies and savings since—contrary to the popular impression that defense money mainly goes for hard stuff like tanks and bullets—manpower costs represent, in fact, 55 percent of the Pentagon's budget. Furthermore, it is encouraging that for fiscal year 1979, agencies will be justifying their budget requests along mission lines. This should make for a leaner military. Rather than voting willy-nilly for all the latest gadgets, because another superpower on the block has them, the Pentagon will have a burden of proof to show that they fit into a logical, cost-effective framework. If the Pentagon can show this on a particular weapons system or whatever, I will be its biggest booster. Since the Budget Committee has the assignment to bring down the deficit, it simply must enforce the distinction between things that are essentials and things that are luxuries.

It is gratifying that we were able to cut the Ford-Carter defense budget of some $123.4 billion down to $118.5 billion in budget authority without sacrificing the muscle. That $5 billion cut from those budget levels, I think, makes a great deal of sense, and that is why I am supporting the 050 function as well as the resolution.

Now, if I may address myself to a larger issue, one that always comes up at budget time; namely, the balance between military spending and social spending. I sometimes get a little concerned, Mr. President, at the way we talk about that. There are some who suggest that in order to raise one we have to lower the other, and vice versa. I do not think that is necessarily so.

I think our job, particularly those of us who are conferees of the Budget Committee, is to judge each and every function on its own merits. I think that is what we have done. It has resulted, compared to the original Senate position, in a modest and, I think, fiscally correct reduction in budget authority for the military and an increase in budget authority for socially oriented expenditures. No one is going to tell me that, by talking like this, I support anything less that whatever is necessary to defend this country and its Constitution from all enemies, foreign and domestic. I took this oath solemnly on coming to Congress. My concern is, however, that our real security is much more than a matter of raw military might. It is as much a matter of the economic and moral strength we project to the world, and the health and happiness of our people. That is why I supported the Senate Budget Committee in taking new initiatives for medical care for veterans, education for the handicapped and disadvantaged, grants to State and local governments who are suffering still from the recession, and energy research and conservation. That is also why I supported Senator PROXMIRE's floor amendments for increased funding in housing and community development.

I do not support such spending blindly. We have a whopping big deficit, and no one should paper over that fact. It gives one second and third and fourth thoughts about voting for this budget resolution. But we do not make deficits just for fun. If it were easy to eliminate them, we would do it pronto. The Budget Committee has done its darndest to get a grip on them, but the practical difficulties must be understood. Almost one-half of the budget is in the form of congressionally mandated entitlements, such as those for social security. Add to that

the legal obligations and contracts the Government has incurred, and over three-fourths of the Federal budget is regarded as "relatively uncontrollable." As if that were not enough, inflation this year has slapped on a $25 billion surcharge. I do not think Congress is willing to rescind cost-of-living increases for pensions, social security, retirement or, for that matter, the Department of Defense. In addition, Congress has made decisions in previous years, especially in the defense area, for real growth in budget authority, and these are only now spending out. Finally, the recession has severely aggravated the deficit. Unemployment means the loss of tax revenue and a slowdown in the normal overall expansion of the economy. The estimate commonly cited is that for each percentage point reduction in the unemployment rate, $45 billion GNP is generated, and in turn $14 billion in additional tax revenues. Unemployment also means more unemployment compensation—which is projected to be $13 billion this year—the need for more CETA jobs, and an untold number of other ramifications.

The PRESIDING OFFICER. The Senator's 10 minutes have expired.

Mr. HEINZ. Mr. President, will the Senator yield 1 more minute.

Mr. MUSKIE. Yes.

Mr. HEINZ. I appreciate that.

I do think that we are all committed to bringing those deficits into line, and as long as the Budget Committee has this kind of commitment, both on the part of the House and on the part of the Senate, and particularly the kind of leadership evidenced by the Senator from Maine and the Senator from Oklahoma, I think we will be able to meet our responsibilities to the American people.

INTEREST ON METRO BONDS FOR FISCAL YEAR 1978

Mr. MATHIAS. I wish to compliment the chairman of the Budget Committee and support the committee's recommendation that will insure the Washington, D.C., subway construction remains on schedule.

As a member of the Appropriations Committee, I interpret the Budget Committee proposal as providing sufficient flexibility for the Appropriations Committee to make a direct appropriation for the 80 percent Federal share of the interest charges on Metro construction bonds rather than relying on interstate transfer funds.

Metro construction bonds are 100 percent federally guaranteed and therefore the Federal Government is obligated by the Metro Bonds Guarantee Act to support the interest on these bonds. The local jurisdictions in the Washington metropolitan area have agreed to provide a 20-percent share of that interest cost in keeping with the national policy on mass transit funds which uses an 80/20 cost-sharing formula.

I think that at this point direct appropriations are the best way to handle the debt service problem of the Washington Metro. I hope that in the near future we will be able to work out a long-term solution to this debt servicing problem.

Mr. DOLE. Mr. President, the Senator from Kansas rises to comment on the revised first concurrent resolution.

As a member of the Senate Budget Committee, the Senator from Kansas has participated in the 4-month process which preceded the reporting out of this resolution. As a member of the Budget Committee, I am also aware of the amount of effort the process requires. I would first like to thank Senator MUSKIE, and the ranking minority member, Senator BELLMON, for their strong leadership during this process in committee, and during the Senate-House conference on this resolution.

Mr. President, the Senator from Kansas voted to report the first concurrent resolution out of the Budget Committee. At that time, even though there were some functions about which I had reservations, on the whole, it seemed to me that we had done an effective job of establishing priorities and maintaining some discipline over the budget process.

On May 4, amendments were added to this resolution, which in total added an additional $7.2 billion to budget authority, and $400 million to outlays, raising the expected deficit in 1978 and committing us to even higher nondiscretionary spending levels in future years. While the Senator from Kansas supported an amendment for a small increase in BA for veterans—$0.5 billion—I could not support the aggregate BA figure after the additional $6.7 billion was added by other amendments.

The budget resolution which we are considering today, however, is superior in two particular areas.

NEED FOR PRICE SUPPORT RECOGNIZED

First, in Agriculture, the conferees have recognized that outlays for fiscal year 1978 will have to increase to reflect farm commodity price support expenses. The most recent OMB estimates indicate that market prices will be low this 1977 planting season, particularly impacting wheat and feed grains, assuming good weather this summer.

The budget now reflects these most recent estimates for price support, which I firmly believe it should. It will be reassuring to the Nation's farmers that we have not overlooked their needs. However, market prices for commodities such as wheat and feed grains are extremely variable, and may need adjustment again for the second concurrent resolution. As the distinguished chairman, Senator MUSKIE, pointed out in a letter to the chairman of the Agriculture Committee, the amount of outlays for commodities support could vary by as much as $2 billion during the year.

REDUCED BUDGET AUTHORITY, LOWER SPENDING

The second area in which this budget resolution shows improvement, Mr. President, is the $1.15 billion reduction in budget authority which is reflected in this resolution. I do not believe we can continue to obligate future budgets with nondiscretionary expenses if we ever expect to achieve a balanced budget; $1.15 billion of reduction does very little to counter the $7.2 billion in budget authority which was added to the Senate resolution by amendment on May 4, but it is certainly a step in the right direction.

I am also encouraged that the level of outlays in this resolution is still lower—by $1.65 billion, $460.95 for the Senate Budget Committee versus $462.6 for Carter—than the Carter administration budget proposal in their April estimate. As Senator BELLMON stated earlier, given equal economic assumptions, it means that this budget represents a lower deficit—by $1.65 billion—than the Carter budget proposal in April.

STRONG NATIONAL DEFENSE

Mr. President, I also want to comment on the reduction in the national defense function which is represented here. One area where I believe the budget should reflect real growth is in national defense. As passed by the Senate last week, budget authority and outlay figures were both higher than current policy. Because of the difficulties encountered by the House Budget Committee in getting approval for their budget proposal, the House budget was unrealistically low in both budget authority and outlays, posing a serious threat to conference agreement in this area. The resulting agreement was slightly lower than current policy in budget authority, but above current policy in outlays. Recognizing the difficulty of their task, I can agree with the earlier remarks of the distinguished ranking minority member. Focusing on the higher priority items, and assuming the financial adjustments described in the conference report to stay within the targets for this function, would seem appropriate. This compromise allows for reductions in budget authority and outlays in this function without significantly detracting from continued growth in national defense.

Mr. President, in this, the third year of the new budget process, it is important to recognize that two of the purposes of this process were "to assure effective congressional control over the budgetary process," and "to provide for the congressional determination each year of the appropriate level of Federal revenues and expenditures." This year, the process of controlling the budget seemed extremely difficult, and agreeing on the appropriate level of expenditures seemed to be more an acceptance of spending levels requested by our committees and the administration than an establishment of appropriate levels of revenues. I do not want the Senate to lose sight of the purpose of this process, it is my hope that we can retain a degree of fiscal responsibility throughout our consideration of this resolution and through the rest of this legislative session.

Mr. President, with these reservations, I voice my support for this resolution.

Mr. CHILES. Mr. President, the Senate is now considering the first concurrent resolution on the budget for 1978. This is the third year in which we have brought such a resolution, and a good time to assess the new congressional budget process.

We have shown the public that Congress can set itself firm limits on spending and stick within them. I think this is one reason that public opinion polls are

showing an increase in confidence about Federal economic policy.

We have also shown that Congress can move quickly to respond to changing conditions and either modify economic policy or shift spending priorities to meet new challenges.

Perhaps the most important part of the process is that we have brought to the public an open debate on spending priorities. We have brought forth a summary of all current and proposed spending at one point in time. The Senate has shown that it can debate those priorities, amend the resolution after debate, and still produce a workable total.

We have also learned a lot from 3 years of the budget process. We have found that we need a longer time perspective, since many programs start small then grow later. We need as much emphasis on budget authority, which controls future year spending, as on current year outlays which are largely beyond control.

This conference resolution represents many difficult choices and compromises within the Senate and between the Senate and the House. I have reservations about some of the individual targets and about the size of the overall spending totals. But I will support the resolution, because without it spending would probably be $10 or $15 billion higher. Without the resolution, we would not know what our priorities were until we got to the end of the year, looked back on what we had done, and added up the totals.

Mr. President, that would totally eliminate any public input into spending priorities. Each bill would be considered in isolation and at no point would it have to compete with other possible ways to use the same amount of money.

Overall, I think this resolution represents a well balanced set of expenditures, providing top priorities for new expenditures in defense, education, energy, job creation, and child health. The resolution will allow full cost-of-living increases for all Federal retirement programs—veterans, social security, military, and civil service retirees. At the same time, the total deficit is restrained so that it will not worsen the problem of inflation that inflicts a cost on all of us.

The target for defense spending was the major area of controversy in the conference. Over the last 2 years the Congress has committed ourselves to a real increase in the level of defense spending, particularly in weapons systems and maintenance of our capacity for ready response to emergency situations. I have strongly supported this renewed commitment to defense, while working on several committees to see that expenditures are made more efficient.

The Senate conferees argued to reduce the defense total adopted by the Senate only on the stipulation that the reduction be achieved from financial adjustments and savings from efficiency, rather than cuts in the real program growth provided in the President's budget. If these savings and adjustments do not work out, the totals may have to be modified.

The budget resolution assumes major program increases in many areas of the budget. I hope that in all areas Congress will carefully examine existing programs and possible trade-offs before it undertakes increased expenditures. I think we have to recognize that there are limits to both financial and human resources. Each new program means shifting the attention of both the public and the Government away from ongoing activities. I hope that we can recognize these trade-offs as we proceed through the authorizing and appropriating process. In many cases we may be able to come in below target and reduce the size of the deficit.

The American public expects us to show this kind of restraint and begin moving toward a balanced budget and stable economic policy. I am hopeful that with continued support for the congressional budget process we will be able to help restore the confidence of the American people that Government is acting reasonably and rationally.

Mr. THURMOND. Mr. President, on this vote, I am voting in the negative. While the conference substitute reduces the fiscal year 1977 budget by $17.15 billion, there still remains a $52.6 billion deficit. I cannot, in good conscience, sanction such a deficit.

Until the Congress accepts the basic law of economics as to the evils of deficit financing, we will not see significant long-range improvements in our economy.

Mr. HATCH. Mr. President, once again the Congress has passed up the opportunity to do something positive for the millions of productive people who provide the economic power of this Nation. Once again we have given precedent to building our spending constituencies. Once again we have made it clear that the people who work and produce exist, in our eyes, only to fund our spending programs. Once again the vested interests, the recipients of handouts, have triumphed over the working American. Once again the Congress chose to spend at the expense of the economic health of the Nation.

Five times this year the Congress has voted down permanent reductions in the personal income tax rates. Each time those of us who pushed for a tax reduction were told that there was no room in the budget. There was not any room in the budget for the spending programs either. But that did not keep us from spending. Any time that there is no room in the budget for spending, we find room in the deficit. This time there is a $60 billion deficit to accommodate the spending programs that could not find room in the budget.

This Congress has never explained why there can bes spending programs, but not tax cuts, when there is no room in the budget. However, this Congress has made it clear that it prefers spending money to cutting taxes.

I do not share this preference, and neither do the American people.

Mr. WALLOP. Mr. President, I want to take this opportunity to commend the members of the Senate Budget Committee for their diligent efforts in establishing budget targets for fiscal year 1978. The formation of this committee and its substantive contributions have done much to make the Senate, the Congress, and the American public aware of aggregate spending levels. After the passage of the Budget Act in 1974, Congress for the first time had an advance handle on aggregate spending levels. Before this act, Congress would spend some here, and some there, and pass a tax bill to raise some money, but there was no advance indication of where all that spending would lead us. Deficits depended on how much Congress spent, and Congress spent without any consideration of the deficits. The Budget Act appears to have changed much of that process, adding order and control where there was none before.

But while I can commend the process, I do not approve of the result. Senate Concurrent Resolution 19 sets the revenue levels at $396.3 billion for fiscal year 1978 and spending levels at $460.95 billion with an estimated deficit at $64.65 billion. Mr. President, that is too much. The public debt is pushing $800 billion, and with gigantic yearly deficits we will slide over the $800 billion mark all too soon. Although the Budget Act gives us the opportunity to incorporate some fiscal discipline into our lives, we have yet to maximize the potential of that process. Fiscal discipline means spending restraint, and a deficit of $65 billion is not spending restraint.

For this reason, I will not support the conference report on Senate Concurrent Resolution 19, the budget resolution. I look forward to the day when the process as well as the result merit commendation.

Mr. MUSKIE. Mr. President, to eliminate the technical question, at this time I move that the conference report be agreed to.

The PRESIDING OFFICER (Mr. ZORINSKY). The question is on agreeing to the conference report.

The conference report was agreed to.

Mr. MUSKIE. Mr. President, at this time I yield 5 minutes to my good friend the Senator from New Mexico, an invaluable member of the Budget Committee from its inception.

The PRESIDING OFFICER. Does the Senator from Maine wish to make his motion at this time?

Mr. MUSKIE. Mr. President, I move that the Senate recede from its disagreement to the House amendment to Senate Concurrent Resolution 19 and concur therein with an amendment which is at the desk.

The amendment is as follows:

That the Congress hereby determines and declares, pursuant to section 301(a) of the Congressional Budget Act of 1974, that for the fiscal year beginning on October 1, 1977—

(1) the recommended level of Federal revenues is $396,300,000,000, and the amount by which the aggregate level of Federal revenues should be decreased is $17,600,000,000.

(2) the appropriate level of total new budget authority is $503,450,000,000;

(3) the appropriate level of total budget outlays is $460,950,000,000;

(4) the amount of the deficit in the budget which is appropriate in the light of economic conditions and all other relevant factors is $64,650,000,000; and

(5) the appropriate level of the public debt is $784,900,000,000, and the amount by which

the statutory limit on such debt should accordingly be increased is $83,600,000,000.

SEC. 2. Based on allocations of the appropriate level of total new budget authority and of total budget outlays as set forth in paragraphs (2) and (3) of the first section of this resolution, the Congress hereby determines and declares pursuant to section 301 (a)(2) of the Congressional Budget Act of 1974 that, for the fiscal year beginning on October 1, 1977, the appropriate level of new budget authority and the estimated budget outlays for each major functional category are as follows:

(1) National Defense (050):
(A) New budget authority, $118,500,000,000;
(B) Outlays, $111,000,000,000.
(2) International Affairs (150):
(A) New budget authority, $9,300,000,000;
(B) Outlays, $7,300,000,000.
(3) General Science, Space, and Technology (250):
(A) New budget authority, $4,900,000,000;
(B) Outlays, $4,700,000,000.
(4) Natural Resources, Environment, and Energy (300):
(A) New budget authority, $20,700,000,000;
(B) Outlays, $20,000,000,000.
(5) Agriculture (350):
(A) New budget authority, $2,200,000,000;
(B) Outlays, $4,350,000,000.
(6) Commerce and Transportation (400):
(A) New budget authority, $20,000,000,000;
(B) Outlays, $19,400,000,000.
(7) Community and Regional Development (450):
(A) New budget authority, $8,200,000,000;
(B) Outlays, $10,800,000,000.
(8) Education, Training, Employment, and Social Services (500):
(A) New budget authority, $26,800,000,000;
(B) Outlays, $27,200,000,000.
(9) Health (550):
(A) New budget authority, $47,900,000,000;
(B) Outlays, $44,300,000,000.
(10) Income Security (600):
(A) New budget authority, $179,900,000,000;
(B) Outlays, $146,700,000,000.
(11) Veterans Benefits and Services (700):
(A) New budget authority, $20,250,000,000;
(B) Outlays, $20,200,000,000.
(12) Law Enforcement and Justice (750):
(A) New budget authority, $3,700,000,000;
(B) Outlays, $3,850,000,000.
(13) General Government (800):
(A) New budget authority, $3,800,000,000;
(B) Outlays, $3,850,000,000.
(14) Revenue Sharing and General Purpose Fiscal Assistance (850):
(A) New budget authority, $9,800,000,000;
(B) Outlays, $9,700,000,000
(15) Interest (900):
(A) New budget authority, $43,000,000,000.
(B) Outlays, $43,000,000,000.
(16) Allowances:
(A) New Budget authority, $800,000,000;
(B) Outlays, $900,000,000.
(17) Undistributed Offsetting Receipts (950):
(A) New budget authority,—$16,300,000,000;
(B) Outlays,—$16,300,000,000.

SEC. 3. In the Third Budget Resolution for fiscal year 1977, the Congress provided for revenue and spending proposals designed to stimulate the Nation's economy in order to reduce unemployment. These proposals, together with recent indications of more vigorous economic growth in the private sector, provide evidence that the Nation's economy may be returned to the levels needed to provide jobs to millions of our unemployed.

The Congress recognizes, however, that unusual uncertainties surround the current economic outlook for 1977 and 1978—primarily, the economic impact of the stimulus proposals and the likelihood of continued economic growth in the private sector—and that additional time and information are needed to make final determinations with respects to fiscal policy for fiscal year 1978; and declares that, if economic recovery does not proceed satisfactorily during the months immediately following adoption of the First Budget Resolution for Fiscal Year 1978, it will be necessary to provide additional stimulus to the economy in appropriate amounts to be determined in the Second Budget Resolution for Fiscal Year 1978. On the other hand, if the recovery continues to show signs of long-term renewed growth, it may be desirable to reduce some of the economic stimulus provided for fiscal year 1978 in order to make more rapid progress toward a balanced budget.

SEC. 4. (a) Pursuant to section 304 of the Congressional Budget Act of 1974, the appropriate aggregate amounts for the fiscal year 1977 set forth in the first section of S. Con. Res. 10 are revised as follows:

(1) the recommended level of Federal revenues is $356,600,000,000, and the amount by which the aggregate level of Federal revenues should be decreased is $2,600,000,000;

(2) the appropriate level of total new budget authority is $470,200,000,000;

(3) the appropriate level of total budget outlays is $409,200,000,000;

(4) the amount of the deficit in the budget which is appropriate in light of economic conditions and all other relevant factors is $52,600,000,000; and

(5) the appropriate level of the public debt is $701,300,000,000, and the amount by which the statutory limit on such debt should accordingly be increased is $1,300,000,000.

(b) Pursuant to section 304 of the Congressional Budget Act of 1974, the allocations for the fiscal year 1977 made in section 2 of S. Con. Res. 10 are revised so that, the appropriate levels of new budget authority and the estimated budget outlays for the various functional categories are as follows:

(1) National Defense (050):
(A) New budget authority, $108,800,000,000;
(B) Outlays, $98,900,000,000.
(2) International Affairs (150):
(A) New budget authority, $7,900,000,000;
(B) Outlays, $6,500,000,000.
(3) General Science, Space, and Technology (250):
(A) New budget authority, $4,500,000,000;
(B) Outlays, $4,600,000,000.
(4) Natural Resources, Environment, and Energy (300):
(A) New budget authority, $18,700,000,000;
(B) Outlays, $16,100,000,000.
(5) Agriculture (350):
(A) New budget authority, $2,300,000,000;
(B) Outlays, $4,500,000,000.
(6) Commerce and Transportation (400):
(A) New budget authority, $17,300,000,000;
(B) Outlays, $14,900,000,000.
(7) Community and Regional Development (450):
(A) New budget authority, $14,800,000,000;
(B) Outlays, $10,100,000,000.
(8) Education, Training, Employment, and Social Services (500):
(A) New budget authority, $30,400,000,000;
(B) Outlays, $20,900,000,000.
(9) Health (550):
(A) New budget authority, $40,600,000,000;
(B) Outlays, $39,000,000,000.
(10) Income Security (600):
(A) New budget authority, $167,700,000,000;
(B) Outlays, $137,100,000,000.
(11) Veterans Benefits and Services (700):
(A) New budget authority, $18,900,000,000;
(B) Outlays, $18,100,000,000.
(12) Law Enforcement and Justice (750):
(A) New budget authority, $3,500,000,000;
(B) Outlays, $3,600,000,000.
(13) General Government (800):
(A) New budget authority, $3,500,000,000;
(B) Outlays, $3,600,000,000.
(14) Revenue Sharing and General Purpose Fiscal Assistance (850):
(A) New budget authority, $7,600,000,000;
(B) Outlays, $7,700,000,000.
(15) Interest (900):
(A) New budget authority, $38,000,000,000;
(B) Outlays, $38,000,000,000.
(16) Allowances:
(A) New budget authority, $800,000,000;
(B) Outlays, $700,000,000.
(17) Undistributed Offsetting Receipts (950):
(A) New budget authority, —$15,100,000,000;
(B) Outlays, —$15,100,000,000.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Maine.

The Senator from New Mexico is recognized.

Mr. DOMENICI. I thank my good friend from Maine. I do not think I will use the full 5 minutes. I have a statement which omitted a couple of points I think are important. I want to state them early, and then introduce the statement.

Mr. President, a great deal was made in the conference between the House and the Senate about whether or not the Senate's figures on military preparedness were sacrificing domestic programs, nonmilitary in nature, for an increasing percentage of either the GNP or the budget for the military.

As the conferees know and as the Senate should know, this became the focal issue that almost caused us not to have a budget resolution.

I have gone back over past budgets in my prepared statement for more than 10 years, and in real dollars the reviews shows the path of spending by the U.S. Government on military preparedness and domestic programs of all types, including those that deal with helping people with actual cash outlays and programs such as food stamps, and I think it is safe to say that but for the last 2 years, we have indeed not sacrificed domestic programs for the military. Quite to the contrary, and if there was a noticeable growth pattern, it was an annualized increase in domestic programs, nonmilitary, and a stagnant or even diminishing real dollar support for military.

President Ford's budget of 2 years ago began to move a little bit in the direction of real increases in military preparedness, and I think it is fair to say that this summary should clearly indicate that the Budget Committee in the Senate has not attempted to sacrifice domestic programs for exaggerated or bloated support for military, but quite to the contrary. We told the conferees that over and over, and we really hope that those in the House of Representatives who are genuinely concerned about that will do some analysis, will read these figures, and will conclude that we compromised significantly in lowering our outlay figure and budget authority figure for the military.

I wish to say for myself that I am not totally satisfied with the conference report. I think we have, indeed, set some extremely low targets for the military, and I raised that in the conference meetings. That is not my total concern, but as the Senate knows, I thought our budget authority figures were too high, especially after we added about $7.2 billion in budget authority here on the floor.

I tried to take that out, and did not succeed; so it would have been logical that I not vote for this budget conference report, because we are really close to those figures that we came up with, with the add-on.

But in all honesty, I want the Senate to know that I do not think there is a process more important to our institutions, to the House of Representatives and the Senate, and to the prosperity of America, than the budget process. We can talk all we want about programs, we can talk all we want about substantive changes in programs and levels of funding, but the stark facts are that a Federal Government that is uncontrolled in terms of what it is trying to do and how much it will spend was quickly losing the respect of the people of this country in terms of why they should be taxed, in terms of why we build up their expectations and then cannot meet them; and as I see it, this Budget Reform Act came about from the grassroots up. The American people were demanding priorities and discipline, and we felt the need here 2 or 3 years later than they felt it out in the byways and the grassroots of America.

I am genuinely concerned that if we do not have this process, which sets these goals and offers realistic targets, and does bring discipline to our almost unquenchable desire to use the Federal Government to solve all problems in our country, then I think there is little hope for credibility between these institutions here in Washington and the American people in the area of taxation, whether they will stand for it, in the area of social programs, whether they will support them, and in the area of those in need in our country, whether they have any confidence that we will try to help them.

Because of that, I felt that the stalemate in the conference was probably going to end up with the real probability of no Budget Act at all, because the cornerstone of the Budget Act is the first concurrent resolution, the one that sets the targets. We know it gets adjusted in the real world of legislation, and changed, but if we had come back without resolving it, then I think the Budget Reform Act and its tremendously important qualities for credibility in this democratic process could very well have gone by the board, as previous budgetary reform proposals have found their way onto the Hill and into the institutions and then somehow found their way out rather quickly.

If we can withstand that now, with the enormous pressures that have come upon this process because of economic conditions, economic stimulus needed and then not needed, differences of opinion in terms of inflation being more important than recission—and we have fought all of this in that field, and been battered around—if we had come back unresolved because of some couple of billions of dollars in disparity, I think we would not have had a budget process next year.

I have been on the Budget Committee for 2½ years—almost 3—as a part of this team, and I am proud of that. I think we might well, in this period, have saved in unneeded expenditures as much as $20 billion, maybe $10 billion each year, or maybe $13 or $14 billion 1 year and $10 or $11 billion the other.

The reason we have done that is that every time America has a crisis, especially an economic crisis, the nature of the institution and its committees is for everyone to want to solve it immediately. In my short 5 years here, I have seen that once without a Budget Reform Act. Every committee that thought it had a chance to help solve the economic crisis quickly called national hearings and got bills to the floor, whether it be new CETA programs for economic reform, extension of unemployment insurance and emergency employment programs, the reform of government operations through countercyclical revenue sharing, or any of the rest of those that preceded this particular kind of program.

I believe we would have had those here on the floor in the last 3 years in abundance, with no targets to measure them against and nothing but the individual persuasiveness of Senators to keep them from becoming law.

We now have the collective spirit of reasonable macrotargets in this budget, and we do not always succeed. The nature of the institution is such that the committees are still very important. Their jurisdictions are properly the pride of the committees. So they want to get into developing the solution when we have problems. That has caused us to have to adjust; it has caused us to have to stretch targets, it has even caused us to have to analyze what programs belong in some of these targets, as Senators well know.

With all that concern, that is why I came down on the side of supporting the compromise.

Let me say what my version of the military preparedness figures is.

Yes, we came down to $118.5 billion in BA and $111 billion in outlays. But we very clearly indicated in our position that we did that with certain savings assumptions. I hope everyone will read those. My version as one Senator—and I am glad the chairman of the Armed Services Committee is here—is that we are saying, "Try to do that." We are saying, "The figures would assume you could do that."

I want to add for myself that in the process of accommodating, in the appropriations process, and in analyzing inflation in the next 4, 5, or 6 months, if, as a matter of fact, those savings cannot be made, as far as this Senator is concerned I will seriously consider, for the second targets, the fact that these first might have to be breached. I want everyone to understand that is why I voted for it. I am not sure we can get those savings. I say that to the good chairman from Mississippi.

I did not vote for this to cut procurement because I believe the administration has already recommended procurement cuts that are right at the bottom of what we can stand.

I supported it on that score. I compliment those who thought up that approach as a way to break the stalemate and preserve the resolution and, in turn, preserve the budget process.

In conclusion, I would be remiss if I did not say to the good Senator from Maine and my good friend from Oklahoma that sometimes this process must seem to both Senators to be far less dramatic than the work of a substantive committee that is bringing new legislation to the floor, which gets a Senator all kinds of notoriety because, as a matter of fact, a Senator has a new idea to help solve a problem.

I commend the Senators for the time they have spent on the process and on this resolution. This is a rather difficult existence when contrasted with the glory of huge new programs that the Senators could be part of in other committees.

Let me say this: Basically, the economic system of America is what gives support to all the programs of which we could be part.

If it does not work, then we are going to have to be here dreaming up programs that are facades, that are trying to cover up the issue of the economic system weakening, which is the basic strength of Americans, their jobs, their capital investments, their improving standard of living. In turn, the budget process has, as its basic motivator, an appropriate relationship of government to the overall economy of America. That is what macroeconomics are about and that is what the priorities are about.

I want to say that I believe the Senators' time is more than well spent. The fact that most of the fights are in conferences and over numbers that many do not understand should not discourage persistence, for if we succeed in balancing government versus the other activities of people in this country with a proper mix, we may very well have found the route to an ever-increasing economy.

It could very well be that government size is out of balance with the economy and that the budget process might find that is the real inhibitor to growth. Maybe 23 percent of GNP for the Federal Government and 38 percent for total government expenditures may just be too much. That may be why the private sector which we pride ourselves in might not be working as well as it could. If that is the case, this process has a better chance of finding that out than anything in which we have been involved, institutionally, I would assume, in many, many decades.

I commend the Senators for their efforts. It is a privilege to join them in their work.

Mr. President, I ask unanimous consent that my prepared statement, including my detailed evaluation of domestic social programs versus military be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SUPPORT FOR CONFERENCE REPORT ON S. CON. RES. 19

It was with a considerable amount of reluctance and misgivings that I signed the Conference Report now before the Senate. I

had voted against the Senate version because I felt it was deficient in several respects, primarily because it projected an FY 78 deficit I found unacceptably high, particularly in comparison with the FY 77 deficit.

You will recall that three floor amendments were adopted which added $7.2 billion in Budget Authority and $0.4 billion in Outlays. You will recall further that I offered an amendment to eliminate those floor increases, an amendment which was defeated. My main arguments at that time was that we had casually increased Budget Authority by a totally unjustified amount without regard to the fact that Budget Authority is the force which drives future spending and fuels government programs, increasing the already too high degree of uncontrolability in the Federal budget.

Now we have before us a conference version of the resolution which has a higher deficit but a smaller number for Budget Authority. While these two factors tend to offset each other, these modifications are not significant enough, in themselves, to cause me to support the Conference Report.

I signed the Conference Report and I will support it today because the nation cannot afford to be again without a congressional budget process. The very foundation of the budget process is a budget resolution, and the conference version before us is a vast improvement over the House's Budget Resolution. In order to preserve the process and prevent adoption of a version closer to the House product, I am, reluctantly, as I said, supporting the Conference Resolution.

In the area of national defense, I am particularly pleased that we rejected the inadequate figures contained in the House's Budget Resolution. It was a difficult conference mainly because the conferees on the House side resisted reasonable defense expenditures. I am pleased that the Senate conferees stuck together and came out of conference with $118.5 billion in Budget Authority and $111.0 billion in outlays for national defense.

There are many undoubtedly who will argue, as House conferees did, that these figures are too high since they represent increases over this year of more than 9 percent in Budget Authority and more than 12 percent in Outlays.

In light of past budget trends it seems entirely proper to me to have increases of this magnitude in this nation's commitment to its national security.

By any measure one chooses to use, military spending has declined when compared to total federal expenditures, or as a portion of the GNP, and as compared to non-defense spending.

Critics of defense spending conventionally forget or overlook the fact that since 1968 defense outlays have gone down from 44% of Federal expenditures to less than 26% in this budget. During that same period payments to individuals and grants have gone up from 32% of Federal outlays to over 53%.

As I said previously, choose any comparison you want during the last two decades and you will confirm this alarming trend. Typical examples are found by comparing national defense with grants to State and local governments. Over the 20 year period ending in 1976, grants to State and local governments increased at the rate of about 14% per year or over 1000% for the period. During that same time, defense spending increased by only 126%. I support Federal assistance to State and local governments and I only point out this trend to demonstrate that people are simply wrong to say that we fund military programs at the expense of domestic assistance.

The 20-year period from 1955 to 1976 saw spending for defense and spending for direct payments to individuals, as a percentage of Federal outlays, almost change places. In 1955, defense spending was 56.5% of Federal outlays while direct payments to individuals was 14.8%. By 1976 defense spending had fallen to 24.4% of Federal outlays while payments to individuals accounted for 46.9% of Federal outlay.

So, it is time we reversed this trend and this Resolution contained an increase in defense spending to 25.7% of projected outlays, up from the 24.1% anticipated for fiscal year 1977.

Finally, Mr. President, the difference between the Senate Resolution and the Conference Resolution for the National Defense Function do not adversely affect the national security aspects of the military function. These reductions represent certain anticipated financial adjustments for unobligated balances, some absorption of inflation in operations and maintenance accounts, a possible realization of savings from increased personnel efficiencies and a lower inflation rate than assumed by the Administration. These downward adjustments will not affect the capability of the defense establishment to procure the weapons, conduct the research and development, and recruit and train the personnel required to maintain the defense posture envisioned in the Senate Resolution. If these adjustments cannot be achieved or these savings cannot be realized in spite of all efforts, we will have the opportunity, through the Second Concurrent Resolution, to reevaluate our numbers and adjust as necessary to reflect those realities.

In closing, Mr. President, I know that none of us is entirely satisfied with the Resolution. There are lots of things I would change were it up to me alone, but, we all must realize that there is no single budget document that would satisfy everyone. I am convinced that, under the circumstances in which we find ourselves in May of 1976, this is an acceptable blueprint for Federal actions in fiscal year 1978. Accordingly, I urge my colleagues to support it. It is certainly better than no blueprint at all.

Mr. MUSKIE. May I say in response to the Senator he has demonstrated a high level of statesmanship in contributing his support in the conference for a budget resolution that he found it necessary to vote against in reporting out of committee and on the floor of the Senate. He has demonstrated his concern for this process. I honor him for it, and I am grateful to him for it.

Mr. DOMENICI. I thank the chairman.

Mr. President, I yield back the remainder of my time.

Mr. MUSKIE. I believe there are no other speakers. I suggest the absence of a quorum, Mr. President.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. CRANSTON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL 12:15 P.M.

Mr. CRANSTON. Mr. President, I move that the Senate stand in recess until 12:15 p.m.

The motion was agreed to, and at 11:17 a.m. the Senate recessed until 12:15 p.m.; whereupon, the Senate reassembled when called to order by the Acting President pro tempore (Mr. ALLEN).

FIRST CONCURRENT BUDGET RESOLUTION, SENATE CONCURRENT RESOLUTION 19—CONFERENCE REPORT

The Senate continued with the consideration of the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the concurrent resolution (S. Con. Res. 19) setting forth the congressional budget for the U.S. Government for the fiscal year 1978.

The ACTING PRESIDENT pro tempore. Who yields time?

Mr. SPARKMAN. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. Does the Senator ask that the time not be charged to either side?

Mr. SPARKMAN. Yes.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. SARBANES). Without objection, it is so ordered.

UNANIMOUS CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, there are two measures on the Unanimous Consent Calendar that were carried over from yesterday. I ask unanimous consent that the Senate proceed to the consideration of Calendar Order Nos. 99 and 110.

The PRESIDING OFFICER. Without objection, it is so ordered.

NASA AUTHORIZATIONS, 1978

The Senate proceeded to consider the bill (H.R. 4088) to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes, which had been reported from the Committee on Commerce, Science, and Transportation with an amendment to strike out all after the enacting clause and insert the following:

That there is hereby authorized to be appropriated to the National Aeronautics and Space Administration to become available October 1, 1977:

(a) For "Research and development," for the following programs:

(1) Space Shuttle, $1,354,200,000;

(2) Space flight operations, $265,800,000;

(3) Expendable launch vehicles $136,500,000;

(4) Physics and astronomy, $226,200,000;

(5) Lunar and planetary exploration, $150,200,000;

(6) Life sciences, $33,300,000;

(7) Space applications, $239,800,000;

(8) Aeronautical research and technology, $231,000,000;

(9) Space research and technology, $97,700,000;

(10) Energy technology applications, $4,500,000;

(11) Tracking and data acquisition, $281,700,000;

(12) Technology utilization, $9,100,000.

(b) For "Construction of facilities," including land acquisition, as follows:

(1) Construction of central hydraulic system, Hugh L. Dryden Flight Research Center, $420,000;

(2) Construction of additional technical processing facilities, Goddard Space Flight Center, $3,100,000;

(3) Modifications to various buildings for seismic protection, Jet Propulsion Laboratory, $2,830,000;

(4) Modification of chillers in central heating and cooling plant, Lyndon B. Johnson Space Center, $2,540,000;

(5) Modifications for utility control system, John F. Kennedy Space Center, $2,130,000;

(6) Rehabilitation of main heating plant Langley Research Center, $790,000;

(7) Rehabilitation of unitary plan wind tunnel, Langley Research Center, $980,000;

(8) Modification of central chilled water system, Lewis Research Center, $860,000;

(9) Modifications for utility control system, National Space Technology Laboratories, $620,000;

(10) Large aeronautical facility: construction of national transonic facility, Langley Research Center, $23,500,000;

(11) Large aeronautical facility: modification of 40- by 80-foot subsonic wind tunnel, Ames Research Center, $13,500,000;

(12) Various locations: rehabilitation and modification of 64-meter antenna components, $1,750,000;

(13) Space Shuttle facilities at various locations as follows:

(A) Modifications to launch complex 39, John F. Kennedy Space Center, $40,700,000;

(B) Modifications for solid rocket booster processing facilities, John F. Kennedy Space Center, $1,730,000;

(C) Rehabilitation of barge channels, John F. Kennedy Space Center, $2,090,000;

(D) Modifications for crew training facilities, Lyndon B. Johnson Space Center, $860,000;

(E) Modification of manufacturing and final assembly facilities for external tanks, Michoud Assembly Facility, $18,610,000;

(F) Rehabilitation and modification of Shuttle facilities, at various locations, $1,750,000;

(14) Space Shuttle payload facility: modifications and addition for Shuttle payload vertical processing, John F. Kennedy Space Center, $6,410,000;

(15) Rehabilitation and modification of facilities at various locations, not in excess of $500,000 per project, $18,900,000;

(16) Minor construction of new facilities and additions to existing facilities at various locations, not in excess of $250,000 per project, $5,950,000;

(17) Facility planning and design not otherwise provided for, $11,780,000.

(c) For "Research and program management", $846,989,000, and such additional or supplemental amounts as may be necessary for increases in salary, pay, retirement, or other employee benefits authorized by law.

(d) Notwithstanding the provisions of subsection 1(g), appropriations for "Research and development" may be used (1) for any items of a capital nature (other than acquisition of land) which may be required at locations other than installations of the Administration for the performance of research and development contracts, and (2) for grants to nonprofit institutions of higher education, or to nonprofit organizations whose primary purpose is the conduct of scientific research, for purchase or construction of additional research facilities; and title to such facilities shall be vested in the United States unless the Administrator determines that the national program of aeronautical and space activities will best be served by vesting title in any such grantee institution or organization. Each such grant shall be made under such conditions as the Administrator shall determine to be required to insure that the United States will receive therefrom benefit adequate to justify the making of that grant. None of the funds appropriated for "Research and development" pursuant to this Act may be used in accordance with this subsection for the construction of any major facility, the estimated cost of which, including collateral equipment, exceeds $250,000, unless the Administrator or his designee has notified the Speaker of the House of Representatives and the President of the Senate and the Committee on Science and Technology of the House of Representatives and the Committee on Commerce, Science, and Transportation of the Senate of the nature, location, and estimated cost of such facility.

(e) When so specified and to the extent provided in an appropriation Act (1) any amount appropriated for "Research and development" or for "Construction of facilities" may remain available without fiscal year limitation, and (2) maintenance and operation of facilities, and support services contracts may be entered into under the "Research and program management" appropriation for periods not in excess of 12 months beginning at any time during the fiscal year.

(f) Appropriations made pursuant to subsection 1(c) may be used, but not to exceed $35,000, for scientific consultations or extraordinary expenses upon the approval or authority of the Administrator and his determination shall be final and conclusive upon the accounting officers of the Government.

(g) Of the funds appropriated pursuant to subsections 1(a) and 1(c), not in excess of $25,000 for each project, including collateral equipment, may be used for construction of new facilities and additions to existing facilities, and not in excess of $50,000 for each project, including collateral equipment, may be used for rehabilitation or modification of facilities: *Provided*, That of the funds appropriated pursuant to subsection 1(a), not in excess of $250,000 for each project, including collateral equipment, may be used for any of the foregoing for unforeseen programmatic needs.

(h) The authorization for appropriation to the National Aeronautics and Space Administration of $6,500,000, which amount represents that part of the authorization provided for in section 1(b)(4) of the National Aeronautics and Space Administration Authorization Act, 1976, for which appropriations have not been made, shall expire on the date of the enactment of this Act.

(i) The authorization for appropriation to the National Aeronautics and Space Administration of $6,000,000, which amount represents that part of the authorization provided for in section 1(b)(14)(B) of the National Aeronautics and Space Administration Authorization Act, 1977, for which appropriations have not been made, shall expire on the date of the enactment of this Act.

SEC. 2. Authorization is hereby granted whereby any of the amounts prescribed in paragraphs (1) through (16), inclusive, of subsection 1(b)—

(1) in the discretion of the Administrator or his designee, may be varied upward 10 percent, or

(2) following a report by the Administrator or his designee to the Committee on Science and Technology of the House of Representatives and the Committee on Commerce, Science, and Transportation of the Senate on the circumstances of such action, may be varied upward 25 percent,

to meet unusual cost variations, but the total cost of all work authorized under such paragraphs shall not exceed the total of the amounts specified in such paragraphs.

SEC. 3. Not to exceed one-half of 1 percent of the funds appropriated pursuant to subsection 1(a) hereof may be transferred to the "Construction of facilities" appropriation, and, when so transferred, together with $10,000,000 of the funds appropriated pursuant to subsection 1(b) hereof (other than funds appropriated pursuant to paragraph (17) of such subsection) shall be available for expenditure to construct, expand, or modify laboratories and other installations at any location (including locations specified in subsection 1(b)), if (1) the Administrator determines such action to be necessary because of changes in the national program of aeronautical and space activities or new scientific or engineering developments, and (2) he determines that deferral of such action until the enactment of the next authorization Act would be inconsistent with the interest of the Nation in aeronautical and space activities. The funds so made available may be expended to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment. No portion of such sums may be obligated for expenditure or expended to construct, expand, or modify laboratories and other installations unless (A) a period of 30 days has passed after the Administrator or his designee has transmitted to the Speaker of the House of Representatives and to the President of the Senate and to the Committee on Science and Technology of the House of Representatives and to the Committee on Commerce, Science, and Transportation of the Senate a written report containing a full and complete statement concerning (1) the nature of such construction, expansion, or modification, (2) the cost thereof including the cost of any real estate action pertaining thereto, and (3) the reason why such construction, expansion, or modification is necessary in the national interest, or (B) each such committee before the expiration of such period has transmitted to the Administrator written notice to the effect that such committee has no objection to the proposed action.

SEC. 4. Notwithstanding any other provision of this Act—

(1) no amount appropriated pursuant to this Act may be used for any program deleted by the Congress from requests as originally made to either the House Committee on Science and Technology or the Senate Committee on Commerce, Science, and Transportation,

(2) no amount appropriated pursuant to this Act may be used for any program in excess of the amount actually authorized for that particular program by sections 1(a) and 1(c), and

(3) no amount aporopriated pursuant to this Act may be used for any program which has not been presented to or requested of either such committee,

unless (A) a period of 30 days has passed after the receipt by the Speaker of the House of Representatives and the President of the Senate and each such committee of notice given by the Administrator or his designee containing a full and complete statement of the action proposed to be taken and the facts and circumstances relied upon in support of such proposed action, or (B) each such committee before the expiration of such period has transmitted to the Administrator written notice to the effect that such committee has no objection to the proposed action.

SEC. 5. It is the sense of the Congress that it is in the national interest that consideration be given to geographical distribution of Federal research funds whenever feasible, and that the National Aeronautics and Space Administration should explore ways and means of distributing its research and development funds whenever feasible.

SEC. 6. The National Aeronautics and Space Administration is authorized, when so provided in an appropriation Act, to enter into and to maintain a contract for tracking and data relay satellite services. Such services shall be furnished to the National Aeronautics and Space Administration in accordance with applicable authorization and appropriations Acts. The Government shall incur no costs under such contract prior to the furnishing of such services except that the contract may provide for the payment for contingent liability of the Government which may accrue in the event the Government should decide for its convenience to terminate the contract before the end of the period of the contract. Facilities which may be required in the performance of the contract may be constructed on Government-owned lands if there is included in the contract a provision under which the Government may acquire title to the facilities, under terms and conditions agreed upon in the contract, upon termination of the contract.

The Administrator shall in January of each year report to the Committee on Science and Technology and the Committee on Appropriations of the House of Representatives and the Committee on Commerce, Science, and Transportation and the Committee on Appropriations of the Senate the projected aggregate contingent liability of the Government under termination provisions of any contract authorized in this section through the next fiscal year. The authority of the National Aeronautics and Space Administration to enter into and to maintain the contract authorized hereunder shall remain in effect unless repealed by legislation hereafter enacted by the Congress.

SEC. 7. Paragraph (1) of subsection 1(a) of the National Aeronautics and Space Administration Authorization Act, 1977 (Public Law 94-307), is amended by striking out "$1,288,100,000" and inserting in lieu thereof "$1,383,100,000".

SEC. 8. This Act may be cited as the "National Aeronautics and Space Administration Authorization Act, 1978".

Mr. STEVENSON. Mr. President, the fiscal year 1978 authorization bill for NASA will continue the balanced program of research and development in space and aeronautics that the agency now has under way. NASA had a successful year in 1976, and this bill will provide the support needed to maintain this record in the coming year.

This bill is the first item of NASA legislation to be reported since the Committee on Commerce, Science, and Transportation assumed jurisdiction over the agency. When we opened hearings on the NASA fiscal year 1978 authorization bill, I listed some general principles that would guide the Committee and the Subcommittee on Science, Technology and Space in evaluating the budget request.

We have applied these principles in our consideration of the authorization bill, and I would like to share them with the Senate.

First, there should be a continuing emphasis on programs that directly benefit the public.

Second, the NASA budget should remain fairly level, barring unforeseen exigencies, to avoid rapid increases or layoffs in personnel. Such actions are costly and make it difficult for NASA to plan effectively. New initiatives should be thoroughly evaluated and weighed against the needs of the Nation. Once Congress approves a new project, it should continue to support the work unless the project is mismanaged or its rationale no longer justified.

Third, a proper balance should be maintained between basic research and technology applications. Similarly, there should be an appropriate balance between aeronautics and space in what is now a space-oriented agency.

Fourth, the objective of space science projects should be science and not space spectaculars.

The NASA authorization for fiscal year 1978 recommended by the committee totals $4,038,789,000, which is about 9 percent higher than the fiscal year 1977 authorization. It is $4 million above the amount requested by the administration and $15 million below the total already authorized by the House.

Most of the funds authorized, about $3 billion, are for research and development. They provide for continued work on the Space Shuttle, space flight operations, research in space, applications of space technology here on Earth and aeronautical research.

The recommended authorization for construction of facilities is $161.8 million. It includes $72 million for Space Shuttle facilities and $37 million for two wind tunnels on which work began last year. The facilities request contains $9.6 million to start a new program of capital investment to achieve greater reductions in energy usage. NASA cut its consumption of energy 26 percent over a 3-year period and has the goal of achieving a 50 percent reduction by 1985.

The authorization for research and program management is almost $847 million. About three-quarters of this request is to pay salaries and related costs of NASA employees. It will provide for 23,737 permanent positions, 56 percent of which are scientific, engineering and technical jobs. The fiscal year 1978 budget request calls for 79 fewer personnel than in fiscal year 1977.

As in prior years, much of the funding that we recommend today is for scientific and applications projects with lead-times of 5 or 6 years. For example, funds that Congress authorized in the late 1960's and early 1970's resulted in the success last year of the Viking spacecraft which successfully landed on Mars. The results of this mission, particularly the color photos of the Martian landscape, generated excitement throughout the world and greatly expanded our scientific understanding of this neighbor in the solar system.

The authorization bill for fiscal year 1978 contains funds for several important new programs that will be completed in the early 1980's, including the Space Telescope, the Jupiter Orbiter Probe, the Search and Rescue Satellite System, and a fourth Landsat spacecraft.

NASA first started work on the concept of a large telescope in space in 1969. The bill before us includes $36 million to begin construction of such an instrument, which is scheduled to be placed in orbit in 1983 by the Space Shuttle. The Space Telescope is designed to operate for at least a decade, providing unparalleled opportunities to astronomers. The Space Science Board of the National Academy of Sciences has stated for several years that the Space Telescope has the highest scientific priority of any space program.

The Jupiter Orbiter Probe will be launched in 1981, and it is the next step in our exploration of the universe following the Voyager missions. The mission will consist of a spacecraft that will orbit Jupiter and make long-term observations of the planet and its satellites and a probe that will descend into the atmosphere of the giant planet. The $20.7 million authorized for this mission will also maintain the continuity needed for systematic and economical exploration of the solar system.

The Search and Rescue Satellite System is a joint effort with Canada that will develop special devices to be included in new satellites. These devices will make it much easier to locate distress signals from ships and aircraft. This bill authorizes $5.6 million to begin this work.

The fiscal year 1978 authorization bill includes $28.9 million to begin work on a fourth Landsat spacecraft. This satellite is due to be launched in 1981 and will carry a new instrument, the thematic mapper, on which development began this year. The new Landsat will provide higher resolution and increased data; it should expand greatly the uses of this program.

Nineteen hundred and seventy-six saw the debut of the first Space Shuttle orbiter. The Shuttle will change the way we do busines in space when it becomes operational in the early 1980's. It will give us routine and reliable access to the unique environment of space and open new opportunities for scientific and commercial activities. It will also become the principal launch system for Defense Department operations in space. The fiscal year 1978 authorization bill includes $1,354,200,000 to continue development of the Shuttle—leading to the first flight late in 1979—and to produce a national fleet of five vehicles for space operations in the 1980's.

This bill also continues support for developing more fuel-efficient commercial transports. This program will help save scarce petroleum products, as well as maintain the dominance of U.S. airplane manufacturers in this worldwide market.

NASA attempted 16 launches of spacecraft in 1976, and all of them succeeded. Of the total, two launches carried NASA payloads, two were cooperative projects—one with Canada and the other with West Germany—and the rest were reimbursable. This trend is continuing in 1977. Of the total, two launches carried NASA for paying customers such as other U.S. agencies, foreign governments and private companies.

Launches in 1977 include the two Voyager spacecraft in August. Both will fly past Jupiter and then Saturn, and NASA has the option later of sending one to Uranus for the first encounter with that distant planet. The third Landsat Earth

resources satellite is due to be launched in September. If successful, it will add to the data we have been receiving from the first two Landsats. These spacecraft have given us invaluable information in such areas as crop survey, mineral prospecting, geology and pollution detection and have altered and broadened the way we look at our planet.

The commitee recommends that the authorization for NASA's technology utilization program be increased $1 million to $9.1 million. Our intent is that the additional funds be used to develop expanded, innovative and flexible dissemination techniques and systems while protecting NASA technology advancements. NASA should develop better methods to restrict uncontrolled adoption of its technology by foreign industry and to increase the return to the U.S. Treasury from the public and private entities that benefit most from the agency's efforts.

Mr. President, I ask unanimous consent to have printed in the RECORD a table showing the NASA fiscal year 1978 authorization request by major program, the House action, and the committee's recommendation thereon.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

FISCAL YEAR 1978 NASA AUTHORIZATION

[In millions of dollars]

	NASA request	House action	Apr. 26, 1977 committee markup	Difference from request
Research and development	3,026.000	3,047.500	3,030.000	+4
Space shuttle	1,349.2	1,349.2	1,354.2	+5
Space flight operations	267.8	270.8	265.8	−2
Expendable launch vehicles	136.5	129.5	136.5	0
Physics and astronomy	224.2	229.2	226.2	+2
Lunar and planetary exploration	158.2	161.2	150.2	−8
Life sciences	33.3	33.3	33.3	0
Space applications	233.8	211.9	239.8	+6
Earth resources operational systems	0	26.9	0	0
Aeronautical research and technology	231.0	236.5	231.0	0
Space research and technology	97.7	101.7	97.7	0
Energy technology applications	4.5	9.5	4.5	0
Tracking and data acquisition	281.7	278.7	281.7	0
Technology utilization	8.1	9.1	9.1	+1
Construction of facilities	161.8	158.34	161.8	0
Crew training facility	.860	0	.860	0
Tank facilities, Michoud	18.61	16.01	18.61	0
Research and program management	846.989	847.989	846.989	0
Grand total	4,034.789	4,053.829	4,038.789	+4
Fiscal year 1977 revision space shuttle	0	95.0	95.0	+95

Mr. STEVENSON. Mr. President, more details of this authorization bill are in the committee's report, a copy of which is before each Senator. The Subcommittee on Science, Technology, and Space held 7 days of hearings on this bill and has examined the NASA request in great detail. We believe it is prudent and responsible legislation. I urge the support of each Senator for this bill.

Mr. SCHMITT. Mr. President, I would like to expand only slightly on the remarks made by my colleague from Illinois. I believe that it is important to recognize there is a strong relationship between the so-called pure science of our endeavors in space and the growing number of technological applications we are enjoying today. For this reason I would like to add special emphasis on the value of two new starts in the NASA authorization bill.

The space telescope is a large conventional telescope which will be placed outside the veil of our atmosphere. This fact alone will result in a 250-fold increase in the volume of space accessible to astronomers. The program has also received a commitment of significant financial support from the European Space Administration. In view of the substantial scientific benefit available to us from this project, it was disappointing to review a recent GAO study which may well have been conducted in a professional manner, but which was reported in perforative and somewhat misleading language. It is my hope that thorough attention will be given this matter during the debate which will follow here and in the House.

The Jupiter orbital probe is a second major new start and another opportunity to vastly improve our knowledge and understanding of our planetary neighbors, as well as the process of navigating between them. This program is an increment in learning which is indispensible in the very long run exploration of our solar system. It is an incremental step which will be taken by our generation, or the next generation or the next.

Authorization of funds for NASA energy-related projects is one major disappointment in the package as it now exists. Assigning all energy research and development to ERDA will be most effective only if ERDA recognizes an even greater obligation to evaluate the potential returns from investigations conducted by NASA, as well as a number of other Federal agencies. Much cooperation is needed to take full advantage of the "seed money" concept used to fund new energy technology development within NASA. One project in which this concept was used is the Satellite Solar Power System, which offers considerable promise for increasing the terrestrial use of solar power, far beyond the capabilities of current earthbound systems.

It is important to reaffirm to all Members of the Senate that the elements of this authorization were carefully considered in light of an appropriate set of budget objectives ably prepared by the subcommittee chairman. As a result some projects were cut and others received authorizations somewhat below what was requested, and $15 million below House authorizations. I believe that the resulting bill generally reflects the desired balance between what is affordable in advancing our space program and in continuing the efforts of the distinguished community of scientists, engineers and managers, who have made it work, and what is not justified in terms of other budgetary imperatives. I urge you all to support the bill and to carry that support through the appropriation phase of our legislative responsibility.

Mr. PROXMIRE. I understand that the committee's report makes it clear that NASA is not authorized to design or produce a prototype of an SST and only specific congressional consent would provide such authorization. Is that accurate?

Mr. STEVENSON. Yes.

Mr. PROXMIRE. Based on the letter from the Office of Management and Budget, it also seems clear that this administration has not requested funds for developing plans for an American SST and does not support the development of such plans. Is that the committee's understanding?

Mr. STEVENSON. Yes, that is the committee's understanding.

Mr. PROXMIRE. The language "The administration does not support and has not requested funds for developing plans for an American SST"—this language indicates that OMB does not want NASA conducting an SST resurrection study. Is that also the position of the committee?

Mr. STEVENSON. I must point out that this is a House study requested by the House Science and Technology Committee. The Senate Committee on Commerce, Science and Transportation does not see a need for such a study at this time; we did not request such a study. But, by the same token, I do not see how the Senate can instruct a committee of the House on what information it may or may not request from the executive branch. Surely the Senate would take great offense if the House ever attempted to limit our prerogative in this regard.

Mr. PROXMIRE. Since the House report calls for an SST technology readi-

ness study by September 1977 and the OMB indicates it is opposed to such a study—how is that difference of opinion going to be resolved?

Mr. STEVENSON. In my view, the apparent difference between OMB and the House Committee on Science and Technology will be resolved in the process of apportioning funds by OMB to NASA for fiscal year 1978 activities.

Mr. PROXMIRE. Does the Senator from Illinois believe that questions of this significance—studying whether or not to resurrect an American SST should be authorized by report language instead of formally in the law itself—is this not a roundabout way of letting NASA conduct an SST resurrection study without specific authorization in the law?

Mr. STEVENSON. I must emphasize that the full House expressed itself on the SST issue by adopting a statutory prohibition against the design of an SST by NASA or the building of an SST prototype. The Commerce, Science, and Transportation Committee believed such a prohibition to be superfluous, since neither NASA nor the administration had any plans whatever for the design or production of a commercial SST. We so indicated in our report on H.R. 4088. It is clear that this country will move forward with a commercial SST only when Congress explicitly authorizes such action. Although I personally do not see a need for the study requested by the House committee, I am very reluctant to take the position that one House of Congress should ever attempt to instruct the other House, or the standing committees of the other body, as to the information or reports that may be requested from the executive branch. Moreover, there is no conceivable way that this study, even if it were carried out, could change the existing facts of life relating to congressional and administration opposition to a commercial SST.

Mr. PROXMIRE. Does the Senator agree with OMB that if any such study should be made in the future, "that some agency of the Government other than NASA should be responsible for such a wide ranging analysis of a possible future American SST"?

Mr. STEVENSON. Certainly. NASA is a research and development agency, not a transportation agency. If there was to be a study of the SST in the future, other agencies would take the lead. The Department of Transportation, for example, should examine the role of the SST from the perspective of national transportation policy. The Department of Commerce would play a role in assessing foreign trade implications of an American effort to produce an SST. OMB itself would play a vital role. NASA's role would be limited to that of advising the Government on the technical feasibility of moving forward.

Mr. PROXMIRE. Does the Senator agree with OMB that "the private sector is in the best position to assess the economic viability of an advanced SST and that marketplace and environmental considerations would be extremely important in any discussions concerning Federal support of the development of an advanced SST"?

Mr. STEVENSON. Absolutely.

Mr. PROXMIRE. Mr. Lance indicated that this House study would be produced prior to the normal budget cycle and before the President had an opportunity to review agency budget proposals. Does the Senator from Illinois see any urgency in conducting this kind of study—if it needs to be conducted at all? I might note that Mr. Lance's letter indicates that "the administration does not believe that the development of plans for achieving technology readiness for an American SST is particularly timely or urgent.

Mr. STEVENSON. I personally do not see an urgent need for such a study at this time. But, as I have noted, the fate of the particular study in question will have to be resolved between OMB, NASA, and the House committee.

Mr. PROXMIRE. Will this SST resurrection report be the subject of debate in the conference even though it is not part of the bill itself?

Mr. STEVENSON. I do not plan to inject this matter into the conference since it is not a part of the NASA bill. I wish only to stress the major point of this colloquoy, namely, that no commercial SST is contemplated, either by NASA or by the administration. There is no authority whatever for NASA or the administration to proceed with the design of an SST or the production of a prototype SST. Given these facts, I would not agree with your characterization of the House committee study as an "SST resurrection report." Only Congress, through explicit affirmative action, has the power to resurrect the SST.

Mr. MUSKIE. Mr. President, at this time I would like to comment on the relationship of the pending bill, H.R. 4088, the authorization measure for the National Aeronautics and Space Administration to the first budget resolution for fiscal year 1978.

I know that Senator STEVENSON and other Members interested in this bill will want to know how the measure stands in relation to Congress budget resolution.

H.R. 4088 authorizes $4 billion in budget authority for fiscal year 1978, with total outlays from this authority and from prior year authority estimated to be $3.9 billion. These amounts are almost identical to the amounts noted in the March 15 report to the Budget Committee by the Committee on Commerce, Science, and Transportation.

Of the $3.9 billion in outlays, $1.1 billion is derived from budget authority provided in previous years. The remaining outlays stem from the proposed new budget authority in H.R. 4088.

As I have stated before, the Budget Committee is not a line-item committee. We do not set budget targets for specific programs or for particular agencies. That is the task of the authorizing and appropriations committees.

What we do set is a target for the functional categories of the budget, and, with the assistance of the Congressional Budget Office, we try to keep the Senate informed as to how legislation is affecting and would affect the functional targets of the budget resolution.

Funding for the National Aeronautics and Space Administration falls primarily within function 250, general science, space, and technology. For this function, the budget resolution passed by the Senate on May 4 set targets of $4.9 billion in budget authority and $4.7 billion in outlays.

This budget authority target is equal to the budget authority total in function 250 recommended to the Budget Committee by the authorizing committees in their March 15 reports.

While the outlay target for this function is slightly below the total outlays recommended to the Budget Committee by the authorizing committees in their March 15 reports, I believe that it is reasonable to expect that actual outlays in function 250 in fiscal year 1978 will be consistent with the budget targets.

The Committee on Appropriations, in its March 15 report to the Budget Committee, indicated that function 250 spending in fiscal year 1978 should be $4.9 billion in budget authority and $4.7 billion in outlays, the same amounts as contained in the budget resolution as passed by the Senate. Moreover, the Committee on Appropriations has in the past funded the programs in this function at slightly below the amounts authorized.

With careful review of the appropriations for all programs in this function, I believe the Senate can hold to the function 250 targets in the first budget resolution. Enactment of H.R. 4088 will not hinder us in attempting to achieve that objective. Neither will the National Science Foundation authorization bill which authorizes the second major component of function 250. As passed by the Senate last week, the NSF bill also authorized funds at a level basically consistent with the functional targets of the budget resolution as passed by the Senate.

The third significant component of this function is the Energy Research and Development Administration's programs of basic research. The authorizing legislation for these programs is not far enough along to know what amounts may be set for the function 250 programs. But I think it is worth noting that the ERDA programs in this function are not in policy areas that are likely to increase greatly as a result of the energy crisis.

So I support H.R. 4088, and I look forward to supporting appropriations in function 250 that will comply with the targets of the budget resolution.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95-120), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

CONGRESSIONAL ADJUSTMENTS TO NASA REQUEST FOR FISCAL YEAR 1978—SUMMARY

Fiscal year 1978	Budget request [1]	House action	Senate committee action
Research and development:			
Space Shuttle	$1,349,200,000	$1,349,200,000	$1,354,200,000
Space flight operations	267,800,000	270,800,000	265,800,000
Expendable launch vehicles	136,500,000	129,500,000	136,500,000
Physics and astronomy	224,200,000	229,200,000	226,200,000
Lunar and planetary exploration	158,200,000	161,200,000	150,200,000
Life sciences	33,300,000	33,300,000	33,300,000
Space applications	233,800,000	211,900,000	239,800,000
Earth resources operational systems	0	26,900,000	0
Aeronautical research and technology	231,000,000	236,500,000	231,000,000
Space research and technology	$97,700,000	$101,700,000	$97,700,000
Energy technology applications	4,500,000	9,500,000	4,500,000
Tracking and data acquisition	281,700,000	278,700,000	281,700,000
Technology utilization	8,100,000	9,100,000	9,100,000
Total	3,026,000,000	3,047,500,000	3,030,000,000
Construction of facilities	161,800,000	158,340,000	161,800,000
Research and program management	846,989,000	847,989,000	846,989,000
Grand total	4,034,789,000	4,053,829,000	4,038,789,000

[1] Includes Carter amendments to original fiscal year 1978 budget request.

PURPOSE OF THE BILL

The purpose of this bill is to authorize appropriations to the National Aeronautics and Space Administration totaling $4,038,789,000 for fiscal year 1978 as follows:

[In dollars]

Fiscal year 1978	Budget request	House action	Senate committee action
Research and development	$3,026,000,000	$3,047,500,000	$3,030,000,000
Construction of facilities	161,800,000	158,340,000	161,800,000
Research and program management	846,989,000	847,989,000	846,989,000

LEGISLATIVE HISTORY

The budget request for fiscal year 1978 for the National Aeronautics and Space Administration was introduced in the House under H.R. 2221 and in the Senate as S. 365. The subsequent amendments of President Carter to the fiscal year 1978 budget request were incorporated in a new authorization bill in the House as H.R. 4088. In view of the minimum changes reflected in the Carter budget amendment, no further legislation was introduced in the Senate.

After holding hearings and marking up H.R. 4088, the House Committee on Science and Technology reported H.R. 4088 with an amendment striking all after the enacting clause and inserting the committee amendment. The bill was passed by the House, after the adoption of two floor amendments, and subsequently referred to this committee.

The committee held hearings on S. 365 during February and March 1977. During its consideration of the bill, the committee determined that amendments were required.

The committee reported out H.R. 4088 with an amendment striking all after the enacting clause and inserting the committee amendment.

SUMMARY

The NASA budget request for fiscal year 1978 was for a total of $4,019,789,000, of which $3,011,000,000 was for "Research and development," $161,800,000 was for "Construction of facilities," and $846,989,000 was for "Research and program management." President Carter subsequently submitted a budget amendment increasing "Research and development" by $15 million to a new total of $3,026,000,000, and the total request to $4,034,789,000. No amendments were made to the other two appropriations categories.

The House approved an authorization total of $4,053,829,000, of which $3,047,500,000 was for "Research and development," $158,340,000 was for "Construction of facilities," and $847,989,000, was for "Research and program management." The House bill is $19,040,000 above the request.

The committee is recommending an authorization of $4,038,789,000, an amount $4 million above the NASA request and $15,040,000 below the amount in the House approved bill. Of the total amount, the committee recommends $3,030,000,000 for "Research and development," which is $4 million above the NASA request, and $17,500,000 below the House approved amount for this appropriations category; recommends $161,800,000 for the "Construction of facilities," which is identical with the NASA request, and $3,460,000 above the House amount; and, recommends $846,989,000 for "Research and program management," which is identical to the NASA request and $1 million below the amount approved by the House.

This authorization recommendation is approximately $343 million above the amount recommended for NASA programs in the prior fiscal year reflecting a slight increase in total program authorization after allowing for the effects of inflation in the intervening period. The NASA authorization, as it has in recent years, represents less than 1 percent of the total of new budget authority recommended in the fiscal year 1978 federal budget.

It was the committee's view in evaluating the NASA budget request for fiscal year 1978 that it was important to sustain a relatively constant level of funding for NASA activities in order to support ongoing programs approved in prior years, and to maintain through NASA a significant share of the national research and technology base—a base that is essential to advancing scientific and technical knowledge, to increasing national productivity, and to being able to respond to current and emerging national needs. Consequently, this bill will support research and development undertakings currently underway and within the constraints of a relatively constant level of expenditure, will support five significant new starts. These new projects are: (1) acquisition of a national fleet of five Space Shuttle orbiters, including the refurbishment of the two orbiters in the develpoment program, to support NASA, Department of Defense, other government agencies, commercial/industrial and international users space launch needs beginning in 1980; (2) initiation of the development of the Shuttle-launched Space Telescope for research in astronomy, the highest priority project of the scientific community; (3) Landsat-D, a third generation Earth resources survey spacecraft to carry an advanced scanning instrument, the thematic mapper, approved for development in fiscal year 1977; (4) initiation of a search and rescue satellite system as a cooperative project with the Government of Canada; and, (5) initiation of a Jupiter orbiter probe mission to continue exploration of the solar system with the launch scheduled for 1981. Each of the foregoing is a multiyear project, yet, as has been indicated, they are so programed that they can be supported, together with other NASA responsibilities, without major budget impacts in subsequent years.

With respect to ongoing activities, the bill provides funding for continued development of the Space Shuttle, the principal element of a reusable space transportation system designed to significantly reduce the cost of space operations and thereby provide a new capability to explore and to utilize space in support of national needs. Testimony presented to the committee states that this program is on schedule and within costs. This bill supports within the Aeronautical Research and Technology line item which underwrites NASA's statutory responsibility to conduct aeronautical research, the second funding increment of a fuel efficient aircraft technology development program designed to provide the technology, by 1985, to decrease the fuel consumption of commercial jet transports by 50 percent. This research initiative has the objective of assuring the continued competitiveness of U.S.-built aircraft in the world marketplace. In addition to these more significant undertakings identified, the bill will provide funds for many other projects such as the completion of Mariner Jupiter/Saturn, Pioneer Venus, Tiros N, and Seasat, for essential supporting activities such as launch and tracking and data acquisition services, and for a multiplicity of research and technology development tasks in space and aeronautics designed to advance the state-of-the-art, to carry out approved initiatives, and to maintain a balanced program that will provide the Nation with a base for undertaking new initiatives that it may desire to accomplish in the future.

The "Construction of facilities" authorization recommendation, about $40 million above the previous fiscal year, is influenced by the need for Shuttle facilities, particularly launch related facilities at the Kennedy Space Center and external tank manufacturing facilities at the Michoud Assembly Facility. The Shuttle facilities program is on schedule and within the cost estimate established in 1972. This bill will also support the second increment of funding for two aeronautical research facilities, namely, construction of the new transonic research facility at the Langley Research Center and the upgrading and expansion of the 40′ x 80′ subsonic wind tunnel at the Ames Research Center. Both of these facilities are an integral part of a joint NASA/DOD large aeronautical research facilities program designed to provide an adequate research capability to maintain the Nation's leadership in aeronautics in the years ahead.

The committee's recommended authorization for the "Research and program management" appropriation reflects an esentially stable budget posture except for the impact of the federal employees annual pay increases. The fiscal year 1978 personnel level of 23,737 to be supported by this bill is 79 positions below that authorized in the previous fiscal year. It does, however, represent a slowing in the very significant annual reductions in the NASA workforce experienced in recent years. With about 75 percent of this appropriations category devoted to salaries and with a very high percentage of the NASA personnel complement reflecting the technical skills forming a significant part of NASA's in-house research and develop-

ment capability, the committee is concerned about further decreases in the onboard NASA strength. The NASA roles and mission study, a comprehensive review of the several NASA field installations undertaken in 1975 to clarify and redefine functional assignments with the objective of increasing organizational efficiency and effectiveness, is in its second year of implementation and will be continued during fiscal year 1978. Against this background it is the committee's view that the "Research and program management" budget is tightly constrained and, therefore, should be supported at the request level.

The committee considered several language amendments as discussed in the report under "Legislative Changes". The most significant amendment, included as section 7 of the bill, amends the amount authorized for the Space Shuttle in the fiscal year 1977 NASA Authorization Act (Public Law 94-307), increasing the program amount by $95 million from $1,288,100,000 to $1,383,100,000. This action authorizes the funds included in the "Economic Stimulus Appropriations Act, 1977", H.R. 4876, and would advance to fiscal year 1977 the start of production on the national fleet of five orbiters thereby permitting the most efficient transition from design, development, test and evaluation activities to production through the retention of Shuttle skilled personnel now on subsequent rehiring which otherwise would be required.

The Subcommittee on Science, Technology, and Space held hearings on this bill on February 25, March 1, 3, 7, 9, 17, and 18, 1977. During the course of the hearings, the subcommittee received testimony from NASA, the Department of Defense, and the Energy Research and Development Administration, and from the scientific community and witnesses representing the general public. Also, statements for the record were received from other agencies conducting space and space-related programs and having significant interfaces with NASA in its research development activities. These are the Department of Agriculture, the U.S. Geological Survey of the Department of the Interior, the National Oceanic and Atmospheric Administration of the Department of Commerce, and the National Science Foundation.

The Subcommittee on Science, Technology, and Space met on April 5, 1977, to mark up the bill and prepare its recommendations to the full committee. The Committee on Commerce, Science, and Transportation met on April 26, 1977, and ordered the bill reported.

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

DEFENSE PRODUCTION ACT EXTENSION AMENDMENT OF 1977

The Senate proceeded to consider the bill (S. 853) to extend the Defense Production Act of 1950, as amended.

Mr. PROXMIRE. Mr. President, the measure under consideration today, S. 853—the Defense Production Act Extension Amendments of 1977—is a brief bill which extends the programs and titles of the Defense Production Act for 2 more years—until September 30, 1979. It was first enacted in the opening months of the Korean war to improve the Nation's industrial and economic capacity to respond to conditions of war. Since that time, the Defense Production Act has become the primary vehicle for preparing our industrial mobilization base.

The titles of the act provide the authority for a number of on-going and standby programs designed to maintain the national defense industrial production base in peacetime, prepare mobilization programs, provide a pool of trained manpower for war production management, provide uniform cost accounting standards for negotiated national defense contracts, examine national policy with regard to material supplies and shortages, and for the establishment of the Joint Committee on Defense Production.

Among the ongoing programs are the defense priorities system, the defense materials system, the machine tool trigger order program, the borowing authority established for the expansion of productive capacity and supply, the Defense Production Act inventory, the national defense executive reserve, and the authority to grant immunity from antitrust action for voluntary agreements requested by the President.

This extension bill is noncontroversial. It has been requested by the administration, and by prior arrangement with the administration, the extension of the act has been made separate from any substantive amendments to the act, so as to speed up the renewal of the basic legislation. This had been the practice in the past but was departed from in 1974 and again in 1975, with the result that a succession of joint resolutions were necessary to accomplish short-term extensions while the details of substantive amendments were worked out.

This bill also extends the Joint Committee on Defense Production for 2 more years. The House members of the committee adopted the view that no benefits were to be gained by transferring the oversight duties to another committee. It was felt that such a transfer of functions would weaken congressional oversight of the defense production program, result in duplicated effort and, at most, amount to changing titles without lessening the workload. Therefore, they sought the extension of the Joint Committee on Defense Production. The House Committee on Banking, Finance, and Urban Affairs, in adopting H.R. 4962, voted 33 to 0 to extend the Defense Production Act and the Joint Committee on Defense Production. On May 2, the House adopted the committee's position by a vote of 385 to 8. Given the adamant position of the House, the Senate Banking Committee felt it would be futile to report legislation transfering the functions of the joint committee as provided for in Senate Resolution 4. Therefore, the Senate Banking Committee in recommending the extension of the Joint Committee on Defense Production feels it has discharged all obligations with respect to Senate Resolution 4.

The Senate Banking Committee unanimously reported this simple extension bill.

Mr. President, I urge favorable consideration of S. 853, which would assure continuance of this important act.

Mr. BAKER. Mr. President, I ask unanimous consent that the distinguished junior Senator from Massachusetts may have his statement on this matter printed in the RECORD at this point.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR BROOKE

I should like to add a few comments to those of my distinguished Chairman, the Senator from Wisconsin.

The purpose of S. 853 is a simple but essential one. This bill, the Defense Production Act Amendment of 1977, would extend for two additional years the titles of the Defense Production Act of 1950, as amended. It is simple because the enactment of S. 853 would add no additional or different costs to those now being incurred in administering the Defense Production Act, which are $5 million by Congressional Budget Office estimates. It is essential because this act is the sole statutory authority for those programs whose aim is to maintain and ccordinate our vital national defense industrial base in peacetime.

Without this act, there would be no authority at the Federal level to provide a trained manpower pool for the management of war production, prepare mobilization plans, provide for uniform cost accounting standards for national defense contracts, or analyze national policy with regard to material supplies and shortages.

Passage of this bill will go a long way toward insuring that our Nation's industrial base will be kept in a state of readiness for rapid mobilization in the event of war. A particularly important provision of this bill, in this time of chronic raw material and energy shortages, is the authority it grants the President to require expedited performance on qualifying national defense or domestic energy contracts, including the authority to allocate scarce and critical materials to insure a high state of preparedness and an orderly mobilization of industrial and material resources in the event of national defense emergencies. Furthermore, the act assures the availability of raw materials essential for defense production through mandatory set-asides. The list of essential materials presently includes steel, copper, nickel, and aluminum, but this list could be extended to cover other essential minerals or commodities as the need arises.

This act also extends for two years the life of the committee with statutory oversight for the Defense Production Act, the Joint Committee on Defense Production. My colleagues and I on the Banking Committee were well aware of the admonition of S. Res. 4 to consider the merger of the Joint Committee on Defense Production into either the Joint Economic Committee or the Banking Committee itself. These alternatives were considered and rejected because it is our opinion that such a merger would not be practical and would result in the loss of the valuable services now being performed by the Joint Committee on Defense Production. During the 94th Congress, the Joint Committee on Defense Production held a number of important hearings on the subjects of conflict of interest and civil defense preparedness. The Joint Committee not only studied and analyzed these problems, but it made a series of positive recommendations and drafted legislation which has been introduced in the present Congress. Last week the Joint Committee released the first of three parts of its year-long study of Federal emergency preparedness measures, which revealed a disarray and confusion in these programs which is truly alarming.

We feel that these vital subjects would most probably be on the bottom of the priority list of either of the larger committees, and no useful purpose would be served other than organizational neatness. Our col-

leagues in the House concure in this assessment as evidenced by their 33–0 vote for the Defense Production Act in the Banking Committee and 385–8 vote on the House floor. In view of this position, and in view of the importance of the Joint Committee on Defense Production itself, our Committee saw no point in reporting legislation which would merge the Joint Committee into any larger committee.

I support the extension of the Defense Production Act and urge my colleagues to support S. 853.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–131), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

COMMITTEE DELIBERATIONS

On March 2, 1977, Senator Proxmire introduced S. 853, which was referred to the Committee on Banking, Housing, and Urban Affairs. At a meeting held on May 4, 1977, the committee determined that the extension of the Defense Production Act of 1950 for 2 more years is desired by the administration and is not opposed by the Congress. The committee took cognizance of the administration's view that the simple extension of the Defense Production Act should be accomplished separately from consideration of substantive amendments to the act. The bill was therefore reported without amendment.

I. PURPOSE OF THE MEASURE

The purpose of S. 853, the Defense Production Act Extension Amendment of 1977, is to extend for 2 additonal years the titles of the Defense Production Act of 1950, as amended. These titles provide the sole authority for a number of programs designed to maintain the national defense industrial production base in peacetime, prepare mobilization programs, provide a pool of trained manpower for war production management, provide uniform cost accounting standards for negotiated national defense contracts, provide for the examination of national policy with regard to material supplies and shortages and establish the Joint Committee on Defense Production.

II. SYNOPSIS OF THE LEGISLATION

Section 1: Enabling clause.

Section 2: Extends the Defense Production Act for a period of 2 years from its present termination date of September 30, 1977, until September 30, 1979.

At the request of the President, titles I, III, and VII of the Defense Production Act (DPA) have regularly been renewed by the Congress. Title I provides authorization for the Defense Priorities System, the Defense Materials System, and a new energy priorities system, and for the management of these systems. Title III authorizes the President to guarantee loans and take other financial measures necessary to expand productive capacity and supply in the interest of national defense. The general provisions of title VII prohibit discrimination against small business enterprises in achieving the objectives of the DPA, provide for the National Defense Executive Reserve, establish other authorities regarding personnel carrying out programs under the act, and provide for oversight of programs under the act. The permanent provisions of title VII, which are not affected by this extension legislation, are those that authorize the promulgation of uniform accounting standards and permit the President to grant antitrust immunity to industrial firms entering into voluntary agreements for national defense purposes at the request of the President.

Titles II, IV, V, and VI of the DPA have not been renewed since the periods following the end of the Korean War and are not affected by this act. They provided for condemnation authority, price and wage stabilization, the settlement of labor disputes, and control of consumer and real estate credit.

III. THE NEED FOR AND EXPLANATION OF THE LEGISLATION

The Defense Production Act is the sole statutory vehicle for insuring that the Nation's industrial base is kept in a state of readiness in peacetime so that new programs may be initiated and standby programs may be expanded in the event of mobilization. The preparedness functions served by the DPA are evident in the many programs authorized by the act. Title I of the act provides authority for the Defense Priorities System, the Defense Materials System, and the energy equipment production priorities system, through which the President is empowered to require expedited performance on qualifying national defense or domestic energy contracts and to allocate scarce and critical materials to insure a high state of preparedness and an orderly mobilization of industrial and material resources in the event of national defense emergencies.

The act also provides authority to guarantee and make loans, when necessary, so as to have a surplus of productive capacity in special industries where it may be required for national defense purposes.

Most of the programs authorized by the DPA are ongoing rather than standby in nature, in order to facilitate the smooth and rapid transformation of the Nation's economy and industry to a war footing, should the need arise. Therefore, these programs, especially those relating to defense production priorities and to defense materials allocation, have become integral parts of the defense procurement process. By exercising the priorities and materials systems in peacetime, the Government not only enhances its readiness for conversion to wartime production, but gains certain cost and scheduling advantages on its peacetime procurement.

The Defense Priorities System assigns priority ratings to important defense procurement which allows such procurement to receive preferential treatment in terms of access to productive capacity. Slightly over 75 percent of all defense procurement qualifies for DPA priority ratings. Rating is mandatory for all "authorized" programs and the Department of Defense states that virtually all "qualifying" contracts are so rated. Hence, using the fiscal year 1974 defense procurement figure of $40 billion, some $30 billion worth of contracts and orders were assigned priority ratings in that year, thereby avoiding the additional inflationary costs that would have been experienced through production delays in the absence of Defense Production Act priorities.

Likewise, the Defense Materials System assures the availability of basic materials for defense production through mandatory materials setaside, which at this time apply to nickel, steel, copper, and aluminum but which could be extended to cover other materials setasides, which at this time apply to Through this allocation mechanism, the Government avoids the upward pressure on defense costs that would result from the necessity of acquiring materials without mandatory setasides for high-priority programs.

Also significant in consideration of the authorities under the Defense Production Act is the establishment (through the Energy Policy and Conservation Act of 1975) of an energy priorities system under title I. This system is parallel in major respects to the already existing priorities system for national defense production and provides the President authority to require expedited performance of contracts for equipment to maximize domestic energy production and to allocate materials for this purpose, as well. This domestic energy priorities system and the national defense priorities system are, under the terms of the act, required to be administered by a single official of the Government on authority delegated by the President and in such a way as to avoid or minimize competition between national defense and domestic energy claims. This authority has already permitted several instances of potential conflict over productive capacity to be resolved in advance. Officials of the Department of Commerce expect that this authority will be increasingly resorted to as a means of avoiding competition between Government programs for scarce productive capacity in certain durable goods industries, competition that is expected to result from the President's energy program.

At present, the Department of Defense is less concerned with the need for a major mobilization of the economy of the type that occurred during World War II or, to a lesser extent, during the Korean War. Instead, defense officials believe that mobilization needs involve a "surge requirement," that is, the ability to mobilize certain, specific sectors of industry for a limited time to absorb the production requirements of a short but costly (in terms of combat consumables, weapon systems, and other military materiel) war, such as occurred in the Middle East in 1967 and 1973. In such a contingency, the ongoing programs of the Defense Production Act would play a major role in determining the swiftness, character and quality of the U.S. response.

Beyond the evident Department of Defense implications of the aforementioned DPA programs, there are other agencies, such as the Central Intelligence Agency, the Energy Research and Development Administration, and the National Aeronautics and Space Administration, which are entitled under the DPA to employ the national defense priorities ratings for qualifying contracts and orders.

IV. COST ESTIMATE

Enactment of S. 853 would entail no new or different costs from those incurred in administering DPA programs in the past. The Congressional Budget Office estimates the cost of the DPA programs to amount to $5 million in fiscal year 1978. The Congressional Budget Office analysis is contained in the following statement, which addresses the companion bill, H.R. 4962:

CONGRESSIONAL BUDGET OFFICE

Cost estimate

April 1, 1977.

1. Bill No.: H.R. 4962 (S. 853).

2. Description of bill: This bill amends titles I, III, and VII (in part) of the Defense Production Act of 1950 by changing the expiration date from September 30, 1977, to September 30, 1979. These titles authorize the following programs:

(*a*) Industrial defense mobilization activities funded in the Domestic and International Business Administration of the Department of Commerce;

(*b*) Certain emergency preparedness functions funded in the Federal Preparedness Agency;

(*c*) The payment of interest on (1) disbursements incident to the expansion of production capacity and supply of strategic materials, and (2) the current market value of inventory of materials procured under section 303 of the Defense Production Act. This is funded in the account Expenses, Defense Production Act within the General Services Administration;

(*d*) Loan guarantee activities administered by the General Services Administration funded in the account Defense Production Act, Loan Guarantee activities; and

(*e*) Loan guarantee activities of the Department of Defense funded in the account Defense Production guarantees.

3. Budget impact:

Authorization amounts and estimated costs:

	Millions
Budget function 050:	
Fiscal year 1978	$3
Fiscal year 1979	4
Budget function 400:	
Fiscal year 1978	2
Fiscal year 1979	2

4. Basis for estimate: The estimate assumes a continuation of a constant level of activities as estimated for fiscal year 1977, taking account of congressional action on the 1977 budget. The estimate adjusts the budget amounts to include CSO inflation assumptions.

The activities authorized in the act are broad, and in the event of a major increase in the level of defense expenditures the budget impact of this bill could be much larger.

5. Estimate comparison: None.
6. Previous CBO estimate: None.
7. Estimate prepared by: Robert Schafer.
8. Estimate approved by:

C. G. NUCKOLS,
(For James L. Blum,
Assistant Director for Budget Analysis).

V. REGULATORY IMPACT

The Defense Production Act Extension Amendment of 1977 does not have any regulatory impact within the meaning of rule XXIX(5)a of the Rules of the Senate. It merely extends the authority for such regulations as have been issued for the administration of the title I priorities and allocation systems and which have become a part of national defense procurements generally.

VI. EXECUTIVE COMMUNICATIONS

The executive branch transmitted to the Senate Committee on Banking, Housing, and Urban Affairs, the following letter endorsing the extension of the Defense Production Act of 1950, as amended, for an additional 2 years:

GENERAL SERVICES ADMINISTRATION,
Washington, D.C., April 25, 1977.

Hon. WILLIAM PROXMIRE,
Chairman, Committee on Banking, Housing, and Urban Affairs, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: In response to your April 6, 1977, letter to Leslie W. Bray, Jr., Director, Federal Preparedness Agency, General Services Administration, we wish to assure you of our support of our plan to first achieve early legislation to extend the expiration date of the Defense Production Act of 1950, as amended, and then consider separate legislation to accomplish any needed amendments to the act.

We were pleased to learn of your introduction in the Senate of S. 853, a bill to extend the Defense Production Act of 1950, as amended, and the introduction of similar legislation in the House of Representatives. As you know, GSA favors prompt extension of the act. We are also submitting in separate correspondence our proposed legislation which would extend and amend the act.

Because uninterrupted continuation of the Defense Production Act of 1950, as amended, is essential to the national security, we would have no objection to your plan to extend the act as soon as possible and to consider amendments later. The act is the cornerstone of the present legal structure that supports the Nation's programs for preparedness to meet national emergencies requiring mobilization of industrial and material resources.

We appreciate the opportunity you have afforded us to coordinate plans and to comment on the bill, S. 853, now before your committee.

The views and plans presented in this letter are being expressed in similar letter to Congressman Henry S. Reuss, chairman, Committee on Banking, Finance and Urban Affairs, U.S. House of Representatives.

The Office of Management and Budget has advised that, from the standpoint of the administration's program, there is no objection to the submission of this report to your committee.

Sincerely,

ROBERT T. GRIFFIN,
Acting Administrator.

VII. COMMITTEE RECOMMENDATION

The Committee on Banking, Housing, and Urban Affairs agreed unanimously that S. 853 should be reported favorably to the Senate and enacted.

VIII. CHANGES IN EXISTING LAW MADE BY THE BILL, AS REPORTED

In view of the fact that S. 853 merely changes a termination date in the statutes, the committee is of the opinion that the requirements of rule XXIX(4), requiring the altered text of the statute to be reproduced in the committee report, should be dispensed with in order to expedite the business of the Senate.

The bill (S. 853) was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Defense Production Act Extension Amendments of 1977".

SEC. 2. The first sentence of section 717(a) of the Defense Production Act of 1950 (64 Stat. 822) is amended by striking out "September 30, 1977" and inserting in lieu thereof "September 30, 1979".

TRANSFER OF MEASURES TO UNANIMOUS CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, there are a number of measures on the General Orders Calendar which have been cleared for action by unanimous consent. They are Calendar Orders numbered 112, 113, 115, 117, and 118.

Mr. BAKER. Mr. President, these calendar order numbers are cleared on this side, to be passed by unanimous consent. We have no objection.

Mr. ROBERT C. BYRD. Mr. President, I ask the clerk to transfer those five measures to the Unanimous Consent Calendar.

The PRESIDING OFFICER. They will be so transferred.

Mr. ROBERT C. BYRD. Mr. President, I yield the floor.

RECESS FOR 1 MINUTE

Mr. ROBERT C. BYRD. Mr. President, I ask that the Senate stand in recess for 1 minute.

The PRESIDING OFFICER. There being no objection, the Senate, at 12:29 p.m., recessed until 12:30 p.m.; whereupon, the Senate reassembled when called to order by the Presiding Officer (Mr. SARBANES).

LT. GEN. IRA C. EAKER MEDAL

Mr. ROBERT C. BYRD. Mr. President, the clerk has just transferred Calendar Order No. 115 to the Unanimous-Consent Calendar. I ask unanimous consent that the Senate proceed to the consideration of that measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, reserving the right to object, there is no objection. I concur in the request of the distinguished majority leader.

The legislative clerk read as follows:

A bill (S. 425) to authorize the President of the United States to present on behalf of the Congress a specially struck gold medal to Lt. Gen. Ira C. Eaker, U.S. Air Force (Retired).

The PRESIDING OFFICER. Is there objection to the present consideration of the bill? There being no objection, the Senate proceeded to consider the bill.

Mr. GOLDWATER addressed the chair.

Mr. ROBERT C. BYRD. Mr. President, I have to say to the distinguished Senator from Arizona that I will have to wait to be sure that this has clearance with the Budget Committee. I think that can be done in a short time. So if I may withdraw my request at this point to consider the matter at the moment, I withdraw the request and will try to check that out with the Budget Committee. Hopefully, we can get that done shortly.

(Later, the following occurred:)

Mr. ROBERT C. BYRD. Mr. President, I now have clearance from the Budget Committee on Order No. 115, and I ask unanimous consent the Senate proceed to its consideration.

There being no objection the Senate proceeded to consider the bill.

Mr. GOLDWATER. Mr. President, I am delighted the Senate is acting today on the bill, S. 425, I introduced to authorize the President of the United States, on behalf of Congress, to present a gold medal to retired Lt. Gen. Ira Eaker in recognition of his distinguished career as an aviation pioneer and Air Force leader.

Now Mr. President, few Americans have contributed more to the development of the U.S. Air Force and to our country than Ira Eaker. This is not just an expression of my personal feelings about this dedicated American, but represents the feelings of many, many others who have spoken and written to me over the years.

Mr. President, anyone who wished to compile a summary of the accomplishments of Ira Eaker would certainly include the following landmarks of his career:

Became a military pilot in 1918.

Was chief pilot in January, 1929, of a Fokker C–2 which flew over 150 hours.

Set an endurance record by using in-flight refueling techniques.

Flew the first blind instrument transcontinental flight in June, 1936.

Served with the RAF in early World War II, studying their air operations to help develop the air arm of the United States.

Commanded the eighth Air Force in World War II, along with Mediterranean Allied Air Forces, both being vital to the allied victory.

Designated by General Arnold to to argue the case for a return to daylight bombing, following allied air losses in 1943. By helping to successfully per-

suade Prime Minister Churchill of this course of action, he helped pave the way to the allied victory.

Following World War II, served as Deputy Commander of the Army Air Forces and Chief of the Air Staff until his retirement as a Lieutenant General in 1947.

Mr. President, there is nothing unusual now about the type of medal I have proposed, although they were not available at the time General Eaker retired. For example, the Senate agreed to a House-passed bill in December of 1975 which provided for the presentation of a similar medal to Brig. Gen. Charles Yeager.

The administration and the Department of the Treasury have submitted a favorable report on the proposal, and I hope my colleagues will approve the special recognition that is due an outstanding American.

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the President of the United States is hereby authorized to present, on behalf of the Congress, to Lieutenant General Ira C. Eaker, United States Air Force (retired), a gold medal of appropriate design in recognition of his distinguished career as an aviation pioneer and Air Force leader. For such purpose, the Secretary of the Treasury is authorized and directed to cause to be struck a gold medal with suitable emblems, devices, and inscriptions to be determined by the Secretary of the Air Force with the approval of the Secretary of the Treasury. There are authorized to be appropriated not to exceed $5,000 to carry out the provisions of this subsection.

(b) The Secretary of the Treasury may cause duplicates in bronze of such medal to be struck and sold at not less than the estimated cost of manufacture, including labor, materials, dies, use of machinery, and overhead expenses, plus 25 per centum of such cost of manufacture. The appropriation then current and chargeable for the cost of manufacture of such duplicate medals shall be fully reimbursed from the payment required by this section and received by the Secretary: *Provided,* That any money received in excess of the actual cost of manufacture of such duplicate medals shall from time to time be covered into the Treasury. Security satisfactory to the Director of the Mint shall be furnished to fully indemnify the United States for the payment required by this section.

(c) The medals provided for in this section are national medals for the purpose of section 3551 of the Revised Statutes (31 U.S.C. 368).

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider en bloc the votes by which the three bills were passed.

The PRESIDING OFFICER. Without objection, the motion is in order.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

FIRST CONCURRENT BUDGET RESOLUTION, SENATE CONCURRENT RESOLUTION 19—CONFERENCE REPORT

The Senate continued with the consideration of the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the concurrent resolution (S. Con. Res. 19) setting forth the congressional budget for the U.S. Government for the fiscal year 1978.

The PRESIDING OFFICER. The hour of 12:30 having arrived, the question now recurs on the motion to recede and concur with the House amendment to Senate Concurrent Resolution 19 with an amendment. The yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Iowa (Mr. CLARK), the Senator from Iowa (Mr. CULVER), the Senator from New Hampshire (Mr. DURKIN), the Senator from Alaska (Mr. GRAVEL), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Louisiana (Mr. LONG), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from North Carolina (Mr. MORGAN), the Senator from New York (Mr. MOYNIHAN), the Senator from Rhode Island (Mr. PELL), and the Senator from Colorado (Mr. HASKELL) are necessarily absent.

On this vote, the Senator from Minnesota (Mr. HUMPHREY) is paired with the Senator from North Carolina (Mr. MORGAN).

If present and voting, the Senator from Minnesota would vote "yea" and the Senator from North Carolina would vote "nay."

I further announce that, if present and voting, the Senator from Iowa (Mr. CLARK), and the Senator from Rhode Island (Mr. PELL) would vote "yea."

Mr. STEVENS. I announce that the Senator from Massachusetts (Mr. BROOKE), the Senator from Michigan (Mr. GRIFFIN), the Senator from Oregon (Mr. HATFIELD), the Senator from New York (Mr. JAVITS), the Senator from Nevada (Mr. LAXALT), the Senator from Kansas (Mr. PEARSON), the Senator from Illinois (Mr. PERCY), the Senator from New Mexico (Mr. SCHMITT), and the Senator from Texas (Mr. TOWER) are necessarily absent.

On this vote, the Senator from Oregon (Mr. HATFIELD) is paired with the Senator from New Mexico (Mr. SCHMITT). If present and voting, the Senator from Oregon would vote "yea" and the Senator from New Mexico would vote "nay."

I further announce that, if present and voting, the Senator from New York (Mr. JAVITS) would vote "yea."

The result was announced—yeas 54, nays 23, as follows:

[Rollcall Vote No. 142 Leg.]

YEAS—54

Anderson	Danforth	Lugar
Baker	Dole	Magnuson
Bayh	Domenici	Mathias
Bellmon	Eagleton	Matsunaga
Biden	Eastland	McClure
Burdick	Ford	McGovern
Byrd, Robert C.	Glenn	McIntyre
Cannon	Hart	Melcher

	Leahy	Zorinsky

NOT VOTING—23

Abourezk	Hatfield	Morgan
Brooke	Hollings	Moynihan
Clark	Humphrey	Pearson
Culver	Javits	Pell
Durkin	Kennedy	Percy
Gravel	Laxalt	Schmitt
Griffin	Long	Tower
Haskell	McClellan	

So the motion was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the motion was agreed to.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

MILITARY CONSTRUCTION AUTHORIZATIONS, 1978

Mr. ROBERT C. BYRD. Mr. President, there is another measure on the calendar that, hopefully, the Senate can complete action on today and without too much time running. It is conceivable that it will require a rollcall vote or it may not.

I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 104, S. 1474, the military construction authorization bill.

The PRESIDING OFFICER. The clerk will state the bill by title.

The legislative clerk read as follows:

A bill (S. 1474) to authorize certain construction at military installations, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. HART. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. HART. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senate will be in order.

The Senator from Colorado is recognized.

Mr. HART. Mr. President, the bill before the Senate, S. 1474, is the fiscal year 1978 military construction authorization bill. This is an annual bill which authorizes funds for new construction for all the military services as well as funds to operate and maintain the inventory of military family housing.

The amended request this year was for $3,576,517,000 in new authority. The Committee on Armed Services recommended adjustments to that request resulting in a reduction of $230 million and has selectively added projects total-

ing nearly $370 million which provides a net increase in the bill of $149 million.

Mr. STENNIS. Mr. President, may we have order? This is an important bill encompassing over $3 billion in authorizations.

The PRESIDING OFFICER. The Senate will be in order. The Members will take their seats.

The Senator from Colorado.

Mr. HART. Mr. President, to explain the net effect of the committee action on the budget "target" for the defense function, some background may be helpful. The fiscal year 1977 supplemental appropriations bill recently passed by Congress contained $122 million for military construction projects "subsequently authorized." The House of Representatives wrote and passed a fiscal year 1977 supplemental military construction authorization. We in the Committee on Armed Services elected not to take up that bill which the Defense witness could not support; instead we took an "across-the-board" look at high-priority, unfunded requirements as a part of our consideration of this fiscal year 1978 bill. By virtue of the fact that they were appropriated in fiscal year 1977 as a supplemental to the other fiscal year 1977 appropriations, that $122 million will be "scored" against the fiscal year 1977 target. Therefore, even though we are recommending an increase of $149 million in authority for fiscal year 1978, corresponding appropriations—assuming appropriations for every authorized item—will increase by no more than $27 million.

The previous administration made a cut in military construction of $1 billion just before sending the request to Congress. Despite a restoration of $310 million by President Carter's budget amendment, the request before the committee was very austere. In addition, the committee was quite aware of the depressed state of the construction industry and felt that military construction projects that could be put under contract quickly could help the industry—just as the public works jobs bill will do—as well as benefit national defense. The Committee on Armed Services established two criteria for these projects: First, the project must be capable of being put under contract early in the fiscal year and, second, that project must be at a "hardcore" installation, that is to say, one not subject to closure or reduction. Using these criteria the services were asked for lists of unfunded projects in three categories—energy conservation, pollution abatement, and operational. From these lists, which the services presented to our committee, projects were selected very carefully to be added to the authorization program. In addition, to these categories the committee added back projects to improve the security of chemical weapons because of the high priority of this requirement. In all, the committee added 250 projects totaling slightly less than $370 million.

I shall highlight very briefly a few major items from the bill:

I have already mentioned the addition of energy conservation projects. We added nearly $100 million in that category. We also have emphasized in our report that we want the Department of Defense to use its technological expertise to pioneer in this field for the Federal Government. For example, the Department of Defense "owns" nearly 400,000 units of family housing. We are strongly urging the Department to consider the wholesale conversion of this housing to solar energy for domestic hot water needs. A major buy in this area would do much to bring down production costs, to stimulate a mass market, and to convince the general public that this is indeed a viable concept.

We have included again this year, section 612, relating to base realinements. Unlike last year when this bill was vetoed because of a similar provision, the Defense Department supports this provision and recognizes the benefits to all concerned to have established guidelines and to involve the public in the decision-making process for base realinements which are always traumatic to the local communities.

Mr. President, I feel that the bill presently before the Senate is a good bill and the Senate should proceed to act on it.

I compliment the ranking minority member, the Senator from South Carolina (Mr. THURMOND), for his contribution to the subcommittee's work, and I feel that with his support and the support of other Senators, this bill should be adopted forthwith.

Mr. THURMOND. Mr. President, I support S. 1474, the 1978 fiscal year military construction authorization bill.

This bill authorizes $3.7 billion in military construction requests for the three military services, defense agencies, and the Reserve forces.

This year's legislation is $145 million above that requested by the administration. As the Senate knows, both the Ford and Carter military construction proposals were considerably below the expected amounts. This resulted because of a deferral of military construction projects within the United States at any installation which might be subject to a cloture decision.

Mr. President, it is my opinion that far too many necessary operational requirements were deleted by the Defense Department before this bill reached Congress. Projects were cut from many installations which could not conceivably be closed if we are to continue to maintain even a marginal defense posture. While I certainly would not support funding for any installation which may be eliminated in the near future, it is my belief that by delaying many programs we are merely driving up the eventual cost.

Fortunately, the subcommittee did take cognizance of this situation and made modest additions, although they were mainly in the energy and pollution areas. These additions were based strictly upon priorities established by the separate services.

A significant feature of this bill is the base realinement provision which is very similar to that enacted in the Senate last year. The difference would be that the current amendment makes this provision permanent law and increases the applicability of the provisions to installations having at least 1,000 civilian personnel whereas the previous guideline was 500 personnel.

Mr. President, I urge favorable action on this legislation by the Senate, as it contains many projects essential to the maintenance of our national defense forces. Spending at overseas facilities has been kept to a bare minimum and allowed in only those cases where our continued deployment there is seen as a long-term proposition.

In conclusion, I would like to commend the able junior Senator from Colorado (Mr. HART), who so capably chaired the hearings and markup for this legislation. He was most ably assisted by Mr. James C. Smith, the professional staff member on armed services who assists the Members in military construction matters.

I also commend the able chairman of the Committee on Armed Services (Mr. STENNIS) for his fine cooperation in this matter.

Mr. MAGNUSON. Mr. President, will the Senator from Colorado yield for a question?

Mr. HART. I yield to the Senator from Washington.

Mr. MAGNUSON. I am looking at page 35 of the report, and am trying to understand just exactly what the committee did in relation to the Trident facilities. It says:

> The committee is authorizing for consideration all of the subelements included in the fiscal year 1978 budget request through the use of unused prior-year authorization, except for the specific reductions shown below:

They add up to a minus $55,000; is that $55,000?

Mr. HART. That is correct.

Mr. MAGNUSON. What confuses the Senator from Washington is that up above it says "in thousands of dollars." I was wondering if we had cut a thousand times that amount. But this is the total amount, $550,000. Is that correct?

Mr. HART. The Senator from Washington is correct. I am afraid that the report in this respect represents a misrepresentation. That figure should be flagged to make it very clear that it is a net reduction of $550,000.

Mr. MAGNUSON. So that would be an authorization of $106,910 million; is that correct?

Mr. HART. The Senator from Washington is correct.

Mr. MAGNUSON. And the only items that they ask for, that the committee did not approve, were these four items that add up to the $550,000; is that correct?

Mr. HART. The Senator from Washington is correct.

Mr. MAGNUSON. I thank the Senator.

The PRESIDING OFFICER (Mr. SASSER). Who yields time?

UP AMENDMENT NO. 204

Mr. THURMOND. Mr. President, I am offering an amendment on behalf of Senator TOWER that would permit the Secretary of the Army to exchange certain land at Fort Bliss, Tex., for lands that are currently being leased to provide maneuvering areas for armored units.

For more than 30 years, Fort Bliss has been using a large tract of land adjacent to its southeastern boundaries under a condemnation lease arrangement. This lease authority has been granted in 5-year increments with leases renewable and negotiable for 1-year periods. It is apparent that Fort Bliss will continue to require this additional maneuver area in the future. Accordingly, it has been proposed that the Secretary of the Army be authorized to gain title to the leased areas by a land exchange with the two private concerns involved.

Senator TOWER's amendment would simply authorize such an exchange, which I understand has been under consideration within the Department of the Army. I am informed that the Army has recommended to other agencies in the executive branch that such an exchange agreement be approved. This arrangement will cost the Army no funds and obviously would be a preferable resolution to this situation than the acquisition of these lands with appropriated funds.

Mr. President, this matter was not brought to the committee's attention until after this bill had been reported. Senator TOWER and I believe that it would serve to alleviate the current difficulties at Fort Bliss in the simplest manner possible. I hope that my colleagues can recognize the need for this provision and that it will be included in the pending legislation at the appropriate place.

I hope that the chairman of the subcommittee will see fit to accept the amendment so that it can be adopted.

The PRESIDING OFFICER. The clerk will first have to report the amendment.

The assistant legislative clerk read as follows:

The Senator from South Carolina (Mr. THURMOND), for Mr. TOWER, proposes an unprinted amendment numbered 204.

The amendment is as follows:

At the appropriate place in Title VI, insert the following:

"Notwithstanding any other provision of law, the Secretary of the Army is authorized to acquire by exchange, under such terms and conditions as he shall deem to be in the public interest, all rights, title and interests in lands, within a sixty thousand one hundred and sixty acre area contiguous to the eastern boundary of maneuver area numbered 1 of the Fort Bliss Military Reservation, El Paso, Texas. As consideration for this exchange, the Secretary of the Army is authorized to convey such land under the jurisdiction of the Department of the Army in El Paso County, Texas, equal in monetary value to the land to be acquired. The exact acreages and legal descriptions of such properties are to be determined by accurate surveys as shall be authorized by the Secretary of the Army."

Mr. HART. Mr. President, the Senator from South Carolina is correct. This is a matter that did not appear before our subcommittee or before the full committee prior to the bill being reported out.

As the Senator from South Carolina indicates, as far as we are able to tell there are no dollar amounts involved in the land exchange. This is an item that, according to my understanding, also will not appear in the House version of the bill, and therefore I believe, on behalf of the committee, that we can accept the amendment and take the issue to conference; and in the meantime have time to study and discuss it and take it up with our House colleagues.

So I would not have any objection to this amendment at this time.

Mr. THURMOND. Mr. President, I move the adoption of the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

UP AMENDMENT NO. 205

Mr. INOUYE. Mr. President, I send to the desk an amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Hawaii (Mr. INOUYE) offers an unprinted amendment numbered 205:

At Section 201, page 10, line 23, strike the amount of "$4,050,000" and insert in lieu thereof "$5,350,000." and;

At Section 602(2), page 33, lines 3 and 5, strike the amounts of "$426,787,000" and "$452,498,000" respectively, and insert in lieu thereof "$428,087,000" and "$453,798,000", respectively.

Mr. INOUYE. Mr. President, I offer an amendment that would increase the authorized funding for a project that is small in its cost and scope as proposed by the U.S. Navy but large in its significance. The project I speak of is a complete memorial complex or visitor center with adequate shoreside support facilities for the U.S.S. *Arizona* memorial at Pearl Harbor, Hawaii.

On December 7, 1941, Pearl Harbor endured an attack unlike any other in the history of our Nation. On that day, 1,102 officers and enlisted men aboard the battleship U.S.S. *Arizona* lost their lives as the ship succumbed and sunk under that heavy attack. The ship is no longer in active commission, having been stricken from the active list in 1942, but in memory of the brave men who lost their lives on that tragic Sunday morning, the battleship U.S.S. *Arizona* serves as a national cemetery for the dedicated fighting men entombed within.

The U.S.S. *Arizona* memorial, located in Pearl Harbor offshore from Ford Island, was completed and dedicated on May 30, 1962, nearly 12 years after the first introduction of legislation in the U.S. House of Representatives on August 31, 1950, to build an appropriate monument for ceremonies. In 1962, 102,471 persons waited at the boat landing in order to make the trip across the harbor to the U.S.S. *Arizona* memorial. Last year as we celebrated our Bicentennial birthday, the number of persons who chose to visit the national shrine, constructed at the site of the sunken ship in Pearl Harbor, was over a half a million.

Since the U.S.S. *Arizona* memorial was constructed, it has become apparent to many that the existing makeshift shoreside facilities, which were not fully satisfactory even in 1962, are completely inadequate today. According to one estimate, the number of visitors to the memorial is projected to increase to over 1 million by 1982. As more and more visitors from across the country come to Hawaii and visit the U.S.S. *Arizona* memorial, it has become necessary to build new shoreside facilities in order to accommodate the increased visitor flow. The $3.3 million shoreside facilities project the Navy has proposed for inclusion in the fiscal year 1978 military construction budget will complete the *Arizona* memorial complex envisioned over 25 years ago but never realized.

The existing shoreside facilities, which consist of a two-boat dock, covered sidewalk, covered waiting area and exhibit area, a souvenir shop, refreshment stand, a small toilet building, information booth, storage room and parking area, are too often overcrowded and cannot properly accommodate the visitors awaiting boat transportation. Visitors usually stand in line for over an hour and for more than 2 hours during the peak tourist season. With the visitor flow expected to double and pass 1 million within the next 5 years, viistors may be waiting as much as 3 or 4 hours standing in line. Furthermore, parking space and the present visitor waiting area are insufficient to permit full use of the shrine by interested visitors. In addition, the covered sidewalk offers no protection from wind-driven rain. If this project is not provided, the visitors to the *Arizona* memorial will have to tolerate the crowded, substandard conditions of the rather pathetic present shoreside facilities while awaiting the boat ride to the U.S.S. *Arizona* memorial. Moreover, they will not be able to see the full story of the *Arizona* and the attack on Pearl Harbor.

The requirement for adequate shoreside facilities has been apparent for the past 10 years. However, past attempts to obtain sufficient and public donations to finance the improvements have been unsuccessful. Since the National Park Service has agreed to manage and operate the *Arizona* memorial when adequate shoreside facilities are built, it would be prudent to act expeditiously now to provide adequate shoreside facilities so that they are in place before the present facilities further deteriorate and continue to detract from the visit to this most historically significant site.

The present concept for the new visitor center for the U.S.S. *Arizona* memorial is to divide the visitor load into various groups viewing exhibits in the lobby and museum, and to provide a movie theater presentation to tell the Pearl Harbor story prior to the actual memorial shrine visit. This will serve to simplify and heighten the experience while actually on board the *Arizona* memorial. The architectural character of the proposed shoreside facilities will be closely related to the architectural character of the *Arizona* memorial so that they will merit the respect due a national shrine.

Without an adequate visitor center with theaters, museums and exhibit areas, which could not be built with the $2 million recommended by the Senate Armed Services Committee, the opportunity to present important historical

background pertaining to this national shrine will be lost. The history of the Pearl Harbor attack and the valiant men who gave up their lives will not be adequately presented nor realistically portrayed without the addition of proper shoreside support facilities to complete the memorial complex for the U.S.S. *Arizona*.

I would not ask Senators to support the estimated outlay of $3.3 million for the construction of shoreside support facilities for the U.S.S. *Arizona* memorial to increase its appeal solely as a tourist attraction. I ask Senators to support a $3.3 million authorization, instead of the incomplete $2 million authorization recommended by the military construction subcommittee and the Senate Armed Services Committee, for this worthwhile project so that the people of our country shall never forget the meaning—the physical and psychological impact and the historic significance—of the attack on Pearl Harbor.

I urge Senators to support my amendment to the military construction authorization bill for fiscal year 1978, for I simply do not see how we can begrudge the extra money to adequately provide for the commemoration of those who gave their lives on one of the darkest days of our history so that we might live on in freedom. I only ask that my colleagues remember the U.S.S. *Arizona*.

Mr. President, I have discussed this amendment with the distinguished Senator from Colorado and the distinguished Senator from South Carolina. The amendment relates to the *Arizona* memorial in Pearl Harbor. If adopted, it will provide for the construction of a visitors' center and shoreside support facilities for this very important U.S.S. *Arizona* memorial.

As Senators will recall, on December 7, 1941, this valiant ship was sunk, together with 1,102 officers and men, and as a result we have a memorial there, a very important one. Throughout the years thousands of Americans have visited that memorial, but we have never had adequate shoreside facilities. People have had to stand out in the rain and wait for boats to come to take them to the memorial. This authorization will provide the necessary funds to build an adequate shoreside facility.

I have been advised by the managers of the bill that they will accept the amendment.

Mr. HART. Mr. Prseident, the Senator from Hawaii appeared before the subcommittee and made a very excellent presentation concerning this item and his support for it. The subcommittee looked into the matter with some deliberation. We examined the project very carefully. It is the only project in the entire bill, which is a bill of $3.5 billion to $4 billion, which was not in the budget request, nor which met the criteria which I mentioned in my opening statement.

The subcommittee agreed, and the full committee supported that agreement, that we would request authorization of $2 million from the Senate for this project. The Senator from Hawaii now requests full funding in the amount of the original request.

It is a request I believe we can accede to and take to conference for discussions with the House.

Therefore, Mr. President, I am prepared, on behalf of the committee, to not object to this amendment.

Mr. THURMOND. Mr. Prseident, this is a meritorious project. The only question is the amount which should be appropriated for construction of the project. The subcommittee appropriated $2 million. The distinguished Senator from Hawaii tells me the Navy says they just cannot do it for that, that it will take $3.3 million. The subcommittee was hoping it could be done for $2 million. Since it cannot be done for that amount, and we are convinced, according to the Navy figures, it will take $3.3 million, I shall not oppose the project and I will support the amendment.

Mr. STENNIS. Mr. President, if the Senator will yield, I am not familiar with the price. I am sure the Senator from South Carolina and the Senator from Hawaii are correct in their statements.

I do want to be on record as supporting this project. I have been there. I am delighted at the prospect of getting what should have been obtained before, to make this an additional shrine where our people can go to honor the dead as well as be inspired.

Mr. INOUYE. I thank the Senator.

Mr. MATSUNAGA. Mr. President, I rise in support of the amendment offered by my distinguished colleague and senior Senator from Hawaii, Mr. INOUYE, to increase the authorization for construction of a shoreside visitor facility for the U.S.S. *Arizona* memorial in Pearl Harbor.

The memorial, built in 1962 over the sunken hulk of the *Arizona*, commemorates the heroism and patriotism of the thousands of men who lost their lives on December 7, 1941 in Pearl Harbor, and as well those who made the ultimate sacrifice for their country in the Pacific theater of the Second World War. As a member of the Pacific War Memorial Commission which was responsible for its unmatchable beauty and uniqueness of construction, I take great pride in the the *Arizona* memorial.

Visitors to Hawaii who wish to pay tribute to our war heroes, many of whom still lie buried within the sunken hull of the battleship *Arizona* must wait at the docks in an open area to board a boat for the short trip out to the memorial. These visitors, who now number over a million a year, gather on the docks where there are no benches, food facilities, or restrooms. In fact, there is no shelter from the rain or the Sun.

Beginning in the 91st Congress and every Congress thereafter, as a Member of the House of Representatives I introduced measures which would have provided a variety of essential shoreside facilities, within a museum and theater complex. Historical exhibits and motion picture films of the actual attack on Pearl Harbor would be shown to enhance the experience of visitors to the memorial. In 1972 such a bill passed the House, but was not acted upon in the Senate.

I am delighted, therefore that the Armed Services Committee under the leadership of the distinguished Senator from Mississippi, has included funds for the project in S. 1474.

Senator INOUYE today offers an amendment to add $1.3 million to the $2 million contained in S. 1474, as reported to the floor. The additional funds would bring the authorization into line with the Navy's estimate that the construction of these facilities would cost $3.3 million. The Navy and the Department of the Interior, as the Departments directly concerned with the construction and operation of these proposed facilities, have expressed a willingness to assume their respective responsibilities as soon as Congress authorizes it and provides the necessary funds, therefore, expect that authorization and appropriation of the funds will lead to swift action in that direction.

I urge my colleagues to support Senator INOUYE's amendment to increase the authorization for the type of shoreside facilities at the *Arizona* memorial that are commensurate with the deep significance which this national shrine holds for all Americans.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. HART. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. CRANSTON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 206

Mr. CRANSTON. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from California (Mr. CRANSTON) proposes an unprinted amendment numbered 206.

Mr. CRANSTON. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the appropriate place in Title VI, General Provisions, insert the following new section:

"Sec. 6. (a) The first section of the Act entitled "An Act authorizing the Secretary of the Army to convey certain lands to the city and county of San Francisco", approved October 13, 1949 (63 Stat. 844), is amended by adding "or jointly for public park and recreational uses and other public purposes."

(b) The Secretary of the Army shall issue such written instructions, deeds, or other instruments as may be necessary to bring the conveyance made to the city and county of San Francisco, California, under authority of the Act of October 13, 1949 (63 Stat. 844), into conformity with this section.

Mr. CRANSTON. Mr. President, this amendment relates to the conveyance of former military land to the city and county of San Francisco. In 1949, by act of Congress, 42 acres of Army land south of the San Francisco zoo were trans-

ferred to the city and county of San Francisco for park and recreation purposes. San Francisco has now determined that this property is the best site for its southwest sewage treatment facility, but the restrictions on the deed make legislation necessary. This amendment would amend Public Law 81–354 to permit the use of the property jointly for public park and recreational uses and other public purposes.

The Department of the Army supports the change I am proposing. I ask unanimous consent that the Department's May 12 letter to the Armed Services Committee endorsing the amendment be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF THE ARMY,
Washington, D.C., May 12, 1977.

Hon. JOHN C. STENNIS,
Chairman, Committee on Armed Services, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Reference is made to your request to the Secretary of Defense for the views of the Department of Defense on S. 700, 95th Congress, a bill "To amend the Act of October 13, 1949, relating to the conveyance of certain land to the city and county of San Francisco, California." The Department of the Army has been assigned responsibility for expressing the views of the Department of Defense on this bill.

The purpose of the bill is to amend the first section of Public Law 354, 81st Congress (63 Stat. 844), by striking out "for public park and recreational purposes," and inserting in lieu thereof "for public purposes,". The bill further provides that the Secretary of the Army shall issue such written instructions, deeds, or other instruments as may be necessary to bring the conveyance made to the city and county of San Francisco, California, under authority of Public Law 354, 81st Congress, into conformity with the amendment made by the first section of the bill.

Pursuant to Public Law 354, 81st Congress, the Secretary of the Army conveyed by quitclaim deed to the city and county of San Francisco, for public park and recreational purposes, forty-two acres of land, more or less, being a portion of the Fort Funston Military Reservation. As provided by section 2a of the Act, the deed reserved to the United States the right to use and occupy the family living quarters located within the 42 acres of land. The deed also provided that should the city and county of San Francisco, without expense to the United States, construct or provide for construction of eight family units of quality and at a location satisfactory to the Army, as a substitute for the reserved quarters, the reservation would have no further force and effect.

Public Law 354 and the deed provided for the city and county of San Francisco to grant to the State of California, for National Guard purposes, the use of 7.69 acres of land for a period of 99 years, reserved existing facilities to the National Guard, and allowed National Guard construction of new facilities on the parcel.

The Act and the deed further provided that, in the event of breach by the grantee of any of the terms, conditions, restrictions, and reservations contained in the deed, or if the property conveyed is used for any purpose other than mentioned in the Act, title to the property, together with all improvements, shall revert to the United States.

The city and county of San Francisco, in order to comply with imposed water pollution standards, proposes to construct a major sewage treatment facilitiy at a site which includes the Fort Funston living quarters and the area on which the California National Guard has an armory, storage and maintenance facilities.

The Department of the Army has a need for continued use of either the living quarters located on the area reserved for that use, or for the eight quarters the city and county of San Francisco would be required to construct as replacement quarters. The California National Guard also has a need for continued use of its armory, storage, and maintenance facilities on the portion of Fort Funston granted for its use.

Section 2 of the bill contains sufficient provision for the Secretary of the Army to protect the interests of the United States and to hold the grantee to all of the remaining provisions of the quitclaim deed granted pursuant to Public Law 354, 81st Congress.

The Department of the Army, on behalf of the Department of Defense, interposes no objection to the enactment of the bill.

The fiscal effects of this legislation are not known to the Department of Defense.

This report has been coordinated within the Department of Defense in accordance with the procedures prescribed by the Secretary of Defense.

The Office of Management and Budget advises that, from the standpoint of the Administration's program, there is no objection to the presentation of this report for the consideration of the Committee.

Sincerely,

PAUL W. JOHNSON,
Deputy for Installation and Housing, OASA (I. & L.).

Mr. CRANSTON. Mr. President, I further understand that the amendment is acceptable to the committee and I trust that will be the case with the Senate.

Mr. HART. Mr. President, the committee has examined the request of the Senator from California in amendment form and does understand that the amendment has the acceptance and approval of the administration in the form of the Office of Management and Budget. There is no cost involved. There is no impact on the bill one way or the other. No budget implications exist, as we understand it. Therefore, for the majority of the committee, I am prepared to accept the amendment of the Senator from California.

Mr. THURMOND. Mr. President, in view of the statement by the distinguished Senator from California that the Defense officials and the administration approve this amendment, and since it would appear also that there is no money involved, we have no objection to the adoption of the amendment.

Mr. CRANSTON. Mr. President, I thank the Senator from Colorado and the Senator from South Carolina.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. STENNIS. Mr. President, I believe the Senator from Kansas has a matter he is interested in presenting. Before third reading of the bill, I believe we should hear from him.

Mr. HART. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to proceed for 1 minute only.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXTENSION OF PATENT TO THE UNITED DAUGHTERS OF THE CONFEDERACY

Mr. ROBERT C. BYRD. Mr. President, S. 810 was reported earlier today from the Committee on the Judiciary. I ask unanimous consent for its immediate consideration.

The PRESIDING OFFICER. Is there objection to the request of the Senator from West Virginia?

There being no objection, the Senate proceeded to consider the bill (S. 810) granting an extension of patent to the United Daughters of the Confederacy, which was read the first time by title and the second time at length.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill (S. 810) was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a certain design patent issued by the United States Patent Office of date November 8, 1898, being patent numbered 29,611, which is the insignia of the United Daughters of the Confederacy, which was renewed and extended for a period of fourteen years by Public Law Numbered 213, Eighty-eighth Congress, approved December 18, 1963, is hereby renewed and extended for an additional period of fourteen years from and after the date of enactment of this Act, with all the rights and privileges pertaining to the same, being generally known as the insignia of the United Daughters of the Confederacy.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed, and I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. THURMOND. Mr. President, I thank the able, distinguished majority leader for such prompt and expeditious action on this measure.

Mr. ROBERT C. BYRD. Mr. President, the Senator is entitled to it.

MILITARY CONSTRUCTION AUTHORIZATIONS, 1978

The Senate continued with the consideration of the bill (S. 1474) to authorize certain construction at military installations, and for other purposes.

UP AMENDMENT NO. 207

Mr. DOLE. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Kansas (Mr. DOLE) proposes unprinted amendment No. 207:

On page 4, strike out lines 16 and 17.

Mr. DOLE. Mr. President, I might say at the outset that the Senator from Kansas does not intend to press this amendment. I want to discuss the implication of the amendment with the Senator from Mississippi; then the Senator from Kansas will withdraw the amendment.

It does reflect a problem in the State of Kansas—in Parsons, Kans. On the House side, my distinguished colleague, Representative JOE SKUBITZ, offered an amendment to strike similar language. That amendment was adopted.

There is some concern that if the funds are added, with reference to the Bay St. Louis proposal, that the Parsons Ammunition Depot in Kansas, and also one in Texas, might be relegated to some inferior status, which could mean the phasing out of those plants in the next 2 to 4 years. I have discussed this with the distinguished Senator from Mississippi.

Perhaps we could have a brief exchange on the future of the plant, what impact the expenditure at Bay St. Louis will have on the Parsons plans. What are the Army's requirements for 155 mm ammunition, and what can we expect in the future, particularly for the Parsons plant, when the new structure is completed?

Mr. STENNIS. Mr. President, if the Senator will yield to me, I shall be glad to discuss the facts of this matter with him.

The Army now is in the midst of overcoming what was a very serious situation during the war in Vietnam—costly war, although not one that was as extensive as earlier wars. During the Vietnam war, we actually got into a serious situation, bordering on a very grave shortage of ammunition. There is spelled out in very clear fashion a need for a greater ammunition production capacity, and also for dispersing our production facilities—not putting so many of our eggs in one basket, so to speak. There is also spelled out a need for production of the new modern shells that are far more effective than the old shells were.

This plant in Kansas—I am referring now to the one at Lawrence—I believe is the one the Senator first mentioned.

Mr. DOLE. Parsons, Kans.

Mr. STENNIS. Well, Parsons and Lawrence. I shall discuss them both here and spell out what their future is in the Army expansion plan for their ammunition production facilities. This is the ammunition for the men who carry a rifle and those that fire the small and larger artillery guns.

At Lawrence, the Army has new construction underway that involves, in round numbers, $100 million. That construction is ongoing for the modernization and expansion of that plant. It has been inactive since 1971, but they tell us very definitely that they plan to reactivate the plant on completion of the nitroguanidine plant in the 1979 time frame. The employment there then will be approximately 450 personnel.

The future projects definitely listed in the Army plan for the Lawrence plant for the immediate future are: Igloo magazines, $2.5 million; product assurance line, $8 million; continuous nitrocellulose line, $14.1 million; modernization of multibase propellant line, $36 million; for a total of $50.6 million over the next few years. A total of $50.6 million. They are very definitely planning to go ahead with this new construction. I expect them to seek authorization, not this year, but in the next few year, and I expect the Army to ask for appropriations.

Looking further at Kansas, we have Parsons, Kans. Present employment as of July 1975, was 1,059. In May 1977, it is down some, down to 764. They have a plan for the future expansion of that plant, $36.5 million worth of construction. I will put the details of that in the RECORD later by unanimous consent.

If all these capacities are added up, together with the additional capacity proposed in this bill to which the Senator has referred, they will still have a capacity of barely half—barely half—of what their maximum needs should be should we get in a war.

I mention that just to show the pattern. We must have more capacity in hand, subject to rapid mobilization, more than we would need or use in peacetime.

There is another part of the problem of any expansion and extension program. We did get caught largely without mobilization capacity—we had cut it down too thin before we got into this war in Vietnam.

As far as I am concerned, I expect to support this modernization effort as long as the need is shown and I think that would be the attitude of the committee. Those of us who were on the committee during the war know what a close call we had.

Mr. DOLE. I thank the distinguished Senator from Mississippi.

It seems to those of us who live in Kansas, and also the distinguished Senator from Texas (Mr. TOWER), and I assume the other Senator from Texas (Mr. BENTSEN), as well as my colleague from Kansas (Mr. PEARSON), that we have a concern. We are not quarreling with what may be done in Bay St. Louis, but we are trying to protect what we believe are outstanding installations in our State where we are producing 155 millimeter M483 ICM rounds.

It seems to us that we want the assurance we think we have had now from the distinguished Senator from Mississippi that this will in no way threaten the future operation of these plants, because there is a shortage, as the Senator said, of production capacity.

Mr. STENNIS. Mr. President, may we have quiet, this is an important matter?

The PRESIDING OFFICER. The Senate will be in order.

Mr. DOLE. As the Senator said, we should not put all our eggs in one basket.

The House report that was issued in this particular area had the following language:

> The committee believes that a more orderly program would result from upgrading old facilities or constructing new facilities near old facilities being phased out rather than constructing new facilities where no experienced personnel are available.

That was in reference to the Bay St. Louis plant. But I can understand the need for greater production of 155 millimeter M483 ICM rounds.

I take it from the distinguished Senator's remarks that he shares that view, that we are not in any way curtailing the operation of the Kansas Army ammunition plant in Parsons, nor in any way interfering with the one in Texas, the Lone Star plant.

Mr. STENNIS. I certainly do not think it interferes at all, especially when we give consideration to the overall plan. Even having this new capacity, we will have just barely half enough capacity.

Even if we put all of the proposed production of this new weapon, this improved 155 millimeter shell, and this should be emphasized greatly, take all this new production and build it in one place, as the Army has proposed at Bay St. Louis, we would not have enough capacity to manufacture half of the contemplated need.

Mr. DOLE. Is it safe to assume then, based on our exchange, that there is a long-term role, possibly an expanded role, for the plant I discussed in Parsons, Kans., and also the one in Texas?

Mr. STENNIS. I think so, and all the evidence I have points that out and proves it. I know nothing to the contrary.

Mr. DOLE. And the Senator understands our interest?

Mr. STENNIS. Yes. I always understand the interests of the Senator from Kansas.

Mr. DOLE. We want progress. We want to make certain we have what we may need down the road as far as the munitions are concerned. But we want to protect what little we have in the State of Kansas in this area. That is why we are asking for some assurance.

Mr. STENNIS. I think the Senator is constructive in what he is doing now. As best as I can, I assure him of what is in the Army's plan. I think their program will be adopted, because Congress takes this matter seriously. The Kansas plant is going to be in good shape.

Mr. DOLE. And this will be a matter in conference?

Mr. STENNIS. Yes. That is correct.

Mr. DOLE. Well, based on the colloquy and the assurances I have had with the distinguished Senator from Mississippi, the Senator from Kansas withdraws the amendment.

Mr. STENNIS. I thank the Senator.

We will go into it in conference and, of course, I will favor it.

I thank the Senator very much.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. MUSKIE. Mr. President, I speak today in support of the military construction authorization bill which the Committee on Armed Services has reported.

First, I extend my congratulations to my friend, the distinguished Senator from Colorado (Mr. HART), for the effort he has devoted to this important legislative measure. He has brought his first military construction bill before the Senate; he is serving the interests of the Senate and the country well in developing this initial piece of legislation.

S. 1474 proposes an authorization level of $3.7 billion in budget authority. Associated with the bill are a few technical financial adjustments whereby the fiscal year 1978 authorization for new appropriations totals $3.5 billion, or approxi-

mately $0.1 billion under the administration's request. Fiscal year 1978 outlays resulting from the bill are slightly above $1.0 billion and less than $30 million over the administration's request.

Mr. President, the Senate has adopted the conference report of the First Budget Resolution for fiscal year 1978. The effect of the military construction authorization, if appropriated at the levels discussed here, would be under the budget request in budget authority, a first step toward achieving the national defense targets accepted by this body in the budget resolution.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

S. 1474

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—ARMY

SEC. 101. The Secretary of the Army may establish or develop military installations and facilities by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment for the following acquisition and construction:

INSIDE THE UNITED STATES

UNITED STATES ARMY FORCES COMMAND

Fort Bragg, North Carolina, $15,976,000.
Fort Campbell, Kentucky, $553,000.
Fort Carson, Colorado, $2,301,000.
Fort Hood, Texas, $13,142,000.
Fort Lewis, Washington, $985,000.
Fort Meade, Maryland, $3,168,000.
Fort Ord, California, $4,149,000.
Presidio of San Francisco, California, $500,000.
Fort Polk, Louisiana, $48,720,000.
Fort Richardson, Alaska, $1,990,000.
Fort Riley, Kansas, $531,000.
Schofield Barracks, Hawaii, $10,189,000.
Fort Stewart/Hunter Army Air Field Georgia, $10,991,000.
Fort Wainwright, Alaska, $6,985,000.

UNITED STATES ARMY TRAINING AND DOCTRINE COMMAND

Fort Belvoir, Virginia, $5,503,000.
Fort Benjamin Harrison, Indiana, $1,796,000.
Fort Benning, Georgia, $23,099,000.
Fort Bliss, Texas, $1,881,000.
Fort A. P. Hill, Virginia, $423,000.
Fort Jackson, South Carolina, $366,000.
Fort Knox, Kentucky, $15,541,000.
Fort Lee, Virginia, $313,000.
Fort McClellan, Alabama. $1,805,000.
Fort Rucker, Alabama, $1,250,000.
Fort Sill, Oklahoma, $1,100,000.

UNITED STATES ARMY MATERIAL DEVELOPMENT AND READINESS COMMAND

Aberdeen Proving Ground, Maryland, $8,458,000.
Anniston Army Depot, Alabama, $4,828,000.
Badger Army Ammunition Plant, Wisconsin, $688,000.
Corpus Christi Army Depot, Texas, $7,583,000.
Detroit Arsenal, Michigan, $228,000.
Harry Diamond Laboratory, Maryland, $1,305,000.
Holston Army Ammunition Plant, Tennessee, $26,846,000.
Indiana Army Ammunition Plant, Indiana, $1,004,000.
Iowa Army Ammunition Plant, Iowa, $708,000.
Letterkenny Army Depot, Pennsylvania, $310,000.
Lexington Blue-Grass Army Depot, Kentucky, $1,827,000.
Lone Star Army Ammunition Plant, Texas, $816,000.
Picatinny Arsenal, New Jersey, $9,593,000.
Pine Bluff Arsenal, Arkansas, $4,439,000.
Pueblo Army Depot, Colorado, $3,011,000.
Red River Army Depot, Texas, $1,193,000.
Redstone Arsenal, Alabama, $962,000.
Rock Island Arsenal, Illinois, $6,384,000.
Tooele Army Depot, Utah, $17,415,000.
Umatilla Army Depot, Oregon, $2,921,000.
White Sands Missile Range, New Mexico, $866,000.

AMMUNITION FACILITIES

Holston Army Ammunition Plant, Tennessee, $4,616,000.
Indiana Army Ammunition Plant, Indiana, $1,009,000.
Iowa Army Ammunition Plant, Iowa, $11,192,000.
Longhorn Army Ammunition Plant, Texas, $555,000.
Louisiana Army Ammunition Plant, Louisiana, $4,345,000.
Milan Army Ammunition Plant, Tennessee, $10,467,000.
Mississippi Army Ammunition Plant, Mississippi, $181,200,000.
Newport Army Ammunition Plant, Indiana, $822,000.
Radford Army Ammunition Plant Virginia, $203,000.
Riverbank Army Ammunition Plant, California, $584,000.
Sunflower Army Ammunition Plant, Kansas, $2,396,000.
Unspecified Location, $334,710,000.
Volunteer Army Ammunition Plant, Tennessee, $597,000.

UNITED STATES ARMY COMMUNICATIONS COMMAND

Fort Huachuca, Arizona, $1,279,000.

UNITED STATES MILITARY ACADEMY

United States Military Academy, West Point, New York, $3,047,000.

UNITED STATES ARMY HEALTH SERVICES COMMAND

Walter Reed Army Medical Center, District of Columbia, $2,089,000.

MILITARY TRAFFIC MANAGEMENT COMMAND

Bayonne Military Ocean Terminal, New Jersey, $442,000.
Sunny Point Military Ocean Terminal, North Carolina, $631,000.

UNITED STATES ARMY INTELLIGENCE AND SECURITY COMMAND

Vint Hill Farms, Virginia, $960,000.

NUCLEAR WEAPONS SECURITY

Various locations, $7,764,000.

OUTSIDE THE UNITED STATES

UNITED STATES ARMY, JAPAN

Various locations, $3,898,000.

KWAJALEIN MISSILE RANGE

National Missile Range, $2,603,000.

UNITED STATES ARMY INTELLIGENCE AND SECURITY COMMAND

Various locations, $1,331,000.

UNITED STATES ARMY, EUROPE

Germany, Various locations, $167,428,000, including funds for the completion of the medical/dental clinic, Building 504, Pendleton Barracks, Giessen.
Italy, Various locations, $3,770,000.
Various locations: For the United States share of the cost of multilateral programs for the acquisition or construction of military facilities and installations, including international military headquarters, for the collective defense of the North Atlantic Treaty Area, $85,000,000. Within thirty days after the end of each quarter, the Secretary of the Army shall furnish to the Committees on Armed Services and on Appropriations of the Senate and House of Representatives a description of obligations incurred as the United States share of such multilateral programs.

NUCLEAR WEAPONS SECURITY

Various locations, $6,800,000.

EMERGENCY CONSTRUCTION

SEC. 102. The Secretary of the Army may establish or develop Army installations and facilities by proceeding with construction made necessary by changes in Army missions and responsibilities which have been occasioned by (1) unforeseen security considerations, (2) new weapons developments, (3) new and unforeseen research and development requirements, or (4) improved production schedules if the Secretary of Defense determines that deferral of such construction for inclusion in the next Military Construction Authorization Act would be inconsistent with interests of national security, and in connection therewith to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment in the total amount of $10,000,000. The Secretary of the Army, or his designee, shall notify the Committees on Armed Services of the Senate and House of Representatives, immediately upon reaching a final decision to implement, of the cost of constructiton of any public work undertaken under this section, including those real estate actions pertaining thereto. This authorization will expire upon the date of enactment of the Military Construction Authorization Act for fiscal year 1979 except for those public works projects concerning which the Committees on Armed Services of the Senate and House of Representatives have been notified pursuant to this section prior to such date.

TITLE II—NAVY

SEC. 201. The Secretary of the Navy may establish or develop military installations and facilities by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment for the following acquisition and construction:

INSIDE THE UNITED STATES

TRIDENT FACILITIES

Various locations, $106,910,000.

MARINE CORPS

Marine Corps Supply Center, Albany, Georgia, $650,000.
Marine Corps Air Station, Beaufort, South Carolina, $1,100,000.
Marine Corps Base, Camp Lejeune, North Carolina, $13,400,000.
Marine Corps Base, Camp Pendleton, California, $1,380,000.
Marine Corps Air Station, Cherry Point, North Carolina, $4,500,000.
Marine Corps Air Station, El Toro, California, $600,000.
Marine Corps Air Station, Kaneohe Bay, Hawaii, $160,000.
Marine Corps Recruit Depot, Parris Island, South Carolina, $750,000.
Marine Corps Recruit Depot, San Diego, California, $1,200,000.
Marine Corps Air Station, Santa Ana, California, $750,000.
Marine Corps Base, Twentynine Palms, California, $11,965,000.

CHIEF OF NAVAL OPERATIONS

Naval Academy, Annapolis, Maryland, $365,000.

Naval Observatory, Flagstaff, Arizona, $80,000.
Commander in Chief Pacific, Headquarters, Pearl Harbor, Hawaii, $4,200,000.
Naval Support Activity, Mare Island, Vallejo, California, $2,900,000.
Naval District Headquarters, Washington, District of Columbia, $1,200,000.

COMMANDER IN CHIEF, ATLANTIC FLEET

Naval Air Station, Brunswick, Maine, $3,750,000.
Naval Air Station, Cecil Field, Florida, $90,000.
Naval Station, Charleston, South Carolina, $180,000.
Fleet Combat Direction Systems Training Center, Dam Neck, Virginia, $400,000.
Naval Amphibious Base, Little Creek, Virginia, $3,600,000.
Naval Station, Mayport, Florida, $1,310,000.
Naval Submarine Base, New London, Connecticut, $470,000.
Flag Administrative Unit Atlantic, Norfolk, Virginia, $90,000.
Fleet Intelligence Center Europe and Atlantic, Norfolk, Virginia, $1,137,000.
Naval Air Station, Norfolk, Virginia, $14,350,000.
Naval Station, Norfolk, Virginia, $4,340,000.
Naval Air Station, Oceana, Virginia, $640,000.

COMMANDER IN CHIEF, PACIFIC FLEET

Naval Station, Adak, Alaska, $11,000,000.
Naval Air Station, Barbers Point, Hawaii, $7,197,000.
Naval Amphibious Base, Coronado, California, $130,000.
Naval Air Station, Miramar, California, $3,830,000.
Naval Air Station, Moffett Field, California, $810,000.
Naval Air Station, North Island, California, $6,000,000.
Commander Oceanographic System, Pacific, Pearl Harbor, Hawaii, $7,400,000.
Naval Station, Pearl Harbor, Hawaii, $4,050,000.
Naval Submarine Base, Pearl Harbor, Hawaii, $2,090,000.
Naval Station, San Diego, California, $8,566,000.
Naval Submarine Support Facility, San Diego, California, $1,670,000.
Naval Air Station, Whidbey Island, Washington, $900,000.

CHIEF OF NAVAL EDUCATION AND TRAINING

Naval Air Station, Kingsville, Texas, $550,00.
Naval Education and Training Center, Newport, Rhode Island, $270,000.
Armed Forces Staff College, Norfolk, Virginia, $160,000.
Naval Training Center, Orlando, Florida, $200,000.
Naval Amphibious School, Coronado, San Diego, California, $3,450,000.
Naval Submarine Training Center, Pearl Harbor, Hawaii, $410,000.
Naval Technical Training Center, Pensacola, Florida, $2,400,000.

BUREAU OF MEDICINE AND SURGERY

Naval Regional Medical Center, Bremerton, Washington, $1,450,000.
Naval Regional Medical Center, Norfolk, Virginia, $600,000.

CHIEF OF NAVAL MATERIAL

Naval Ship Research and Development Center, Annapolis, Maryland, $280,000.
Naval Ship Research and Development Center, Bethesda, Maryland, $200,000.
Puget Sound Naval Shipyard, Bremerton, Washington, $11,600,000.
Polaris Missile Facility Atlantic, Charleston, South Carolina, $18,150,000.
Charleston Naval Shipyard, Charleston, South Carolina, $8,700,000.
Naval Weapons Station, Charleston, South Carolina, $850,000.
Naval Air Rework Facility, Cherry Point, North Carolina, $360,000.
Naval Weapons Center, China Lake, California, $900,000.
Naval Weapons Station, Concord, California, $2,550,000.
Navy Public Works Center, Great Lakes, Illinois, $850,000.
Naval Avionics Facility, Indianapolis, Indiana, $90,000.
Naval Ordnance Station, Indian Head, Maryland, $180,000.
Naval Air Rework Facility, Jacksonville, Florida, $1,200,000.
Naval Torpedo Station, Keypoint, Washington, $3,540,000.
Portsmouth Naval Shipyard, Kittery, Maine, $10,030,000.
Naval Air Station, Lakehurst, New Jersey, $160,000.
Long Beach Naval Shipyard, Long Beach, California, $9,020,000.
Naval Air Rework Facility, Norfolk, Virginia, $390,000.
Naval Supply Center, Norfolk, Virginia, $1,200,000.
Navy Public Works Center, Norfolk, Virginia, $4,150,000.
Naval Air Test Center, Patuxent River, Maryland, $6,089,000.
Naval Supply Center, Pearl Harbor, Hawaii, $17,100,000.
Pearl Harbor Naval Shipyard, Pearl Harbor, Hawaii, $1,060,000.
Navy Public Works Center, Pearl Harbor, Hawaii, $3,000,000.
Navy Public Works Center, Pensacola, Florida, $1,650,000.
Philadelphia Naval Shipyard, Philadelphia, Pennsylvania, $17,500,000.
Pacific Missile Test Center, Point Mugu, California, $1,980,000.
Naval Construction Battalion Center, Port Hueneme, California, $2,510,000.
Norfolk Naval Shipyard, Portsmouth, Virginia, $100,000.
Naval Undersea Center, San Diego, California, $250,000.
Navy Public Works Center, San Francisco, California, $480,000.
Naval Air Propulsion Test Center, Trenton, New Jersey, $240,000.
Mare Island Naval Shipyard, Vallejo, California, $24,100,000.
Naval Research Laboratory, Washington, District of Columbia, $330,000.
Naval Surface Weapons Center, White Oak, Maryland, $280,000.
Naval Weapons Station, Yorktown, Virginia, $5,800,000.

NAVAL TELECOMMUNICATIONS COMMAND

Naval Communications Station, Adak, Alaska, $300,000.

NAVAL SECURITY GROUP COMMAND

Naval Security Group Department, Adak, Alaska, $2,350,000.
Naval Security Group Detachment, Sugar Grove, West Virginia, $900,000.
Naval Security Station, Washington, District of Columbia, $90,000.

NUCLEAR WEAPONS SECURITY

Various locations, $20,658,000.

OUTSIDE THE UNITED STATES

CHIEF OF NAVAL OPERATIONS

Naval Support Facility, Diego Garcia, Indian Ocean, $7,300,000.

COMMANDER IN CHIEF, ATLANTIC FLEET

Naval Facility, Antigua, British West Indies, $180,000
Naval Station, Keflavik, Iceland, $161,000.
Naval Station, Roosevelt Roads, Puerto Rico, $320,000.

COMMANDER IN CHIEF, PACIFIC FLEET

Navy Public Works Center, Guam, Mariana Islands, $2,800,000.
Navy Fleet Activities, Yokosuka, Japan, $1,850,000.

NAVAL FORCES EUROPE

Naval Air Facility, Sigonella, Italy, $4,300,000.

BUREAU OF MEDICINE AND SURGERY

Naval Regional Medical Clinic, Pearl Harbor, Midway Island Detachment, $4,350,000.

NAVAL TELECOMMUNICATIONS COMMAND

Naval Communication Area Master Station, Naples, Italy, $1,700,000.
Naval Communications Unit, Thurso, Scotland, $350,000.

NAVAL SECURITY GROUP COMMAND

Naval Security Group Department, Rota, Spain, $2,400,000.

EMERGENCY CONSTRUCTION

SEC. 202. (a) The Secretary of the Navy may establish or develop Navy installations and facilities by proceeding with construction made necessary by changes in Navy missions and responsibilities which have been occasioned by (1) unforeseen security considerations, (2) new weapons developments, (3) new and unforeseen research and development requirements, or (4) improved production schedules, if the Secretary of Defense determines that deferral of such construction for inclusion in the next Military Construction Authorization Act would be inconsistent with interest of national security, and in connection therewith to acquire, construct, convert, rehabilitate, or install permanent or temporary public works including land acquisition, site preparation, appurtenances, utilities, and equipment, in the total amount of $20,000,000. The Secretary of the Navy, or his designee, shall notify the Committees on Armed Services of the Senate and House of Representatives, immediately upon reaching a final decision to implement, of the cost of construction of any public work undertaken under this section, including those real estate actions pertaining thereto. This authorization will expire upon the date of enactment of the Military Construction Authorization Act for fiscal year 1979 except for those public works projects concerning which the Committees on Armed Services of the Senate and House of Representatives have been notified pursuant to this section prior to such date.

(b) The Secretary of the Navy may use the authority contained in subsection (a) to provide the necessary facilities at King's Bay, Georgia, or at such other site as he may determine, to accommodate the submarine squadron currently stationed in Rota, Spain. Funds may not be expended for such purpose until the Secretary of the Navy has completed a site selection study and has publicly announced his final site decision.

(c) Section 202 of Public Law 94-431 is amended by striking out "This authorization will expire upon the date of enactment of the Military Construction Authorization Act for fiscal year 1978" and inserting in lieu thereof "This authorization will expire upon the date of enactment of the Military Construction Authorization Act for fiscal year 1979".

REPLACEMENT OF LEASED FACILITIES, SAN DIEGO

SEC. 203. Notwithstanding any other provision of law, the Secretary of the Navy is authorized (1) to construct at the United States Naval Station, San Diego, California, recreational facilities necessary to replace those facilities located on the Navy Athletic Field, Naval Station, San Diego, which field is held under lease (dated August 9, 1949) from the city of San Diego, and (2) to expend for such construction funds paid to the United States by the San Diego Unified Port District (the current holder of the lessor's interest in the premises on which such Navy Athletic Field is situated) pursuant to an agreement, to be negotiated between the Secretary and the Unified Port District, providing for Navy termination of the lease

and abandonment of its existing facilities on the leasehold in consideration of the Unified Port District paying to the United States the cost of replacement recreational facilities. However, such lease shall not be terminated and the Department of the Navy shall not be required to relinquish use of any part of the leasehold until the new facilities authorized to be constructed herein are available for use, as determined by the Secretary, or his designee.

TRANSFER OF AUTHORIZATION

SEC. 204. The Secretary of the Navy may utilize the $100,000,000 authorization for the National Naval Medical Center, Bethesda, Maryland, contained in section 201 of Public Law 94-107 (89 Stat. 550), for the construction of a south parking structure serving the 500-bed replacement hospital.

TITLE III—AIR FORCE

SEC. 301. The Secretary of the Air Force may establish or develop military installations and facilities by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment, for the following acquisition and construction:

INSIDE THE UNITED STATES

AEROSPACE DEFENSE COMMAND

Kingsley Field, Oregon, $115,000.
Peterson Air Force Base, Colorado, $773,000.
Tyndall Air Force Base, Florida, $690,000.

AIR FORCE LOGISTICS COMMAND

Hill Air Force Base, Utah, $23,020,000.
Kelly Air Force Base, Texas, $9,878,000.
McClellan Air Force Base, California, $4,086,000.
Newark Air Force Station, Ohio, $2,080,000.
Robins Air Force Base, Georgia, $11,884,000.
Tinker Air Force Base, Oklahoma, $12,894,000.
Wright Patterson Air Force Base, Ohio, $7,274,000.

AIR FORCE SYSTEMS COMMAND

Arnold Engineering Development Center, Tennessee, $1,280,000.
Buckley Air National Guard Base, Colorado, $1,895,000.
Edwards Air Force Base, California, $13,532,000.
Eglin Air Force Base, Florida, $16,485,000.
Los Angeles Air Force Station, California, $500,000.
Patrick Air Force Base, Florida, $300,000.
Various locations, $2,826,000.

AIR TRAINING COMMAND

Chanute Air Force Base, Illinois, $8,026,000.
Columbus Air Force Base, Mississippi, $1,183,000.
Keesler Air Force Base, Mississippi, $850,000.
Lackland Air Force Base, Texas, $4,700,000.
Lowry Air Force Base, Colorado, $5,188,000.
Mather Air Force Base, California, $115,000.
Randolph Air Force Base, Texas, $425,000.
Sheppard Air Force Base, Texas, $980,000.
Williams Air Force Base, Arizona, $679,000.

AIR UNIVERSITY

Gunter Air Force Base, Alabama, $248,000.

ALASKAN AIR COMMAND

Eielson Air Force Base, Alaska, $297,000.
Elmdorf Air Force Base, Alaska, $5,042,000.
King Salmon Airport, Alaska, $631,000.
Shemya Air Force Base, Alaska, $3,947,000.

MILITARY AIRLIFT COMMAND

Altus Air Force Base, Oklahoma, $805,000.
Andrews Air Force Base, Maryland, $3,626,000.
Bolling Air Force Base, District of Columbia, $133,000.
Dover Air Force Base, Delaware, $165,000.
Little Rock Air Force Base, Arkansas, $573,000.
McChord Air Force Base, Washington, $6,011,000.
McGuire Air Force Base, New Jersey, $640,000.
Norton Air Force Base, California, $3,636,000.
Pope Air Force Base, North Carolina, $1,669,000.
Travis Air Force Base, California, $9,980,000.

PACIFIC AIR FORCES

Hickam Air Force Base, Hawaii, $2,140,000.

STRATEGIC AIR COMMAND

Barksdale Air Force Base, Louisiana, $2,253,000.
Beale Air Force Base, California, $409,000.
Blytheville Air Force Base, Arkansas, $941,000.
Carswell Air Force Base, Texas, $400,000.
Castle Air Force Base, California, $884,000.
Dyess Air Force Base, Texas, $672,000.
Ellsworth Air Force Base, South Dakota, $376,000.
Griffiss Air Force Base, New York, $645,000.
Grissom Air Force Base, Indiana, $6,300,000.
March Air Force Base, California, $1,387,000.
McConnell Air Force Base, Kansas, $216,000.
Offutt Air Force Base, Nebraska, $1,364,000.
Pease Air Force Base, New Hampshire, $2,314,000.
Plattsburgh Air Force Base, New York, $518,000.
Rickenbacker Air Force Base, Indiana, $815,000.
Vandenberg Air Force Base, California, $2,193,000.

TACTICAL AIR COMMAND

Bergstrom Air Force Base, Texas, $874,000.
Cannon Air Force Base, New Mexico, $937,000.
Davis Monthan Air Force Base, Arizona, $252,000.
England Air Force Base, Louisiana, $585,000.
George Air Force Base, California, $3,073,000.
Holloman Air Force Base, New Mexico, $2,377,000.
Homestead Air Force Base, Florida, $90,000.
Langley Air Force Base, Virginia, $5,202,000.
Luke Air Force Base, Arizona, $9,242,000.
MacDill Air Force Base, Florida, $2,420,000.
Moody Air Force Base, Georgia, $5,555,000.
Mountain Home Air Force Base, Idaho, $195,000.
Myrtle Beach Air Force Base, South Carolina, $718,000.
Nellis Air Force Base, Nevada, $5,180,000.
Seymour-Johnson Air Force Base, North Carolina, $3,816,000.
Shaw Air Force Base, South Carolina, $763,000.

UNITED STATES AIR FORCE ACADEMY

United States Air Force Academy, Colorado, $1,872,000.

NUCLEAR WEAPONS SECURITY

Various locations, $44,298,000.

OUTSIDE THE UNITED STATES

AEROSPACE DEFENSE COMMAND

Sondrestrom Air Base, Greenland, $310,000.
Thule Air Base, Greenland, $350,000.

PACIFIC AIR FORCES

Kadena Air Base, Japan, $2,372,000.
Osan Air Base, Korea, $1,255,000.
Yokota Air Base, Japan, $2,448,000.

STRATEGIC AIR COMMAND

Anderson Air Force Base, Guam, $1,905,000.

UNITED STATES AIR FORCES IN EUROPE

Germany, $16,417,000.
United Kingdom, $11,730,000.
Various locations, $97,905,000.

UNITED STATES AIR FORCE SECURITY SERVICE

Misawa Air Base, Japan, $732,000.

NUCLEAR WEAPONS SECURITY

Various locations, $10,162,000.

SPECIAL FACILITIES

Various locations, $2,356,000.

EMERGENCY CONSTRUCTION

SEC. 302. The Secretary of the Air Force may establish or develop Air Force installations and facilities by proceeding with construction made necessary by changes in Air Force missions and responsibilities which have been occasioned by (1) unforeseen security considerations, (2) new weapons developments, (3) new unforeseen research and development requirements, or (4) improved production schedules, if the Secretary of Defense determines that deferral of such construction for inclusion in the next Military Construction Authorization Act would be inconsistent with interests of national security, and in connection therewith to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment in the total amount of $20,000,000. The Secretary of the Air Force or his designee, shall notify the Committees on Armed Services of the Senate and House of Representatives, immediately upon reaching a final decision to implement, of the cost of construction of any public work undertaken under this section, including those real estate actions pertaining thereto. This authorization will expire upon the date of enactment of the Military Construction Authorization Act for fiscal year 1979 except for those public works projects concerning which the Committees on Armed Services of the Senate and House of Representatives have been notified pursuant to this section prior to such date.

TITLE IV—DEFENSE AGENCIES

SEC. 401. The Secretary of Defense may establish or develop military installations and facilities by acquiring, constructing, converting, rehabilitating, or installing permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment, for defense agencies for the following acquisition or construction:

INSIDE THE UNITED STATES

NATIONAL SECURITY AGENCY

Fort George G. Meade, Maryland, $650,000.

DEFENSE SYSTEMS MANAGEMENT COLLEGE

Fort Belvoir, Virginia, $1,810,000.

HIGH ENERGY LASER FACILITY

White Sands, New Mexico, $33,449,000.

OUTSIDE THE UNITED STATES

DEFENSE LOGISTICS AGENCY

Defense Property Disposal Office, Ludwigsburg, Germany, $1,650,000.

EMERGENCY CONSTRUCTION

SEC. 402. The Secretary of Defense may establish or develop installations and facilities which he determines to be vital to the security of the United States, and in connection therewith to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment in the total amount of $20,000,000. The Secretary of Defense, or

his designee, shall notify the Committees on Armed Services of the Senate and House of Representatives, immediately upon reaching a final decision to implement, of the cost of construction of any public works undertaken under this section, including real estate actions pertaining thereto.

TITLE V—MILITARY FAMILY HOUSING

AUTHORIZATION TO CONSTRUCT OR ACQUIRE HOUSING

SEC. 501. (a) The Secretary of Defense, or his designee, is authorized to construct or acquire sole interest in existing family housing units in the numbers and at the locations hereinafter named, but no family housing construction shall be commenced at any such locations in the United States until the Secretary shall have consulted with the Secretary of the Department of Housing and Urban Development as to the availability of suitable private housing at such locations. If agreement cannot be reached with respect to the availability of suitable private housing at any location, the Secretary of Defense shall notify the Committees on Armed Services of the Senate and the House of Representatives, in writing, of such difference of opinion, and no contract for construction at such location shall be entered into for a period of thirty days after such notification has been given. This authority shall include the authority to acquire land, and interests in land, by gift, purchase, exchange of Government-owned land, or otherwise.

(b) With respect to the family housing units authorized to be constructed by this section, the Secretary of Defense is authorized to acquire sole interest in privately owned or Department of Housing and Urban Development held family housing units in lieu of constructing all or a portion of the family housing authorized by this section, if he, or his designee, determines such action to be in the best interests of the United States; but any family housing units acquired under authority of this subsection shall not exceed the cost limitations specified in this section for the project nor the limitations on size specified in section 2684 of title 10, United States Code. In no case may family housing units be acquired under this subsection through the exercise of eminent domain authority; and in no case may family housing units other than those authorized by this section be acquired in lieu of construction unless the acquisition of such units is hereafter specifically authorized by law.

(c) Family housing units:

Fort Polk, Louisiana, one hundred units, $3,545,000.

Naval Complex, Adak, Alaska, one hundred units $8,500,000.

Portsmouth Naval Complex, Kittery, Maine, two hundred units, $8,086,000.

Naval Security Group Activity, Winter Harbor, Maine, thirty-two units, $1,450,000.

Naval Complex, Bremerton Washington, five hundred twenty units, $24,602,000.

Defense Attache Office, Quito, Eucador, two units, $105,000.

Defense Attache Office, Wellington, New Zealand two units, $88,000.

(d) Any of the amounts specified in this section may, at the discretion of the Secretary of Defense, or his designee, be increased by 10 per centum, if he determines that such increase (1) is required for the sole purpose of meeting unusual variations in cost, and (2) could not have been reasonably anticipated at the time such estimate was submitted to the Congress. The amounts authorized include the costs of shades, screens, ranges, refrigerators, and all other installed equipment and fixtures, the cost of the family housing unit, design, supervision, inspection, overhead, land acquisition, site preparation and installations of utilities.

IMPROVEMENT OF EXISTING QUARTERS

SEC. 502. The Secretary of Defense, or his designee, is authorized to accomplish alterations, additions, expansions, or extensions, not otherwise authorized by law, to existing public quarters at a cost not to exceed—

(1) for the Department of the Army, $20,891,000, including $223,000 for energy conservation projects;

(2) for the Department of the Navy, $10,353,000, including $3,500,000 for energy conservation projects and

(3) for the Department of the Air Force, $15,022,000, including $485,000 for energy conservation projects.

EXCEPTIONS TO IMPROVEMENT LIMITATION

SEC. 503. The Secretary of Defense, or his designee, within the amounts specified in section 502, is authorized to accomplish repairs and improvements to existing public quarters in amounts in excess of the $15,000 limitation prescribed in section 610(a) of Public Law 90–110, (81 Stat. 279,305), as amended, as follows:

Fort Bliss, Texas, one unit, $50,000.

Marine Corps Development and Education Command, Quantico, Virginia, thirty-three units, $739,880.

LEASED QUARTERS

SEC. 504. (a) The third sentence of section 515 of Public Law 84–161 (69 Stat. 324, 352) is amended to read as follows: "Expenditures for the rental of such housing facilities, including the cost of utilities and maintenance and operation, may not exceed: For the United States (other than Alaska, Hawaii, and Guam) and Puerto Rico, an average of $280 per month for each military department or the amount of $450 per month for any one unit; and for Alaska, Hawaii, and Guam, an average of $350 per month for each military department, or the amount of $450 per month for any one unit."

(b) Section 507(b) of Public Law 93–166 (87 Stat. 661, 676), as amended, is amended by striking out "$405" and "$700" in the first sentence, and inserting in lieu thereof "$435" and "$760", respectively.

MAXIMUM TERM OF FOREIGN LEASES

SEC. 505. Notwithstanding any other provision of law, the Secretary of Defense, or his designee, may acquire by lease, in any foreign country, family housing facilities and real property relating thereto that are needed for military purposes. A lease under this section may be for a period of not more than ten years.

APPROPRIATIONS LIMITATIONS

SEC. 506. There is authorized to be appropriated for use by the Secretary of Defense, or his designee, for military family housing and homeowners assistance as authorized by law for the following purposes:

(1) for construction or acquisition of sole interest in family housing, including demolition, authorized improvements to public quarters, minor construction, relocation of family housing, rental guarantee payments, and planning an amount not to exceed $65,200,000.

(2) for support of military family housing including operating expenses, leasing, maintenance of real property, payments of principal and interest on mortgage debts incurred, payment to the Commodity Credit Corporation, and mortgage insurance premiums authorized under section 222 of the National Housing Act, as amended (12 U.S.C. 1715m), an amount not to exceed $1,451,440,000.

(3) for homeowners assistance under section 1013 of Public Law 89–754 (80 Stat. 1255, 1290), as amended, including acquisition of properties, an amount not to exceed $3,000,000.

TITLE VI—GENERAL PROVISIONS

WAIVER OF RESTRICTIONS

SEC. 601. The Secretary of each military department may proceed to establish or develop installations and facilities under this Act without regard to section 3648 of the Revised Statutes, as amended (31 U.S.C. 529), and sections 4774 and 9774 of title 10, United States Code. The authority to place permanent or temporary improvements on land includes authority for surveys, administration, overhead, planning, and supervision incident to construction. That authority may be exercised before title to the land is approved under section 355 of the Revised Statutes, as amended (40 U.S.C. 255), and even though the land is held temporarily. The authority to acquire real estate or land includes authority to make surveys and to acquire land, and interests in land (including temporary use), by gift, purchase, exchange of Government-owned land, or otherwise.

APPROPRIATIONS LIMITATIONS

SEC. 602. There are authorized to be appropriated such sums as may be necessary for the purposes of this Act, but appropriations for public works projects authorized by titles I, II, III, IV, and V, shall not exceed—

(1) For title I: Inside the United States, $843,550,000; outside the United States, $270,830,000; or a total of $1,114,380,000.

(2) For title II: Inside the United States, $418,087,000; outside the United States, $25,711,000; or a total of $453,798,000.

(3) For title III: Inside the United States, $280,347,000; outside the United States, $147,942,000; or a total of $428,289,000.

(4) For title IV: A total of $57,559,000.

(5) For title V: Military Family Housing, $1,519,640,000.

COST VARIATIONS

SEC. 603. (a) Except as provided in subsections (b) and (c), any of the amounts specified in titles I, II, III, and IV of this Act may, at the discretion of the Secretary of the military department or Director of the defense agency concerned, be increased by 5 per centum when inside the United States (other than Hawaii and Alaska), and by 10 per centum when outside the United States or in Hawaii and Alaska, if he determines that such increase (1) is required for the sole purpose of meeting unusual variations in cost, and (2) could not have been reasonably anticipated at the time such estimate was submitted to the Congress.

(b) When the amount named for any construction or acquisition in title I, II, III, or IV of this Act involves only one project at any military installation and the Secretary of the military department or Director of the defense agency concerned determines that the amount authorized must be increased by more than the applicable percentage prescribed in subsection (a), he may proceed with such construction or acquisition if the amount of the increase does not exceed by more than 25 per centum the amount named for such project by the Congress.

(c) When the Secretary of Defense determines that any amount named in title I, II, III, or IV of this Act must be exceeded by more than the percentages permitted in subsections (a) and (b) to accomplish authorized construction or acquisition, the Secretary of the military department or Director of the defense agency concerned may proceed with such construction or acquisition after a written report of the facts relating to the increase of such amount, including a statement of the reasons for such increase, has been submitted to the Committees on Armed Services of the Senate and House of Representatives, and either (1) thirty days have elapsed from date of submission of such report, or (2) both committees have indicated approval of such con-

struction or acquisition. Notwithstanding the provisions in prior military construction authorization Acts, the provisions of this subsection shall apply to such prior Acts.

(d) Notwithstanding the foregoing provisions of this section, the total cost of all construction and acquisition in each such title may not exceed the total amount authorized to be appropriated in that title.

(e) No individual project authorized under title I, II, III, or IV of this Act for any specifically listed military installation for which the current working estimate is $400,000 or more may be placed under contract if—

(1) the approved scope of the project is reduced in excess of 25 per centum; or

(2) the current working estimate, based upon bids received, for the construction of such project exceeds by more than 25 per centum the amount authorized for such project by the Congress, until a written report of the facts relating to the reduced scope or increased cost of such project, including a statement of the reasons for such reduction in scope or increase in cost, has been submitted to the Committees on Armed Services of the Senate and House of Representatives, and either (A) thirty days have elapsed from date of submission of such report, or (B) both committees have indicated approval of such reduction in scope or increase in cost as the case may be.

(f) The Secretary of Defense shall submit an annual report to the Congress identifying each individual project which has been placed under contract in the preceding twelve-month period and with respect to which the then current working estimate of the Department of Defense based upon bids received for such project exceeded the amount authorized by the Congress for that project by more than 25 per centum. The Secretary shall also include in such report each individual project with respect to which the scope was reduced by more than 25 per centum in order to permit contract award within the available authorization for such project. Such report shall include all pertinent cost information for each individual project, including the amount in dollars and percentage by which the current working estimate based on the contract price for the project exceeded the amount authorized for such project by the Congress.

CONSTRUCTION SUPERVISION

SEC. 604. Contracts for construction made by the United States for performance within the United States and its possessions under this Act shall be executed under the jurisdiction and supervision of the Corps of Engineers, Department of the Army; or the Naval Facilities Engineering Command, Department of the Navy; or such other department or Government agency as the Secretaries of the military departments recommend and the Secretary of Defense approves to assure the most efficient, expeditious, and cost-effective accomplishment of the construction herein authorized. The Secretaries of the military departments shall report annually to the President of the Senate and the Speaker of the House of Representatives a breakdown of the dollar value of construction contracts completed by each of the several construction agencies selected together with the design, construction supervision, and overhead fees charged by each of the several agents in the execution of the assigned construction. Further, such contracts (except architect and engineering contracts which, unless specifically authorized by the Congress, shall continue to be awarded in accordance with presently established procedures, customs, and practice) shall be awarded, insofar as practicable, on a competitive basis to the lowest responsible bidder, if the national security will not be impaired and the award is consistent with chapter 137 of title 10, United States Code. The Secretaries of the military departments shall report annually to the President of the Senate and the Speaker of the House of Representatives with respect to all contracts awarded on other than a competitive basis to the lowest responsible bidder. Such reports shall also show, in the case of the ten architect-engineering firms which, in terms of total dollars, were awarded the most business; the names of such firms; the total number of separate contracts awarded each such firm; and the total amount paid in the case of each such action under all such contracts awarded such firm.

REPEAL OF PRIOR AUTHORIZATIONS: EXCEPTIONS

SEC. 605. (a) As of October 1, 1978, all authorizations for military public works, including family housing, to be accomplished by the Secretary of a military department in connection with the establishment or development of installations and facilities and all authorizations for appropriations therefor, that are contained in titles I, II, III, IV, and V of the Act of September 30, 1976, Public Law 94-431 (90 Stat. 1349), and all such authorizations contained in Acts approved before September 30, 1976, and not superseded or otherwise modified by later authorizing legislation are repealed except—

(1) authorizations for public works and for appropriations therefor that are set forth in those Acts in the titles that contain the general provisions; and

(2) authorizations for public works projects as to which appropriated funds have been obligated for construction contracts, land acquisition, or payments to the North Atlantic Treaty Organization, in whole or in part, before January 1, 1979, and authorizations for appropriations therefor.

(b) Notwithstanding the repeal provisions of section 605 of the Act of September 30, 1976, Public Law 94-431 (90 Stat. 1349, 1364), authorizations for the following items shall remain in effect until January 1, 1980:

(1) Aeromedical research building in the amount of $9,139,000 at Fort Rucker, Alabama, authorized in title I, section 101 of the Act of October 7, 1975 (89 Stat. 546), as amended.

(2) Pier utilities construction in the amount of $633,000 at Fort Eustis, Virginia, authorized in title I, section 101 of the Act of October 7, 1975 (89 Stat. 546), as amended.

(3) Academic Building construction in the amount of $5,315,000 at Fort Huachuca, Arizona, authorized in title I, section 101 of the Act of October 7, 1975 (89 Stat. 547), as amended.

(4) Solar energy plant construction in the amount of $690,000 at Fort Huachuca, Arizona, authorized in title I, section 101 of the Act of October 7, 1975 (89 Stat. 547), as amended.

(5) Relocate the weapons range from the Culebra Complex in the amount of $12,000,000 for the Atlantic Fleet Weapons Range, Roosevelt Roads, Puerto Rico, authorized in title II, section 204 of the Act of November 29, 1973 (87 Stat. 688), as amended and extended in section 605(b)(II) of the Act of October 7, 1975 (89 Stat. 545), as amended.

(6) Solar observation facilities construction in the amount of $2,011,000 at various locations worldwide, authorized in title III, section 301 of the Act of October 7, 1975 (89 Stat. 555), as amended.

UNIT COST LIMITATIONS

SEC. 606. None of the authority contained in titles I, II, III, and IV of this Act shall be deemed to authorize any building construction projects inside the United States in excess of a unit cost to be determined in proportion to the appropriate area construction cost index, based on the following unit cost limitations where the area construction index is 1.0:

(1) $42 per square foot for permanent barracks; or

(2) $45 per square foot for bachelor officer quarters; unless the Secretary of Defense, or his designee, determines that because of special circumstances, application to such project of the limitations on unit costs contained in this section is impracticable. Notwithstanding the limitations contained in prior Military Construction Authorization Acts on unit costs, the limitations on such costs contained in this section shall apply to all prior authorizations for such construction heretofore repealed and for which construction contracts have not been awarded by the date of enactment of this Act.

INCREASES FOR SOLAR HEATING AND SOLAR COOLING EQUIPMENT

SEC. 607. The Secretary of Defense shall encourage the utilization of solar energy as a source of energy for projects authorized by this Act where utilization of solar energy would be practical and economically feasible. In addition to all other authorized variations of cost limitations or floor area limitations contained in this Act or prior Military Construction Authorization Acts, the Secretary of Defense, or his designee, may permit increases in the cost limitations or floor area limitations by such amounts as may be necessary to equip any projects with solar heating and/or solar cooling equipment.

MINOR CONSTRUCTION PROJECTS

SEC. 608. (a) Section 2674 of title 10, United States Code, is amended to read as follows:

"§ 2674. MINOR CONSTRUCTION PROJECTS

"(a) Under such regulations as the Secretary of Defense may prescribe, the Secretary of a military department or the director of a defense agency may acquire, construct, convert, extend, and install, at military installations and facilities, permanent or temporary public works not otherwise authorized by law including the preparation of sites and the furnishing of appurtenances, utilities, and equipment, but excluding the construction of family quarters.

"(b) This section does not authorize a project costing more than $1,000,000. A project costing more than $500,000 must be approved in advance by the Secretary of Defense, and a project costing more than $300,000 must be approved in advance by the Secretary of a military department or the director of the defense agency concerned.

"(c) The total costs for all projects initiated under authority of this section by any military department or by defense agencies in any fiscal year (except those projects funded from appropriations available for operations and maintenance as provided in subsection (c)) may not exceed the total amount authorized for minor construction projects in the annual military construction authorization Act for such military department or defense agencies, as the case may be, for such fiscal year.

"(d) Not more than $50,000 may be spent under this section during a fiscal year to convert structures to family quarters at any one installation or facility.

"(e) Only funds appropriated to a military department or to the defense agencies for minor construction projects may be used by such department or by such agencies to accomplish minor construction projects, except that the Secretary of a military department or the director of a defense agency may spend, from appropriations available for maintenance and operations, amounts necessary for any project costing not more than $100,000 that is authorized under this section.

"(f) The Secretary of each military department and the Secretary of Defense for the defense agencies shall report in detail annually to the Committees on Armed Services and Appropriations of the Senate and

House of Representatives on the administration of this section. In addition, such committees shall be notified in writing of any such approved project costing more than $300,000 at least thirty days before funds are obligated for such project.

"(g) For the purposes of this section, 'project' means a single undertaking which includes all construction work, land acquisition and items of installed equipment necessary to accomplish a specific purpose and produce (1) a complete and usable facility, or (2) a complete and usable improvement to an existing facility.

"(h) The directors of the defense agencies will execute the construction of minor projects under authority of this section by or through a military department designated by the Secretary of Defense as provided in section 2682 of this title.".

(b) The table of sections at the beginning of chapter 159 of title 10, United States Code, is amended by striking out

"2674. Establishment and development of military facilities and installations costing less than $300,000."

and inserting in lieu thereof

"2674. Minor construction projects.".

(c) The amendments made by this section shall become effective October 1, 1978.

USE OF PROPERTY SALE PROCEEDS FOR NATIONAL GUARD FACILITIES

SEC. 609. (a) The Secretary of Defense, or his designee, is directed to report to the General Services Administration for disposal at fair market value the forty-three acres, more or less, together with any improvements thereon, formerly known as the Air Force San Patricio Fuel Storage Site, San Juan, Puerto Rico. The net proceeds from the sale may be used to construct new facilities for the Puerto Rico National Guard in accordance with Department of Defense criteria.

(b) Section 804 of Public Law 91-142, December 5, 1969, is repealed.

USE OF PROCEEDS FROM TIMBER SALES

SEC. 610. Section 2665(d) of title 10, United States Code, is amended to read as follows:

"(d) Appropriations of the Department of Defense available for operation and maintenance may be reimbursed during the current fiscal year for oil expenses of production of lumber or timber products pursuant to this section from amounts received as proceeds from the sale of any such property.".

REVISION IN NUMBER OF NAVAL DISTRICTS

SEC. 611. (a) Chapter 516 of title 10, United States Code, is repealed.

(b) The table of chapters at the beginning of subtitle C and at the beginning of part I of subtitle C of title 10, United States Code, are each amended by striking out

"516. Naval Districts..... 5221".

BASE REALIGNMENTS

SEC. 612. (a) Notwithstanding any other provision of law, no action may be taken to effect or implement—

(1) the closure of any military installation;

(2) any realignment involving a reduction in the authorized level of civilian personnel at any military installation by more than one thousand civilian personnel or 50 per centum of the level of such personnel authorized at the time that the Secretary of Defense or the Secretary of the military department concerned notifies the Congress that such installation is a candidate for closure or significant realignment; or

(3) any construction, conversion, or rehabilitation at any other military installation (whether or not such installation is a military installation as defined in subsection (b)) which will or may be required as a result of the relocation of civilian personnel to such other installation by reason of any closure or realignment to which this section applies;

unless—

(A) the Secretary of Defense or the Secretary of the military department concerned publicly announces and notifies the Committees on Armed Services of the Senate and the House of Representatives in writing that such military installation is a candidate for closure or significant realignment;

(B) the Secretary of Defense or the Secretary of a military department concerned complies with the requirements of the National Environmental Policy Act of 1969;

(C) the Secretary of Defense or the Secretary of the military department concerned submits to the Committees on Armed Services of the Senate and the House of Representatives his final decision to close or significantly realign such installation and a detailed justification for his decision, together with the estimated fiscal, local economic, budgetary, environmental, strategic, and operational consequences of the proposed closure or realignment; and

(D) a period of at least sixty days expires following the date on which the justification referred to in clause (C) has been submitted to such committees, during which period the Secretary of Defense or the Secretary of the military department concerned may take no irrevocable action to implement the decision.

(b) For purposes of this section—

(1) The term "military installation" means any camp, post, station, base, yard, or other facility under the authority of the Department of Defense—

(A) which is located within any of the several States, the District of Columbia, the Commonwealth of Puerto Rico, or Guam; and

(B) at which not less than one thousand civilian personnel are authorized to be employed.

Such term does not include any facility used primarily for civil works; rivers and harbors projects or flood control projects.

(2) The term "civilian personnel" means direct-hire permanent civilian employees of the Department of Defense.

(3) The term "realignment" includes any action which both reduces and relocates functions and civilian personnel positions but specifically excludes reductions in force resulting from workload adjustments, reduced personnel or funding levels, skill imbalances or other similar causes.

(c) This section shall not apply to any closure or realignment if the President certifies to Congress that such closure or realignment must be implemented for reasons of any military emergency or national security or if such closure or realignment was publicly announced prior to October 1, 1977.

(d) Section 613, Public Law 89-568 is repealed.

LAND CONVEYANCE, CALIFORNIA

SEC. 613. Notwithstanding any other provisions of law, the Secretary of the Navy or his designee, is authorized to convey to the city of Los Angeles, California, subject to such terms and conditions as the Secretary shall deem to be in the public interest, all right, title, and interest of the United States in and to a parcel of land consisting of approximately thirty-five acres with improvements thereon, located in the city of Los Angeles north of and separated by Seaside Avenue from Reeves Field, in exchange for the conveyance by the city of Los Angeles to the United States of the unencumbered fee title to approximately thirty-five acres of land adjacent to the western boundary of the Naval Support Activity, Long Beach, California, to be improved in a manner acceptable to the Secretary, and subject to such other conditions as the Secretary shall deem to be in the public interest. The exact acreages and legal descriptions of both properties are to be determined by accurate surveys as mutually agreed upon by the Secretary and the city of Los Angeles.

LAND CONVEYANCE, COLORADO

SEC. 614. Notwithstanding any other provision of law, the Secretary of the Air Force is authorized to acquire, by exchange with the city of Colorado Springs, Colorado, all rights, title and interest of such city in approximately one hundred sixty seven acres of land lying adjacent to the northerly boundary of Peterson Air Force Base, El Paso County, Colorado. As consideration for this exchange, the Secretary of the Air Force is authorized to convey to the city, land and improvements on Ent Air Force Base, in the city of Colorado Springs, equal in monetary value to the land to be acquired. The exact acreages and legal descriptions of both such properties are to be determined by accurate surveys as mutually agreed upon by the Secretary and the city of Colorado Springs.

AUTHORITY FOR LONG TERM CONTRACT FOR REFUSE-DERIVED FUEL

SEC. 615. Notwithstanding any other provisions of law, the Secretary of a military department, or his designee, is authorized to enter into long-term contracts (not to exceed ten years) for the purchase of fuels derived from waste materials (commonly known as refuse-derived fuel (RDF)). Such contracts may also provide for the collection and disposal of solid waste from Department of Defense installations, and may result in delivery to a Department of Defense installation of RDF which, by weight, exceeds that installation's generation of solid waste. Funds for such contracts shall be provided from annual operations and maintenance appropriations.

USE OF COMMISSARY SURCHARGE FUNDS FOR THE CONSTRUCTION OF COMMISSARIES OVERSEAS

SEC. 616. Section 2685(b) of title 10, United States Code, is amended by striking out "within the United States".

GAS PRICING, BARROW, ALASKA

SEC. 617. The Secretary of the Navy is authorized and directed, with respect to any natural gas supplied by the Department of the Navy to villages and facilities at or near Point Barrow, Alaska, between October 1, 1974, and April 6, 1976, inclusive, to charge such villages and facilities for such gas at a rate equal to the rate charged for natural gas supplied to such villages and facilities by the Department of the Navy (pursuant to section 104(e) of the Naval Petroleum Reserve Production Act of 1976 (90 Stat. 305)) subsequent to April 6, 1976.

LAND CONVEYANCE, EL PASO COUNTY, TEXAS

SEC. 618. Notwithstanding any other provision of law, the Secretary of the Army is authorized to acquire by exchange, under such terms and conditions as he shall deem to be in the public interest, all rights, title and interests in lands, within a sixty thousand one hundred and sixty acre area contiguous to the eastern boundary of maneuver area numbered 1 of the Fort Bliss Military Reservation, El Paso, Texas. As consideration for this exchange, the Secretary of the Army is authorized to convey such land under the jurisdiction of the Department of the Army in El Paso County, Texas, equal in monetary value to the land to be acquired. The exact acreages and legal descriptions of such properties are to be determined by accurate surveys as shall be authorized by the Secretary of the Army.

LAND CONVEYANCE, SAN FRANCISCO, CALIFORNIA

SEC. 619. (a) The first section of the Act entitled "An Act authorizing the Secretary of the Army to convey certain lands to the city and county of San Francisco", approved October 13, 1949 (63 Stat. 844), is amended

by adding "or jointly for public park and recreational uses and other public purposes".

(b) The Secretary of the Army shall issue such written instructions, deeds, or other instruments as may be necessary to bring the conveyance made to the city and county of San Francisco, California, under authority of the Act of October 13, 1949 (63 Stat. 844), into conformity with this section.

SHORT TITLE

SEC. 620. Titles I, II, III, IV, V, and VI of this Act may be cited as the "Military Construction Authorization Act, 1978".

TITLE VII—GUARD AND RESERVE FORCES FACILITIES

AUTHORIZATION OF FACILITIES

SEC. 701. Subject to chapter 133 of title 10, United States Code, the Secretary of Defense may establish or develop additional facilities for the Guard and Reserve Forces, including the acquisition of land therefor, but the cost of such facilities shall not exceed—

(1) For the Department of the Army:

(A) Army National Guard of the United States, $44,377,000.

(B) Army Reserve, $41,390,000.

(2) For the Department of the Navy: Naval and Marine Corps Reserves, $19,800,000.

(3) For the Department of the Air Force:

(A) Air National Guard of the United States, $37,300,000.

(B) Air Force Reserve, $10,100,000.

WAIVER OF CERTAIN RESTRICTIONS

SEC. 702. The Secretary of Defense may establish or develop installations and facilities under this title without regard to section 3648 of the Revised Statutes, as amended (31 U.S.C. 529), and sections 4774 and 9774 of title 10, United States Code. The authority to place permanent or temporary improvements on lands includes authority for surveys, administration, overhead, planning, and supervision incident to construction. That authority may be exercised before title to the land is approved under section 355 of the Revised Statutes, as amended (40 U.S.C. 255), and even though the land is held temporarily. The authority to acquire real estate or land includes authority to make surveys and to acquire land, and interests in land (including temporary use), by gift, purchase, exchange, of Government-owned land, or otherwise.

SHORT TITLE

SEC. 703. This title may be cited as the "Guard and Reserve Forces Facilities Authorization Act, 1978".

Mr. HART. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. THURMOND. I move to lay that motion on the table.

The PRESIDING OFFICER. The motion to lay on the table was agreed to.

Mr. HART. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to make technical and clerical corrections in the engrossment of S. 1474.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STENNIS. Mr. President, I warmly thank the Senator from Colorado for the hard work he put in on this bill, which was shared by the Senator from South Carolina. Senator HART has not had a chance to get into a measure of this kind before. He shows a remarkable grasp of these problems, a situation which is usual with him. He worked hard and mastered the subject. We are all indebted to them.

Mr. HART. Mr. President, I thank the distinguished committee chairman for those kind words.

Once again, I thank the Senator from South Carolina for his help and reiterate his earlier observations about the excellent staffwork done on this bill by staff member Jim Smith.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BUMPERS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ENERGY RESEARCH AND DEVELOPMENT ADMINISTRATION AUTHORIZATIONS, 1977

Mr. BUMPERS. Mr. President, on behalf of Senator JACKSON, Senator HANSEN, and myself, I ask the Chair to lay before the Senate a message from the House of Representatives on S. 36, a bill to authorize appropriations to the Energy Research and Development Administration.

The PRESIDING OFFICER laid before the Senate the amendment of the House of Representatives to the bill (S. 36) to authorize appropriations to the Energy Research and Development Administration in accordance with section 261 of the Atomic Energy Act of 1954, as amended, section 305 of the Energy Reorganization Act of 1974, and section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974, and for other purposes.

(The amendment of the House is printed in the RECORD of May 2, 1977, beginning at page 13140.)

UP AMENDMENT NO. 208

Mr. BUMPERS. Mr. President, the House amended S. 36 by adding section 309, which would authorize sums for the nuclear nonweapons programs and projects of ERDA as provided in title II and III of the bill, H.R. 13350, as set forth in the conference report, House Report 94–1718.

This amendment raises several questions concerning the scope of the matters which will be incorporated by reference to the conference report.

It is, therefore, the judgment of the Committee on Energy and Natural Resources that the language of section 309 as presently written is unclear and, therefore, to clarify the references to the conference report, I move that the Senate concur in the House amendment with amendments which are now sent to the desk, and I ask unanimous consent that they be considered en bloc. There are two of them.

The PRESIDING OFFICER. Without objection, they will be considered en bloc and the clerk will state the amendments.

The assistant legislative clerk read as follows:

The Senator from Arkansas (Mr. BUMPERS) proposes unprinted amendment No. 208, which consists of two amendments en bloc.

The amendment is as follows:

On page 9, line 8, after "$3,000,000." add "(A–E and long-lead procurement)."

On page 27, strike sec. 309 and insert instead the following:

"In utilizing the funds which have been made available by Public Law 94–355, as amended, the Administrator is hereby directed to observe the limitations of clauses (1) through (8) and clauses (12) through (14) of section 202, sections 203 through 207, and section 208 except subsection (e)(5) of the bill H.R. 13350 (Ninety-fourth Congress) as set forth in the conference report thereon (House Report 94–1718)."

Mr. BUMPERS. Mr. President, as an original sponsor of the portion of the ERDA authorization providing for the establishment of a National Center for Bioenergy Conversion, I am pleased that the Senate Committee on Energy and Natural Resources is offering a clarifying amendment to S. 36 to indicate that the authorization for the biomass conversion facility of $3 million in fiscal year 1977 only represents initial costs for this project.

In marking up the ERDA authorization for 1978, the committee urged ERDA to move forward on the establishment of a National Center for Bioenergy Conversion since initial funding for the project has been included in the 1977 authorization. This authorization only represents a portion of the cost of this facility. Additional appropriations will be necessary to complete the facility and continue its operation. This amendment clarifies this provision.

The energy potential of the biomass resource is vast. The Earth's green plants are estimated to annually store six times the world's technological energy consumption. Obviously all of this cannot be utilized to meet our energy needs, but this is still an enormous resource. Specialty crops are known which are capable of collecting the energy equivalent of 10 barrels of oil per acre each year. One ton of dry plant material or annual waste is the energy equivalent of about 1.3 barrels of oil. A special National Science Foundation seminar held at the University of California in 1974 estimated that there are 800 million recoverable tons of crop residues and animal wastes produced annually. Unused forest materials provide an additional 50 to 180 million tons per year. This means that we have an enormous potential untapped resource in this country.

Since the basic research on this resource has already been done, it is incumbent upon us to develop the technologies to convert this resource into the fuels which we so badly need. The National Center for Bioenergy Conversion will act as the focal point for basic and applied research in biomass energy conversion and related areas. The primary function of the national center shall be the development of economical pilot plants for several different types of bioenergy conversion processes, such as anaerobic digestion, thermochemical—including hydrogeneric, pyrolysis, and other gasification techniques, and combustion—including coal mixtures, municipal waste, and fluidized bed.

Mr. HANSEN. Mr. President, today we are reconsidering S. 36, a bill to authorize appropriations to the Energy Research and Development Administration for fiscal year 1977. We first considered and

passed S. 36 on April 4, 1977, subsequently, the House of Representatives passed S. 36 with a series of amendments. We are acting today to amend the House-passed bill simply in order to clarify the intent of the amended provisions.

This authorization for the Energy Research and Development Administration was considered at great length in the 94th Congress. Both Houses passed authorization bills and a conference was held at the end of the last session. The conference report was accepted in the House of Representatives, but the Senate failed to consider the report during the last hours before adjournment.

S. 36 basically contains the provisions adopted in the conference during the last Congress. A few minor changes in the provisions of the conference report were made by the Senate and the House in consideration of this year's bill. Primarily, however, what we are doing in enacting S. 36 is to insure full statutory authorization for the programs and projects already being funded by appropriations acts and several joint resolutions.

The two changes included in the Senate amendment to the House-passed bill are both technical in nature. The first proposed amendment modifies the language of section 309, regarding the nuclear nonweapons programs and projects of ERDA in fiscal year 1977. The House added section 309 simply to make clear that appropriations for nuclear programs and projects were fully authorized and thereby to avoid any potential legal complications in the conduct of those activities. The amendment of section 309 recommended by the Energy and Natural Resources Committee would clarify the intent of the Congress regarding the authorization of those appropriations. It is our judgment that the House provision could lead to misinterpretation of our intent in any administrative or judicial review. The proposed amendment to section 309 makes clear on its face that the only action we are taking is to authorize the appropriations.

The second proposed amendment will clarify apparent confusion over congressional intent regarding a bioconversion test facility. There has been some question with regard to the nature of the $3 million authorized for this project in this bill, and the resulting use of the currently available appropriated funds for it. This amendment would make clear that the appropriated funding is to be used for purposes of facility design and some procurement, rather than as the total funding for the facility. The committee intends that administration planning for this facility would proceed accordingly and, as a result, the Congress will receive further administration recommendations regarding its full construction.

Mr. BUMPERS. I move that the Senate concur in the House amendment with amendments.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Arkansas.

The motion was agreed to.

Mr. BUMPERS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business without any resolutions coming over under the rule.

The PRESIDING OFFICER. Without objection, it is so ordered.

Is there routine morning business?

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirdon, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

MESSAGE FROM THE HOUSE

At 2:27 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its clerks, announced that the House has passed the following bills in which it requests the concurrence of the Senate:

H.R. 6655. An act to amend certain Federal laws pertaining to community development, housing, and related programs; and

H.R. 6714. An act to amend the Foreign Assistance Act of 1961 to authorize development assistance programs for fiscal year 1978, to amend the Agricultural Trade Development and Assistance Act of 1954 to make certain changes in the authorities of that act, and for other purposes.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. METCALF, from the Committee on Energy and Natural Resources:

With amendments:

H.R. 4390. An act to authorize appropriations for continuation of construction of distribution systems and drains on the San Luis Unit, Central Valley project, California, to mandate the extension and review of the project by the Secretary, and for other purposes (Rept. No. 95–144).

By Mr. MAGNUSON, from the Committee on Commerce, Science, and Transportation:

With an amendment:

S. 891. A bill to amend section 25 of the Deepwater Port Act of 1974 by providing a permanent authorization of appropriations (title amended) (Rept. No. 95–145).

Without amendment:

H.R. 6205. An act to authorize appropriations for fiscal years 1978, 1979, and 1980 to carry out the Atlantic Tunas Convention Act of 1975 (Rept. No. 95–146).

With an amendment:

H.R. 6206. An act to authorize appropriations for fiscal years 1978, 1979, and 1980 to carry out the Commercial Fisheries Research and Development Act of 1964 (Rept. No. 95–147).

By Mr. JACKSON (for Mr. ABOUREZK), from the Committee on Energy and Natural Resources:

With an amendment:

S. 1125. A bill to authorize the establishment of the Eleanor Roosevelt National Historic Site in the State of New York, and for other purposes (Rept. No. 95–148).

By Mr. EAGLETON, from the Committee on Human Resources:

With an amendment:

S. 1170. A bill to strengthen the surplus commodities provision of the Older Americans Act of 1965, and for other purposes (Rept. No. 95–149).

Without amendment:

S. 1321. A bill to extend the deadline for transmittal of U.S. Commission on Civil Rights report on unreasonable discrimination based on age in programs and activities receiving Federal financial assistance, and for other purposes (Rept. No. 95–150).

By Mr. BAYH, from the Committee on the Judiciary:

Without amendment:

S. 1232. A bill to amend the Comprehensive Drug Abuse Prevention and Control Act of 1970 (21 U.S.C. 801 et seq.) to extend for two years the appropriation authorizations for the administration and enforcement of that Act (Rept. No. 95–151).

By Mr. THURMOND, from the Committee on the Judiciary:

Without amendment:

S. 810. A bill granting an extension of patent to the United Daughters of the Confederacy (Rept. No. 95–152).

By Mr. BURDICK (for Mr. CULVER), from the Committee on Environment and Public Works:

Without amendment:

S. 1511. An original bill to amend the Noise Control Act of 1972 to authorize appropriations to carry out the provisions of such act for fiscal year 1978 (Rept. No. 95–153).

By Mr. BURDICK, from the Committee on Environment and Public Works:

Without amendment:

S. 1512. An original bill to amend the Disaster Relief Act to extend authorizations for the Federal disaster assistance program (Rept. No. 95–154).

By Mr. EASTLAND, from the Committee on the Judiciary:

Without amendment:

S. 464. A bill for the relief of Sameek Keshary Ray (Rept. No. 95–155).

S. 556. A bill for the relief of Lee Young Soo (Rept. No. 95–156).

With an amendment:

S. 58. A bill for the relief of Dora Alicia Adan (Rept. No. 95–157).

S. 215. A bill for the relief of Nostratollah Moradi (Rept. No. 95–158).

By Mr. SPARKMAN, from the Committee on Foreign Relations:

With an amendment:

H.R. 5262. An act to provide for increased participation by the United States in the International Bank for Reconstruction and Development, the International Development Association, the International Finance Corporation, the Asian Development Bank, and the Asian Development Fund, and for other purposes (title amended) (Rept. No. 95–159).

By Mr. INOUYE, from the Committee on Commerce, Science, and Transportation:

With amendments:

S. 1019. A bill to authorize appropriations for the fiscal years 1978 and 1979 for certain maritime programs of the Department of Commerce, and for other purposes (title amendment) (Rept. No. 95–160).

HOUSE BILLS REFERRED

The following bills were each read twice by their titles and referred as indicated:

H.R. 6655. An act to amend certain Federal laws pertaining to community development, housing, and related programs; to the Committee on Banking, Housing, and Urban Affairs.

H.R. 6714. An act to amend the Foreign Assistance Act of 1961 to authorize development assistance programs for fiscal year 1978, to amend the Agricultural Trade Development and Assistance Act of 1954 to make certain changes in the authorities of that act, and for other purposes; ordered held at the desk.

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. CURTIS:

S. 1504. A bill to permit certain farmowners or lessees to elect not to have made applicable to them certain recently enacted amendments changing the treatment, for social security purposes, of certain farm income; to the Committee on Finance.

By Mr. SPARKMAN (for himself and Mr. ALLEN):

S. 1505. A bill to authorize the Secretary of the Interior to assist in the preservation of the Fort Toulouse National Historic Landmark and Taskigi Indian Mound in the State of Alabama, and for other purposes; to the Committee on Energy and Natural Resources.

By Mr. ABOUREZK:

S. 1506. A bill for the relief of Sana Hassan; to the Committee on the Judiciary.

By Mr. BARTLETT:

S. 1507. A bill to provide for the gradual reduction of the U.S. contribution to the United Nations; to the Committee on Appropriations.

By Mr. STENNIS:

S. 1508. A bill to amend the Internal Revenue Code of 1954 to provide an exclusion from gross income of amounts received for the production from certain oil or gas wells; to the Committee on Finance.

By Mr DOMENICI (for himself and Mr. SCHMITT):

S. 1509. A bill to provide for the return to the United States of title to certain lands conveyed to certain Indian Pueblos of New Mexico and for such land to be held in trust by the United States for such tribes; to the Committee on Indian Affairs.

By Mr. DOMENICI:

S. 1510. A bill to amend title XIX of the Social Security Act to assure coverage, under State medicaid programs, of chemotherapy furnished by hospitals to patients on either an inpatient or outpatient basis, and to make clear that physicians services provided under such programs include transplants of organs and tissues, implants of materials and devices, and plastic surgery (and related services) when performed on account of disease, injury, or other surgery which is or was medically necessary; to the Committee on Finance.

By Mr. BURDICK (for Mr. CULVER), from the Committee on Environment and Public Works:

S. 1511. An original bill to amend the Noise Control Act of 1972 to authorize appropriations to carry out the provisions of such Act for fiscal year 1978; placed on the calendar.

By Mr. BURDICK, from the Committee on Environment and Public Works:

S. 1512. An original bill to amend the Disaster Relief Act to extend authorizations for the Federal disaster assistance program; placed on the calendar.

By Mr. ALLEN (for himself and Mr. SPARKMAN):

S. 1513. A bill for the relief of the John A. Peterson Charitable Trust; to the Committee on Finance.

By Mr. ALLEN (for himself, Mr. SPARKMAN, and Mr. THURMOND):

S. 1514. A bill to amend section 4941 of the Internal Revenue Code of 1954, and section 101(1)(2) of the Tax Reform Act of 1969; to the Committee on Finance.

By Mr. McCLURE:

S. 1515. A bill to prohibit the sale, alienation, or commitment of gold by the Secretary without prior approval by Act of Congress; to the Committee on Finance.

By Mr. METCALF:

S. 1516. A bill to assist the States in raising revenues by encouraging more uniform severance taxes on coal and oil shale and to impose a countervailing duty on imported coal and oil shale; to the Committee on Finance.

By Mr. HATCH:

S. 1517. A bill for the relief of Myfty Huff; to the Committee on the Judiciary.

By Mr. MATSUNAGA:

S. 1518. A bill for the relief of Benjamin Miguel Acob; to the Committee on the Judiciary.

S. 1519. A bill to amend the tariff schedules of the United States in order to suspend until the close of December 31, 1978, the duty on certain field glasses, opera glasses, binoculars and other telescopes; to the Committee on Finance.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. CURTIS:

S. 1504. A bill to permit certain farmowners or lessees to elect not to have made applicable to them certain recently enacted amendments changing the treatment, for social security purposes, of certain farm income; to the Committee on Finance.

Mr. CURTIS. Mr. President, I am introducing legislation today to correct a serious inequity in the Social Security Act.

The law provides that farm rental income is covered under social security if the rental arrangement provides that the landowner materially participated in the production of the agricultural or horticultural commodities on his land, and if there is material participation by the landowner. Under prior law, in determining whether the landowner's actions contribute in a material way to the production of the commodities raised on his farm, his own actions plus actions of his agent were considered. Actions by an agent were attributed to the farmland owner, so that if the agent participated in the management and operation of the farm, the farmowner was also deemed to be participating even though he did not personally participate.

The Internal Revenue Service discovered that many farm landlords, who engaged farm managers to supervise their farms, were not reporting for self-employment taxes the income received as crop shares from farm tenants. The Internal Revenue Service early in 1973 pointed out to certain taxpayers that they had failed to avail themselves of coverage for social security benefits and their tax returns were properly adjusted to reflect the increased tax liability.

Following the action of the Internal Revenue Service, certain unintended effects of this provision were brought to the attention of the Finance Committee.

The problem arose in the case of landowners who entered into an agreement with a professional farm management company or other person who had the responsibility to choose a tenant and to manage and supervise the farm operation. In such a situation, the landowner did not personally participate in the operation of the farm and viewed his income as investment income rather than income from farm self-employment. However, under the law he was considered to be materially participating because of the actions of the farm management company—his agent.

Accordingly, Public Law 93–368 provided that in such a situation the landowner would not be considered to participate in the operation of the farm unless he personally took some part in it. Therefore, his farm income would not count for social security purposes if he entered into an agreement with another person to manage or supervise the farm operation, including the selection of tenants, when there is in fact no personal participation on his part.

Mr. President, many taxpayers who began to pay taxes because of the former law, now find themselves in the position of no longer being able to pay into social security in order to qualify for benefits, nor are they able to receive a refund of amounts previously paid.

Mr. President, the bill that I am introducing today would correct this inequity. The bill would permit an individual who had made self-employment tax payments prior to the effective date of Public Law 93–368 to elect to continue to treat farm rental income of this type as net earnings from self-employment and subject to self-employment income.

Mr. President, I ask that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1504

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subsection (c) of section 10 of Public Law 93–368 is amended—

(1) by striking out "The amendments" and inserting in lieu thereof "(1) Except as provided in paragraph (2), the amendments", and

(2) by adding at the end thereof the following new paragraph:

"(2)(A) The amendments made by this

section shall not apply to any taxable year of an individual if an election of the taxpayer under subparagraph (B) is effective with respect to such taxable year.

"(B)(i) Any individual shall be eligible to make an election under this subparagraph, if for a taxable year which began after December 31, 1971, and prior to January 1, 1974, such individual had any amount of income which (I) was included in computing his gross income under section 211(a) of the Social Security Act and section 1402(a) of the Internal Revenue Code of 1954, but (II) would not have been so included if the amendments made by this section had been effective with respect to such taxable year.

"(ii) An election under this paragraph by an eligible taxpayer shall be filed in such form and manner, and with such official, as the Secretary of the Treasury shall by regulations prescribe. Any such election shall, subject to the next succeeding sentence, be effective with respect to a taxable year specified by the taxpayer (which taxable year shall not begin prior to January 1, 1974, and shall not be later than the taxable year in which the election is made) and all succeeding taxable years of the taxpayer. Notwithstanding any other provision of this paragraph, no election hereunder shall be effective unless there is paid (within such period after the date of the filing of the election as the Secretary of the Treasury shall by regulations prescribe) all taxes on self-employment income, imposed under the Self-Employment Contributions Act of 1954, which are, by reason of the election, due and payable by the taxpayer for any period prior to the date of the filing of the election (but no penalty for late payment shall be imposed with respect to any such taxes paid within the period so prescribed by the Secretary of the Treasury).".

By Mr. SPARKMAN (for himself and Mr. ALLEN):

S. 1505. A bill to authorize the Secretary of the Interior to assist in the preservation of the Fort Toulouse National Historic Landmark and Taskigi Indian Mound in the State of Alabama, and for other purposes; to the Committee on Energy and National Resources.

SAVING FORT TOULOUSE—HISTORIC FORT ON THE COOSA RIVER NEAR WETUMPKA, ALABAMA

Mr. ALLEN. Mr. President, in 1717 Captain Marchand of the French Army and 19 French colonial soldiers departed the Port of Mobile for the interior of Alabama. Captain Marchand was acting at the orders of Governor Bienville, who was then the governor of the French Louisiana Territory. Bienville reasoned that the newly established city of New Orleans could only be successfully protected from the British and from the Spanish if the French constructed an outpost in the interior of Alabama to act as a flank defense against incursions from British colonies on the eastern seaboard or from the Spanish colony in Florida.

After sailing several hundred miles inland along the Alabama River, Captain Marchand selected for occupation a strategic site at the origin of the Alabama River near the confluence of the Coosa and Tallapoosa Rivers. With the acquiescence of the Creek Indian nation, Captain Marchand's men constructed a large fortification to control the river routes and named the structure Fort Toulouse. Many of the French soldiers thereafter took Indian wives, and Captain Marchand himself married the Creek Princess Sehoy of the Family of the Wind, the ruling family of the Creek Nation. From their offspring were drawn the great war chiefs and political leaders of the Creek Nation.

Since those early days, Fort Toulouse has had a long and important history in the development of the Southeast. Occupied successively by the French, the Creeks, and the British, in 1814 the fort was garrisoned by Andrew Jackson when his army of Tennesseans were en route to the Battle of New Orleans. Fort Toulouse served as Jackson's headquarters during his negotiations with the Creek nation, and it was at Fort Toulouse that the famous Creek leader, William Weatherford—or Red Cloud—surrendered to Jackson by symbolically riding into Jackson's camp unarmed with a deer across his saddle as a gift.

Fort Toulouse next served as a principal site of settlement in the newly opened Alabama Territory, but early in the history of the State of Alabama, the site was abandoned in favor of another developing town, the present capital at Montgomery which is some 15 miles downstream.

Fort Toulouse has long been State property, but some 10 years ago the site was designated a national historic landmark, and in 1971 a large tract of surrounding property was acquired by the Federal Government for a Federal park. Substantial sums of money have been expended both by the State of Alabama and by the Federal Government in reconstructing Fort Toulouse and in improving park facilities at the location. I have been particularly impressed with the tremendous local citizen participation in various projects associated with the fort, and frankly, I feel great pride at the magnificent effort made by many individual citizens to upgrade the fort site even when Federal support for the project was not significant. But now, Mr. President, we face a problem that cannot be solved from purely local resources.

The Coosa River, probably as a result of Corps of Engineer projects on the Alabama-Coosa River system, has begun in the last few years to shift in its banks at the fort site and is eroding at an alarming rate the bluff on which the fort is situated. The problem has reached crisis proportions, and the northern berm and associated timber wall are in the process of sloughing off into the river. Immediate action is clearly required if this historic treasure is to be preserved. For that reason Senator SPARKMAN and I are introducing today a measure to authorize the Secretary of the Interior to expend such funds as are needed to shore up the bank of the river at the fort site to prevent further loss.

I might also mention, Mr. President, that in addition to the fort, significant archeological sites in the immediate vicinity of the fort are also threatened and that the measure we propose is designed to guarantee that work on a prehistoric temple mound and related archeological remains at the site can continue so that all possible information can be developed regarding a prehistoric Indian culture which existed there some 10,000 years ago.

So, Mr. President, I would hope that the committee to which this measure is referred will carefully examine the problem we are facing and will act promptly to report the measure. The Secretary of the Interior is already fully apprised of the situation at the fort, and I am confident that he also believes that prompt action is in order.

By Mr. BARTLETT:

S. 1507. A bill to provide for the gradual reduction of the United States contribution to the United Nations; to the Committee on Appropriations.

Mr. BARTLETT. Mr. President, today I am introducing legislation to phase down the percentage level of the United States contribution to the United Nations. This legislation provides for a reduction of our contribution from the present 25 percent of the U.N. budget to 15 percent, the reduction being accomplished at the rate of 2 percent annually for the next 5 years.

I believe such a reduction in the U.S. burden of funding the United Nations fairly reflects the diminution of America's role in the organization. No longer does our position as a permanent member of the U.N. Security Council provide the role of responsibility and leadership it has in the past. Actual powers of the United Nations, once vested to a great degree in the Security Council, now rest largely with the General Assembly and its 147 members. With this shift in powers, the emerging nations have assumed a greater influence. I believe this redistribution of power calls for a redistribution of the responsibilities of maintaining the organization financially.

In a recent poll which covered a variety of subjects I asked my Oklahoma constituents two questions related to the United Nations issue. One question asks whether the United States should continue its membership in the United Nations; 55 percent of those polled responded affirmatively. The second question asked whether the United States contributions to the United Nations should increase, decrease, or remain the same; 87 percent of those polled indicated that contributions should decrease.

These results are significant, in my opinion. Furthermore, a recent poll by Potomac Associates indicates that there are more Americans who would like to see the U.S. contribution to the United Nations reduced or ended than there are Americans who would like to see it kept at the present level or increased. Summarizing polls since 1972, this study concluded that "contributing to the United Nations represents the only case in which the level of support has fallen consistently over the entire four-year period." Also, agreement that the United States should cooperate with the United Nations has dropped from 72 percent in 1964 to 46 percent in 1976.

Mr. President, I ask that the questions and results of the polls conducted by Potomac Associates and me be included in the RECORD at the end of my remarks.

The legislation I offer today is introduced with no malice toward the United Nations, but with hope that this organization can find greater stability through equitable distribution of its financial assessment to member nations. It is also my hope that this legislation will result in more responsible actions by the United Nations.

I introduce this legislation not so much in response to any particular decisions made recently by the United Nations, but in response to obvious changes in the decisionmaking process of the United Nations.

Mr. President, I ask that the text of my bill be printed in the RECORD together with the Oklahoma national poll results.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

S. 1507

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Public Law 92-544 (86 Stat. 1109, 1110) is amended, in the paragraph headed "CONTRIBUTIONS TO INTERNATIONAL ORGANIZATIONS" under "INTERNATIONAL ORGANIZATIONS AND CONFERENCES", by striking out the sentence after the word "Provided," and inserting in lieu thereof the following: "That no appropriation is authorized and no payment shall be made to the United Nations or any affiliated agency in excess of—

"(1) 25 per centum of the total assessment of such organization in the fiscal year 1977;

"(2) 23 per centum of such assessment in the fiscal year 1978;

"(3) 21 per centum of such assessment in the fiscal year 1979;

"(4) 19 per centum of such assessment in the fiscal year 1980;

"(5) 17 per centum of such assessment in the fiscal year 1981;

"(6) 15 per centum of such assessment in the fiscal year 1982; except that this proviso shall not apply to the International Atomic Energy Agency and to the joint financing program of the International Civil Aviation Organization.".

RESULTS OF THE OKLAHOMA POLL REGARDING THE UNITED NATIONS

(1) In the past few years significant changes have occurred in the internal power structure of the United Nations. As power has drifted from the Security Council to the General Assembly an alliance of Third World nations has assumed a great deal of authority. Because of the changing character of the United Nations, many people believe the United States should reassess its role in this organization.

(A) Should the United States continue its membership in the U.N.?

		Percent
Yes	4,669	55
No	3,422	40
No opinion	398	5
Total	8,439	

(B) Presently the United States contributes 24% of the total U.N. budget. During the current fiscal year the U.S. will contribute more than $91 million to the U.N. in addition to more than $100 million to its affiliated organizations. Should U.S. contributions to the U.N.:

		Percent
Increase	168	2
Decrease	6,723	87
Remain the same	714	9
No opinion	164	2
Total	7,769	

RESULTS OF POTOMAC ASSOCIATES POLL

International spending contributions to the United Nations should be:

[In percent]

	1972	1974	1976
Increased	10	5	6
Kept at present level	46	44	37
Reduced	29	33	35
Ended altogether	9	6	13
Do not know	6	12	9

The United States should cooperate fully with the United Nations:

[In percent]

	1964	1968	1972	1974	1975	1976
Agree	72	72	63	66	56	46
Disagree	16	21	28	20	30	41
Do not know	12	7	9	14	14	13

By Mr. STENNIS:

S. 1508. A bill to amend the Internal Revenue Code of 1954 to provide an exclusion from gross income of amounts received for the production from certain oil or gas wells; to the Committee on Finance.

Mr. STENNIS. Mr. President, I am introducing today, for appropriate reference, a bill which I believe would greatly encourage exploration for and production of oil and gas without substantially reducing tax income.

This bill would amend the appropriate provisions of the Internal Revenue Code of 1954 to provide that, with respect to any exploratory oil or gas well drilled within 5 years from the effective date of the act, the taxpayer, for any taxable year in which production from such well exists, will be entitled to exclude from his gross income amounts attributable to production from such well.

Let me emphasize that the exemption would apply only to a discovery well drilled in the next 5 years. In addition the discovery well, to qualify for the exemption must be more than 2 miles from the nearest point on the nearest producing oil well or must have been completed 2 years or more after completion of the last producing oil or gas well which does not meet such requirement.

Mr. President, conservation of oil and gas is fine. I am all for it. At the same time, however, I believe we must offer tangible incentives for exploring for and finding new oil and gas which, as we all know, is an expensive undertaking. I believe that this bill, if enacted into law, will do this and I urge its favorable consideration by the Senate.

By Mr. DOMENICI (for himself and Mr. SCHMITT):

S. 1509. A bill to provide for the return to the United States of title to certain lands conveyed to certain Indian Pueblos of New Mexico and for such land to be held in trust by the United States for such tribes; to the Committee on Indian Affairs.

Mr. DOMENICI. Mr. President, today at the request of the Pueblos of New Mexico, I am introducing a bill which provides for the return to the United States of title to certain land previously conveyed to them and for such land to be held in trust by the United States for such Pueblos.

The land involved is slightly over 11 acres located in Albuquerque, N. Mex. Recently, through the auspices of a Federal grant, there has been constructed on this land an Indian Pueblo Cultural Center.

In 1969, pursuant to the authority of 25 U.S.C. 293a, the Acting Commissioner of Indian Affairs executed a quitclaim deed for this land to the 19 Pueblos of New Mexico. Because of an error in the land description, a corrective quitclaim deed was executed in 1970. One of the 19 Pueblos has executed a quitclaim for their interest in the land to the remaining 18 Pueblos. As a result, the land is currently held as tenants-in-common by the Pueblos.

By resolution adopted on December 2, 1976, the All Indian Pueblo Council, an organization representing the 19 Pueblos, requested extension of Federal trust status to this land. The city of Albuquerque has adopted a resolution in support of changing the status of the land to the trust status requested by the Pueblos.

Mr. President, these are several arguments to be made in support of extending Federal trust status to this land. These include:

First. The quantity and quality of the title to the lands would be clarified, especially the interests of the beneficiary Pueblos and their utilization of the land;

Second. The confusion created by the quitclaim deed executed by one Pueblo would be clarified as to that Pueblo's interest as well as the remaining 18 Pueblos' interest, in the land.

Third. The Federal laws, rules, regulations, and policies governing the administration of trust land would be extended to the 11 acres, including prohibitions against alienation and encumbrance;

Fourth. The various Federal loan and grant programs would be available to the Pueblos on the same basis as all other eligible Indian groups.

Fifth. The Pueblos will be able to plan, with far more certainty that at present, other activities relative to this land to benefit both the concerned Indians as well as the community at large.

Mr. President, I do not contend that my bill has solved all the problems that will be associated with the conversion of this land to a Federal trust status. For example, the issue of law enforcement jurisdiction over this land must be addressed. I am confident that the hearings on my bill will focus on this and similar problems and find the best solutions thereto.

I will, of course, work with the appropriate committee and other interested members to make this bill as effective as possible for the purposes I have mentioned. I am hopeful that hearings on my bill can begin shortly. I ask unanimous consent that my bill be printed at this point in my remarks. I am pleased to have Senator SCHMITT as a cosponsor for this bill.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1509

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the duly authorized officials of each of the Indian Pueblos of New Mexico are hereby authorized to convey to the United States all the right, title, and interest of such Pueblos in the land located in Albuquerque, County of Bernalillo, State of New Mexico, which was conveyed to such Pueblos on behalf of the United States and the Secretary of the Interior by the Quitclaim Deed executed on June 17, 1969, by the Acting Commissioner of Indian Affairs, and by the Correction Quitclaim Deed executed July 30, 1970, by the Commissioner of Indian Affairs, and which is described as follows:

TRACT "C"

A tract of land lying and being situated in section 7, township 10 north, range 3 east of the New Mexico principal meridian, within the city of Albuquerque, County of Bernalillo, State of New Mexico, said tract being more particularly described as follows:

Beginning at a point on the west right-of-way line for 12th Street and the north right-of-way line for Indian School Road, said point also being corner no. 2 of tract herein described and from whence the New Mexico Highway Department Triangulation Station 1–40–15 having established coordinates of Y–1494103.76, X–378204.72 of the New Mexico coordinate system, central zone, bears S. 16°02'03" E. 989.43 feet; thence 59°58'22" W., 281.29 feet along the north R/W of Indian School Road to the point of curvature and corner No. 3 of said tract; thence in a northwesterly direction 212.69 feet along the R/W curve concave to the northeast having a radius of 1,393.27 feet to corner No. 4; thence N. 8°49'05" E., 865.60 feet to corner No. 5, a point on the south R/W line of Menaul Boulevard extension; thence in a northeasterly direction 493.42 feet along the R/W curve concave to the south having a radius of 716.20 feet to corner No. 1, a point on the west R/W line for 12th Street; thence S. 8°16' W., 1,255.45 feet along said R/W to corner No. 2, the point and place of beginning, said tract containing 11.2857 acres, more or less.

Corner coordinates of tract "C"

Corner	Y-coordinate	X-coordinate
1	1496295.97	378116.98
2	1495054.70	377931.43
3	1495196.41	377688.55
4	1495316.87	377513.58
5	1496171.41	377649.72

(b) Upon approval by the Secretary of the Interior, the Secretary shall accept such conveyances on behalf of the United States and such land shall be held in trust jointly for such Indian Pueblos. The Secretary shall cause a description of such trust land to be published in the Federal Register.

(c) Nothing in this Act shall terminate or otherwise alter the rights or interests, if any, of the Indian Pueblo Cultural Center, Inc., as an assignee or subleasee of the lease of such land to the All Indian Pueblo Council, Inc., approved on August 27, 1974, by the Bureau of Indian Affairs.

(d) Nothing in this Act shall alter the rights or interests, if any, in the adjacent lands previously conveyed to the County of Bernalillo for Four-H Club use by deed dated March 22, 1960.

By Mr. DOMENICI:

S. 1510. A bill to amend title XIX of the Social Security Act to assure coverage, under State medicaid programs, of chemotherapy furnished by hospitals to patients on either an inpatient or outpatient basis, and to make clear that physicians services provided under such programs include transplants of organs and tissues, implants of materials and devices, and plastic surgery (and related services) when performed on account of disease, injury, or other surgery which is or was medically necessary; to the Committee on Finance.

Mr. DOMENICI. Mr. President, today I am introducing legislation to amend the Social Security Act to assure coverage under State medicaid programs of chemotherapy treatments furnished by hospitals on either an inpatient or outpatient basis and to assure that coverage of physician services provided under such programs will be understood to include such vital and necessary services as organ and tissue transplants, implantation of materials and prosthetic devices and plastic surgery when performed as a result of disease, injury or other medically necessary surgery.

The effect of such legislation would be a vast and much needed improvement in comprehensive and rehabilitative care of cancer patients. There are today untold numbers of cancer patients who experience all too much physical and emotional pain simply because they are unable to afford the necessary medical and rehabilitative services required for their care.

Medical care is not cheap as all of us know. But I speak here of the quality of life. Through our own legislation in the National Cancer Act, we have injected literally billions of dollars in an all-out war against this Nation's most feared disease—cancer. And the results have been promising. Along with this continued effort to stamp out cancer, however, we must begin to look at those who have survived and who need our sustained financial and emotional support so that they might continue to lead prolonged, satisfying and productive lives. We have an obligation to see to it that our citizens who are victimized by this insidious disease are not denied the treatment and rehabilitative services which are mandatory for their care and absolutely essential to provide them with as prolonged and pain-free a life as possible simply because they cannot afford the high cost of these services.

There are, each year, an increasing number of cancer patients who will be required to undergo chemotherapy for a number of reasons—to prevent the spread of a localized tumor, to attempt to halt or control identified tumors or to reduce pain and discomfort in patients with advanced or progressive forms of the disease.

The first order of priority I am calling for today is to assure that State medicaid programs support chemotherapy treatments on either an inpatient or outpatient basis for cancer victims when this type of treatment is recommended by the patient's physician as essential to his or her care.

Insurance reimbursements for these necessary life-sustaining treatments will also serve to improve cancer rehabilitation by reducing the burden of financial hardship related to cancer cure, thus allowing the patient and his or her family the freedom to use their limited physical productive labors and constructive activities. If, as the evidence seems to indicate, for a large number of patients, chemotherapy does in fact extend and improve survival of cancer patients, the citizens so affected can thus lead more adaptive, satisfying and contributing lives.

The second critical issue for which we are requesting an amendment in the Social Security Act is to assure coverage for three major medical procedures, all of which are essential to recovery and optimal functioning of the cancer patient. These three procedures include: First, transplants of organs and tissues; second, implants of materials and devices such as bladder or bowel resections and the surgical creation of a "stoma" and; third, plastic or reconstructive surgery to repair, add on, or correct damage or loss of an organ resulting from disease, injury or surgery which is or was medically necessary.

Implants of materials and devices should include both external prostheses as well as internalized replacements for amputated organs. While a patient's insurance plan may cover the reconstructive surgery performed, unless stipulated as a separate issue, the cost of the actual implant may be ignored. The prosthesis, as in the case of a breast form inserted in the chest area, is a separate expense from the procedure required to implant it in the body.

Eighty thousand breast cancer patients annually will have mastectomies and have one or both breasts removed. In addition, there is some reason to consider that women who are identified as "high risk" breast cancer patients may be told by their physicians that prophylactic removal of breast tissue could significantly reduce their chances of developing the disease. These women will be spared enormous emotional turmoil as well as the prospect of developing breast cancer in the future if they select this preventive procedure which removes the breast tissue and immediately or soon thereafter replaces the "high risk" tissue with an implant, leaving the breast looking and feeling almost normal. In addition to the pain from the actual surgical procedure of mastectomy and the now recognized psychological trauma associated with the loss of this socially prized organ, there are also bona fide long-term physiological discomforts resulting from the alteration in the muscular and skeletal system to accomodate for this major shift in body proportion and balance.

Serious consideration must be given to those women who cannot afford a replacement for their lost body part because of insufficient funds and the absence of national sponsored medical support of these health needs. Further, we must begin right now to redefine our concept of permanent surgical implantation of a breast prosthesis following removal of a cancerous or precancerous lesion as superficial or cosmetic surgery. It is a medically valid component, both physically and psychologically, of effective cancer rehabilitation for the breast cancer patient.

Many women refuse mastectomy—the

procedure which might indeed save their lives—because of the horrible threat that this procedure is an irreversible event—the amputation of their breast which cannot be retrieved. This type of trauma could be significantly abated by legislative reforms which would include making reconstruction and/or prostheses more readily available to those who need it.

Reconstructive surgery can improve the quality of survival, the feelings of self worth, and may increase the productivity of these patients longevity. In addition, if reconstructive surgery is made more available because of reduced out-of-pocket expenditures to the breast cancer patient and her family more women might be willing to present themselves for breast examination earlier in the course of disease because mastectomy becomes a "repairable injury" and not an end state for which there is no reversible condition.

We have made significant advances in our fight against cancer. Favorable consideration of this legislation would help cement our committment to the victims of that disease, recognizing the many contributions they still have to make to themselves, their families, and this society.

By Mr. ALLEN (for himself and Mr. SPARKMAN):

S. 1513. A bill for the relief of the John A. Peterson Charitable Trust; to the Committee on Finance.

Mr. ALLEN. Mr. President, I am introducing today for Mr. SPARKMAN and myself a measure designed to correct an anomalous situation which developed under section 4940 of the Internal Revenue Code.

Some years ago Mr. John A. Peterson died in Montgomery, Ala., and established by his last will a trust, the income of which was to be distributed "to and among any such religious, charitable, scientific, and educational institutions that shall be designated and determined in writing by the Kiwanis Club of Montgomery." The Kiwanis Club was, under Mr. Peterson's will, designated as neither the trustee nor the beneficiary of the trust. It was given the privilege, however, through the acts of a majority of its board of directors, to designate the recipients of the trust income so long as the club existed and was willing to act under the terms of the trust. Mr. Peterson requested, but did not require, that the Kiwanis Club, in its selection of charitable beneficiaries, give preference "to such institutions operating" in the city and county of Montgomery, Ala.

It is apparent from even the most superficial reading of Mr. Peterson's will that he intended the trust to be a totally tax-exempt entity. The trust was established "exclusively for religious, charitable, scientific, and educational purposes" (the exact language contained in the Internal Revenue Code respecting estate tax deductions for charitable contributions both at the date his will was executed and at the date of his death). Mr. Peterson further directed that no distribution could be made which would not qualify for a charitable deduction under the Federal estate tax laws.

However, Mr. President, Mr. Peterson—who died in 1968—was unable to foresee what Congress would do in 1969, and he, therefore, did not include in his will some of the more technical and rigid requirements introduced into the tax laws by the Tax Reform Act of 1969, with the result that the Peterson Trust has been determined to be a "private foundation" subject to the imposition of a Federal excise tax under section 4940 of the Internal Revenue Code. The trust has therefore been forced to pay during the years 1972 to 1976 in excess of $7,500 in excise taxes, the payment of which has necessarily diverted to the Federal Government the use of charitable funds from the Montgomery area charitable beneficiaries of the trust.

The bill I am introducing today would enable the trust to be brought within the ambit of section 509(a)(3) of the Internal Revenue Code, since in substance it much more closely resembles an organization designed to receive the benefits of that section than it does an organization operating as a private foundation subject to section 4940. The bill would also reverse the anomalous effect of the section 4940 treatment given to the trust over the past tax years and would return to the charitable beneficiaries in Montgomery the excise tax heretofore paid to the Federal Government.

Mr. President, I ask unanimous consent that this bill for the relief of the Peterson Trust be referred to the Committee on the Judiciary.

The PRESIDING OFFICER. Is there objection?

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object, may I ask the distinguished Senator the question, Would that bill normally go to the Judiciary Committee?

Mr. ALLEN. It probably would since it is a relief bill, but it has to do with taxes, excess payment of taxes, and there is a legal question involved.

Mr. ROBERT C. BYRD. Would it normally go to the Finance Committee?

Mr. ALLEN. I have not checked. I think it would probably go to the Judiciary Committee.

Mr. ROBERT C. BYRD. May I ask the Chair?

The PRESIDING OFFICER. Under normal circumstances the bill would be referred to the Committee on Finance.

Mr. ALLEN. It was referred to the Committee on the Judiciary in the House of Representatives.

Mr. ROBERT C. BYRD. Has the referral been cleared with Mr. LONG, the chairman of the Committee on Finance?

Mr. ALLEN. No, it has not.

Mr. ROBERT C. BYRD. I shall have to object. May I say to my friend, I received two letters from the Senator from Louisiana, the chairman of the Committee on Finance, instructing me that any measures that are about to be jointly referred by unanimous consent must be cleared with him if they impact on his committee in any way whatsoever.

Mr. ALLEN. Very well.

Mr. ROBERT C. BYRD. I am sure the distinguished Senator would not mind taking this up with the Senator from Louisiana.

Mr. ALLEN. I will let it go in the normal channels then.

Mr. President, I withdraw the request.

The PRESIDING OFFICER. Does the Senator from Alabama withdraw the unanimous-consent request?

Mr. ALLEN. Yes.

The PRESIDING OFFICER. It is withdrawn.

Mr. ROBERT C. BYRD. Mr. President, will the distinguished Senator yield?

Mr. ALLEN. I yield.

Mr. ROBERT C. BYRD. I would be glad to have the Senator ask unanimous consent that the measure not be referred to any committee until one day next week until he could have a chance to talk to the Senator from Louisiana.

Mr. ALLEN. No. It is perfectly all right with me that it go to the Finance Committee.

Mr. ROBERT C. BYRD. I thank the Senator.

By Mr. ALLEN (for himself, Mr. SPARKMAN, and Mr. THURMOND):

S. 1514. A bill to amend section 4941 of the Internal Revenue Code of 1954, and section 101(1)(2) of the Tax Reform Act of 1969; to the Committee on Finance.

Mr. ALLEN. Mr. President, I introduce a bill to amend the Internal Revenue Code, and I ask unanimous consent that an explanation of the bill and the text of the bill be printed in the RECORD.

There being no objection, the explanation and the bill were ordered to be printed in the RECORD, as follows:

EXPLANATION OF PROPOSED BILL TO AMEND SECTION 4041 OF THE INTERNAL REVENUE CODE

Public Welfare Foundation, Inc., ("the Foundation") a Delaware non-stock, nonprofit corporation, with present headquarters in Washington, D.C., was formed in 1951 as the successor to Public Welfare Foundation of Austin. The Foundation is classified as a private foundation exempt from Federal income tax under Section 501(c)(3) of the Internal Revenue Code of 1954 ("Code"). The creator of the Public Welfare Foundation was Charles E. Marsh, a successful newspaper entrepreneur, who desired to create a charitable organization to provide help to worthwhile charitable projects without becoming a permanent crutch.

Since Public Welfare Foundation's original formation in 1947, it has paid out, approximately, $11,000,000 in recognized charitable grants, of which approximately $3,500,000 were made in the past 5 years.

The principal source of the charitable grants made by the Foundation has been the Foundation's, direct or indirect, ownership of all of the assets of the Spartanburg Herald and Journal. The Gadsden Times and The Tuscaloosa News. These newspapers originally were owned by General Newspapers, Inc., which Mr. Marsh controlled. Subsequent to the formation of the Foundation in the early 1950's, Mr. Marsh caused General Newspapers, Inc. to transfer the assets of those newspapers to the Foundation, through bargain sales. Concurrent with the transfer of the assets of those newspapers to the Foundation, their then respective publishers (who up until then had been employees) formed their own separate operating corporations to lease the assets and facilities of the newspapers from the Foundation. Those arrangements continued until 1966 when, pursuant to a settlement with the Internal Revenue Service of an income tax case involving the Foundation, the Foundation caused the assets of those newspapers to

be transferred to its three wholly owned, newly formed, and fully taxable subsidiaries, The Gadsden Times, Inc., The Tuscaloosa News, Inc., and The Spartanburg Herald and Journal, Inc. Those wholly owned subsidiaries continue to lease the assets of their respective newspaper properties to the operating corporations owned by the publishers. The newspaper publishers thereby have been able to serve and help develop their local communities for approximately the past thirty years.

By the close of the Foundation's fiscal year ended October 31, 1969, it had received total contributions in the amount of $2,750,000, approximately. Of this amount, the operator of The Spartanburg Herald and Journal had contributed a total of approximately $283,000 to the Foundation; the operator of The Gadsden Times, a total of approximately $191,000; and the operator of The Tuscaloosa News had contributed a total of approximately $136,000 to the Foundation. The operators commenced making these voluntary contributions on their own initiative after one of the lease arrangements was questioned by Internal Revenue Service as possibly calling for an unreasonably high rent from the operators to the Foundation. Rather than litigate the question, settlement at a reduced rental was reached which thereafter served as the pattern for the leases to the operators. And, thereafter the operators voluntarily made charitable donations to the Foundation which approximated the amounts of the reductions in the rents paid by them to the Foundation.

The Tax Reform Act of 1969 imposed many new restrictions upon private foundations and in ultimate effect will cause the termination of the relationship between the operators of the newspapers and the Foundation, a relationship which has proven of benefit to the operators, their communities, the Foundation, and the recipients of its charitable grants. Whether such result was intended is questionable in these circumstances.

Section 4941 of the Code, added by the Tax Reform Act of 1969, imposes a penalty tax on "self-dealing", which includes any direct and indirect leasing of property between a private foundation and a "disqualified person". Under Section 4946(a)(1) of the Code, the term "disqualified person" includes a "substantial contributor," who is anyone who contributed more than $5,000 to a private foundation, if such amount was more than 2% of the total contributions received by the foundation before the close of the taxable year in which the contribution was received. All contributions up to October 9, 1969 are aggregated and treated as received on that day. Moreover, once the status of "substantial contributor" is achieved, that status remains for all subsequent periods. Section 507(d)(2) of the Code.

Thus, by statutory definition, the operating corporations (and those persons who are their controlling shareholders or members of their families) became substantial contributors, prohibited from engaging in any direct or indirect leasing of property from the Foundation. However, by reason of the transitional rules of Section 101(1)(2)(C) Tax Reform Act and the regulations issued thereunder, under prescribed circumstances, contracts in effect on October 9, 1969, or any renewals thereof, do not become subject to the self-dealing prohibitions until taxable years beginning after December 31, 1979.

Consequently, by reason of the Tax Reform Act of 1969, after 1979, Public Welfare Foundation's three subsidiary corporations will no longer be able to lease their assets to the operators who have so successfully developed those assets over the past thirty years. There is no restriction on leasing to third parties who are not disqualified persons so that such leases could continue indefinitely. Under Section 4943 of the Code, however, relating to excess business holdings, the Foundation eventually will have to divest itself of its holdings in the subsidiaries so that by 1989 its holdings must not exceed 50% of the stock of the subsidiaries, which figure must be reduced to 35% by the year 2004.

Congress has already recognized that in certain circumstances it is fair and appropriate to limit the applicability of Section 4901. Thus, the Tax Reform Act of 1976 amended the transitional rules set forth in Section 101(1)(2) of the Tax Reform Act of 1969 to extend the date on which stock interests could be sold to disqualified persons and to provide that certain assets could be sold to disqualified persons. The time in which the stock could have been sold has already closed and the assets would have to be sold prior to January 1, 1978.

As an economic matter, the Foundation believes its ability to provide maximum grants to chartiable beneficiaries will best be enhanced if it continues to own, and lease or operate, the newspaper subsidiaries. Newspapers in the areas where the Foundation's subsidiaries are located recently have experienced and are presently experiencing significant increases in value. Moreover, the Foundation has been advised that this trend is expected to continue for some time. Consequently, the Foundation believes that in these circumstances any sale in the near future would be premature and therefore contrary to its duty to conserve and best use its assets for charitable purposes.

Thus, by reason of statutory provisions which were neither in existence nor foreseeable at the time the operators made charitable contributions to the Foundation, the operator's relationships with the very newspapers which they developed must terminate. The operators will be forced to suffer the immediate and severe economic hardships resulting from terminating their thirty year relationships with the newspapers. But, those same statutory provisions would permit some other persons, who did not develop the papers, to step into the operators' shoes and gain the advantages of their development and the improved economic conditions.

It is submitted that the above results are harsh and unwarranted in these particular circumstances. The self-dealing provisions, which require the disengagement of substantial contributors from the affairs of private foundations, were directed towards the unfair business competition resulting from the misuse of a tax exempt status by a grantor of a private foundation. But that abuse is not present here, for these subsidiaries are fully taxable entities. And, the provisions were intended to reach the creators of foundations, members of their families and corporations they control. None of the operators in this situation is related to Mr. Marsh or his family, nor has any member of the Foundation's board any relationship to the operators, their families or their corporations. Rather, the operators are the accidental victims of legislation enacted after their having made well-intended charitable contributions to the Foundation, which contributions now would back-fire to prohibit continuation of their long-standing, and mutually profitable, relationships.

To correct these inequities the Bill first provides in subsection (a) that the leases now in effect would be exempt from the self-dealing provision. Since a requirement of exemption is that the lessor corporation be a taxable entity there should be no adverse effect on the tax revenues. And, because subsections (i), (ii) and (iii) restate the requirements of Section 101(1)(2)(C) of the Tax Reform Act of 1969 and subsection (v) further limits the applicability to those persons who became disqualified persons through charitable gifts alone, the provision will be of limited applicability and will not open a loophole.

The second relief provided by the Bill, through subsections (b), (c), and (d) simply further extends the dates during which the transitional rules of the Tax Reform Act of 1969 postpone the applicability of Section 4941 of the Code. As set forth above, under Section 4943, as presently applicable to the Foundation, partial divestiture of its subsidiaries will not have to be accomplished until 1989. If the leases now in effect were allowed to continue until that time, it appears equitable that the Foundation should be allowed to sell either the stock of the subsidiaries or cause their assets to be sold to the most likely purchasers, the operating corporations, by the close of the period during which the leases are in effect. By so doing, the legislation would permit the present local publishers to continue to operate the local newspapers which they have developed. The changes also would eliminate a cause for these local operations to be taken over by others, perhaps large, impersonal, absentee chains. The changes also would permit continuance of the large charitable grants which the Foundation has made. If the Foundation were to know that it could continue its relationships with the operators, it will be able to make even larger grants in the future, for it recently has had to maintain reserves to handle presently anticipated costs of transition to new and different operators. A 10 year extension of the present arrangements would minimize, if not eliminate, the need for such reserves. This would make coextensive the periods in which leases and sales to present operators, and retention of 100 percent ownership by the Foundation of the taxable subsidiaries, are permissible.

As set forth above, there is some precedent for the requested relief in the present law. Recent amendments have been enacted to extend from 1975 to 1977 the time within which certain sales could be made by a private foundation to a disqualified person. And there is provision for relief from economic hardships for "disqualified persons" in areas other than leases. (Sec. 4941(d)(2)(B) and Reg. § 53.4941(d)-1(b)(1)).

The requested changes would put leases on a more equal footing with that granted goods, services or facilities supplied by private foundations to disqualified persons who otherwise would be engaged in an act of "self-dealing".

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

(a) Section 4941(d)(2) of the Internal Revenue Code of 1954 is amended as follows:

(1) by striking out "and" at the end of subparagraph (F);

(2) by strking out the period at the end of subparagraph (G) and inserting in lieu thereof "; and" and

(3) by adding at the end of such paragraph the following new subparagraph:

"(H) The leasing of property by a corporation, all the stock of which is owned by a private foundation, to a disqualified person shall not be an act of self-dealing if (i) it is pursuant to a binding contract in effect on October 9, 1969 (or pursuant to renewals of such contract); (ii) the leasing at no time constituted a prohibited transaction (within the meaning of section 503(b) or the corresponding provisions of prior law); (iii) the terms of the lease are no more favorable to the disqualified person than those under which the corporation would lease the property to an unrelated party in an arm's-length transaction; (iv) the lessor corporation is not exempt from tax under subchapter F; and (v) the disqualified person became such solely because of contributions made to the private foundation prior to October 9, 1969."

(b) Section 101(1)(2)(B) of the Tax Reform Act of 1969, as amended by section 1309 of the Tax Reform Act of 1976, is amended by striking out "January 1, 1977" and inserting in lieu therof "January 1, 1990".

(c) Section 101(1)(2)(C) of the Tax Re-

form Act of 1969 is amended by striking out "December 31, 1979" and inserting in lieu thereof "December 31, 1989".

(d) Section 101(1)(2)(F) of the Tax Reform Act of 1969, as added by section 1301 of the Tax Reform Act of 1976, is amended by striking "January 1, 1978" from subparagraph (ii) and inserting in lieu thereof "January 1, 1990".

By Mr. McCLURE:

S. 1515. A bill to prohibit the sale, alienation, or commitment of gold by the Secretary without prior approval by act of Congress; to the Committee on Finance.

Mr. McCLURE. Mr. President, today I am introducing a bill to prohibit the sale, alienation, or commitment of gold by the Secretary of the Treasury without prior approval by act of Congress.

In the years prior to passage of the law which permits the American citizen to own gold, the U.S. Treasury came up with a series of specious arguments against gold ownership. One of them was that gold is and should be treated exactly like every other commodity. During debates on this subject, I often pointed out that that was precisely what Treasury was not doing, in advising against private ownership of gold. Showing the inconsistency of the Treasury's position did not, however, mean that I had bought their premise. Gold is not and never has been exactly like anything else. For century after century, it has served as a numeraire that is the basis upon which the price of everything else was calculated and the ultimate reserve of value.

So-called gold nuts are often criticized for a mystical reverence for the metal. But there is nothing mystical in a preference for a substance which is unique in combining the qualities of durability, malleability, quantity, and beauty.

There is more cause for surprise when the gold-based currency fails, at last until examination shows that thee coinage has been deflated by Government. And there is only a distinction of sophistication between the coin clipping of emperors and the inflationary practices of democracies. Gold, itself, remains valuable in both its roles as a measure of value and store of reserve. For example, a barrel of oil has been worth the same two grains of gold for years. It is the currencies which fluctuate.

Although the value of our gold stocks is hypothetically $40 billion at present market prices, the actual quantity of our gold is 276 million ounces, less than half of what it was 25 years ago. In view of the changing world economic and strategic picture, present stocks cannot be viewed as being in excess of possible monetary and strategic needs. In times of crises, it would be vital for the United States to have stocks of gold for military and related purposes.

The Treasury Department's "Gold Market Report" written by Thomas W. Wolfe points out that there is no surplus of gold in the world and that industrial demand alone is expected to exceed production in the foreseeable future. Particularly in the strategically important computer industry, the consumption of gold is rapidly increasing.

Thus, given the overall stability of gold, it would be the height of folly to sell remaining reserves. The United States cannot unilaterally strip gold of its value. And despite all the talk of demonetization by various committees of the International Monetary Fund, gold is internationally as desirable today as it was when the United States belatedly closed the gold window in 1971 to protect its diminishing reserve.

Several of our allies have recently called upon the United States and upon multilateral organizations for financial assistance. In addition, financial agreements have been made using gold stocks as collateral. The IMF permitted members to offer gold as collateral for loans and the German-Italian loan followed. The IMF allowed members to revalue gold at free market prices and the result was the French figure of 170. Demonetization is the popular phrase and the SDR is the fad of the moment, but the real action is in gold. If the United States should again embark upon a program of gold sales, world prices would be driven down and we would be hurting the same nations which we have, in other ways, tried to help. Nations such as Italy, Portugal, France, and Spain have significant stores of gold and would be adversely affected by any U.S. gold sale program.

Economists have pointed out that some nations with sizable gold stocks are also those nations which are having difficulties obtaining credit, and in fact, may default on some of their obligations. A large scale default would, of course, have great impact on American financial institutions and impose a costly strain on our financial system. On the other hand, if the gold available to these nations is available for use is collateral, as in the case of the Italian/German agreement, these nations may be provided with breathing space in order to put their financial house in order.

The Treasury sold 500,000 ounces of gold at a price of $165.05 per ounce on June 30, 1975. Since that time, there have been a number of changes in the world financial situation. At that time, central banks were effectively prohibited from purchasing or dealing in gold because of the artificially low official price. Because of the amendments to the Bretton Woods Agreement, however, it will soon be possible for central banks to use gold for whatever purpose they choose. As a result, any U.S. gold sale may provide added gold to central banks for such uses. In such a case, sales by the United States to central banks would certainly not be "demonetizing" gold.

The sale of U.S. gold at this time of international financial instability would potentially cost the United States far more than any temporary gains such sales would achieve. It could hurt our allies and set back the goal of an orderly world marketplace. It is impossible to see why the United States or any financially responsible body would want to substitute the rapidly inflating paper currencies of the world for a metal with a proven intrinsic value. I urge, therefore, that the sale of gold by the Treasury without approval by Congress be prevented by law.

By Mr. METCALF:

S. 1516. A bill to assist the States in raising revenues by encouraging more uniform severance taxes on coal and oil shale and to impose a countervailing duty on imported coal and oil shale; to the Committee on Finance.

Mr. METCALF. Mr. President, our domestic coal deposits are becoming more important as this Nation develops and establishes a comprehensive energy policy. One of the cornerstones of the Carter administration policy is a great expansion of our production of coal and its conversion to energy. This means that tremendous pressure for social services will be placed upon the States and communities where this development must occur.

There is little dispute that, ultimately, coal and its related industries can and should pay their own way for these services and improvements. But first, the impacted communities must understand the problems facing them, organize, indebt themselves, and mobilize their taxing powers. Even if these actions occur, the need for roads, housing, sewers, schools, and so forth, is immediate while the revenue derived from industry and its employees does not materialize for 2 to 3 years. Mr. President, the impacted areas need front-end moneys.

In the past, States and communities across this Nation have experienced the boom-and-bust cycle of mineral extraction. Communities expand and become indebted and in 10 to 20 years continue to repay these debts after the industry has left the area.

Mr. President, I feel industry should assume major responsibility for its effects upon the impacted areas. Current practice is to leave it to the general taxpayer through general fund expenditures, as in the case of Federal assistance programs, and also to the residents of the impacted communities through bonded indebtedness.

Equally important, the States have a right to receive revenues for the severance of their nonrenewable resources. These are treasures which can never be replaced. The States should receive revenues to assist the impacted communities and to provide for a future when these resources no longer exist.

The bill I introduce today does this very thing for coal and oil shale operations. It offers States a tax source which they cannot now fully utilize. It imposes a Federal severance tax of 25 percent of the gross income from all domestic coal and oil shale properties which produce 20,000 tons or more a year if strip mined and 15 percent if mined by other methods. Full credit is to be allowed against the Federal tax, however, for similar State or local severance taxes paid with respect to the properties.

The credit for State and local severance taxes is the heart of this bill. If it becomes law, States which do not now have severance taxes will speedily impose them. Furthermore, States that tax at lower rates than 25 and 15 percent will increase their tax rates to at least that level. Thus, once the States adjust to the new tax, the Federal Treasury will derive no revenues from it. This is the purpose

of the bill. The important thing is that the tax receipts of most States will be increased significantly.

States find it difficulty to impose severance taxes today because a State acting alone runs the risk of placing some mining companies operating within the State at a competitive disadvantage relative to companies operating where there are no severance taxes. They are afraid the enactment of such a tax would reduce mining activities in the State. Interstate competition, in other words, acts to keep severance taxes low.

This bill remedies this problem. It also provides for a countervailing duty to be levied on imported coal or oil shale equal to the burden of the domestic tax unless it does not compete with American production. In this way, the States are not only saved from economic disadvantages with one another, but also with foreign countries.

If the Senate in its wisdom feels that the rates of 25 and 15 percent are too low or too high, I am certainly willing to negotiate. I use these rates as a starting point for debate. However, a severance tax at these rates will not place a severe burden on the mining industry.

Montana, my home State, has a severance tax on coal which is higher than the one I propose today. Montana and its local governments impose a severance tax of up to 35 percent of the contract sale price of the coal f.o.b. at the mine, less taxes paid on production, depending on the Btu content of the coal. In other words, Montana levies a severance tax on coal up to 10 percentage points higher than the one I propose.

Again, Mr. President, I stress that this severance tax will not place a severe burden on the mining industry. Despite Montana's having the highest severance tax on coal in the Nation, companies have continued to enter into long-term contracts for its coal. The demand for coal will continue to increase in the future. In addition, coal is one of the few minerals which is sold using long-term contracts of 20 years or more and which provide for tax increases.

All States with coal or oil shale production will benefit from this bill. My staff has estimated the severance tax collections which would result from this bill. The table incorporates 1975 data from the Bureau of Mines and illustrates the level of revenue each State may expect to generate by imposing a similar tax. It concerns only coal production because there is no commercial oil shale production in the United States at this time.

The chart indicates that some $2.2 billion in increased severance tax receipts could be raised using this bill, all of which could be absorbed by the States if they enact complementary statutes. This figure would be reduced to approximately $2.1 billion due to the exemption for small mines.

Admittedly, the price of coal would increase and some of this burden would fall upon the consumer, but not significantly. This price increase would lead to some conservation and is preferable to levying a tax on the general Federal taxpayer to finance the improvements necessitated by the coal industry.

The State of Montana has studied the impact of its 35-percent severance tax on the consumer. For example, according to former Lt. Gov. Bill Christiansen, the tax will "increase the average annual residential electric bill in Detroit Edison's service area by $3.38. This amounts to just over 1 cent a day." As he stated, we all have seen "appliance commercials that advertise the cost of operating the appliance as 'just a few cents a day.'"

These revenues would be particularly important to the States of Appalachia which are dollar poor but rich in coal. Interstate competition has prevented these States from deriving adequate tax revenues from mineral operations. This has been true even though the profits from these operations have been a principal benefit to the residents of other States. For example, according to the table, West Virginia, which, as of April 15 of this year, has no severance tax on coal, would receive $529.6 million annually for the needs of its citizens.

I would not expect all the States to take immediate action to impose their own severance tax once this bill becomes law. In some cases their reaction would be delayed for a few years, so that the Federal Government would derive some revenue from the tax. These amounts would be enough, I believe, to defray any administrative costs. For this reason it is reasonable to permit the entire amount of the tax to be offset by a credit for State tax. Under the bill, a mineral property would be defined to include the same properties as those eligible for percentage depletion deductions under the Federal income tax.

The 25- and 15-percent severance tax would apply to the gross income received by the owner of the working interest in a mineral property. That is, gross income would be the same for the purposes of this tax as the figure which forms the basis for computing Federal percentage depletion deductions in cases in which there were no royalty payments or production payments. Gross income would be defined differently when there was a royalty or a production payment.

Only rents or royalties or bonuses paid to Federal, State, or local governments could be excluded; there would be no exclusion for rent or royalties or bonuses paid with respect to the property; any amount paid to the holder of a production payment would be included in computing the gross income of the owner or the working interest; finally, any amount received from the sale of a production payment would be excluded in computing gross income.

Mineral properties which produce less than 20,000 tons of coal a year would be exempt from the severance tax.

The State severance taxes which could be credited against the tax imposed by this bill would have to be based on the gross income attributable to the extraction of coal or oil shale derived from the property located within the State. Finally, the tax would have to be a severance tax; it could not be a general sales tax or an income tax applied generally to the income from most sources. Any severance tax paid by a holder of a royalty or other nonoperating interest would be treated as if it had been paid by the holder of the working interest.

The bill provides for the exchange of information between the States and the Federal Government. That is, upon request, the Internal Revenue Service would inform a State of the amount claimed by the taxpayer as his gross income from a mineral property located within the State.

Mr. President, this bill would permit the States to utilize an important source of tax revenue which they now are inhibited from using because of interstate competition. The bill, at little or no cost to the Federal Government, would provide much needed assistance to the States. I hope my colleagues in the Senate will give their support. I ask unanimous consent that the table previously referred to and the bill be printed at this point in the RECORD.

There being no objection, the table and bill were ordered to be printed in the RECORD, as follows:

State	Production (thousand tons) [1]			Value of production (millions) [2]			Gross severance tax under proposal (millions)			Current estimated State severance Tax liability (State credit) (millions)	Net severance tax liability under proposal (millions)

[1] Production figures were taken from table 8 of "Mineral Industry Surveys: Coal—Bituminous and Lignite in 1975," published by U.S. Department of Interior, Bureau of Mines, Feb. 10, 1975.
[2] Ibid., table 12.
[3] Includes auger and strip-auger produced coal.
[4] Computed from national average of $13.12 per ton for surface-mined coal.
[5] Where figures are withheld by industry, or where mix of surface and deep mining is unknown, this table assigns all values, to surface mining.
[6] Computed from national average of $26.28 per ton for deep-mined coal.

Note: Minus 5 percent for 20,000 exemption equals 2,114.69.

S. 1516

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subtitle D of the Internal Revenue Code of 1954 (relating to miscellaneous excise taxes) is amended by adding at the end thereof the following new chapter:

"CHAPTER 44—SEVERANCE TAX

"Sec. 4991. Imposition of severance tax on coal and oil shale.
"Sec. 4992. Credit against tax.
"Sec. 4993. Definitions.
"Sec. 4994. Information to States.

"SEC. 4991. IMPOSITION OF SEVERANCE TAX ON COAL AND OIL SHALE.

"(a) IMPOSITION OF TAX.—There is hereby imposed on the severance of coal or oil shale from a property located within the United States an excise tax equal to the applicable percentage of the gross income from the property during the taxable year.

"(b) RATE OF TAX.—For purposes of subsection (a), the applicable percentage shall be—

"(1) 25 percent, in the case of extraction of coal or oil shale from the property by surface mining, or

"(2) 15 percent, in the case of extraction of coal or oil shale from the property by any other method.

"(c) LIABILITY FOR TAX.—The tax imposed by this section shall be paid by the person who holds the working interest in the mineral property.

"(d) EXEMPTION.—The provisions of subsection (a) shall not apply to the severance of coal or oil shale from any property which produces less than 20,000 tons of such coal or shale during the taxable year.

"SEC. 4992. CREDIT AGAINST TAX.

"(a) IN GENERAL.—There shall be allowed as a credit against the tax imposed by section 4991 on the severance of coal or oil shale from any property an amount equal to the qualified severance taxes paid by the taxpayer during the taxable year with respect to the extraction of such coal or oil shale from such property.

"(b) QUALIFIED SEVERANCE TAXES.—

"(1) IN GENERAL.—For purposes of subsection (a), the term 'qualified severance taxes' means a severance tax paid to a State or local government with respect to the extraction of coal or oil shale from property located within the jurisdiction of such government.

"(2) SEVERANCE TAX.—For purposes of this subsection, the term 'severance tax' means a tax paid with respect to the extraction of coal or oil shale from any property which—

"(A) is paid by the owner of the operating mineral interest in the property,

"(B) is based on gross income from the property which is attributable to—

"(i) extraction of coal or oil shale from such property, and

"(ii) such owner of the operating mineral interest, and

"(C) is required to be paid the State or local government in installments which are required to be paid not less frequently than once every 4 calendar months.

"(3) SPECIAL RULE FOR ROYALTY HOLDERS.—For purposes of subsection (a), the amount of any severance tax paid to a State or local government with respect to the extraction of coal or oil shale from a property located within the jurisdiction of such government by any person who owns a nonoperating mineral interest in such property shall be treated, for purposes of paragraph (1), as being a severance tax paid by the holder of the operating mineral interest in such property.

"(4) EXCLUSIONS.—For purposes of this subsection, the term 'qualified severance tax' does not include any amounts paid as a tax imposed generally on gross sales or gross receipts or as general income tax.

"SEC. 4993. DEFINITIONS.

"For purposes of this chapter—

"(1) GROSS INCOME FROM THE PROPERTY.—The term 'gross income from the property' has the same meaning as it has under section 613(c) except that any rents or royalties paid or incurred by the taxpayer in respect of such property to the United States, a State, or a local government shall be excluded from such gross income.

"(2) OPERATING MINERAL INTEREST.—The term 'operating mineral interest' has the same meaning it has under section 614(d).

"(3) PROPERTY.—The term 'property' has the same meaning it has under section 614 except that no election may be made under section 614(c)(2) to treat a single interest as more than one property for purposes of this chapter.

"(4) UNITED STATES.—The term 'United States' when used in a geographical sense has the same meaning it has under section 638(1).

"SEC. 4994. INFORMATION TO STATES.

"Notwithstanding any other provision of law, the Secretary or his delegate shall, upon request by any official of a State or local government who is lawfuly charged with the administration of a severance tax imposed by such State or local government, furnish to such official a copy of any schedule or statement filed by any taxpayer with respect to the taxes imposed by chapter 1 which discloses the amount of gross income from property, within the meaning of section 613(c), located within the jurisdiction of such State or local government. Information disclosed to State or local government officials under this section shall be subject to the provisions of section 6103(b) and, for purposes of section 7213, shall be considered to have been disclosed under section 6103(b)."

(b) The table of chapters of subtitle D is amended by adding at the end thereof the following new item:

"CHAPTER 44. Severance tax.".

(c) Section 303 of the Tariff Act of 1930 (19 U.S.C. 1303) is amended—

(1) by redesignating subsection (e) as subsection (f), and

(2) by inserting immediately after subsection (d) the following new subsection:

"(e) SEVERANCE TAXES.—(1) For purposes of subsection (a), the severance tax amount determined under paragraph (2) of this subsection shall be considered to be a bounty or grant upon the manufacture or production or export of each ton of coal or oil shale imported into the United States. For purposes of subsection (c), notwithstanding subsection (a)(2), the Secretary shall be considered to have published his determination with respect to such bounty or grant on the date of enactment of this subsection.

"(2) For purposes of paragraph (1), the severance tax amount shall be the average amount per ton of severance taxes imposed under chapter 44 of the Internal Revenue Code of 1954 on coal or oil shale, as determined by the Secretary from time to time.

"(3) The provisions of paragraph (1) shall not apply—

"(A) with respect to products derived from coal or oil shale if the fair market value of such products is more than 3 times greater than the fair market value of the coal or oil shale from which they were derived at the time of its extraction, or

"(B) if the President determines that a specific grade of imported coal or oil shale is not directly competitive with coal or oil shale produced in the United States and publishes such determination in the Federal Register.

The provisions of subparagraph (B) shall not apply if either House of Congress enacts a simple resolution disapproving the President's determination under such subparagraph within 60 calendar days after such publication.

"(4) The provisions of subsection (d) do not apply to the additional duty required under this subsection.".

By Mr. MATSUNAGA:

S. 1519. A bill to amend the tariff schedules of the United States in order to suspend until the close of December 31, 1978, the duty on certain fieldglasses, opera glasses, binoculars and other telescopes; to the Committee on Finance.

Mr. MATSUNAGA. Mr. President, I am introducing legislation to suspend tariffs on certain imported binoculars and telescopes. Americans today make widespread use of binoculars and telescopes for sports and recreation. Better technology and production has decreased the cost of quality instruments, and this moderate pricing has opened a wide consumer market in America.

While American demand has increased, imported binoculars and telescopes have been subject to a 20-percent ad valorem tariff. The original tariff was established at a time when the American optical industry was experiencing technical difficulties in producing quality optical instruments. The national interests at that time warranted protection of the industry. At present, however, the Department of Commerce reports no known commercial production in the United States of the kind of prisms used in these binoculars and telescopes which are presently being imported. Indeed, the small domestic commercial production which does occur, uses imported prisms, and the small domestic production has been directed at the most expensive, high quality, high performance instruments for an extremely select market.

The reasons for tariff protection in this area no longer exist. However, imported binoculars and telescopes still have a 20-percent ad valorem tariff imposed upon them, and this tariff is invariably passed on to the consumers. As a consequence, American consumers continue to pay a protective tariff which protects no one.

The suspension provided by my bill will be only temporary. The suspension will end on December 31, 1978. By that time, the tariff reduction negotiations in Geneva should be over, and the executive branch should reach a permanent decision on this matter. I believe that the administration will then agree to the permanent elimination of tariffs on telescopes and binoculars.

In the meantime, the temporary suspension of the tariff at this time, will lead to great savings for American consumers, and I urge support of my bill.

ADDITIONAL COSPONSORS

S. 2

At the request of Mr. MUSKIE, the Senator from Utah (Mr. HATCH) was added as a cosponsor to S. 2, a bill to require authorizations of new budget authority for Government programs at least every 5 years, to provide for review of Government programs every 5 years, and for other purposes.

S. 70

At the request of Mr. MATHIAS, the Senator from South Dakota (Mr. MCGOVERN) was added as a cosponsor of S. 70, The Homebuyers' Assistance Act.

S. 119

At the request of Mr. INOUYE, the Senator from New Hampshire (Mr. MCINTYRE) was added as a cosponsor of S. 119, to incorporate the Pearl Harbor Survivors Association.

S. 123

At the request of Mr. INOUYE, the Senator from North Dakota (Mr. BURDICK), the Senator from South Dakota (Mr. MCGOVERN), the Senator from Florida (Mr. STONE), the Senator from Montana (Mr. METCALF), the Senator from West Virginia (Mr. RANDOLPH), and the Senator from Iowa (Mr. CLARK) were added as cosponsors of S. 123, to amend the Social Security Act.

S. 224

At the request of Mr. INOUYE, the Senator from Idaho (Mr. CHURCH) was added as a cosponsor of S. 224, to amend title 5, United States Code.

S. 233

At the request of Mr. INOUYE, the Senator from Massachusetts (Mr. BROOKE) was added as a cosponsor of S. 233, relating to the medicare and medicaid programs.

S. 264

At the request of Mr. DOLE, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of S. 264, to increase Federal expense in meat inspection programs.

S. 274

At the request of Mr. THURMOND, the Senator from North Dakota (Mr. BURDICK) was added as a cosponsor of S. 274, to prohibit unionization of the military services.

S. 531

At the request of Mr. MUSKIE, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of S. 531, a bill to authorize additional appropriations under title II of the Public Works Employment Act of 1976.

S. 784

At the request of Mr. SCHWEIKER, the Senator from Rhode Island (Mr. CHAFEE) was added as a cosponsor of S. 784, to provide for unbiased consideration of applicants to medical schools.

S. 819

At the request of Mr. MATHIAS, the Senator from Vermont (Mr. LEAHY), the Senator from Hawaii (Mr. INOUYE), and the Senator from West Virginia (Mr. RANDOLPH) were added as cosponsors of S. 819, the Interpreters for the Hearing Impaired Act.

S. 868

At the request of Mr. CASE, the Senator from New York (Mr. MOYNIHAN) was added as a cosponsor of S. 868, to terminate the authorization for the Tocks Island Reservoir project as part of the Delaware River Basin project, and for other purposes.

S. 938

At the request of Mr. BUMPERS, the Senator from Wisconsin (Mr. NELSON) and the Senator from California (Mr. CRANSTON) were added as cosponsors of S. 938, to prohibit certain aerial spraying.

S. 1090

At the request of Mr. INOUYE, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of S. 1090, to improve labor-management relations in the Federal service.

S. 1116

At the request of Mr. MCGOVERN, the Senator from South Dakota (Mr. ABOUREZK), the Senator from New Jersey (Mr. CASE), the Senator from Iowa (Mr. CLARK), the Senator from Kansas (Mr. DOLE), the Senator from Alaska (Mr. GRAVEL), the Senator from Minnesota (Mr. HUMPHREY), the Senator from Vermont (Mr. LEAHY), the Senator from Hawaii (Mr. MATSUNAGA), and the Senator from West Virginia (Mr. RANDOLPH) were added as cosponsors of S. 1116, the nutrition counseling bill.

S. 1122

At the request of Mr. THURMOND, the Senator from New Mexico (Mr. SCHMITT) was added as a cosponsor of S. 1122, to amend the Occupational Safety and Health Act.

S. 1191

At the request of Mr. MCGOVERN, the Senator from South Dakota (Mr. ABOUREZK), the Senator from New Jersey (Mr. CASE), the Senator from Iowa (Mr. CLARK), the Senator from Alaska (Mr. GRAVEL), and the Senator from West Virginia (Mr. RANDOLPH) were added as cosponsors of S. 1191, the Preventive Medicine, Health Maintenance and Health Promotion Act of 1977.

S. 1238

At the request of Mr. MCINTYRE, the Senator from South Carolina (Mr. THURMOND) was added as a cosponsor of S. 1238, a bill to provide for legal assistance to members of the Armed Forces and their dependents.

S. 1242

At the request of Mr. NELSON, the Senator from Utah (Mr. HATCH) was added as a cosponsor of S. 1242, the Youth Employment and Training Act of 1977.

S. 1305

At the request of Mr. HASKELL, the Senators from Louisiana (Mr. LONG and Mr. JOHNSTON) were added as cosponsors of S. 1305, a bill to amend the Small Business Act to authorize the making of economic injury disaster loans in certain extraordinary circumstances without a disaster declaration, and for other purposes.

S. 1307

At the request of Mr. THURMOND, the Senator from Kansas (Mr. DOLE), the Senator from Utah (Mr. HATCH), and the Senator from New Mexico (Mr. SCHMITT) were added as cosponsors of S. 1307, to deny benefits to certain veterans.

S. 1310

At the request of Mr. DOLE, the Senator from South Carolina (Mr. THURMOND) was added as a cosponsor of S. 1310, providing for installation of a teletypewriter in the Capitol.

S. 1345

At the request of Mr. BAYH, the Senator from West Virginia (Mr. RANDOLPH) was added as a cosponsor of S. 1345, Vot-

ing Rights for the Elderly and the Handicapped.

S. 1346

At the request of Mr. BAYH, the Senator from West Virginia (Mr. RANDOLPH), was added as a cosponsor of S. 1346, to amend the Civil Rights Act of 1964 to prevent discrimination on account of the handicapped condition of an individual.

S. 1415

At the request of Mr. DOLE, the Senator from Nebraska (Mr. CURTIS) was added as a cosponsor of S. 1415, to amend the Trade Act.

S. 1461

At the request of Mr. CURTIS, the Senator from South Carolina (Mr. THURMOND) was added as a cosponsor of S. 1461, to expand the research in agricultural commodities and forest products.

S. 1486

At the request of Mr. BELLMON, the Senator from Oklahoma (Mr. BARTLETT) was added as a cosponsor of S. 1486, to amend the Social Security Act.

S. 1501

At the request of Mr. GARN, the Senator from Texas (Mr. TOWER) and the Senator from New Mexico (Mr. SCHMITT) were added as cosponsors of S. 1501, the Truth in Lending Simplification Act.

S. 1503

At the request of Mr. THURMOND, the Senator from Mississippi (Mr. STENNIS) was added as a cosponsor of S. 1503, to reimburse businesses affected by the ban of Tris.

SENATE JOINT RESOLUTION 35

At the request of Mr. INOUYE, the Senator from Nebraska (Mr. ZORINSKY), the Senator from Vermont (Mr. STAFFORD), and the Senator from Rhode Island (Mr. PELL) were added as cosponsors of Senate Joint Resolution 35, to designate Municipal Clerks Week.

SENATE RESOLUTION 173—SUBMISSION OF A RESOLUTION RELATING TO THE CONSIDERATION OF S. 1125

(Referred to the Committee on the Budget by unanimous consent.)

Mr. JACKSON submitted the following resolution:

S. RES. 173

Resolved, That pursuant to section 402 (c) of the Congressional Budget Act of 1974, the provisions of section 402(a) of such Act are waived with respect to the consideration of S. 1125. While acquisition of the site is not expected to occur prior to October 1, 1977, immediate authorization will give the Secretary of the Interior the necessary protective authority to prevent any adverse actions which might threaten the integrity of the site.

Mr. JACKSON. Mr. President, I submit a resolution pursuant to section 402(c) of the Congressional Budget Act of 1974, to waive the provisions of section 402(a) of that act with respect to H.R. 5562, legislation to establish the Eleanor Roosevelt National Historic Site. I ask unanimous consent that the resolution be referred directly to the Budget Committee without the necessity of being reported from the Energy and Natural Resources Committee.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JACKSON. Mr. President, the Energy and Natural Resources Committee, in considering H.R. 5562, is concerned that without immediate designation of the historic site, the Secretary of the Interior will not have the necessary authority to protect the site from any adverse actions. It is unlikely, however, that acquisition will occur prior to October 1, 1977.

SENATE CONCURRENT RESOLUTION 24—SUBMISSION OF A CONCURRENT RESOLUTION RELATING TO THE FINAL ACT OF THE CONFERENCE ON SECURITY AND COOPERATION IN EUROPE

(Referred to the Committee on Foreign Relations.)

Mr. DOLE submitted the following concurrent resolution:

S. CON. RES. 24

Resolved by the Senate (the House of Representatives concurring),

Whereas the Final Act of the Conference on Security and Cooperation in Europe, signed by the United States in 1975, committed the participating States to "respect human rights and fundamental freedoms, including the freedom of thought, conscience, religion or belief, for all, without distinction as to race, sex, language or religion" and to "act in conformity with the purposes and principles of the Charter of the United Nations and with the Universal Declaration of Human Rights"; and

Whereas specific provisions of the Final Act pledged the participating states to:

"Recognize and respect the freedoms of the individual to profess and practice, alone or in community with others, religion or belief acting in accordance with his own conscience," and

"Respect the rights of persons" belonging to national minorities "to equality before the law", to "afford them the full opportunity for the actual enjoyment of human rights and fundamental freedoms" and to "protect their legitimate interests in this sphere," and

"Deal in a positive and humanitarian spirit with the applications of persons who wish to be reunited with members of their family, with special consideration being given to requests of an urgent character . . . ," and

"Examine favorably and on the basis of humanitarian considerations requests for exit or entry permits from persons who have decided to marry a citizen from another participating State;" and

Whereas the United Nations Declaration of Human Rights assures all people the right to free emigration; and

Whereas the Congress of the United States established the Commission on Security and Cooperation in Europe in 1976 and directed it "to monitor the acts of the signatories which reflect compliance with or violation of the articles of the Final Act of the Conference on Security and Cooperation in Europe, with particular regard to the provisions relating to Cooperation in Humanitarian Fields;" and

Whereas by means of oral and written testimony, travel abroad and individual interviews, the Commission has compiled data which points to gross violations of the humanitarian provisions of the Helsinki Final Act, especially with respect to religious liberties, minority rights, free emigration and family reunification, by the Governments of Bulgaria, Czechoslovakia, Hungary, Poland, Romania and the Union of Soviet Socialist Republics; and

Whereas the United States is a nation of immigrants composed of many citizens with ancestral and familial ties to Eastern Europe; and

Whereas human rights is a cause which has long been a major concern of the people of the United States and has now become the cornerstone of our foreign policy; and

Whereas the Helsinki Final Act provides that the participating States meet in Belgrade beginning on June 15 "to decide on the date, duration, agenda and other modalities" for a later meeting which will lead to "a thorough exchange of views both on the implementation of the Final Act and of the tasks defined by the (Helsinki) Conference;" Therefore be it

Resolved by the Senate (the House of Representatives concurring), That it is the sense of the Congress of the United States and the American people that the official United States delegation to the Belgrade Conference should

(1) reiterate in precise and unequivocal terms the commitment of the American people to human rights in the context of an ultimate enlargement of human freedom throughout the world and to articulate the significance of this committment to security and cooperation in Europe; and

(2) insist on a full conference agenda which includes the presentation and thorough discussion of all violations of the Helsinki Final Act, especially those related to universal humanitarian ideals; and

(3) include at least seven permanent seats for members of the Commission on Security and Cooperation in Europe to be filled on an alternating basis as the legislative and administrative duties of Commissioners and staff permit.

Mr. DOLE. Mr. President, on June 15, the United States will join Canada and 33 European nations at Belgrade to plan an agenda for a later meeting to be devoted to an evaluation of the implementation of the final act of the Helsinki Conference on Security and Cooperation in Europe.

Today I am introducing a sense of the Congress concurrent resolution which calls upon the members of the official U.S. delegation to the Belgrade conference to reiterate in precise and unequivocal terms the committment of the American people to human rights and to insist on a full conference agenda which includes a thorough discussion of all violations of the Helsinki final act, especially those related to universal humanitarian ideals.

THE VALUE OF HELSINKI

As we are all aware, the final act of the conference on security and cooperation was signed by President Gerald R. Ford in the summer of 1975. Many Americans were highly critical of President Ford for signing that document because they believed the Helsinki Accords represented a Soviet diplomatic victory. Today, we realize—and the Soviets realize—that the final act is a victory for the freedom-loving democracies of the world. Without that document, the dissidents in Eastern Europe, especially those in the Soviet Union, would be minus a very significant reference point for calling international attention to their unfortunate plight.

THE HELSINKI COMMISSION

Last year, largely as a result of the efforts of my distinguished colleagues, Senator CLIFFORD CASE and Congresswoman MILLICENT FENWICK, Congress established the Commission on Security and Cooperation in Europe and charged it with the responsibility of monitoring final act compliance among signatory nations. The Commission has spent al-

most a year compiling and organizing evidence which has been presented by reliable witnesses and experts concerning the degree to which provisions of the Helsinki Accords are being respected by the Soviet Union and other Eastern European nations. As a member of the Commission, I have spent many hours listening to testimony related to freer emigration, family reunification, religious liberties and minority rights. These hearings have helped me realize that regardless of the progress the United States may have made with the Soviet Union in certain areas of economic and technological cooperation, we have made little, if any, headway in the human right arena. The Soviet Union remains today what it has always been—a totalitarian state intent upon the obliteration of even the most mild resistance to its policy of repressing of individual, religious, and national rights.

THE PROMISE OF BELGRADE

America is a beacon of hope for those who resist totalitarian domination of their lives. We cannot abandon these brave people. We must continue to make every effort to call the world's attention to the present state of affairs in Eastern Europe.

We have an opportunity to do so at Belgrade, but we must remain steadfast and true to our basic human rights commitment. This resolution will go a long way toward strengthening our resolve and permitting our delegation to present a position which truly reflects the will of the American people.

Congresswoman MILLICENT FENWICK is introducing this same resolution on the House side this afternoon.

NOTICES OF HEARINGS

THE REGULATORY REFORM ACT OF 1977

Mr. MUSKIE. Mr. President, on May 23, 24, and 25, the Subcommittee on Intergovernmental Relations will hold hearings on S. 600, the Regulatory Reform Act of 1977 introduced by Senator BYRD of West Virginia and Senator PERCY.

The hearings will begin at 10 a.m., in room 6226 of the Dirksen Office Building. Any questions regarding the hearing should be directed to Lee Lockwood of the subcommittee staff, at 224–4718.

NOMINATION OF FRANCIS J. BOYLE, OF RHODE ISLAND, TO BE U.S. DISTRICT JUDGE

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Tuesday, May 24, 1977, at 10:30 a.m., in room 2228, Dirksen Senate Office Building, on the following nomination:

Francis J. Boyle, of Rhode Island, to be U.S. district judge for the district of Rhode Island vice Edward William Day, retired.

Any persons desiring to offer testimony in regard to this nomination shall, not later than 24 hours prior to such hearing, file in writing with the committee a request to be heard and a statement of their proposed testimony.

This hearing will be before the full Judiciary Committee.

ACCOUNTING HEARINGS

Mr. METCALF. Mr. President, I announce that the hearings by the Subcommittee on Reports, Accounting, and Management next Wednesday, May 18, will begin at 9 a.m. rather than 10 a.m. as previously announced.

The subcommittee is reviewing the processes by which accounting and auditing practices and procedures, promulgated or approved by the Federal Government, are established. At the May 18 hearings the subcommittee will receive testimony from the managing partners of Arthur Andersen & Co., Arthur Young & Co., Coopers & Lybrand and Mason & Co.

The starting hour has been changed in order to be able to complete the hearing by 11:30 a.m., when the Governmental Affairs Committee and its subcommittees are scheduled to appear before the Senate Rules Committee in connection with budgets for the next fiscal year.

I have previously announced that the accounting hearings will continue on Tuesday, May 24 and Thursday, May 26, at which time we will hear from the Securities and Exchange Commission and the Cost Accounting Standards Board.

I wish to announce that a final day of hearings in this series has been scheduled at the request of the distinguished senior Senator from Illinois (Mr. PERCY) whose contribution to the hearings is invaluable. Those hearings will be held on Thursday, June 9. Manuel Cohen, chairman of the Cohen Commission, Newton N. Minow, chairman of the Arthur Anderson Public Review Board, Howard Wagner, chairman, Finance Committeee and director of the Jewel Companies, Inc. and John Hackett, executive vice president and director of the Cummins Engine Co., are scheduled to appear.

All of the four hearings mentioned above will be held in 6202 Dirksen. Except for next Wednesday's 9 a.m. hearing, they will commence at 10 a.m.

ADDITIONAL STATEMENTS

THE LONE EAGLE OVER THE ATLANTIC AND A WORLD TRAVELING IN SPACE

Mr. RANDOLPH. Mr. President, 1 week from today Americans and friends abroad will pause to marvel at the unbelieveable heroism of the late Charles A. Lindbergh. Next Friday marks the 50th anniversary of his daring transatlantic flight which captured the world's imagination and precipitated the giant steps in air travel so commonplace today.

Perhaps there are many in our younger generation who cannot conceive of the soaring spirit and national pride evoked by Lindbergh's historic flight. They know of the fantastic Apollo missions to the Moon, of Al Shepherd's swift circling of the Earth and our own colleague, JOHN GLENN's first venture into outer space.

But Lindbergh, the "Lone Eagle" of aviation, broke a seemingly unsurmountable distance barrier of inner-space that made these later leaps for mankind possible.

Shortly after the formal opening of the National Air and Space Museum last July, Washington Star columnist John Fialka analyzed the similarities and paradoxes of Lindbergh's aerial accomplishment in 1927 and the space missions of the 1960's. On display at the Museum are the *Spirit of St. Louis* and the command module of Apollo 11.

The contrast between the two craft and the men who flew them is starkly delineated by Mr. Fialka. One was alone in the void; the astronauts were backed up by thousands of scientists and technicians, and cheered on by the entire populace of the earth via radio and television.

Incidentally, this weekend the Air and Space Museum, which I had the privilege of authoring through legislation in 1946, and helped to dedicate last July 4, will attract its 8 millionth visitor.

I recommend to all who seek inspiration in the sky a visit to the museum, and especially at a time when we honor one of the pioneering pilots of all flight history—Charles Lindbergh.

Mr. President, I ask unanimous consent that the article by Mr. Fialka be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GETTING INTO THE SPIRIT OF ST. LOUIS

(By John Fialka)

N–X–211 hangs from the ceiling of Washington's cavernous new National Air and Space Museum like a toy or a child's mobile as the crowds bustle around on the floor below.

There is nothing very flashy about the small silver plane. It has a crude, homemade look about it. It is certainly not as intriguing to the crowds as the Plexiglas-covered command module which sits on the floor.

There are a few similarities between the two crafts. Both were uncomfortable, were crammed with gear and were difficult to see out of. But they both bear names that will live in history as great American adventures.

The command module is the reentry-charred tip of Apollo 11, an unbelievably complex piece of technology that first took two men to the surface of the moon on July 20, 1969, and brought them back.

N–X–211 is the Spirit of St. Louis, the flying gasoline tank equipped with a bag of sandwiches that Charles Lindbergh landed in Paris on May 21, 1927.

But the similarities end there. Lindbergh, a mail pilot, bucked the odds that said an amateur in a tiny, one-engined plane could not make the crossing.

The men of Apollo 11 performed their incredible feat before a television audience in another age, one in which people expect to see such technological performances work and tend to take them for granted.

So the thrill of Apollo was relatively momentary. It did not stick. Apollo was not really the beginning but the end of American manned space ventures, at least for the immediate future. There is a sign on the interstate highway near Disney World outside Orlando, Fla., that tells the story as succinctly as anyone could.

Erected in an apparent attempt to lure tourists away from the charms of "Adventure Land" and "Tomorrow Land," the sign asks people to drive a few miles further, to the huge U.S. space installation on Florida's Atlantic Coast, now falling into disuse.

"Visit Cape Canaveral, the sign says, showing a picture of astronauts in space suits. 'It's Reality.'"

Perhaps the story of Apollo is just too complicated. It is hard to identify with some-

thing that required the efforts of the nation's top scientists and engineers, that cost the government billions, and that had, at one point, 390,000 people working on it.

Walter Cronkite was there to hold our hands on Apollo, removing any lingering anxiety over the dangers of moon landings. Apollo, he explained to the millions, was designed with double and triple redundancies. There were safety systems backing up safety systems. Not to worry. And now a word from our sponsor.

Until a generation comes along that is moved by the splendors and the challenge of Apollo, perhaps we should focus on N-X-211. Here is a story that every American can identify with.

The Spirit of St. Louis was designed on the back of an envelope by two men having a hurried meeting in the loft of a dilapidated building near the San Diego waterfront. They were Lindbergh and Donald Hall, a young aeronautical engineer, and they know pretty much what they wanted until it came to the size of the plane's gasoline tank. Neither one knew how far it was between New York and Paris.

So they hopped into Hall's aged Buick roadster and drove downtown to the San Diego library where they found a globe and measured the distance between the two points with a piece of white grocery string. They compared the string to the globe's scale and they got the answer they wanted, it was roughly 3,600 statute miles.

As for risks, well, consider this conversation between Hall and Lindbergh as later recalled by Lindbergh in his fascinating book, "The Spirit of St. Louis":

HALL. "Okay. Now what night-flying equipment do you want to put in the plane?"

LINDBERGH (who had never flown over the ocean): "None. Those things are nice to have, but we can't afford the weight."

HALL. "How about a parachute?"

LINDBERGH. "Same answer. That would cost almost 20 pounds."

Perhaps there should be another sign erected near Disney World that says: "Visit the Smithsonian's new Air and Space Museum in Washington and look up at the ceiling. Its reality!"

ALLEYS DON'T HAVE TO BE DREARY

Mr. MATHIAS. Mr. President, the alleys of Washington, D.C., as a rule are not a cause for great delight. In fact, the alleys of many neighborhoods, including some within the shadow of the Capitol, are a disgrace. But, there is one glorious exception within easy walking distance of this Chamber. That is the alley just behind the Museum of African Art in the 300 block of A Street NE.

There, every nonrainy Saturday and Sunday from mid-March until May 7, neighbors and friends of the museum held a paint-in to decorate the walls of the museum's patio and adjacent Frederick Douglas Court.

This, however, was not your usual free-form paint-in. It was a museum project of "replicating designs used by the N'Debele people of Southeastern Africa." The project is now complete and the result is magnificant. I urge my colleagues to go see for themselves the miracle that has been wrought by the remarkable museum in our midst. Today the museum is a brillant artistic achievement both inside and outside.

The "Alleys Don't Have To Be Dreary" project is merely the latest in a series of innovative and educational programs undertaken by the African Museum—the only institution in the United States devoted exclusively to portraying the rich creative heritage of Africa.

Benjamin Foley, in the Washington Star of May 26, 1975, wrote that:

The importance of the (African) Museum is not so much in its collections, though they are considerable, but in its use of those collections as educational tools to expand our awareness of the richness of African civilization and of the unique contributions of that civilization to the culture of our own country.

Recently, the tremendous success of Alex Haley's "Roots," both as a book and as a television production, has reinforced our awareness of the significance to our cultural life of the Museum of African Art.

To those of my colleagues who are not familiar with this unique museum, I urge that you visit it soon. The experience will be both stimulating and rewarding. I am confident that you will feel as I do that the African Museum is a tremendous asset to our community and to the Nation and that it deserves our enthusiastic support.

THE LIFE OF PRINCE JONAH KUHIO KALANIANAOLE

Mr. INOUYE. Mr. President, the following remarks were delivered at Kawaiahao Church in Honolulu on March 20, 1977, at services commemorating the birthday of Prince Jonah Kuhio Kalanianaole. The speaker was Mr. Melvin Ayau, president of the Prince Kuhio Hawaiian Civic Club.

Prince Kuhio was the first member of his race to serve in the U.S. Congress where for 20 years he served with great distinction. Some of the important legislation he authored between 1903–21 concerned the development of Pearl Harbor, Kalaupapa Leper Settlement, the Hawaiian Homestead Act, and the Hawaii National Park. Prince Kuhio worked diligently to instill pride in Hawaiians. He believed in democracy and self-government and was proud of his American citizenship.

It is fitting that the new Federal building in Honolulu will be named the Prince Jonah Kuhio Kalanianaole Federal Building in honor of a great American who was devoted to the Hawaiian people whom he so faithfully served in the U.S. Congress.

Mr. President, I request unanimous consent that the remarks of Mr. Melvin Ayau be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

THE LIFE OF PRINCE JONAH KUHIO KALANIANAOLE

(By Melvin Ayau)

"Aloha, Aloha, Kamaaina," these were the words used by the Prince Jonah Kuhio Kalanianaole when greeting his audiences.

Prince Jonah Kuhio Kalanianaole, a descendant of Hawaii's ancient royal families, was born at Hoai, Kualu in the Koloa district on the island of Kauai on March 26, 1871, the youngest son of Kauai's High Chief David Piikoi and Princess Kekaulike.

Kuhio and his 2 brothers were adopted by their aunt, Kapiolani, upon the death of their parents. Kapiolani was their mother's sister and the wife of King Kalakaua. When King Kalakaua and Queen Kapiolani ascended their thrones in 1874, Kuhio was already a member of the royal household as the queen's nephew and later, a foster son He was bestowed the title of "Prince" by proclamation of King Kalakaua, and used the surname of Kalanianaole

Prince Kuhio was educated at St. Alban's College now Loiani School, Punahou School, St. Matthew's School at San Mateo, California and at the Royal Agricultural College in Cirencester, England.

Upon his return from England, Prince Kuhio received a position in the Ministry of the Interior and the Customs Service. It was during this period that he demonstrated his leadership in public affairs, which later played an important role in his adult life.

A strong supporter of his aunt, Queen Liliuokalani, he wanted to see her returned to her throne after the Monarchy's downfall in 1893. He joined a group of revolutionaries in an effort to overturn the republic and restore the monarchy. For this action, Prince Kuhio was charged and found guilty of treason by a military commission and served about a year as a political prisoner.

His release and pardon came on the same day in 1895 that the republic released Queen Liliuokalani from her imprisonment.

One year later, on October 8, 1896, he married Elizabeth Kahanu Kaauwai, daughter of a chief of Maui.

The young couple made a trip around the world in 1899, seemingly with the intent of settling in another country. Congress in 1900 has passed the Organic Act which established a territorial form of government in Hawaii and which provided that the Constitution and laws of the United States had the same force and effect in the Territory as elsewhere in America. It was probably this that brought the Prince back to Hawaii. He became a member of the Republican party and a loyal supporter of the United States.

He was successful in his first bid for election and served as Hawaii's delegate to Congress from 1903 to 1921. He was well liked by his fellow-legislators in Washington, even those who at times opposed his views. His sincerity, enthusiasm and the courage to stand up for his convictions commanded universal respect.

The Rehabilitaiton Act, better known as the Hawaiian Homes Commission Act, was his greatest achievement and it took years of fighting. The battle was not won until 1921. The rehabiltiation act established a principle that the Hawaiians should have first consideration in the dsiposition of remaining public lands of the Territory. In arguing his cause, the Prince told congressmen of his anxiety over the dying Hawaiian race. He explained how the Hawaiians had lost their land to the aggressive races which had settled in the islands. He plead with them to rectify the great wrong which had been done the Hawaiians and argued that a return to the soil would save the Hawaiian race from dying out.

The result of his efforts, however, was not realized until the Hawaiian Home Commission opened the first Homestead tract of land in Kalamaula, Molokai. This settlement was named Prince Kalanianaole.

At home, he organized the Order of Kamehameha, a society devoted to the perpetuation of the memory and greatness of Kamehameha the Great. This set the pattern for the revival of many old Hawaiian societies such as the Hale O Na Alii, the Daughters and Sons of Hawaiian Warriors, the Kaahumanu Society and others. Another great organization was founded by the Prince—The Hawaiian Civic Club. The purposes of the Hawaiian Civic Club were: To stop the decline of the Hawaiian Race; To provide educational opportunities for the young Hawaiians and to assist in the social welfare of the Hawaiians.

Prince Kuhio died of heart disease at his Waikiki Beach home on January 7, 1922 at the age of 50 and was given the last state funeral held in Hawaii for an Alii. He is buried in the Kalakaua crypt at the Royal Mausoleum in Nuuanu Valley.

Prince Kuhio believed in democracy and self-government, he believed that Hawaiians must adjust to changing conditions and he believed that the only salvation for the Hawaiians was work—hard work which will enable them to compete with other races, in this, their homeland.

Aloha, Aloha, Kamaaina.

FINANCIAL STATEMENT OF SENATOR CASE

Mr. CASE. Mr. President, the following is a combined statement for my wife and me of our assets and liabilities at the end of 1976 and our income for that year. This is our 15th such report:

ASSETS

Cash in checking and savings accounts (after provision for Federal income tax for 1976), approximately	$65,000
Life insurance policies with the following insurers (currently providing for death benefits totaling $140,500): U.S. Group Life Insurance, Aetna Life Ins. Co., Conn. General Life Ins. Co., Conn. Mutual Life Ins. Co., Travelers Insurance Co. Continental Assurance Co., Equitable Life Assurance Soc., Provident Mutual Life Ins. Co. of Philadelphia	
Cash surrender value	58,339
Retirement contract with Federal Employees Retirement System (providing for single life annuity effective January 3, 1979 of $45,996 per annum). Senator Case's own contribution to the Fund total, without interest	58,666
Annuity contracts with Teachers Insurance and Annuity Association and College Retirement Equities Fund. As at 12/31/76 these contracts (estimated to provide a life annuity—10-Year Guaranteed Period—effective January 1979 of $1,973) had an accumulation value of	16,121
Securities as listed in Schedule A	465,297
House in Washington, D.C. (original cost plus capital expenditures)	66,604
Tangible personal property in Rahway and Washington, estimated	15,000

Liabilities: None.

INCOME IN 1976

Senate salary and allowances, $44,682, less estimated expenses allowable as income tax deductions of $5,725 (actual expenses considerably exceed this figure)	38,957
Dividends and interest on above securities and accounts	25,536
Net long term gain	1,243

SCHEDULE A: SECURITIES

Bond and debentures of the following, at cost (aggregate market value somewhat lower)	$95,732
Principal amount	
American Telephone & Telegraph Co.	$12,000
Cincinnati Gas & Electric Co	4,000
Consolidated Edison Co. of New York	5,000
Consumers Power Co	5,000
General Motors Acceptance Corp	17,000
Mountain States Tel. & Tel. Co	5,000
N.J. Bell Tel. Co	22,000
N.Y. City Debentures	20,000
South Western Bell Tel. Co	5,000
Toledo Edison Co	5,000
Stocks (common, unless otherwise noted) at market	369,565
Corporation and No. of shares:	
American Natural Gas Co	200
Chubb Corp	1,000
Consolidated Edison Co. of New York $5 Pfd	50
DuPont	40
General Electric Co	340
General Motors Corp	420
Household Finance Corp	550
International Business Machines Corp	160
Investors Mutual, Inc	2,760
Kenilworth State Bank	37
Marine Midland Corp	563
Merck & Company, Inc	400
Morgan, J. P	44
National Community Bank, N.J	600
Reynolds Industries	100
Tri-Continental Corp	1,941
Tri-Continental, $2.50 Pfd	1,000
United Counties Trust Co	1,413
Warner-Lambert Pharmaceutical Co	600
Wisconsin Gas Co	40

AIR SERVICE IN DANGER

Mr. McGOVERN. Mr. President, there is increasing concern in rural America and in smaller communities that the pending legislation on airline deregulation, if adopted, will result in denying access to the nation's airways for those who live away from airports served by major trunk carriers.

That is certainly the case in my State of South Dakota, where airline officials have warned us that if airline deregulation becomes a reality, we will lose much of the service we presently have.

That point is underscored in a thoughtful editorial from the Huron, S. Dak., Daily Plainsman.

I ask unanimous consent that this editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AIR SERVICE IN DANGER

A number of South Dakota communities, including Huron, could lose the commercial airline service they now enjoy if deregulation legislation now being pushed in the United States Senate becomes law.

Under provisions of a deregulation bill sponsored by Sens. Edward Kennedy (D-Mass.) and Howard Cannon (D-Nev.) commercial air service at the current level would be completely eliminated at five of the nine commercial airports in the state and severely curtailed at the other four.

Theoretically deregulation would increase competition and reduce the price of airline tickets. Actually opponents of deregulation contend that service would be so drastically curtailed that ticket prices would probably increase.

In sparsely settled states such as South Dakota there is no question of the effects of deregulation, which would also eliminate government subsidies. One provision of the proposed law would set a minimum of 40 passengers a day as a requirement for service. That would effectively eliminate five of the nine commercially served communities in this state. And that reduction in service would adversely affect the remaining four.

The subject of airline deregulation is not new. The proposal now before a Senate subcommittee is in fact a third generation bill. It was first introduced in 1975. The South Dakota Aeronautics Commission is opposed to the deregulation measure, as is North Central Airlines which serves all of these communities.

The measure has a certain amount of support from consumer groups. But for South Dakota consumers of commercial air transportation it could be a disaster. The things that most consumers are concerned with are safety, frequency reliability and price of air service. If the present scheduled airline service were to be replaced with local service carriers—the most likely prospect—the first three consumer concerns would be depreciated. The fourth, price, might easily go up, depending upon public acceptance of reduced service.

If you want to keep the air service that you now have it would be a good idea to let your representatives in Washington know of your concern—both senators and representatives. Rep. James Abdnor is a member of the Public Works and Transportation Committee in the House of Representatives.

Deregulation of airlines as proposed in Senate Bill 689 is definitely not in the best interest of South Dakota.

TAXES

Mr. WALLOP. Mr. President, on May 6, the Wyoming Eagle, one of Cheyenne's newspapers, published an article which I find rather frightening. The article claims that the average Wyoming taxpayer must work 40.8 percent of the time just to pay Federal, State, and local taxes. This is an exorbitant amount of both time and money.

As long as Congress eagerly jumps on any new spending program, the amount of taxes paid to the Federal Government will not decrease. We in Congress must review all spending programs with a very critical eye; we cannot afford to cater to the "cause" of the hour. There are many good projects and programs which are worthy of Federal funds, but we cannot continue to spend without some idea of where that spending will lead us. Congress will have to learn to say "no," or else face the fact that taxes will increase. Apparently only a constitutional provision will be adequate protection to the public that spending should be limited.

I ask unanimous consent that the article from the Eagle be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NOW YOU'RE WORKING FOR YOURSELF AGAIN

Is the average Wyoming taxpayer really any more free of obligations than a medieval serf who served a lord?

The Wyoming Taxpayers Association concludes maybe not.

According to statistics developed by the association, the "typical Wyoming family" will spend about 40.8 percent of their gross income this year to meet the demands of federal, state and local taxes.

This "typical" Wyoming family will earn a total of $21,297 this year ad spend $8,695 or 40.8 percent of their gross income on taxes.

This mythical family has three members, both husband and wife are employed, they own a home valued at $40,000 and two cars.

The typical Wyoming taxpaying family has to work from Jan. 1 to May 30—if they had used every dollar of income as fast as it was earned to pay their taxes—to be tax free.

May 30 is the day they start working for themselves.

THE GENOCIDE TREATY

Mr. PROXMIRE. Mr. President, as Americans, we have grown up possessing the most secure measure of human rights that the world has ever seen. We can say what we want, live where we want, work where we want, associate with whom we want, and worship in the way we want. But each of these freedoms, each of these rights, carries with it a responsibility. In declaring that "all men . . . are endowed by their Creator with certain unalienable rights," we obligated ourselves to protect these rights not only for ourselves, but just as importantly, for others. To believe otherwise is to turn President Carter's human rights statements into empty self-righteousness.

Knowing this, I cannot believe that we in the Senate have failed to take a stand on the most basic of all human rights. While the President continues to courageously speak out in defense of man's inalienable rights, the Senate maintains its stolid silence on what must be the most inalienable right of all—the right to life itself. For almost 30 years, we have refused to even vote on the United Nations Convention on Genocide, a treaty that would take a giant step toward correcting our long silence. The treaty makes genocide—an action that is anatheme to even the loosest definition of human rights—an international crime. I urge that we break our silence; let us act now to ratify the genocide treaty.

EXTENSION OF COMMODITY CREDITS

Mr. DOLE. Mr. President, on April 28, I introduced a measure to lift restrictions against commodity credits for nonmarket countries trading with the United States. As I stated at the time, my particular interest was in extending commodity credit corporation credit terms to the Peoples Republic of China to encourage future wheat purchases by that country. At this time, I shall expand upon that earlier statement and explain in more detail just what my bill would and would not accomplish, if enacted.

WHEAT PRICES DOWN

As most everyone knows, that wheat situation is disastrous. Prices are at a very low level. Estimated planted acres for wheat totaled about 8.2 million acres with a carryover projected by the Department of Agriculture at 1.12 billion bushels and production at about 2.05 billion bushels making an unprecedented total supply of 3.17 billion bushels. We have a tremendously large crop and large carryover with a total estimated disappearance of 1.72 billion bushels, which will increase our next year's carryover situation. USDA's latest projections on price indicate a season average price of about $2.25 to $2.35 per bushel. With this large supply, low prices, and seemingly adequate production in the rest of the world, we must seek to increase our U.S. wheat export opportunities.

New demand has been opening up for wheat exports to the Peoples Republic of China—PRC—and U.S. farmers' hands have been tied in trying to compete for these export sales. The PRC has contracted for fiscal year 1977 about 5 million metric tons and is expected to be in the market for an additonal 1 million metric tons. So far, all of the PRC purchases have been wheat from other suppliers, including Australia, Canada, and Argentina, who have been offering very favorable credit terms.

PURPOSE OF DOLE BILL

Under the Trade Act of 1974, the U.S. Government is prohibited from offering CCC credit to the PRC so that U.S. farmers could compete for this new market. I have, therefore, introduced legislation to allow CCC credit for purchases of agriculture commodities on a nondiscriminatory basis.

This amendment would enable the United States to take advantage of this kind of export opportunity and will not, of course, apply to countries to which validated export licenses are denied under the "Trading With the Enemy Act"—North Vietnam, North Korea, Cuba, Cambodia, and Rhodesia.

In my opinion, there is a very good reason for seeking to facilitate greater trade with the Peoples Republic of China at this time. Following Communist China's new "open door" policy with the United States, U.S. exports to that country jumped from "zero" in 1971, to $819 million worth in 1974. This was a phenomenal new market for American goods, and 80 percent of those exports were agricultural products—primarily wheat, cotton, soybeans, and corn. And the Chinese insisted on paying cash for most of it.

After 1974, our exports to Communist China fell sharply, due mainly to domestic political turmoil in China, foreign exchange problems, and a large trade deficit realized by that country. I believe commodity credit agreements between the United States and the PRC at this time could stimulate this lagging market for American agricultural goods. Of course, formal diplomatic recognition of the People's Republic is an entirely separate issue, entailing resolution of several outstanding political problems involving the U.S. national interest, and our responsibilities and commitments to Taiwan.

NO CREDITS TO CUBA OR VIETNAM

But, as I have indicated, I definitely do not favor extension of trade credits to Cuba or Vietnam. It is not the intent of my bill to do this, and enactment of my proposal would not accomplish it, since both Cuba and Vietnam are currently barred from U.S. trade under the Trading With the Enemy Act. What concerns me is that the President has authority to add or delete countries from the Enemy Act at his own discretion, and I can only reiterate the strongest feeling of myself and many of my colleagues that it would be a mistake for President Carter to take Cuba or Vietnam off of that list.

There is a good reason for avoiding trade overtures to Cuba and Vietnam at this time. Our preliminary contacts with those two countries have been minimal, and improved relations at this time would benefit only their Communist regimes. It would be a one-way street, in the other direction. It is no secret that they are eager for economic ties with us. Yet Vietnam continues to be uncooperative in accounting for our MIA's. Cuba continues to export their revolutionary doctrine, and their troops, throughout the world. Both countries seriously violate human rights of their own citizens. If we expect to see any progress on these important points, we must use all our bargaining chips—and the best one we have to use is the prospect of future trade.

The 1972 Shanghai communique laid a basis of mutual understanding between the United States and Communist China, on which political and economic ties could be developed so long as they were mutually beneficial. We have no such groundwork prepared with the Cubans and Vietnamese and, frankly, I do not see any basis for it at this time.

EDUCATIONAL OPPORTUNITIES IN SPACE SHUTTLE PROGRAM—PROJECT ENTERPRISE

Mr. STEVENSON. Mr. President, NASA's Space Shuttle will provide transportation for the most sophisticated scientific experiments ever conducted in space. Most Shuttle projects, such as the Spacelab being constructed by the European Space Agency, are necessarily high-cost and high-technology efforts.

But, that is not the entire story, NASA is also offering space aboard the Shuttle—termed "getaway specials"—at a relatively low cost to high school and college students for their own science experiments.

The getaway special offers 5 cubic feet—200 pounds limit—of experimental space aboard the Shuttle for $10,000/flights; 2½ cubic feet—100 pounds limit—for $5,000 and 1½ cubic feet—67 pounds limit—for $3,000. Under this agreement, the Space Shuttle will transport an experiment to weightless orbit; expose it in the cargo bay to the space environment for a week to a month, and return it for postflight evaluation and potential reuse.

Project Enterprise is a nonprofit, volunteer program, which provides individuals and organizations with an opportunity to donate "getaway special" space to educational institutions.

Under the terms of Project Enterprise, high school and college students, with appropriate faculty guidance, will develop experiments in areas of physical sciences, life sciences, atmospheric sciences, engineering and agriculture. Beginning in June 1977, NASA plans to conduct on-campus institutes for students and faculties on the intricacies of space experimentation. Universities and high school districts will then prepare their experimental programs to be carried on an early Shuttle mission.

In order to participate in Project Enterprise, an individual or organization should send a $500 downpayment to Chester M. Lee, Director of Space Transportation Systems Operations, code MO, NASA Headquarters, Washington, D.C. 20546. Pledges for the remainder of the ticket price, due the year the experiment flies—in 1975 equivalent dollars—may then be obtained from commercial or educational organizations.

The Utah section of the American Institute of Aeronautics and Astronautics has made downpayments on experimen-

tal space in the Shuttle for four universities and one high school district in Utah involved in Project Enterprise.

Mr. President, Project Enterprise is an outstanding example of public participation in support of space experimentation; it deserves our support and commendation. The project is designed to use our space program as an educational stimulus for science and engineering students. We must encourage science and technology advancement through our educational system. I urge my colleagues to involve their own State educational institutions in Project Enterprise.

Mr. President, I ask unanimous consent that an article, entitled "Project Enterprise," written by Gil Moore, be printed in the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROJECT ENTERPRISE

(By Gil Moore)

The Space Shuttle era, which dawns in two short years, will revolutionize uses of the space environment for everyday, practical, down-to-earth purposes. I don't need to describe this revolution to you, the aerospace professional. Its details have been recounted in a host of publications to which you are exposed every day, including Astronautics and Aeronautics.

What I do wish to point out to you is the absolutely gold-plated, diamond-studded opportunity the Shuttle program hands to you and me to revitalize science and engineering education in this country and to help set the course for the beneficial uses of space for years to come.

This opportunity takes the form of NASA's "Getaway Special" offer for experiment space aboard the Shuttle. Under the terms of this offer, you and I can rent 5 cu ft of space in the Orbiter cargo bay for our very own, self-contained R&D payload at the bargain price of $10,000 per flight. For this sum NASA will transport our package to weightless orbit, expose it in the open cargo bay to the profound vacuum of space for a period ranging from a week to a month, and return it gently to the ground for our post-flight evaluation and potential re-use. Before this offer came along, the cheapest equivalent ride, on the venerable Scout, cost 3 million, and you didn't get your package back, either.

If $10,000 for a freight ticket still sounds steep, how about $5,000? For that much you get 2½ cu ft; for $3,000, 1½ cu ft—the minimum size of package available. Incidentally, the weights corresponding to those volumes are 200 lb for 5 cu ft, 100 lb for 2½ cu ft, and 67 lb for 1½ cu ft. The down payment for any of these tickets comes to just $500, with the remainder due in the year your package flies, payable in 1975 equivalent dollars.

The basic idea: The Getaway Special provides low-cost space transportation for small experimental payloads that have their own, self-contained power supplies and data recording systems and remain in the Orbiter's cargo bay throughout a flight. If you want additional services for your payload, however, such as telemetry or tape recording, electrical power, spacecraft pointing, remote-manipulator-system operation, astronaut extravehicular activity, ejection commands, and the like, they can be made available at extra cost, to be determined.

You may ask, What can I do with this marvelous bargain once I acquire it? You don't need to seek afield for the answer. You can sit down with your kids and build that experiment you've always dreamed about, but never really through you'd get the chance to fly. Or how about donating it to your favorite educational institution? Can you imagine what a fantastic stimulus it would be for the science and engineering students at your alma mater or your neighborhood high school to know that they could fly an experiment aboard the Space Shuttle? (I'll never forget the first time I was assigned by the Naval Research Laboratory to prepare and install soft x-ray densitometer cassettes on the tail fins of a V-2 rocket at what was then called the White Sands Proving Ground in New Mexico. The year was 1947, and I was a lowly engineering student at New Mexico A&M College and a part-time employee of the college's Physical Science Laboratory. Wow! The thrill of seeing "my" bird go roaring into "outer space" has never faded away. I can still see in my mind's eye the faint images on the developed film resulting from the 5-25-Å radiation which penetrated the cassette's half-mil Beryllium foil windows during the rocket's brief flight above the absorbing atmosphere.)

We in AIAA spend a great amount of time in our meetings and publications moaning to each other that the public doesn't care about space any more, and that no bright, fresh, sparkly kids are coming up through the educational system to pick up our heavy burdens as we totter off into the sunset. Well, here's our chance. We can turn it all around, starting right now. Let me describe what one group within AIAA is up to, and then see if you don't think that your section should do something simular.

Operating sometimes as individuals and sometimes collectively, we in the AIAA Utah Section have made down payments on Space Shuttle experiment-package freight tickets for four universities and one school district. Specifically, we have concluded agreements with, and made down payments for, Utah State Univ. in Logan, Utah; Weber State College, Ogden, Utah; the Univ. of Utah, Salt Lake City, Utah; Purdue Univ., West Lafayette, Ind., and the Weber County School District, which surrounds Ogden, Utah, and contains three high schools. And we have opened discussions with the Univ. of Maryland, College Park, Md., and the nearby Prince George's County School District; the Univ. of Michigan, Ann Arbor, Mich.; Westminster College, Salt Lake City, Utah; Brigham Young Univ., Provo, Utah; New Mexico State Univ., Las Cruces, N.M.; Iowa State Univ., Ames, Iowa; and the Logan/Cache, Box Elder, Ogden and Davis School Districts in Northern Utah. By the time this article reaches you we expect to have negotiations completed with these institutions, have payloads reserved for them, and be working on our next batch.

What do these institutions do, once we have provided them with an orbital freight ticket?

Take Utah State Univ. as an example, since it was the first university to participate in what I'm calling "Project Enterprise."

This project was born at the 1976 Congress of the International Astronautical Federation, held last October in Anaheim, Calif. There John Yardley, NASA Associate Administrator for Space Flight, made the first public announcement of the availability of the Gateway Special. I reserved the first ticket then and there. After my wife and kids and I decided what we wanted to fly, we realized we needed only about half the space, so we offered two-and-a-half cubic feet of our package to Utah State University for use by some of its undergraduate students.

Rex Megill, associate director of Utah State's Aeronomy Center and professor of both Physics and Electrical Engineering, together with Peter Banks, Physics Department chairman, were intrigued by the offer. They approached Glen Taggart, president of Utah State, and the appropriate members of his administration with their desire to set up a scholarship program based on our offer. Dr. Taggart liked the idea and, after consulting with his faculty and Institutional Council, approved it and the scholarship plan. A Space Science Experiment Committee was then established, with Rex as chairman and with representation from all interested academic departments. They also arranged to have me appointed to the faculty as a non-salaried adjunct professor of physics and then assigned me to the committee.

The next step was to send out several thousand flyers to high school seniors across the western United States, which we accomplished with the enthusiastic assistance of B. Michael Donahoe, educational-programs representative for the NASA Ames Research Center. In these flyers, we have solicited ideas for experiments to be developed at Utah State for flight aboard the first operational Shuttle. The responses are coming in now and are being screened by the Space Science Experiment Committee.

Once we have selected the top three students, they will be granted four-year tuition-waiver scholarships to the university, commencing in the fall of 1977, plus part-time jobs, unrestricted access to the university's electronics labs and machine shops, and the assignment of volunteer faculty members to advise and counsel for them four years, as they will labor to build, perfect and test their experiments. At the same time, they will, of course, be pursuing regular undergraduate degrees in their chosen fields of study.

The students will also have the opportunity to fly small-scale, precursor experiments on sounding rockets, balloons, and jet aircraft during their freshman, sophomore and junior years, in order to get a feel for aerospace research, and to work the glitches out of their gadgets before they have to commit them to the Shuttle payload. Negotiations are well along with the NASA Goddard Space Flight Center, NASA Ames physics Laboratory, and Sandia Laboratories to fly these student piggyback packages on a non-interference, space-available, no-charge basis on one or the other of the transportation devices listed above.

As a follow-up to my 1980 ticket, Rex Megill has purchased a freight ticket for a Shuttle experiement to be flown by Utah State students in 1981, and he has convinced thirty faculty members from various departments of the university to buy one for a 1982 flight. President Taggart and his deans have agreed to support the program with additional scholarships and jobs through 1982, at least, to see how it works out. My guess is that Utah State's students will be flying experiments on the Shuttle for many years.

After Utah State Univ. got its program under way, the Utah Section of AIAA felt it would be worthwhile to make a similar opportunity available to the Univ. of Utah. Jim Kordig, Section chairman, assembled his council on the evening of February 1 and we put the proposition to them: We would ask the Section members interested in participating to donate $30 each to help buy a 1½-cu-ft freight ticket for the university. We would also volunteer our professional services, after working hours and on weekends, to help the students design, build, program, integrate and test their payloads, if they needed us.

The council enthusiastically endorsed the concept, and we raised enough money for a down payment by 8:30 the next morning. Section members who chipped in for the down payment were Jim Kordig, Lowell Smith, Reid Hopkins and John Tsamisis of Hercules; Bill Benda of Sperry Univac; Joan Reinhart of Lockheed; Gary Flandro of the Univ. of Utah; and Hal Ritchey, Jim Stone, Tom Davidson, Harry Koch, George Alford, Paul Hoekstra, Pete Kirschner, Warren Allen, Gil Moore and Ed Dorsey of Thiokol.

We fired off a TWX to NASA, reserving a payload, and followed it up with a confirming letter and check. We then met with groups of Univ. of Utah faculty members to explain our program, and we sent a formal offer to David P. Gardiner, Univ. of Utah president. President Gardiner has established a task force headed by Merrill Ridd of the Geography Dept. to study our offer,

and he expects to have a response for us before this article reaches print.

Meanwhile, $30 checks are coming in at a steady rate from Utah Section members, and we expect to have our final payment in the bank before the year is over.

Hal Ritchey, Thiokol's Board chairman, then decided it was about time we spread our efforts out a bit, so he opened negotiations with Purdue Univ. in February. After we had conversations with Knud Knudsen and Steve Luther of University Development, Bruce Reese, chairman of the Aeronautics and Aerospace Dept., and S.N.B. Murthy of Purdue's Thermal Science and Propulsion Center, Hal was sufficiently encouraged to buy a Shuttle ticket for Purdue on March 4.

On that day, I made a down payment on a Shuttle ticket for Weber State College, after having had numerous meetings with students, faculty, and administrators there, and satisfying myself that its students would be good candidates for developing a Project Enterprise payload. I also sent a formal offer to President Joseph Bishop, donating the down payment and pledging to raise the rest of the money by the due date. Within two weeks, I received a formal response from Dello Dayton, Academic VP, accepting the offer and the accompanying terms, and establishing a scholarship and volunteer faculty program identical to the one at Utah State, together with a Space Science Committee under the chairmanship of David Tripp of the Physics Dept.

The AIAA Utah Section's most recent step has been to tackle the high school phase of this project. As our initial candidate, we've selected the Weber County School District because it's close to both Utah State Univ. and Weber State College. In this case, we're organizing groups of sophomores from Weber High in Pleasant View, Roy High in Roy, and Bonneville High in Washington Terrace, Utah, into teams to build Shuttle experiments over a three-year period. Each team will represent a microcosm of the aerospace world, with members assigned from each of the disciplines involved in space research and engineering. Students interested in the physical sciences, life sciences, engineering, manufacturing and management will be involved. Each of the three high schools will build its own experiment and then participate in integrating it into the district package.

Ideas for the experiments will come from the students themselves, from their teachers, and from the faculties of Utah State and Weber State College. Summer institutes will be held on the campuses of both to tutor the high school students and their teachers in the intricacies of space experimentation. Even Memmott of Weber State has agreed to broaden the format of his immensely popular Aerospace Education Workshop to make room for a Shuttle experiment institute. The first session will occur in June, just about the time you read this article, Don Lind, the scientist/astronaut who represents Johnson Space Center on NASA's Shuttle Orbital Flight Test experiment team, and who is also the astronaut-monitor of the Remote Manipulator System development, will keynote this first section. A representative from the Marshall Space Flight Center will outline Shuttle experiments suitable for student participation in the field of materials processing. Jon Busse, chief of the Goddard Space Flight Center Sounding Rocket Division, will discuss precursor flight opportunities on rockets, balloons and aircraft. He will also point out ways for the students to minimize the fabrication costs of their Shuttle payloads.

Students from not only the Weber County School District, but also from other districts listed earlier, will be invited to this and subsequent sessions at Weber State and at Utah State. Faculty members from these two campuses will be available on call to the high school teachers and students during each school year, and the students will be invited to special laboratory sessions on the campuses if their own school's facilities don't suffice for space-payload manufacturing and testing. Roger Williamson, of Utah State's Physics Dept., and Walt Saunders, chairman of that institution's Secondary Education Dept., are establishing the procedures for the university/high school interface, in cooperation with Leland Burningham, Weber County School District superintendent, Jim West, district science coordinator, and Ted Campbell, Weber High School principal.

I have peppered this article with names to show you that a whale of a lot of people have been heavily involved in getting this program off the ground (or should I say into orbit), and more are becoming involved every week. We're working with George Pieper, director of Sciences, Len Arnowitz, associate chief of the Sounding Rocket Division, and Elva Bailey, educational programs officer, of NASA's Goddard Space Flight Center to set up a Univ. of Maryland program. Our initial meeting with provost Joe Marchello, asst. provost Elske v. P. Smith, Alex Dragt, Physics department chairman, Frank Kerr, Astronomy, and Robert Munn, Chemistry, was most encouraging. In fact, Joe informed us that, when a Space Science Experiment Committee is established, he plans to chair it himself. We've talked with Bob Krieger, director of NASA's Wallops Flight Center, and his cohorts, Abe Spinak and Larry Early, about a program at the Univ. of Maryland's Eastern Shore Campus. We've talked with Dick Smith, deputy director of NASA's Marshall Space Flight Center, and Ed Buckbee, director of the Alabama Space and Rocket Center, about the possibilities of cooperation between their two organizations on the payload for which ASRC recently bought a Shuttle freight ticket, Dick has not only agreed to that cooperation, but, after briefing Bill Lucas, director of MSFC, he has also started making contacts with Auburn Univ. in Auburn, Alabama, the Univ. of Alabama at its Tuscaloosa, Birmingham and Huntsville campuses, Vanderbilt Univ. in Nashville, and the Univ. of Tennessee in Knoxville, to see if he can stimulate some Project Enterprise activity at their institutions.

We've talked with Chris Kraft, director of NASA's Johnson Space Center. Cliff Charlesworth, acting program manager of JSC's Shuttle Payload Integration and Development Program Office, and Don Lind, shuttle astronaut, about setting up an Enterprise operation in the JSC area. They felt that it was a good idea, and Chris suggested that we start out with Rice Univ. in Houston, the Univ. of Texas in Austin, and Texas A&M in College Station, Texas, since JSC already has working relationships with those institutions. Tom Murtagh, incoming chairman of the AIAA Houston Section, and Loren Wood, perennial section sparkplug are planning to approach the section membership on the possibility of sponsoring a freight ticket for one or more of the Texas universities, and of setting up a school program in the Clear Lake/El Lago vicinity.

We've contacted George Carignan, director of the Space Physics Research Laboratory and Tom Donahue, chairman of the Department of Atmospheric and Oceanic Science, at the Univ. of Michigan and have been told that the university definitely plans to participate. Ken Randle has set his sights on getting a Shuttle freight ticket for them. Those of you who have met Ken know that the Univ. of Michigan will soon be involved in a student program on the Space Shuttle. And the list goes on. This article will be hopelessly outdated by the time it's published, but maybe Editor John Newbauer will ask for a sequel next year.

How do you go about showing the world that you and your AIAA section can do ten times better a job than the over-the-hill gang in Utah? It's very simple. First, you collect a $500 down payment and send it to Chester M. Lee, Director of Space Transportation Systems Operations, Code MO, NASA Headquarters, Washington, D.C. 20546. Either Chet or his administrative assistant, Donna Skidmore will acknowledge receipt of your down payment and remind you to send the rest of the money the year your payload flies. They'll also start the dialogue which will spell out the terms and conditions attached to the Getaway Special offer (you can't use this payload for cheap exploitation, you can't jeopardize the crew's safety, etc.).

Next, get pledges for the remainder of the price of the ticket, either from within your own group or from outside. Civic clubs, PTAs and professional societies make excellent partners.

Finally, you select a suitable university or school district with which to work, and settle down to the exciting task of providing a once-in-a-lifetime opportunity for a group of bright young people to come up with ways of using space for the betterment of our earthly lot.

So, all aboard for Project Enterprise, I say, and a crisp, new page in aerospace education. You're going to be pleased with tomorrow's economic and psychic return on this investment.

MARYLAND OCCUPATIONAL SAFETY AND HEALTH PROGRAM

Mr. MATHIAS. Mr. President, occupational safety and healthy working conditions are matters of continuing national concern. For this reason, it is important that we share information on programs that are achieving results in these fields.

The State of Maryland had been very active in these areas under the leadership of Commissioner of Labor and Industry Harvey A. Epstein. For the information of my colleagues, I ask unanimous consent to have printed in the RECORD excerpts from Commissioner Epstein's comprehensive report on the Maryland occupational safety and health program.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

MARYLAND OCCUPATIONAL SAFETY AND HEALTH PROGRAM

HISTORICAL BACKGROUND

The Williams-Steiger Occupational Safety and Health Act of 1970 charged the U.S. Department of Labor with the responsibility of establishing a program assuring "so far as possible every working man and woman in the nation, safe and healthful working conditions, and preserving our human resources."

Congress included in the Act of 1970 a provision under Section 18(b) "for any state at any time, that desires to assume the responsibility for development and enforcement of a state occupational safety and health program, may elect to do so."

In March 1971, Governor Marvin Mandel designated the Division of Labor and Industry as the responsible agency to develop and administer Maryland's Occupational Safety and Health Plan in accordance with Section 18(b) of the Occupational Safety and Health Act of 1970.

In December 1972, Maryland's developmental plan for Occupational Safety and Health was submitted to the U.S. Department of Labor for approval. In anticipation of approval of the plan, the Maryland Legislature, during its 1973 session, passed enabling legislation, Article 89, Section 28–49A of the Annotated Code of Maryland, establishing the Maryland Occupational Safety and Health Act.

Final approval of the Maryland Occupational Safety and Health developmental

plan by the U.S. Department of Labor was received on June 28, 1973. With plan approval and enabling legislation passed, the Division of Labor and Industry assumed authority and enforcement responsibility for the Maryland Occupational Safety and Health Act (MOSHA) on July 1, 1973.

ADMINISTRATION

For the three and one-half year period since that date, MOSH has undergone the Federal evaluation process required for program certification. Having signed an operational agreement during 1976 with the U.S. Department of Labor, the Maryland program expects to be certified in calendar year 1977.

With the accomplishment of its initial developmental stages, MOSH has emerged as a program which is fully prepared for the challenge of assuring safe and healthful working conditions for the working men and women of Maryland.

Standards activity

During 1976, the Commissioner of Labor and Industry adopted by reference the following Federal standards, thus enabling MOSH to increase program effectiveness.

1928.57—Guarding of Farm Field Equipment, Farmstead Equipment and Cotton Gins.

1928.57—Guarding of Farm Field Equipment, Farmstead Equipment and Cotton Gins (corrections as listed below), 1928.57(a)(5), 1928.57(a)(11)(iii) typographical, 1928.57(d)(2)(i).

1910.1001(i)(1)—Standard for Exposure to asbestos amended to extend the retention period for asbestos exposure monitoring records from three years to 20 years.

1910.184(f)(6)—revoked-deletion of requirement prohibiting knots and wire rope clips.

1910.57(a)(3) and (a)(4)—Guarding of Farm Field Equipment, Farmstead Equipment, and Cotton Gins; Deferral of effective date.

1975 Supplements d, e, and f to the ANSI A17.1 Safety Code for Elevators, Dumbwaiters, Escalators, and Moving Walks became effective in July. The adoption of these standards broadened the Section 49B of the Law to include material lifts and dumbwaiters with automatic transfer devices.

In February, the Commissioner initiated the first standards in the country for a newly determined health hazard, Chlordecone (Kepone). Pursuant to the proposal, public hearings were held by the MOSH Advisory Board and by the Commissioner and the standard was submitted for publication. On January 19, 1977 the permanent Maryland Occupational Safety and Health Standard for Chlordecone (Kepone) becomes effective.

MIS

The Management Information System's primary purpose is to facilitate the timely collection, recording, transmission, analysis, and the use of accurate data needed to manage OSHA activities in Maryland. The secondary purpose is to provide the necessary data to meet Federal reporting requirements. The computer reports derived from the MIS involve such major activities as safety and health inspection, elevator inspection, training, and consultation services.

CONSULTATION SERVICES

The Maryland Occupational Safety and Health Law provides for the Commissioner of Labor and Industry to aid and assist employers in carrying out their responsibilities under the Act and to suggest and recommend to employers and groups of employers methods and procedures by which they may develop safety and health programs.

During calendar year 1976, the Division of Labor and Industry made available the following Consultation Services to assist employers in attaining voluntary compliance with the MOSH Act:

Onsite consultation services

The Division's trained Occuptional Safety and Health consultants were available, upon request, to conduct free on-site safety and health surveys designed to enable employers to eliminate workplace hazards and substantially reduce the potential for injury or illness occurrences.

Employers have the option of requesting complete "wall to wall" surveys of their worksites or can limit the scope of the survey to specific operations or pieces of equipment.

Consultative services are available to any Maryland employer with scheduling priorities given to those industries with high hazards as a result of their injury and illness incidence rate and also to small businesses financially unable to contract for this service privately.

During 1976, consultation services responded to 178 requests for surveys which affected 5,995 employees. Maryland experienced a trend toward increased requests for health hazard consultations during this period; showing a 37% increase over health hazard consultations performed in calendar year 1975.

Consultation services continues to operate separately and apart from the MOSH enforcement section, thereby assuring employers availing themselves of this service that citations and penalties will not result.

Training and informational services

Consultation services offer a wide spectrum of educational services to private and public employers. The Division has developed and distributed several informational pamphlets designed to acquaint employers and employees with the provisions of the MOSH Act. Consultation services maintain close liaison with employer and employee associations, institutional facilities and public agencies in an attempt to keep them informed about all pertinent new information. This service also utilizes local media to notify interested parties about MOSH services and availability.

The Division recognizes the great benefit derived by training employees in safe and healthful work practices. To this end, Consultation services offer in-depth training courses presented free of charge upon request. The capability also exists to design and present special training courses to meet an employer's specific needs.

During 1976, Consultation services conducted 66 training activities, in which 2,177 persons participated.

The purpose of these courses are to have a multiplier effect, that is, individuals trained by MOSH will use their newly acquired knowledge to train and educate others at their workplace.

SAFETY AND HEALTH COMPLIANCE SERVICES

Maryland Occupational Safety and Health (MOSH) activities are directed towards accomplishing compliance with standards adopted pursuant to the law. In order to foster better understanding of the meaning and requirements of these standards, employers and employee groups are encouraged to participate in the Division's free cooperative programs. Employers who voluntarily comply with existing MOSH standards avoid the citations and monetary penalties that can result from violations of standards.

Direct enforcement activities are conducted in order to determine if there is compliance with the standards and to eliminate workplace hazards which could cause injury or illness. During the calendar year 1976, the MOSH program conducted 10,488 inspections which affected 607,423 employees.

High priority is given to scheduling inspections in target industries (determined on the basis of injury and illness statistics and employment size). Working on a worst first basis, emphasis is also placed on investigations of catastrophes, fatalities, and complaints. General and follow-up scheduling further broaden the coverage of MOSH enforcement activities.

Regional offices located in Cumberland, College Park, Salisbury, and within the Baltimore metropolitan area (2 locations) have contributed to greater accessibility for both employers and employees.

Safety inspection

The occupational safety and health inspection staff has attended 1,683 training days in 1976. Through such in-service training programs, inspectors have been able to develop and maintain the expertise and competence necessary for hazards recognition and standards enforcement.

The activities of safety inspection are detailed in the Compliance Activity—Calendar Year 1976 chart (see page 25).

The most frequently cited standards concern hazards such as electrical code violations, fire protection violations, machine guarding violations, scaffolding violations, and floor and wall openings violations.

Occupational health

During 1976, this unit achieved full staff capacity and a large portion of its efforts were devoted to completion of training of industrial hygienists. The staff of the Occupational Health Unit in 1976 attended a total of 336 days of training.

The Occupational Health Unit is responsible for enforcement of the health standards of the Maryland Occupational Safety and Health Act. The unit is composed of industrial hygienists assigned to the five regional offices. The Occupational Health Unit during the calendar year 1976 conducted 662 health inspections affecting 38,894 employees.

At the request of the Baltimore City Police Department, the Occupational Health Unit conducted a study which measured the exposure of its urban police force to carbon monoxide. Samples were collected from 320 policemen who volunteered to participate. Results of the study were also presented at the Annual Conference of the American Industrial Hygiene Association held in Atlanta, Georgia, May, 1976.

The Executive Assistant Commissioner, Technical Services, served on Maryland's Kepone Task Force, the Hazardous Substance Advisory Council, and the Influenza Vaccination Campaign Committee in 1976. The Occupational Health Unit mailed information to over 400 secondary schools and colleges in the state of Maryland concerning the newly adopted registration requirements of 15 known cancer-causing chemicals. Packets were provided to the schools detailing handling, use and storage of these chemicals as now required under the state regulations. Schools wishing to dispose of known carcinogens were advised to contact the Occupational Health Unit and proper arrangements for their disposal were made.

Public sector

Article 89, Section 45 of the Annotated Code of Maryland provides that, "The Commissioner is authorized and directed to provide an effective and comprehensive occupational safety and health program for employees within each Agency of the State Government and such Agency of each political subdivision." Under the Maryland Plan for the Public Sector, each Agency of the State and each political subdivision may elect to develop, conduct and maintain a program of self-inspection. To initiate the program, training of public sector self-inspectors began on February 3, 1976 and was continued to October 19, 1976. A total of 61 self-inspectors were trained during the period.

Monitoring of the Public Sector self-inspectors was initiated during the latter months of 1976.

Public Sector Agencies not covered by approved self-inspection programs are inspected by the Division of Labor and Industry.

Regardless of the source of inspection, all

citations are issued by the Division of Labor and Industry.

OFFICE OF REVIEW

Regulations adopted under the MOSH Act of 1973 provide that "Any employer to whom a citation or notice of proposed penalty has been issued may, under Section 37(a) of the Act, notify the Commissioner in writing that he intends to contest such citations or proposed penalty before the Commissioner."

During the latter part of 1976, the Office of Review was established by combining a number of activities of other offices and personnel relevant to the review process. In addition to the overall responsibility of administration and coordination, the office performs numerous activities including the scheduling of hearings and conferences, arranging for court reporter services and hearing rooms, processing of penalty payments, maintaining records, and preparing reports.

During calendar year 1976, 362 Notices of Contest were filed and 181 Formal Hearings were held.

ELEVATOR SAFETY INSPECTION

Section 49B of Article 89, Annotated Code of Maryland, entitled Maryland Occupational Safety and Health Law, requires the registration and yearly certification of all elevators, escalators, dumbwaiters and moving walks in the State.

At the request of Baltimore County, Gaithersburg, and Rockville the Division of Labor and Industry assumed the responsibility for inspections in those areas. This unit is now responsible for all elevator inspections within the entire State with the exception of Baltimore City and certain areas of Montgomery County.

The elevator safety unit performs industrial crane operations throughout the State. In order to assure the necessary expertise, training in current standards and effective inspection techniques is conducted. During 1976, several inspectors attended the OSHA Training and Certification Course.

The inspection unit also provides training services. This year a crane hazard recognition course was designed and presented to State and County safety personnel.

Staff memberships in the NAESA provide the State with current perspectives, innovations, and code interpretations, as well as the opportunity to participate in the establishment of codes that govern the elevator and amusement industry.

1976 elevator safety activities

Safety test	516
Surveys	3,685
Resurvey (followup)	1,370
Final	91
Accident investigation	32
Complaint investigation	29
Seal out of service	24
Approximate total units inspected	5,747
Total persons affected	2,283,171
Total employees affected	275,301

AMUSEMENT SAFETY

On July 1, 1976 the Amusement Safety Law was enacted. This new law empowers the Commissioner of Labor and Industry to administer and enforce the provisions relating to amusement rides and attractions, to prescribe regulations and to inspect all amusement rides and attractions located in amusement parks, fairs and carnivals and provides for the licensing, regulation and safety inspection of amusement rides and attractions.

The legislative enactment provided for the Governor to appoint an Amusement Safety Advisory Board to advise, consult with and make recommendations and propose such regulations and standards, or their modifications, amendments, or revocations, to the Commissioner for the prevention of conditions detrimental to the public.

SMOKING ON ELEVATORS

Authorized by Chapter 594, Acts of 1975, the General Assembly of Maryland prohibited smoking on any elevator whose use is available to the general public and established a civil penalty not to exceed $25.00.

The legislation empowered the Commissioner of Labor and Industry to promulgate regulations. After publication and public hearing, regulation 09.12.61 was adopted and became effective January 1, 1976.

Signs in red on white must be posted inside each elevator and above the call-button on each floor with lettering which states:

No Smoking: Smoking or Carrying Lighted Tobacco Products In This Elevator Is Illegal and Subject To A Penalty Not To Exceed $25.00. Commissioner of Labor and Industry, 203 East Baltimore Street, Baltimore, Maryland 21202.

SAFETY AND HEALTH COMPLIANCE ACTIVITY—CALENDAR YEAR 1976

Standard industrial classifications	Inspections					Establishments		Violations		Man-hours inspected by occupational safety personnel
	Accident	Complaint investigation	Followup	Scheduled inspections	Total	Employees affected by inspections	In compliance	Serious violations	Nonserious violations

BOILER AND PRESSURE VESSEL SAFETY INSPECTION

Inspections of all uninsured high pressure boilers, low pressure boilers, and pressure vessels, as required by Article 48, Section 167–180, Annotated Code of Maryland, are made by the personnel of the Boiler and Pressure Vessel Safety Inspection Unit and by those insurance inspectors who qualify and are commissioned as special inspectors by the Commissioner.

In the State of Maryland there are approximately 42,000 pressure vessels and 38,000 boilers which qualify for inspection. Of the boilers, approximately 72 percent are low pressure and 28 percent are high pressure boilers. Insurance companies currently insure 70 percent of the boilers and 60 percent of the pressure vessels. All uninsured boilers and pressure vessels must be inspected and registered by the Boiler and Pressure Vessel Safety Inspection Unit. High pressure boilers are required to be inspected twice a year. Pressure vessels and low pressure boilers are required to be inspected once a year.

The Boiler and Pressure Vessel Safety Inspection Unit conducted 6,253 inspections in 1976. These inspections include certificate inspections and special inspections. Special inspections encompass canvassing for uncertified boilers, joint inspections with insurance companies, accident investigations, complaint investigations, etc.

In 1976, 13,131 certificates of inspection were issued. The fees charged for various inspections (boilers, pressure vessels, shop, field and symbol inspections) and certificates amounted to $63,675.00.

Effective July 1, 1976, a new law exempted the State of Maryland or any agencies of the State or municipal governments from the payment of a fee for the issuance of a Certificate of Inspection for boilers and pressure vessels.

NATIVE HAWAIIAN RENAISSANCE

Mr. INOUYE. Mr. President, I invite the attention of my distinguished colleagues to a speech delivered by Mr. George Sanford Kanahele on March 22 before the Rotary Club of Honolulu. He addressed a subject that has received considerable public attention in Hawaii in recent years, yet has not had much exposure in the rest of the country: The renaissance of the native Hawaiian people.

This renaissance, defined by Mr. Kanahele as a "rebirth of artistic and intellectual achievement accompanied by a revival of interest on the past," has affected not only the approximately 146,220 persons of Hawaiian ancestry in my home State, but also thousands of individuals of other ethnic backgrounds. Local papers recently have run articles about the sudden surge of widespread interest, particularly among the State's youth, in grassroots-style Hawaiian music that relies on acoustic rather than amplified or electric instruments, more indigenous song forms and Hawaiian language lyrics. The newspapers also have reported that swelling numbers of students, Hawaiian and non-Hawaiian, are enrolling in Hawaiian language classes in the high schools and colleges.

This decade has seen a new political movement among the native Hawaiians, which has grown with the movement in Hawaiian arts and culture. The heightened political consciousness of many native Hawaiians, in fact, has helped to broaden public awareness of the native Hawaiian people and their culture, which for so many years had been ignored by the public because many perceived it as backward or heathen.

In turn, the expanded awareness of the beauty of Hawaiian culture has intensified the native Hawaiian political movement, compelling it to correct the wrongs committed against the Hawaiian people over the years. All of this adds up to what Mr. Kanahele called the native

Hawaiian renaissance. In an early section of his speech he said,

What is happening among Hawaiians today is probably the most significant chapter in their modern history since the overthrow of the monarchy and loss of their nationhood in 1893.

Mr. Kanahele is a respected leader throughout Hawaii and is among those actively promoting public interest in native Hawaiian culture, arts and politics. Mr. Kanahele, born in Kahuku, Hawaii and a graduate of the Kamehameha Schools, has degrees from Brigham Young University and Cornell University, and has devoted part of his career to teaching, government service and business. In 1973 he was named Outstanding Hawaiian of the Year by the State Association of Hawaiian Civic Clubs.

Mr. President, I request unanimous consent to have printed in the RECORD the text of Mr. Kanahele's stimulating and thorough discussion of the native Hawaiian renaissance.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY GEORGE S. KANAHELE

My talk today is about Hawaiian heritage, not so much about its roots, as about its fruits.

For example, when the Hokule'a completed its round-trip voyage to Tahiti, which was the most outstanding feat of the American bicentennial, it replicated an achievement that had not been done for maybe 6 or 7 centuries.

A few weeks ago a 760-page manuscript was completed and handed to the University Press of Hawaii for publication. It is an encyclopedia of Hawaiian music, the first ever written for Hawaiian or any other ethnic music.

Recently a Hawaiian chantress, nearly 70 years of age, said that she never thought she would live to see the day when there would be so many young and good chanters as there are today.

These are the fruits I speak of, the results of the flowering of Hawaiian culture which, in the classic European sense, can be called a "renaissance." It is a rebirth of artistic and intellectual achievement accompanied by a revival of interest in the past, and an increasing interest in and pursuit of knowledge or learning.

Some have called it a "psychological renewal," a kind of purging of feelings of alienation and inferiority and a reassertion of self-dignity and self-importance.

Of course, it is both, for neither can happen without the other.

What is happening among Hawaiians today is probably the most significant chapter in their modern history since the overthrow of the monarchy and loss of their nationhood in 1893. For, concomitant with this cultural rebirth, is a new political awareness which is gradually being transformed into an articulate, organized but unmonolithic movement.

The consequences of this fusion are already evident, the most immediate example of which is Kahoolawe, which has been so dramatized, so exploited and so tragic. Before it runs its course, it may get worse or better, but, in either case, Kahoolawe will certainly not be the last demonstration of Hawaiian political action rooted in cultural revivalism. Needless to say, it deserves understanding and watching.

Strictly speaking, the renaissance is not an entirely new phenomenon in Hawaiian history. There have been during this century periods of cultural resurgence. These range from the revival of surfing in the very early 1900s or canoe racing in the 1950s to the efforts of George Mossman and his Lalani Village in the 1930s and Malia Solomon's Ulu Mau Village in the 1950s and 60s. But these were sporatic, narrow-gauged phenomena that were initiated or led by a dynamic leader or small group of enthusiasts. Perhaps, the nearest thing to what is happening today, although on a much smaller scale, was the period between 1915 and 1925 centering around the successful efforts of Prince Kuhio—whose memory we celebrate in March—in organizing the Hawaiian Civic Club movement with its focus on education and in securing the passage through Congress of the Hawaiian Home Lands Act with its abortive hope of "rehabilitating" the Hawaiians.

But this history cannot be really compared with the magnitude and strength of what is occurring today. When seen in its totality, the Hawaiian Renaissance is truly unprecedented and a remarkable comeback for a people and culture that have been doomed to extinction more times than I would like to count.

Let me tell you about it in a little more detail. Seven years ago it was said that Hawaiian music was in its death throes. (I know, because I was the one who said it.) Today there are more musicians playing Hawaiian music than anyone can remember. There are certainly more students learning to play Hawaiian music, especially the slack key guitar because it is, in part, a distinctive Hawaiian style. There are more songs being composed today, and probably more records being produced and sold. Hawaiian music is very much alive. And two things are particularly noteworthy: one is the conversion of many young people from rock 'n' roll to Hawaiian sounds, and two, the much more visible involvement of non-ethnic Hawaiians as players or aficionados.

In the field of dance, the hula—once described by a zealous bishop as an "unnameable lewdness" and as one of the causes of the decline of the Hawaiian race—has probably more devotees today than at any time in recent years. The number of hula studios and classes, students and teachers seems to be increasing annually. Dance conferences held each year by the State Council on Hawaiian Heritage attract more and more people. As in the slack key, much more interest is shown in ancient dances because they are more distinctive, authentic. Significantly, more young male Hawaiians are learning and performing the hula. I remember as a kid no local boy would be caught dead dancing the hula for fear of being called a sissy, but nowadays you're likely to be popped in the mouth if you called a male dancer, who may be on the football team, a sissy. Something must be happening to change what was once a deep-set attitude.

One way to tell if people are serious about reviving their culture is to see whether they are studying their language. Hawaiians, both young and old, are doing just that. Not only Hawaiians, but others as well. Not too many years ago you were lucky to get more than a handful of students registering for a Hawaiian language class at the University. Now there are hundreds of students each year. Unfortunately, a "manini" (or stingy) budget cannot accommodate all the students.

It's the young people who are interested. About a year ago, 3000 high school students were invited to the University of Hawaii, Manoa Campus, to visit the language department and out of that number, so I've been told, 1000 expressed an interest in visiting the Hawaiian classes.

Times have changed. When I was a kid, we had almost no interest. My parents used it as a code language. When I was at Kamehameha, I had three choices in language study: German, French and Spanish, and Latin which was offered one year. Today students at Kamehameha and other private as well as public schools have Hawaiian classes.

Did you know that one of the best-selling books published by the University Press of Hawaii is the Pukui-Elbert Hawaiian dictionary?

How else can you explain this widespread interest in learning what some have called a "non-functional" language, other than in terms of a cultural renaissance? ?

Another vital dimension of the Hawaiian Renaissance is the intellectual ferment among Hawaiians, a fact which completely escaped the writer and editors of Fodor's guidebook on Hawaii (1975 edition). I quote:

"So far there have been no Hawaiian intellectuals. There may never be." And, in a pitiful effort to be coy, it states: "... (they or the Hawaiians are) allergic to thought." If they had taken the pains to do their homework, they would have learned that the literacy output of Hawaiians in recent years has been unprecedented. If they needed an example, they could have read the writings of John Dominis Holt or talked with Charles Kenn or Mary Kawena Pukui. They and others have produced plays, scholarly treatises, memoirs, textbooks, a novel, poems, short stories, a dictionary, and so on. To be sure, the great Hawaiian novelist or poet or dramatist has not yet emerged—or it is at least too early to tell—but that time is coming, for there is a wealth of Hawaiian material out of which great literature is being or will be written.

In higher education, more Hawaiians have earned PhDs in the last ten years than ever before. Once a rarity, now a Hawaiian PhD is becoming almost commonplace. They are found in nearly all fields including mathematics, engineering, anthropology, biology and so on, and in many universities across the land. Of course, a PhD is no assurance of intellectual quality, but it certainly doesn't mean that Hawaiians are "allergic to thought."

As a matter of fact, in ancient Hawaiian society, the intellectual who was the scholar-priest, had a prominent place among the elite. Not only was he the teacher, but also the keeper and transmitter of the accumulated knowledge and tradition of the culture. Since it had no written language, everything had to be recorded in the memory banks of these intellectual giants. Hawaiians were naturally imbued with respect for the mind, and notwithstanding the traditional anti-intellectualism in American society, contemporary Hawaiians are returning to this ancient value that will serve them well now and in the future.

Another important aspect of the Hawaiian Renaissance is the artistic activity ranging from composition to drama, art, graphics, and interior decorating. We all know about the Hawaiian talent in music and dance, but did you know that some of the best graphic designers, interior decorators, commercial artists, and ceramists in Hawaii today are Hawaiians? Herb Kane, Momi Cazimero, Charles Heen, Joel Awai, to name a few. Art is a subjective thing and I may have to make some allowance for nativist myopia. But, I think, that all things being equal—and I grant that they seldom are—the Hawaiians represent the most creative emerging artistic force in the Islands and that in the near future we will see even more notable artistic achievements from them.

So, this crescendo of artistic, literary and intellectual activity is all part and parcel of a very real cultural revival. This, of course, is not an isolated phenomenon, peculiar only to Hawaii. Similar cultural activism has taken place and is happening throughout the Pacific Islands and in many other parts of the world. The Maoris, Fijians, Tahitians, the Chamorro, and other islanders are ex-

periencing their own cultural revivals, although I suspect the Hawaiians have taken the lead probably because their culture has been the most seriously threatened.

The Hawaiian renaissance is also part of the "Age of Ethnicity" that dawned in the United States a couple or more decades ago, and that has achieved, perhaps, its penultimate expression in the public response to ABC's showing of "Roots." It used to be that the great American shibboleth for Hawaii was the "melting pot" where everybody tried to be part of the same homogenized lump. It was a shame to be anything else, especially a Hawaiian, or Japanese, or Chinese or whatever. But, the return of the veterans from the Second World War, the civil rights movement, the revolution of rising expectations, and so on, these historic changes in American life also affected the attitudes of ethnic minorities. The blacks, Chicanos, American Indians, and others have reasserted their rights and their roots. No doubt, the Hawaiian cultural and political activism today is part of the legacy.

Another cause for the Hawaiian renaissance has been tourism, both as a reaction to and a challenge from. What we hear or read about mostly is the reaction, usually negative, that tourism is another indignity heaved upon Hawaiians, that it destroys the cultural integrity of Hawaii-nei, and so on. Some Hawaiians have been motivated by this vision of the archenemp to hold on even more firmly to their Hawaiianness. On the other hand, the challenge has come from the industry directly in the form of statements and policies urging Hawaiians to preserve their arts, and crafts, customs and values. The organizing of "Pacific Nostra" is a good example of this. But, mostly, I think Hawaiians have taken a hard-headed bread-and-butter look at tourism in terms of the opportunities it offers for employment and enrichment. Some have made very constructive contributions to the preservation of Hawaiian arts and crafts, thanks to the income generated by tourism: the Ulu Mau Village, the Halekulania, the Polynesian Cultural Center, to name just a few.

Now, let me draw some meaning from all of this, for if the Hawaiian renaissance is as important as it is for the Hawaiians, it ought to be important for the entire State. For one thing, Hawaiians regard themselves, generally speaking, a lot better with a greater sense of identity, self-assurance, and pride. For some, of course, these feelings may turn into belligerency or militancy, but that is a natural part of the price, if it is such that comes with the revitalization of a people, particularly those who feel that they are still strangers in their own land.

The other side of this coin is that the way others regard Hawaiians will change also. After all, it is human nature to feel better if the other guy feels better, if it isn't at your expense, of course. I think as attitudes change, so will the old stereotypes that characterized the Hawaiian as "dumb, fat, lazy, and undisciplined," and the distorted notion that Hawaiians were better suited for menial, non-professional non-intellectual work. Ethnic prejudices, like barnacles stuck to a ship's hull, are hard to remove, but they must be.

Relatively speaking, the Renaissance is a young movement, i.e., its leadership and supporters are more young than old. They are positive, confident, articulate and impatient. They are not the "shadowed margins" of society, as John Holt put it, suffering from the hang-ups of shame and inferiority of older generations. They represent a new generation, infused with a sense of identity and purpose, and for some, mission. What this means is that the Renaissance will be as enduring and longlasting as this generation. It is not a fad, a momentary flirtation with an exotic past, but more like a permanent commitment.

Of course, not all Hawaiians, young or old are actively involved in the Renaissance. There are many who are indifferent or just don't give a damn. As I've suggested before, the Hawaiian community is not a monolithic thing; it is a highly diverse community. I suspect the last time we had a truly homogeneous, unified Hawaiian community was during the reign of Kamehameha I. Historical changes have created not one but many, different communities with shifting interests that merge on some issues and divide on others. Understandably, it is difficult to find unifying issues, but if there is a broad issue that most Hawaiians can rally around, it is the Renaissance.

I suspect it will be used more and more by political activists to try and galvanize the Hawaiian community for political purposes. It may also be the Trojan Horse for some who may pretend to speak for Hawaiians as if they were a solid community.

Finally, perhaps, the most important meaning for the community at large of the Hawaiian Renaissance is that besides ethnic Hawaiians, it also involves non-ethnic Hawaiians. It has not and never has been a purely Hawaiian enterprise. There are probably as many non-ethnic Hawaiians who are active in the cultural movement as there are Hawaiians. That is, haoles, Japanese, Chinese, etc., people who have no Hawaiian ancestry but who for one reason or another have come to identify themselves culturally, psychologically and spiritually with Hawaiianness. And in the process, some have become more Hawaiian than the Hawaiians—to the chagrin of some Hawaiians. Non-ethnic Hawaiians have often taken the initiative or played key leadership roles in many Hawaiian causes, and sometimes it has been their support in money and other resources that have spelled the difference between success and failure.

Some Hawaiians, unfortunately, choose to ignore this fact. They are so self-conscious about their new-found Hawaiianness that they become suspicious of every haole or Oriental who may went to help. Paradoxically, in some cases such Hawaiians are in truth as much haole or Oriental in outlook as they are Hawaiian.

This points out what a lot of kamaainas have known for a long time and that is in the process of acculturation Hawaiianization has gone on hand-in-hand with Americanization. Consciously or unconsciously, everybody who claims or wants Hawaii to be home, wants to share in its Hawaiianness. To the extent that this is true, then, we're all part of the Hawaiian Renaissance.

TEXTILE IMPORTS

Mr. THURMOND. Mr. President, an article entitled, "Timmerman: Textile Health Depends on Import Limits" appeared in the May 5, 1977 issue of the Aiken Standard newspaper, Aiken, S.C.

In this newsstory, the new president of the American Textile Manufacturers Institute, Robert P. Timmerman, makes some telling points on textile imports.

Mr. Timmerman, president of the Graniteville Co. in Aiken County, S.C., notes that textile imports are increasing at a rate twice as great as the growth of the domestic industry.

He also praises President Carter for acting promptly in setting into motion renewal of the International Multifiber Arrangement which expires December 31, 1977.

At the same time, Mr. Timmerman cites the need for an amendment to the agreement which will limit the growth of textile imports to a rate no greater than the growth of our own industry.

Mr. President, I applaud this approach. It is a sensible solution to a complex problem. Our own industry should be expanding, not losing ground to rising textile imports.

Mr. President, I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Aiken (S.C.) Standard, May 5, 1977]

TIMMERMAN: TEXTILE HEALTH DEPENDS ON IMPORT LIMITS

HOT SPRINGS, Va.—Robert P. Timmerman, the president of Graniteville Co., and the new president of the American Textile Manufacturers Institute (ATMI), said recently that only by limiting the growth of imports can a healthy U.S. textile industry be assured.

Timmerman said the industry supports the Carter Administration policy of renewing the International Multifiber Arrangement (MFA), but sees pressing need for an amendment to it.

"The present MFA permits imports to grow at an annual rate of 6 per cent, while our industry's growth is running at a rate of less than 3 per cent," Timmerman said.

"We are convinced of the need to limit the growth of imports to a rate no greater than the growth of our domestic industry," Timmerman added.

The MFA is the instrument under which the U.S. has bilateral textile trade agreements with some 18 nations. It expires on Dec. 31.

Timmerman said that ATMI representatives have been meeting with key government officials involved in the textile import program. He then assessed the cooperation the industry has received from the Carter Administration.

"I personally know of no other administration which so early in its term of office has given the kind of continuous attention we have received from the Carter Administration about this great problem of imports," Timmerman said.

Timmerman summarized the industry's economic posture by saying there's "good reason to be optimistic" about the remainder of the year.

He listed reduced retail, apparel and textile inventories, increased consumer spending, and a 6 per cent improvement in textile orders in January over the average for 1976.

Timmerman said that profits are a different story. They averaged 1.6 per cent of sales for the fourth quarter of last year, less than one-third that of other manufacturing industries.

For 1976, textile profits were only 2.4 per cent of sales, contrasted with the 5.3 per cent average for all manufacturing.

"This trend must be reversed for the well-being of the industry," Timmerman said, "as well as to provide the funds necessary to comply with regulations we face from government agencies."

Timmerman commented on two of those regulations: proposed noise and cotton dust control standards.

On noise, Timmerman said that it will cost the industry about $3 billion and "will achieve nothing that we cannot accomplish with personal ear protectors, administrative controls and medical testing."

He said the cotton dust proposal will cost the industry an estimated $2.5 billion and, perhaps, shut down some smaller plants in the industry.

Noting that President Carter has indicated his intention to do something about excessive government regulation, Timmerman responded: "We certainly hope he is able to accomplish this task."

JOINT RESOLUTION OF THE MAINE LEGISLATURE

Mr. MUSKIE. Mr. President, on behalf of Senator HATHAWAY and myself, I ask unanimous consent that a joint resolution of the Maine Legislature be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

JOINT RESOLUTION MEMORIALIZING THE PRESIDENT OF THE UNITED STATES, UNITED STATES DEPARTMENT OF AGRICULTURE AND MAINE CONGRESSIONAL DELEGATION TO SUPPORT INCREASED ALLOTMENTS OF FUNDS TO THE STATE OF MAINE THROUGH THE FARMERS HOME ADMINISTRATION

Whereas, many regional and local construction projects in Maine depend for their completion upon funds made available through the Farmers Home Administration; and

Whereas, priority construction projects in the following regions will fail to be completed unless funds are made available through the Farmers Home Administration: Caribou Hospital District; Region II Vocational School in Houlton; Hospital Administrative District #4 in Dover; Region III Vocational School in Lincoln and Southern Aroostook Community School District in Island Falls; and

Whereas, the pressing need for improved educational and medical services in many areas of Maine renders these construction projects of the upmost importance to Maine; and

Whereas, current disputes concerning vast portions of the land in Maine have made it essential for Maine to receive increased funding from outside of the State to help ensure continued growth and development; and

Whereas, allotments to these priority projects through the Farmers Home Administration would assist in maintaining this growth and development while providing these needed services to Maine residents; now, therefore, be it

Resolved: That we, your Memorialists, respectfully request that the President of the United States, the United States Department of Agriculture and the Maine Congressional Delegation take all possible action to provide an increase of $11,620,000 in allotment of funds to the State of Maine through the Farmers Home Administration program to assist in funding these priority construction projects within Maine; and be it further

Resolved: That a duly authenticated copy of this Memorial be immediately submitted by the Secretary of State to the Honorable Jimmy Carter, President of the United States, to the Secretary of the Department of Agriculture and to each Member of the Maine Congressional Delegation.

SENATOR ROTH'S SPEECH ON AMERICAN-EAST ASIAN POLICIES

Mr. SCHWEIKER. Mr. President, I call to the attention of my colleagues a significant address by the distinguished senior Senator from Delaware (Mr. ROTH) to the Georgetown Center for Strategic and International Studies. Senator ROTH, who played a very active role in our recent official mission to China, reports in this speech his observations on the United States and Northeast Asia. I commend his remarks to the Senate's attention and ask unanimous consent that they be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

THE UNITED STATES AND NORTHEAST ASIA: A STRATEGIC AND ECONOMIC PERSPECTIVE

Ladies and gentlemen: I am very pleased to have this opportunity to discuss Northeast Asia with you today. I have always regarded the Georgetown Center for Strategic and International Studies as an important forum, and I was very flattered when the invitation to speak came. But I did not realize how valuable it was until, days after this conference was announced, I received another invitation—this time to visit mainland China.

I remember as a child how my parents told me that if I dug a deep enough hole, I would eventually get to China. I have discovered they were right. The China of today is such a vastly different culture from ours, such a strange combination of western-based Marxism superimposed on a traditional eastern civilization, such a striking contrast of regimentation compared to our individualism, that it almost seems that it must be a place that you could get to only by going through a hole in the ground and where people walk upside down rather than right side up.

Some people have come back from China as instant experts on everything Chinese. As someone who left that country just four days ago, I am still impressed how little we know about China and how little they know about us. I am still undergoing a period of decompression and of trying to sort out my thoughts and put them in some logical order. However, I do want to share some of my preliminary impressions with you.

East Asia, of course, has been of immense interest to Americans for decades. I am afraid, however, that our policies towards East Asia have been distorted by myths, stereotypes, or wishful thinking. We have alternated between periods of neglect in the 1930s and early postwar years to periods of over-involvement more recently. In the past few years, the trauma of Vietnam has inhibited the construction of a realistic and effective Asia policy.

In the wake of Vietnam, there have been two kinds of reactions that have deeply affected our Asian policies. One has been an increased impulse towards isolationism and renewed Eurocentricism. The other reaction has been to put our policy on a new moral basis, and this thread is felt in the new emphasis on human rights issues in our foreign policies.

Despite the difficulties associated with the end of the Vietnam experience, I believe that in many respects our Asian policies of the past two years have been fundamentally sound. Under President Ford, the United States took initiatives to strengthen our relationship with Japan. He was the first American President to visit that important nation, and the "shocks" of the Nixon period were not repeated. Our commitment to South Korea's security remained strong, and we took constructive steps to try to lower the level of tensions in the Korean peninsula through a multilateral framework. In our relations with China, we continued the dialogue with the People's Republic of China, but not at the expense of our diplomatic, economic, or security relations with our long-time ally, the Republic of China on Taiwan.

We have not yet, however, delineated a clear and positive set of long-term guidelines on which to base our East Asian policies. This, in turn, reflects a much more fundamental problem with American foreign policy today—the lack of a consistent global framework tieing together our interests, objectives, and policies. This Administration—admittedly still new—has yet to articulate a clear concept of America's world role to underpin and make meaningful our policies on specific issues.

This problem is particularly acute in East Asia. Here we are engaged in some very important issues—the withdrawal of ground troops in Korea, the future of our relationships with Taiwan and mainland China, base negotiations with the Philippines, our political and economic relationship with Japan—but each of these matters is being considered in a piece-meal fashion without a clear concept of what our future role in this region should be or how this role relates to broader interests and objectives of the United States.

America's over-all posture in East Asia has profound implications for the future of world peace and for our own national security. Our postwar East Asia friends, Japan, South Korea, Taiwan, and the Philippines, are questioning our reliability as an ally and reassessing their relationships with us. The People's Republic of China is going through a very important period in which its internal leadership is in flux and its foreign policy may be subject to review. The credibility of our presence and commitments in East Asia will help determine China's future course. The Soviet leaders are also close observers of America's East Asia policies and will have little hesitancy about trying to fill any holes or gaps we leave behind. This is of deep concern to both our allies and to China.

If we are to maintain a presence in East Asia that gives confidence to our friends and is credible to the Soviet Union and China, we need some clear thinking about the future of our overall role in East Asia. We must rethink and answer some very basic questions—whether we need a strong military presence in that region, what kind of presence that should be, whether we should remain committed to non-Communist governments in South Korea and Taiwan, and whether we intend to maintain the kind of economic relationships with these countries that have, in the past, helped support our political and security interests.

In developing a constructive, long-term Asian policy, we must consider the lessons of the past as well as the realities of today's Asia.

Looking at the past, the United States prior to World War II relied on indigenous and European forces to maintain a rough equilibrium of power that permitted a broad degree of American access and influence in the region. We recognized only very late that the tremendous strength of Japan and the inability of any combination of China and the hard-pressed European states to contain Japan required a much greater degree of American attention and involvement if the balance of power were to be maintained. That mistake—and the mistake in the later part of the 1940s in failing to make our commitment to South Korea more explicit—cost us dearly.

But we also learned in Vietnam that American troops cannot fight an effective, limited war in mainland Asia without an effective local government on our side. This conflict sapped our strength and threatened to destroy the more vital aspects of our Asian and world policies because of over-involvement in a local situation.

The lessons of history, it seems to me, tend to confirm that the United States does indeed have an important stake in East Asia. At the same time, our commitments must be prudent and our strength carefully husbanded to ensure that our power and influence are used wisely and economically in those situations where crucial American interests are involved. To do otherwise depletes our material and psychological resources and may lead to policies of retreat and retrenchment.

What, then, are the realities of today's Asia?

First, there is the reality of the overwhelming economic strength of Japan. Over the past quarter century, Japan has built a truly modern and efficient industrial base. What is all the more remarkable about

Japan's growth is that the Japanese Islands themselves are over-crowded and have very little in terms of natural resource endowments. Japan has now a gross national product in the order of $500 billion, the third largest in the world—the second largest in the Free World—and much larger than the combined gross national product of all the rest of the East Asian countries, including China, combined.

Japan is also a democracy—in fact after India, which has just returned to that status, and the United States—the world's third largest democracy. The Japanese share with us the same basic interests and values.

For those reasons, Japan must remain the linchpin of American policies in East Asia and the Pacific.

A second reality is the fact of Sino-Soviet tension. It would not be sound policy for the United States to premise its Asian policies on the present level of tension as being a necessary or a permanent condition. It is clear, however, that there is a triangular relationship between the Soviet Union, the United States, and China. In the early 1950s, we spoke of the Sino-Soviet bloc Now there is a common perception by American and Chinese that the Soviet Union is the most expansionist country in the world today. It is clear that China's concerns about what they call Soviet imperialism are not limited to their immediate neighborhood. Chinese officials spoke often and with great concern about the Soviet danger in Europe and Africa. And they argued that the United States has followed a policy of appeasement, especially with respect to Africa. Time and time again, they emphasized that the primary target of Soviet expansionism is Western Europe, not China.

While Sino-Soviet tensions exist, they enhance our bargaining leverage with both countries, but only if we are an active part of this triangular balance of power. Moreover, a complete withdrawal of U.S. forces in such areas as the Korean Peninsula could touch off local conflicts that in an atmosphere of intense Sino Soviet rivalry could expand into a large power conflict. It is true that when one directly asks the Chinese about whether or not the United States should continue to withdraw its military power from Asia, they express support for withdrawals. But it is also true that they say this without much urgency or conviction and that it is strikingly inconsistent with what they say about the American military presence in Europe. Implicitly, I believe the Chinese value our military presence in East Asia. They are explicit in saying that Japan's first priority must be its relationship with the United States. Interestingly enough, I was also asked whether the United States could not do more to assist Pakistan.

A third reality is that the non-Communist nations of the Republic of Korea and the Republic of China have become vigorous, self-reliant economic and political units. They are part of a web of economic relationships that link the nations of Northeast and Southeast Asia and have become an important element in the larger free world economic system. But not only are these countries important economically, they also are closely related to Japanese security and thus our own. Moreover, the manner in which the United States treats small allies such as these will have important repercussions for how we are perceived by our other allies around the world. I believe, therefore, that the United States has a tangible interest in and a moral obligation to the preservation of freedom in Taiwan and South Korea.

In my judgment, both today's realities and the lessons of history dictate a continued strong American military presence in East Asia. This presence must be credible. It must have the strength to support our commitments and interests—first, in protecting Japan as the linchpin of our East Asian policies; second in supporting the freedom of South Korea and Taiwan; and third, in maintaining our ability to play an important role in the triangular balance of power with China and the Soviet Union.

These interests must be the underlying considerations in our negotiations with South Korea, Taiwan, and the Philippines. In the steps that we take regarding our presence in each of these countries, we must consider how this will affect our bargaining position with China and with the Soviet Union. If we continue to look at each of these issues in a piece-meal fashion, we run the risk of inadvertently reducing our bargaining position and injuring our global relationships with the world's other superpowers.

This does not mean that our presence must be exactly the same as it is today. In the post-Vietnam world, it is most unlikely that the United States would again commit ground forces in Asia, short of a major war. I think that our forces will have more credibility abroad and more support at home if we shift our emphasis in the direction of air and naval support.

Our allies, such as South Korea, should continue to be encouraged to take over the responsibility for their own defense on the ground so long as this is done in a careful manner designed to maintain the strength of our deterrent during the transitional period and in consultation with our allies.

Politically, the United States should continue to pursue its dialogue with China. We do have very important parallel interests in regard to the Soviet Union. We also have a stake in breaking through the self-imposed isolationism and provincialism of mainland China. The narrow isolation of the Peking leadership is very striking to a traveler, such as I have been, and this raises a serious threat of misperception leading to irresponsible policies. China is far more isolated than Japan was before World War II, and Japan's misperception of the vast power and resource differences between it and the United States was a major cause of the Pacific War.

Moving forward in our relations with Peking is of critical importance as a means of offsetting the Soviet Union's expansionist policies, but, nevertheless, it is going to be a very difficult task. During our visit, the Chinese repeatedly stated that there can be no significant increase in trade or in cultural exchanges, nor can any Chinese premier visit the United States so long as we do not have official diplomatic relations. And there can be no diplomatic relations unless the United States gives up its diplomatic relationship and mutual security treaty with the Republic of China on Taiwan.

Nevertheless, this rhetoric is not new and at least some China specialists believe that there may be more flexibility than the rhetoric would indicate. How the United States upholds its moral obligation to Taiwan and at the same time strengthens its relationship with the mainland is the key question. I do not know how we can escape from this dilemma except to say that it will take the wisdom and the patience of a Solomon. Perhaps we should show that, we too, like the Chinese, are a very patient people.

In our political relations with our allies, we should seek to avoid adding additional burdens to those that these governments already face. We are asking them to be more self-reliant. In some cases, we are asking them to make some basic changes in past policies in the interests of human rights. In the case of Japan, the Liberal Democratic Party is facing increased internal difficulties as well as more intense external pressures as witness the dispute over the anti-hegemony clause in the Sino-Japanese treaty and the pressures being placed on the Japanese government at the present time by the United States right now in its economic and nuclear energy policies.

I expect the LDP to remain the dominant party in Japanese domestic politics in the forseeable future, either alone or in a coalition with one or more of the smaller opposition parties. There may also be the beginnings of an effective opposition element. The period of Liberal Democratic Party rule has been one of close Japanese-American collaboration and stable leadership in Japan, and I believe our government should make a conscious effort to avoid undermining this party. This means more than avoiding "shocks;" it also requires a positive appreciation of Japan's situation and interests and a genuine effort to accommodate those interests when they are compatible with our own.

Today's most pressing near-term problems with our allies are economic ones. Japan, South Korea, and Taiwan have been at the very top of the list of rapidly growing economies. Yet, one weakness that they all share is that their economic growth programs have been heavily dependent on overseas markets and, in the case of Taiwan and South Korea, on overseas capital investments. The worldwide recession of the mid-1970s, therefore, has been particularly hard on these countries.

The economic growth of Northeast Asia raises a difficult dilemma for American policy. On one hand, these nation's high growth rates have strengthened their political viability, tied them more closely with the Western economy, and made it possible for the U.S. to substantially reduce our foreign aid burden in Northeast Asia. On the other hand, East Asian manufacturers have injured important segments of our own industry and have strengthened the forces of protectionism in the United States.

The resolution of these economic issues will require a great deal of understanding, restraint, and accommodation on all sides. Here are some steps that I believe are necessary.

In the first place, Japan, South Korea, and Taiwan must recognize that they cannot expect to place the entire burden of their adjustments to the oil price rise on their trading parners. Over the past year, Japan ran balance of payments surpluses of over $5 billion with the United States and $4 billion with the European Community. It is clear that neither the United States nor Western Europe can tolerate sustained deficits of this magnitude in their trade with Japan. Voluntary restraints, of the sort the United States is currently seeking with Korea and Taiwan in the case of shoes or with Japan in the case of color television sets, is one short-term answer to this problem.

I believe the President has made some courageous political decisions in seeking voluntary restraints in the shoe and color television cases. I hope our allies will support this effort by being forthcoming in negotiations to work out fair and satisfactory agreements on these products.

Second and more fundamentally, there needs to be a revision in the GATT trading rules, particularly in the treatment of tax rebates on export items. There has been a natural reluctance on the part of the industrial countries to open up a full discussion of GATT for fear that the Group of 77 developing nations will make realistic negotiations practically impossible. I believe that the stake of the industrial democracies in new trading rules is far too important to permit ourselves to be intimidated by the Third World. It is necessary for us to go ahead and negotiate our own understandings and rules, and then to apply them among ourselves, even if the rest of the world is temporarily left aside.

Third, American business and industry needs to be much more assertive in international commerce. There is no doubt that in countries such as Japan, there are difficult cultural, legal, and administrative barriers to market penetration. But we should also recall that the countries of Northeast Asia have made strenuous efforts to learn about

our culture and business practices, and have creatively adapted their marketing accordingly. When we seek markets in their countries, we must go halfway by making an effort to meet their tastes rather than trying to change those tastes.

The American government needs to provide stronger support for American business overseas. Our rules and society do not permit the same kind of government—business relationships that you find in Japan or, for that matter, in South Korea and Taiwan. But the present scattered and ineffective government programs in the trade area are inexcusable. When I was in Japan in January, some of the Japanese government leaders pointed out that when they try to deal with the U.S. government on trade issues, they are unsure just who to deal with—Treasury, State, Commerce, or the President's Special Representative on Trade. I think we can do a great service to our business and economy by coordinating U.S. foreign trade and investment policies in a single Cabinet level department, and I will soon be introducing legislation to do just that.

I want to conclude on an optimistic but sobering note. We have laid the foundations of a sound Asian policy. We have built a solid relationship with Asia's most dynamic society—Japan. Our allies in South Korea and Taiwan are thriving. We have established a dialogue with China and are pursuing parallel interests with that nation. We stand now at a critical junction—can we consolidate our gains and build upon past policies? Or will we make costly mistakes and weaken our bargaining position by hasty and ill-conceived moves formulated more in terms of domestic politics and wishful thinking than in terms of international realities?

The choice is ours. To take the right path we need some realistic and very fundamental rethinking within the government about our over-all interests and objectives; we need to apply these objectives to specific negotiations and we need to articulate to our own public and to the outside world where we stand. If we take these steps, we will have the strength and the initiative to consolidate present relationships and build a more stable peace in a very dynamic region of this globe.

MR. MELLON'S WAY OF GIVING

Mr. MATHIAS. Mr. President, as an alumnus of Yale University, as an admirer of British art, and as an American, who is grateful and proud whenever the cultural life of our Nation is enriched, I would like to thank Paul Mellon for his extraordinary gift of British art to Yale University.

Mr. Mellon has proved that a collection of art can be an art form itself. He is a matchless collector and consummate giver of collections. An appreciation of his rare abilities and his rare gift was published in the Washington Post on April 30, 1977. I ask unanimous consent that the Post's perceptive editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. MELLON'S WAY OF GIVING

Paul Mellon's gift to Yale of its new Center for British Art is an exemplary personal achievement as well as an extraordinary act of philanthropy. It was Mr. Mellon who conceived the idea of enriching his alma mater in this fashion. It was he who paid $12.5 million for the beautiful building, the last major work of the late Louis Kahn. And it was Mr. Mellon—with the unsalaried aid of British art historian Basil Taylor—who put together the 1,800 paintings, 5,000 prints, 7,000 drawings, 16,000 rare books, and so on. Our art critic, Paul Richard, has called the Center "the finest collection of British art ever privately assembled." Combined with Yale's Boswell and Walpole papers, the university becomes perhaps the leading center of British scholarship outside Britannia herself. And the bequest, of course, is but one of many Mr. Mellon has made to Yale and to others—particularly in the Washington area, where he lives.

What seems even more noteworthy, though, than the scale of Mr. Mellon's giving is his *way* of giving. The Yale Center, in particular, exemplifies Mr. Mellon's quiet, intensely committed kind of philanthropy. British art is not a field in which to invest if one is out to make a public splash (and with Mr. Mellon's means, such splashes could hardly be easier, if he so chose). But with Mr. Mellon, collecting is inextricably a part of his genteel, cultivated style of living. To go out and scour the world for opulent artifacts that would not fit comfortably with that way of living would smack of tasteless and undisciplined acquisitiveness. The British bequest is rooted in his attachment to the British country landscape, to the sporting life and to British learning. Thus he made himself a champion of those gentle English landscapes, stately portraits and pristine sporting scenes that were, as Mr. Mellon has noted, "long neglected, even abandoned, not only in this country, but in their homeland."

A not unrelated characteristic of Mr. Mellon's philanthropy is exemplified by his determination that the project be called the *Yale* Center, not the Mellon Center—just as his father, Andrew Mellon, declined to have the National Gallery of Art named after him, thought he built it and donated his resplendent collection of Old Masters. The same will be true for the additional National Gallery structure now being built by Paul Mellon—to more than double the gallery's space—even though it is very much *his* building. He chose the architect, I. M. Pei. Mellon money (one-third of it Mr. Mellon's own) will pay the bill of about $100 million. And as the anything-but-absentee president of the gallery (his "Who's Who" listing is "art gallery executive"), he supervises construction as if it were to be his residence. But a hard hat labeled "Mr. Mellon" that hangs in the construction shed is about as close as he will allow his name to be attached.

In a speech some time ago, Mr. Mellon voiced his view on philanthropy, observing that "considering the blessings of a large personal income, added to the favorable climate brought on by enlightened and liberal tax regulation, one is forced to admit that the doing of good deeds was wished onto one by a sort of happy predestination." The result is a "happy predestination" for more than just Mr. Mellon.

TOMMY TSUCHIYAMA, HAWAII'S ESSAY CONTEST WINNER, SEES AFFIRMATIVE ACTION FOR THE HANDICAPPED AS THE "ANONYMOUS" LAW

Mr. MATSUNAGA. Mr. President, only a few weeks ago, the handicapped of our country launched a campaign to bring their problems to the attention of both lawmakers and the public. Their perseverance and dedication paid off: HEW Secretary Califano signed regulations implementing section 504 of the 1973 Rehabilitation Act, which prohibits discrimination, exclusion or denial of benefits to otherwise qualified handicapped individuals by any program or activity receiving Federal financial assistance. But there is still a long way to go toward equal treatment of the handicapped in one of the areas most important to their very existence: Employment.

Tommy Tsuchiyama, Hawaii's essay contest winner, here in Washington to compete in the national finals, presented a clear and concise explanation of the problem of educating both the handicapped and their potential employers to the existence of Affirmative Action programs as provided by section 503 of the Rehabilitation Act. Tommy, a high school senior, characterized the Affirmative Action clause as "almost anonymous." I would like to take this opportunity to congratulate Tommy on producing a fine essay on a most timely issue. Because I am confident that readers of the CONGRESSIONAL RECORD can all benefit from his research findings, I ask unanimous consent that his essay be printed in the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

HANDICAPPED PEOPLE AND AFFIRMATIVE ACTION

(By Tommy Tsuchiyama)

A billion dollar vocational bill was vetoed by former President Nixon in March 1973 on the grounds that it would divert aid to the handicapped from its original goal of training the employable.[1] The President's decision was extremely fair though the criteria now is to divert the handicapped to the training. Unfortunately, a large majority of the handicapped are not aware that an Affirmative Action Clause exists to assist them in this aspect.

The Affirmative Action Clause requires every contractor vying for a federal contract of more than $2,500 to actively recruit, consider and employ all qualified handicapped applicants and that all qualified handicapped employees be afforded nondiscriminatory consideration for promotion and job advancements. "No handicapped individual may be discriminated against on the basis of his handicap."[2] Now ask a handicapped person to define Affirmative Action and chances are he cannot. Ask him where or how he could possibly find out about it and perplexity will again cross his face.

The truth is Affirmative Action sorely lacks publicity. A class survey in which 75 questionaires were distributed to various Honolulu businesses produced a paltry 19 responses—not surprising since cold stares and ill feelings often greeted our teams. Of those responding, a whopping 44% were not familiar with Section 503 of the Rehabilitation Act. The question is, how do you enforce an almost anonymous law?

A trip to the Hawaii State Library revealed very few up-to-date books on handicapped employment opportunities. The Affirmative Action Clause being relatively new will probably have to wait till the 1980's to receive attention. Several large book stores I visited stocked not a single book on the handicapped. During the past Handicapped Week, Vincent Cui, attorney for the Disabled American Veterans, tried in vain to influence the local papers into doing a large special report on the plights and progress of the handicapped people. All that resulted was a short column acknowledging that it was, indeed, "Handicapped Week."

Terrance Tom, blind since birth, is a relatively successful private attorney who received his first job in the city prosecutor's office in 1973, the year the Rehabilitation Act was initiated. Married, he is also a part-time musician and a Lions Club member. By contrast, Bob Smith (fictitious name), blind, is an unemployed college student receiving $3,500 a year from Social Security. His income is nearly 50% below the national poverty level. Prior to losing his sight, Bob was a video tape technician earning in excess of $20,000 a year. He expressed a need for an

[1] Lester A. Sobel, "Health Care," p. 121.

[2] "Affirmative Action To Employ Handicapped People" pamphlet.

immediate part-time job, but the added income would cancel his Social Security benefits. Besides, he was not confident that he would qualify for better than a minimum-wage janitor. He harbored a bitter awareness of innate prejudices. Interestingly, when asked what sort of law regarding employment for the handicapped he would like to see passed. Bob outlined the Affirmative Action program with which he, like Terrance Tom, was previously unfamiliar.

I propose a magazine or short newspaper as one solution to this information dilemma. Instead of being stored at some state or federal department office or sold at some ridiculously high price, these papers will be free and available in more accessible areas such as employment offices, hospitals, sheltered workshops, training centers, rehabilitation facilities, special education classes, and handicapped organizations in addition to libraries, prisons, colleges and various stores. It could also be mailed at a small cost to interested handicapped people. These periodicals would feature information on affirmative action and current government proposals and perpetrations in addition to reports regarding special training schools and employment centers. A special "Help Wanted" classified page and insights of handicapped persons at work could further heighten interest and relevance. In short, it would be news complementing vital information. The paper would have the appeal of a professional publication without the pampering and patronizing attitude handicapped people abhor. The main purpose of this periodical, aside from feeding the uninformed, would be educate the "normal" community.

My research has led me to conclude that such a project is very feasible. A local private newspaper with a circulation of 20,000 to 40,000 copies has bi-weekly production costs of under $5,000. It is made available, free, at more than 300 outlets. The proposed publication could follow a similar format on a monthly basis. Paid staff would consist of a few editors and sales people with the bulk of the workload being handled by volunteer writers and contributors. While much of the money would come from advertising, sponsorship by a charitable organization would pave the way for funds which could then be solicited from various local trusts and foundations.

The newspaper could be a driving force toward bringing the handicapped together for unified action to press for stricter, more widespread application of Affirmative Action laws. The objective would be a higher employment rate for the handicapped.

Like all other human efforts, my proposal requires positive attitudes to make this dream a reality. Equality should be our top priority. The handicapped people are not asking to be placed about the crowd, but to be treated equally. Ralph Burton Perry best summed it up when he said, "A man is not an equalitarian in principle until he seeks and enjoys a reciprocal relation of equality; and the test of this is to be found not in a man's dislike of other's superiority, but in his dislike of their inferiority, and in his relish for a social relationship in which each looks upon the other with a level eye." NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

John C. Merkel, Jr., of Washington, to be U.S. attorney for the western district of Washington for the term of 4 years vice Stan Pitkin, resigned.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Friday, May 20, 1977, any representations or objections they may wish to present concerning the above nomination with a further statement whether it is their intention to appear at any hearing which may be scheduled.

(This concludes additional statements submitted today.)

ORDER FOR CONSIDERATION OF H.R. 5970 MONDAY

Mr. ROBERT C. BYRD. Mr. President I ask unanimous consent that on Monday, following the recognition of the two leaders under the standing order, the Senate proceed to the consideration of the military procurement authorization bill, H.R. 5970.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT UNTIL MONDAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in adjournment until 12 noon on Monday.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXTENSION OF TIME FOR FILING COMMITTEE REPORTS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that committees may have until midnight tonight to file reports.

The PRESIDING OFFICER (Mr. RIEGLE). Without objection, it is so ordered.

ORDER FOR RECORD TO REMAIN OPEN UNTIL 5 P.M. TODAY

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the RECORD remain open until 5 p.m. today for the introduction of statements, petitions, memorials, bills, and resolutions.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER TO HOLD H.R. 6714 AT THE DESK

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that a message from the House of Representatives on H.R. 6714 be held at the desk, pending further disposition.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. McGOVERN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

TRADE WITH CUBA

Mr. McGOVERN. Mr. President, earlier this week the Committee on Foreign Relations by a vote of 10 to 7 adopted a measure calling upon our Government to lift partially the embargo on trade with Cuba. The amendment which was added to the State Department authorization bill does not permit the sale of Cuban goods into the American economy. But it does permit one-way trade in the sense that the Cubans would be authorized to make purchases of two categories of items, agricultural products and food on the one hand, and medical supplies on the other.

On yesterday, the House of Representatives adopted an amendment which was erroneously interpreted, I believe, in the press to have undone the work done by the Foreign Relations Committee in the Senate provided the House language were retained.

But, as a matter of fact, a close reading of the amendment adopted by the House, I think, will make clear to Members of the Senate and the Congress that it has no relevance as far as trade is concerned.

The amendment, as approved yesterday by the House—and this is an amendment to the Foreign Assistance Act, but it would make little or no difference even if it were offered to the State Department authorization bill as was the Senate amendment—reads as follows:

> None of the funds authorized to be appropriated in this act shall be used for the purpose of allowing any form of aid or trade either by monetary payment or by the sale or transfer of any goods of any nature to the Socialist Republic of Vietnam or Cuba.

Mr. President, since there is no foreign aid fund involved in opening up the right to the Cubans or the Vietnamese, for that matter, to make purchases in the American economy, the House amendment could be adhered to and we could still proceed with the limited trade authorized by the Senate bill.

I very much hope that the Congress will stay with the language adopted by the Senate. It does seem to me that the

effort to foreclose either the Cuban market or the Vietnamese market to the United States is a case of cutting off our noses to spite our faces.

It may in some way hamper the Cubans and the Vietnamese not to be able to purchase things here in the United States, but the alternative is simply that they purchase them in other parts of the world. One wonders how that advances the interest of the United States, how it strengthens our economy, how it fortifies our foreign policy or how it does anything else except to forego a market that would otherwise be available to us.

I do not look on this move taken by the Foreign Relations Committee as primarily an altruistic or humane effort on our part, although I see nothing wrong with an occasional spurt of humanity to manifest itself in our relations with other countries, but what it does do is to open the way for commonsense commercial arrangements to be made under which we can sell some of the things we have in abundant supply in this country.

To those who argue that it might be desirable to do what we can to influence the direction of events in Cuba and Vietnam, it escapes me how we do that by denying ourselves whatever influence comes under the process of commercial trade—one way that nations do influence each other is through the process of commercial trade.

I would think that would be a factor that the government in both of these countries would take into consideration in making future judgments.

Once they begin to trade with us, they have an interest in preserving that and, in perhaps a modest way, they give us a little more influence in those countries than might otherwise be the case.

The gentleman in the other body who suggested this amendment said he was offering it in part to make clear that the senior Senator from South Dakota should not be permitted to dictate American foreign policy.

Well, Mr. President, that was obviously not my purpose in going through a perfectly legitimate legislative procedure, which was to offer an amendment in the Foreign Relations Committee of which I am a member. I might add that that amendment was cosponsored by the chairman of the Senate Foreign Relations Committee, the Senator from Alabama (Mr. SPARKMAN), who 2 years ago took the floor of the Senate and urged we lift the entire embargo on Cuba.

So this partial step we have taken, simply to permit us to sell some agricultural and medical supplies in Cuba, which Senator SPARKMAN and I have cosponsored and which had bipartisan support in the Senate and was adopted by a clear margin, is not some kind of unique or peculiar effort to dictate foreign policy on the part of a single Senator, but it represents the efforts of a majority of the Foreign Relations Committee to bolster what I think is the long-term objective of the present administration, and that is, on a step-by-step basis, to improve our relations with Cuba.

I would hope that the same considerations would prevail, that we would not think it is in our interest to yield that market entirely to the Soviets, to the Chinese, to the Japanese, and other aggressive competitors of ours for commercial markets, but that we would see it in our interests to open up this kind of exchange with the people of those two countries.

We have been in trouble with them in the past, but they are giving some signs that they now want to get along with us in the future.

I think we ought to have the self-confidence and the imagination and the commonsense to grasp that opportunity and to move ahead. But I do hope that it is underscored again that the House action, as I interpret it, and I have read the language very carefully, does not, as it now stands, interfere with our opening up trade on a limited basis with these two countries.

Mr. President, I yield the floor.

Mr. MATSUNAGA. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator from Hawaii suggests the absence of a quorum. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. MATSUNAGA. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Does the Senator from Tennessee desire recognition?

ORDER OF BUSINESS

Mr. BAKER. Mr. President, I see the majority leader is on the floor. I wonder if he would permit me to inquire about the outlook of the situation on Monday.

LEGISLATIVE PROGRAM FOR NEXT WEEK

Mr. ROBERT C. BYRD. On Monday, the Senate will convene at 12 o'clock noon. After the two leaders have been recognized, the Senate will then proceed to the consideration of the military procurement authorization bill. I would suspect there would be amendments to that bill, and that there will be rollcall votes on such amendments.

The chairman of the committee (Mr. STENNIS) has indicated he will be prepared to go into the evening on Monday and that he will also be prepared to go on Tuesday early and late in the effort to complete action on the bill, if possible, on Tuesday, so there would be rollcall votes on Monday and on Tuesday on the military procurement bill.

Of course, if the Senate does not complete action on Tuesday on that bill, it would still be before the Senate on Wednesday.

Mr. BAKER. Mr. President, I thank the majority leader.

Particularly in view of the fact that we will be on that measure Monday and possibly Monday evening, I wonder if it would be possible to have an agreement that rollcall votes would not occur before a particular time on Monday so that we could try to regularize that schedule as much as possible? I am particularly interested in the majority leader's statement that we may go into Monday evening and certainly into Tuesday, so if we could try to arrive at a time, say 4 o'clock on Monday, before which there would not be rollcall votes, I think it would be a great help.

Mr. ROBERT C. BYRD. I would hesitate without clearing this with Mr. STENNIS. I think it would probably be safe to say 2 o'clock on Monday and I would be very glad to propose that request.

Mr. BAKER. That would be very helpful. I would hope, if the majority leader sees fit to do so on Monday, we would try our best to postpone until 4 o'clock, but I would be grateful for the 2 o'clock request.

ORDER FOR NO ROLLCALL VOTES ON MONDAY PRIOR TO 2 P.M.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be no rollcall votes on Monday prior to the hour of 2 p.m., with the exception of any rollcall that might be in connection with the establishment of a quorum, which I would not anticipate.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, may I take this occasion, too, in response to the question from the distinguished minority leader, to say that it is hoped that once the military procurement bill can be disposed of the Senate would then proceed to take up either the Energy Department bill or the surface mining bill, and also to express the hope that the Senate would complete action on the Department of Energy bill and the surface mining bill, and other measures on what will soon become an extremely crowded calendar.

ANNOUNCEMENT OF LIKELIHOOD OF SESSION ON SATURDAY, MAY 21, 1977

I say this to indicate to all Senators that there is a very great likelihood that the Senate will be in session next Saturday. I do not want the Senate to be in session Saturday but I am concerned that it may be necessary to have a Saturday session next week, so I think it only proper to indicate that strong probability in the RECORD today.

There is a possibility that the Senate will have to be in session the following Saturday unless the Senate can get its work done, and by its work I mean the measures I have mentioned in addition to some other important legislation on the calendar.

I thank the distinguished minority leader for making the inquiry because that gave rise to my statement with respect to Saturday sessions.

Mr. BAKER. Mr. President, I thank the majority leader for his helpful information.

Mr. ROBERT C. BYRD. May I say also I would expect lengthy sessions daily next week and the following week because committees now have had almost 5 months in which to work, and we will have passed the May 15 deadline on Monday by having the date extended 1 day for committees to report new authorization measures. That having been done, I would hope that all Members will understand the necessity for longer sessions from here on out.

ADJOURNMENT

Mr. MATSUNAGA. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until the hour of 12 noon Monday.

The motion was agreed to; and at 2:53 p.m. the Senate adjourned until Monday, May 16, 1977, at 12 noon.

NOMINATIONS

Executive nominations received by the Senate May 13, 1977:

Department of State

Arthur A. Hartman, of New Jersey, a Foreign Service officer of the class of Career Minister, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to France.

James Gordon Lowenstein, of the District of Columbia, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Luxembourg.

Robert H. Miller, of Washington, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Malaysia.

Philip Henry Alston, Jr., of Georgia, now Ambassador Extraordinary and Plenipotentiary of the United States of America to Australia, to serve concurrently and without additional compensation as Ambassador Extraordinary and Plenipotentiary of the United States of America to the Republic of Nauru.

Harry W. Shlaudeman, of California, a Foreign Service officer of the class of Career Minister, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Peru.

Lawrence S. Eagleburger, of Virginia, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Socialist Federal Republic of Yugoslavia.

Donald Clayton Bergus, of New Jersey, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Democratic Republic of the Sudan.

Adrian S. Fisher, of the District of Columbia, for the rank of Ambassador while serving as the U.S. Representative to the Conference of the Committee on Disarmament.

Department of Justice

Andrew W. Danielson, of Minnesota, to be U.S. attorney for the District of Minnesota for the term of 4 years, vice Robert G. Renner, resigning.

James R. Britton, of North Dakota, to be U.S. attorney for the district of North Dakota for the term of 4 years, vice Harold O. Bullis, resigned.

Jamie C. Boyd, of Texas, to be U.S. attorney for the western district of Texas for the term of 4 years, vice John E. Clark, resigned.

John C. Merkel, Jr., of Washington, to be U.S. attorney for the western district of Washington for the term of 4 years, vice Stan Pitkin, resigned.

Albert S. Hinds, of Illinois, to be U.S. marshal for the eastern district of Illinois for the term of 4 years, vice Arthur J. Wilson, Jr., resigning.

Harold C. Warren, of North Dakota, to be U.S. marshal for the district of North Dakota for the term of 4 years, vice Alvin W. Bumann, resigning.

Rodolfo A. Garza, of Texas, to be U.S. marshal for the western district of Texas for the term of 4 years, vice Sam H. Roberts, resigned.

CONFIRMATIONS

Executive nominations confirmed by the Senate May 13, 1977:

DEPARTMENT OF JUSTICE

Anthony G. Dirienzo, Jr., of Connecticut, to be U.S. marshall for the District of Connecticut for the term of four years.

ASIAN DEVELOPMENT BANK

Lester E. Edmond, of Florida, to be United States Director of the Asian Development Bank, with the rank of Ambassador.

INTER-AMERICAN DEVELOPMENT BANK

Ralph Anthony Dungan, of New Jersey, to be Executive Director of the Inter-American Development Bank for a term of three years.

Eugene Jay Finkel, of the District of Columbia, to be Alterenate Executive Director of the Inter-American Development Bank.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

EXTENSIONS OF REMARKS

"STAFF" AFFECTION: THE IN-HOUSE BROADCAST LOBBY

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. ANDERSON of Illinois. Mr. Speaker, I would like to call the attention of my colleagues to the recent issue of "Staff," a "congressional staff journal as a process for communication" which is "published for the Congress by the House Select Committee on Congressional Operations." The journal is free to all House staff and Members, but it is costing the taxpayers $1.50 a copy or $9,000 for a monthly run of 6,000 issues, or $108,000 annually—and that is out of GPO's budget and not the $628,000 annual budget of the select committee. That comes to about $600 a page for the recent 15-page issue, if you count the three blank pages at the end.

Compare that, if you will, to the $322 a page it costs to publish the CONGRESSIONAL RECORD, and you begin to wonder if there might be a cheaper way to let staff know: how the Senate system of committees and subcommittees compares with the old, three pages; that there is a new subway station being built on the House side of the Capitol, two pages; how to care for and feed summer interns, one page; that select committee personnel can write cutsie book reviews, two pages; that some congressional offices are combining their constituent service efforts, two pages; or when the Memorial Day recess begins and ends in the House and Senate, what exhibits are running, and who the members of the Select Committee on Congressional Operations are, one-half page.

But what really attracted my attention in this Staff journal was the one and one-half page lead article entitled, "TV Coverage of House Chamber Appears to Have a Real Future." This review of the current 90-day broadcast test of House floor proceedings being conducted by the Select Committee on Congressional Operations would seem to have some real communication value for staff since, according to a Staff survey of Rayburn offices, one out of every 10 offices is not even aware of the broadcast tests, let alone that they can hookup with the master antenna to receive closed-circuit coverage of House debates.

Mr. Speaker, I do not object to the select committee blowing its own horn a little and informing staff on how the broadcast system works and who is using it. I do object to the fact that smack-dab in the middle of this article is a five-paragraph editorial touting the superiority of the House broadcast system over network coverage.

It seems some astute Staff TV critic watched the President's energy address to Congress simultaneously on the closed circuit and network channels, and observed that networks "used a variety of camera angles," "roamed over the Chamber, frequently leaving the President to pick up reaction shots from the audience on the floor and in the galleries," and in general, were guilty of taking "the more journalistic approach favored by the industry" for the sake of—God forbid—making "coverage of the House more interesting."

The superior House system, on the other hand, presented only "the single head-on picture," and only pulled back for "wide-angle views of the President's arrival and departure." By the same token, during House floor coverage, the in-House, remote controlled, black-and-white "security" cameras "focus exclusively on Members actively participating in debates," the cameras being "synchronized with the House sound system and the appropriate camera is determined by the microphone into which a Member is speaking." Let us hope a security alarm does not go off if two Members should speak simultaneously into different microphones.

Why is this in-House system superior to the "journalistic" approach taken by "the industry"? Because, in the words of the Staff critic, the emphasis in the House system is "on obtaining a complete, uninterrupted record of the official proceedings," and "proponents of the House system argue that excessive panning detracts from audience understanding of a debate."

This argument, of course, makes two assumptions which I would take issue with: first, that the networks are guilty of "excessive panning" to the point of distraction and detraction from the words of the speaker; and secondly, that a "head-on picture" of the person speaking is an accurate record of the proceedings. I would submit that, for the most part, the networks have been prudently selective and brief with their reaction shots, and moreover, that these are ever as much a part of the overall proceedings as the person speaking. Is the House in debate simply one person speaking at a time, as if he were only addressing the TV audience, or is it also the reactions and interactions of Members to the words being spoken? It seems to me that the most accurate picture of the Committee of the Whole at work should be just that—a picture of the whole or individual reactors from time to time, and not just of the principal actor at the live mike.

Mr. Speaker, I rate these issues as a member of the Rules Committee's Ad Hoc Subcommittee on Broadcasting in the last Congress. Our subcommittee studied the various broadcast options, a House system, a public broadcast system, and a network pool system, and concluded that the network pool arrangement would not only be less expensive to the taxpayer, but would have more journalistic integrity and public credibility. The Joint Committee on Congressional Operations, now the House Select Committee on Congressional Operations, came down on the side of a House operated system, at least during the initial closed circuit and public broadcast test of such coverage. The Speaker has chosen the House system for the duration of the 90-day test this spring. The main concern I have expressed this year about the in-house test is what I have perceived as the priority attention being given to the broadcast system as a self-service rather than as a public service.

The Staff article only confirms my apprehensions. While the headline trumpets the "real future" of House Chamber TV coverage, the lead paragraph notes that, "increasing *in-house* use of the broadcasts and experimentation with advanced equipment suggests there may be a long-term future for the project" (emphasis mine). Whether you interpret the long-term future to be for in-house use or the House system, no mention is made of public access to coverage.

Indeed, the public is not even mentioned until the end of the article—and then only by inference—as one of the six factors which the Speaker wants to evaluate in the test: "the suitability for broadcast purposes of the quality of picture obtainable from such equipment." Here I assume what is intended is public broadcast purposes. And yet nowhere in this midterm review of the test is there any indication that commercial broadcasters have been brought in to determine whether the pictures are suitable for their purposes. All we are told is that "several of the most advanced color mini-cameras were tested in the House Chamber during the Easter district work period, with generally favorable results." Generally favorable to whom? It must be asked whether we are limiting our future options by essentially confining the test to black and white security cameras. Why should not higher quality color cameras be used while the House is in session and evaluated for public broadcast suitability?

Mr. Speaker, from all appearances, these issues have not been confronted during the current test, nor are they addressed in the Staff article. Instead, we are being fed a high-powered lobby job for an in-house broadcast system through the slick and costly pages of this Staff journal. My objection to this self-promotional use of taxpayers funds for a "journal" of dubious value to anyone is exceeded only by my objection to the way in which the broadcast test is being handled primarily in the self-interest of the House instead of in the public interest. And the public interest in this case is in having full access to broadcast coverage of our proceedings through commercial and public broadcast stations and networks.

I would hope that during the final month of this broadcast test a determined effort will be made by the select committee to consult with commercial broadcasters about their minimum needs and standards in producing a quality broadcast picture which they can use for public broadcast purposes, and that there will be greater experimentation with the type of quality color cameras that will meet these needs.

JIMMY WHAT?

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. DERWINSKI. Mr. Speaker, Alex R. Seith, a respected observer of the international scene, also has keen insight into domestic and current events.

In his column of May 8, appearing in the Suburbanite Economist of suburban Cook County, Ill., Mr. Seith comments on the public assessment of President Carter's record in office.

The article follows:

JIMMY WHAT?

(By Alex R. Seith)

"Jimmy Carter will give liberals almost everything they want—except money." That was my view of candidate Carter a full year ago, about the time when his primary victories pointed to certain nomination and probable election. Then, people had mostly stopped asking "Jimmy Who?" and began asking "What does Carter stand for?"

Then and now, my view was unchanged: In social action issues, like E.R.A., job equality and right of privacy, Carter would win plaudits from traditional liberals. But on money matters he would be more conservative than believed by either liberals or conservatives.

At the end of his first 100 days in the White House—the arbitrary deadline for a President's first report card—this year-old assessment of Carter is widely shared.

Listen to Joseph L. Rauh, Jr., activist Washington lawyer whose middle name is almost synonymous with traditional liberalism: "The Carter administration could turn out to be the first conservative Democratic administration of this century."

Ruefully agreeing is Walter W. Heller, chairman of President John F. Kennedy's Council of Economic Advisors. "I kept telling people in the fall," said Heller, "this guy is more conservative than you think. What I didn't know was that he was more conservative than I thought."

As Heller implies, last fall Carter was widely seen as predominantly liberal, but is currently seen as substantially more conservative than previously believed. To mark the first 100 days, The New York Times and CBS News conducted a nationwide poll to compare current opinions of Carter with opinions expressed in September.

People were asked to rate themselves as liberal, moderate or conservative and to rate Carter by their own standards. Across the board, each of these groups rate President Carter as more conservative than candidate Carter. In September Carter's ranking among self-described liberals was: liberal 37 per cent; moderate 33 per cent and conservative 17 per cent. Now, liberals told the Times-CBS surveyers, Carter's liberal rating has fallen from 37 to 29 while his moderate rating rose from 33 to 39 and his conservative moved up from 17 to 26. Likewise, among self-described conservatives Carter's liberal rating dropped from 37 to 22 while his conservative rating jumped from 22 to 39. Among moderates, Carter's liberal score declined 13 points while his moderate mark rose 18 points, from 35 to 53.

Admittedly, these political rankings are tricky. Chicago Tribune Washington correspondent Bill Newkirk noted that "putting a label on Carter's agenda is difficult. Carter's advisers do not even agree. Budget Director Bert Lance calls it fiscally conservative. Domestic Adviser Stuart Eizenstat calls it moderate. Others call it either liberal or populist in tone."

Despite the difficulty in labeling Carter, Lisa Meyers of the Chicago Sun-Times Washington bureau vividly explained why Carter's liberal rating has dropped while his conservative rating has risen.

"They said he was a fiscal conservative," wrote Meyers. "It was rumored he was so thrifty he used tennis balls until the fuzz wore off. But few, including his most ardent supporters, expected President Carter to be as tight-fisted as he has turned out to be."

So far, Carter's fiscal conservatism—in such decisions as seeking a lower minimum wage than requested by George Meany and in fighting inflation more ardently than unemployment—has borne out part of my prediction. Yet he has kept promises to liberals by pardoning Vietnam war draft evaders, intervening in state legislatures to urge passage of E.R.A., ordering a disclosure of the C.I.A.'s budget, permitting former F.B.I. agents to be prosecuted for illegal wiretapping and criticizing foreign governments which curtail human rights

While not a Georgia intimate of Carter, to me this Presidential pattern seemed predictable a year ago because of two aspects of Carter's upbringing: His personal encounters with racial inequality and his hard life in scratching for money.

On Jan. 26, just before starting his Vice Presidential tour of Europe and Japan, Fritz Mondale joked about conservative doubts about Carter. "Some people tell me," Mondale quipped, "that they would have voted for Jimmy, if only they had known he was going to send me abroad within a week after taking office." Three months later, a lot more people are thinking about how they would have voted, if only they had known Carter would give liberals almost everything they want—except money.

THE TALMUDICAL ACADEMY OF BALTIMORE

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. LONG of Maryland. Mr. Speaker, this Sunday, May 15, I shall be participating in a joyous occasion, the 60th anniversary banquet of the Talmudical Academy of Baltimore. This distinguished elementary and secondary school has been created and nourished by the Jewish community of the Baltimore area to teach Jewish culture and ethics to each succeeding generation, assuring that a tradition that is as old as the Book of Deuteronomy will continue.

Jewish culture places special emphasis on tradition. We read of this duty in Isaiah. "And My words, which I have put in Thy mouth, shall not depart out of Thy mouth, nor out of the mouth of Thy seed, nor out of the mouth of Thy seed's seed, saith the Lord, from henceforth and for ever." The Talmudical Academy and its sister schools assure that the Bible, the Talmud, the codes of law, and the rabbinic literature will survive for generations to come.

The Talmudical Academy was founded in 1917 by Rabbi A. N. Schwartz, and teaches both Hebrew and English. In the first years, the students were, for the most part, children of immigrants. Many had to work to help support their families upon leaving the Talmudical Academy and were unable to go on to advanced education. As economic pressure on the community eased, most of the graduates began to attend colleges or rabbinical schools, testifying to the excellence of the academy. The current President, Dr. Lawrence Katz, assistant dean of the University of Maryland Law School, and the executive vice president, Rabbi Albert Pattashnick, have faithfully carried on this tradition of excellence.

The Talmudical Academy has given us secular and religious leaders such as Rabbi Israel Miller, vice president of Yeshiva University in New York and former chairman of the Conference of Presidents of Major American Jewish Organizations, and the late Dr. Joseph Schwartz, son of the founder and graduate, who was the national executive vice president of Israel bonds. The Talmudical Academy can be proud of the accomplishments of these leaders to whom it gave early training and inspiration.

THE F-16, A "FALCON" WITHOUT EQUAL

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. DORNAN. Mr. Speaker, last week I had the opportunity to inspect at the Edwards Air Force Base Test Facility the new F-16, a remarkable fighter aircraft designed and built by General Dynamics Corp. to fill the critical free world requirement for a lightweight, high speed, low altitude dog-fighter to compliment the excellent high altitude air superiority fighter, the F-16 Eagle.

The Air Force concept of a "high-low mix" represents the most effective combination of quality and quantity required to meet current and projected threats. The F-16 air combat fighter—ACF—is a vital factor in this force structure concept. The F-16 combines advanced technology and low cost, both acquisition and life cycle, to produce a superb multi-mission aircraft capable of backing up the F-15 in the air-to-air role and supplementing the A-10, F-4, and F-111 in the air-to-surface role. This will provide battle theater commanders with reflexibility to react to changing tactical situations and make optimum use of air power. Because of its low cost, the F-16 can also be procured in sufficient quantities to offset Soviet numerical superiority in tactical fighters as well as permitting modernization of Air National Guard and Air Force Reserve forces, which now operate far below the standards of Iran, for example. To be operated by at least four NATO nations, the F-16 is a significant step forward in terms of NATO standardization and will allow ideas such as use of common depots and joint operating bases to become realities. The four NATO Countries are Belgium, Denmark. The Netherlands and Norway. The F-16's introduction into the fighter inventories of these nations will have a lasting impact on solidarity of the North Atlantic Alliance and its defense and fighting capability.

At the high end of the "high-low mix," the F-15 "Eagle" offers combat capabilities unmatched by any fighter in the world. With its high speed and long-range radar, it is the only U.S. aircraft capable of meeting the Soviet high-altitude, high-airspeed threat. While the F-16 does not have the larger radar search area and the beyond-visual-range missile capability of the F-15, it does possess a clear-air, close-in maneuvering capability that is virtually equal to its big brother. The F-16's persistence, the ability to remain engaged in combat longer than the enemy, will greatly enhance combat employment. In addition, its small size and low-smoke engine will all contribute to the F-16's ability to complement the F-15 in the air-to-air "dogfighting" role.

Results of the last Arab-Israeli conflict highlighted the requirement for a highly maneuverable and versatile fighter such as the F-16. To overcome the air defense umbrella of a modern army, the F-16 will use a pod capable of countering both missile and anti-aircraft threats. This pod is reprogramable as well as integrated with internal aircraft detection systems and can be adapted to meet new threats as they are encountered. The F-16 will be compatable with the latest in laser and electro-optical weapons to provide maximum effectiveness with minimum exposure. This is a key factor in blunting and stopping mobile armored forces. Rapid turnaround for maximum sortie rate has been a design consideration since its inception. In the air-to-air environment, technology advances such as a "snap-shoot" gunsight and the latest in heat-seeking missiles will provide more victories per mission.

The F-16 is a vital element of our free world defense posture. I support the F-16 program currently proposed by the U.S. Air Force and strongly urge my colleagues to do the same.

I might add that I personally would like to see General Dynamics and the Air Force name this sleek, amazingly effective fighter the "Falcon." The falcon is the symbol of the U.S. Air Force Academy where we train tomorrow's air leaders and begin them on the long road to piloting this shield of liberty. What a great team for American and NATO airpower: The "Eagle," F-15, and the "Falcon," F-16. If we have them, we will probably never have to use them in anger.

Thank you, Mr. Chairman.

EXPLANATION OF VOTE ON EXPORT-IMPORT BANK ACT AMENDMENTS

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. BINGHAM. Mr. Speaker, on May 3, 1977, I voted "nay" on House rollcall No. 182, a motion to suspend the rules and pass H.R. 6415, a bill to extend and amend the Export-Import Bank Act of 1945.

Mr. Speaker, my negative vote on final passage of this legislation was purely procedural and does not reflect my views on the substance of H.R. 6415. On the contrary, I support the programs carried out by the Export-Import Bank, the extension of those programs, and the procedures and standards with respect to nonproliferation and human rights for Export-Import Bank financed projects set forth in H.R. 6415.

I objected, however, to the fact that this legislation was brought to the floor under "suspension of the rules"—a procedure which precludes amendments. At least one significant amendment had been proposed to this legislation, and full notice given to the Members of the House concerning this amendment. I refer to an amendment proposed by my friend and colleague from New York, Mr. BADILLO.

Mr. Speaker, I did not favor the Badillo amendment, and would have voted against it had it been offered. But I believe it was a significant amendment which deserved the consideration and attention of the House. My vote against passage of H.R. 6415 reflected my dissatisfaction with the procedure under which the bill was considered which made it impossible for this amendment to be debated.

SOCIAL SECURITY TAXES

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. PICKLE. Mr. Speaker, the President has come forward with a very innovative approach to the funding crisis which the social security program is now facing. Certainly his program is fraught with controversy and will have to be examined very closely by the Ways and Means Committee.

I am enclosing an article from the New York Times which raises a very serious issue that the administration plan enlarges: the cost of State and local governments and nonprofit institutions.

Last session, the Congress forced the municipalities to provide unemployment insurance for their employees. Similarly, in the administration proposal to remove the cap on the wage base for employers, universities, city, county, and State governments will have to pay the tax for the total salary. These additional funds must come from increased taxes. So, I would hope that we tread carefully in this area to make certain that we do not wind up in the same boat that unemployment compensation has put the cities: They have to lay off employees to be able to pay into their unemployment fund. This brings into focus also the question whether all employees—Federal included—should be covered.

There are other serious problems raised by the proposal, particularly taking funds from the General Treasury, and removing the limits on the employer wage base, but I wanted to point out the special problem which nonprofit groups face.

The article follows:

[From the New York Times, May 12, 1977]

CARTER'S PROPOSAL TO RAISE SOCIAL SECURITY TAXES COULD PUT A STRAIN ON STATE AND LOCAL GOVERNMENTS

(By Edward Cowan)

WASHINGTON, May 11.—If enacted by Congress, President Carter's proposal to increase Social Security taxes paid by employers could cause new fiscal stress for state and local governments, including New York City.

States, counties, cities and towns might have to choose between withdrawing from the Social Security System and finding additional tax revenues to pay their share of the higher Social Security payroll tax on employers, according to Social Security officials.

Some 10 million state and local government employees now participate.

Plainly worried that a rash of withdrawals by states and subdivisions would aggravate the system's financing problems, officials contended that "one way or another, they're going to have to pay higher retirement costs" because of inflation, either under the Carter proposals or under a more conventional ap-

proach that would raise payroll taxes for employers and workers equally.

The officials also contended that no town, state, county or school district could buy for its employees comparable retirement, survivor and disability benefits from a private underwriter at lower cost than from the Government. In any event, there will be a squeeze, it was said.

As one official put it, "The private employers can pay it out of taxes or pass it on to the consumer in prices. In the case of state and local entities, there isn't any consumer to pass it on to except the taxpayer."

Nonprofit organizations such as the Salvation Army would also be squeezed.

In March 1976, New York City gave the required two years' notice that it would withdraw its 400,000 employees. The city and the workers together paid $516 million in payroll taxes in 1975. That notice was regarded by many persons as a ploy to put pressure on municipal unions in contract negotiations.

Without conceding that in so many words, a spokesman for John C. Burton, the Deputy Mayor for Finance, said today that preliminary indications of a study of withdrawal showed "it would be more costly for the city to withdraw."

CITY WILL LIKELY STAY

"So the high probability is that we will stay in the system," he said.

Or, as one city official who requested anonymity put it, "We're not going to irritate the unions by pulling out."

Federal analysts said that many state and local pension systems were financed on a combined basis with Social Security. Requiring more in Federal payments would tend to drain contributions away from the local system, officials said. One obvious conflict could be demands by city managers for bigger employee contributions to the local system and counterproposals by municipal unions that the city raise the money.

As part of a package of measures that he said would eliminate the growing deficits in the Social Security System—the excess of benefit payments over payroll tax revenues—President Carter asked Congress Monday to require employers, but not employees, to make payroll tax payments on the full compensation of all employees.

Since enactment of the Social Security Act in 1935, the practice has been to collect equal levies from covered workers and their employers. The tax was imposed on wages up to a specified level, this year $16,500. The combined tax rate is 11.7 percent, divided equally.

Eliminating that ceiling in stages for employers would cost them an extra $30 billion in 1979–82, including $11.4 billion in 1982 alone, according to the White House. Social Security officials said that they were unable to estimate for the moment how much of that extra $30 billion would come from state and local governments. No mention of this problem was made at Monday's White House briefing.

However, the chief actuary of the Social Security System, A. Haeworth Robertson, has said that state and local governments accounted for 10.5 percent of 1975 revenues. Using that as a first approximation, officials said that the four-year cost to state and local governments could be $3 billion, or perhaps a bit less because of the higher executive salaries in private industries.

For the last 15 years or so, there has been a creeping trend toward withdrawal from the system. Between 1959 and 1976, withdrawals covered 52,200 employees of 372 state and local units.

In addition, 325 public employes filed notices of termination to take effect through 1978 and cover 505,700 employees. However, officials said that some had changed their minds and canceled their notices, for example Baltimore and San Diego County, and that Alaska gave every indication that it was going to cancel.

In addition, new political units have joined the system each year. Social Security data show that the number of additional employees exceeded those dropping out in each year of the period 1973–76.

Whether employees must vote on withdrawal depends on state law, not Federal. Federal law permits cancellation of a two-year withdrawal notice up to the last day. But once it takes effect, the unit cannot elect to rejoin.

By law, no employee loses whatever retirement and survivors rights he has earned by past contributions. "You lose nothing you have on the record," a spokesman said. However, because the law reads differently for disability benefits, that eligibility would expire five years after withdrawal, the spokesman said.

CONCORDE

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. ROSENTHAL. Mr. Speaker, I am deeply upset, as are the residents of Queens, about yesterday's court decision to permit Concorde supersonic transport service at John F. Kennedy International Airport.

Concorde is as welcome in New York as a horde of locusts, and it is potentially more destructive.

We are not jealous that the British and French have a supersonic transport and the United States does not. That is a specious argument I thought we laid to rest years ago. The 92d Congress, of which I was a Member, took the decisive step of removing the U.S. Government and the American people from the supersonic aircraft business. The Congress said a resounding "No" to the SST because it was and still is economically unsound, unbearably noisy and potentially threatening to the ecology of our atmosphere.

The SST will serve a privileged, wealthy few at the cost of the welfare of the many. So that select members of the international jet travel set may have the luxury and convenience of supersonic travel, the rest of us, primarily those of us who live in Queens, are being asked to surrender to the ear-shattering noise and ecological dangers posed by this new toy in the sky.

Concorde salesmen have painted a picture of New York losing commerce and prestige if it rejects Concorde. Trade supposedly will be encouraged by the 2- or 3-hour cut in travel time, and our role as America's No. 1 gateway preserved. That is a false and distorted portrayal. It is not New York that needs Concorde, but Concorde that needs New York.

This airplane threatens the domestic tranquility that we hold so dear. It raises an already debilitating noise level to an intolerable stage. The rights of hundreds of thousands of New Yorkers surely must outweigh the convenience of a few hundred wealthy Concorde passengers.

Aircraft noise is not only annoying but it also threatens the physical health of persons on the ground as well as their psychological and social balance. It interferes with sleep, speech, listening to the radio and television, communicating, reading, and so many of our other daily functions. It depreciates the market value of residential property and disrupts schools and businesses in its path.

I am not at all certain the Concorde's sponsors, particularly the British, are as pleased as they appear to be about getting landing rights at Kennedy. They surely recognize that their airplane is a flying white elephant that is a financial failure of the first magnitude. There simply have not been enough orders from airlines to buy the plane and sustain its cost. Virtually every flight loses money. It was designed primarily for the world's busiest and most lucrative long-distance route, New York to London/Paris. Design and weight problems, however, have forced the airlines to cut back the number of revenue-producing seats. On one recent flight passengers were forced to leave their baggage in Europe so there would be enough room for them and the fuel necessary to get them to the United States because of headwinds aloft.

The plane is not just uneconomical, but also an enormous financial drain on Great Britain, which can ill afford such a luxury. But that country is locked into coproduction of the Concorde with France as part of the price of entry into the European Common Market. Britain has on several occasions reportedly tried to drop Concorde, but the French, who see their national pride at stake, have forced them to stay in.

The British and French have poured more than $3 billion into the project, and New York landing rights are their last hope. But it may already be too late. Present plans call for building only 16 planes by the end of next year; 2 of these are for testing, the British and French state-owned airlines have purchased 9 and 5 are unsold. They must sell several hundred to break even, but the best they have been able to do so far is get some unenthusiastic options to buy from China and Iran.

The evidence appears strong that Concorde will fail regardless of whether it gets New York landing rights. Should they ultimately be denied access to Kennedy Airport, the plane's sponsors may seek to portray our city as the scapegoat to justify scrapping their airplane. That would be unfair and unfortunate, but I for one would rather see New York be their scapegoat than their guinea pig.

REGULATORS A PROBLEM

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of my colleagues the excellent editorial from the Goleta Today entitled:

"Regulators a Problem":

REGULATORS A PROBLEM

In the crazy energy picture which now confronts the country, most Americans wonder what it will mean to them as individuals.

Will there be enough gasoline for the family car and enough natural gas to heat our homes?

Right now the pressure is on the gasoline guzzlers. In the total picture, though, automobiles use only about 18 per cent of our total energy. Less than 20 per cent is used in our homes and commercial establishments.

So where does the lion's share of energy go?

To electric generation and to big industry, more than 55 per cent of the total energy used.

Today, too much of the nation's natural gas and oil go into the production of electricity. It used to be that coal was the main source for producing the power that lights our homes, turns our electric motors and lights our streets.

But coal use has gone down in recent years, largely because of federal regulations.

Environmental standards have made it harder and harder both to mine coal and to burn it.

So the trend has been toward burning oil, which our cars need, and natural gas, which our homes need.

This country has enough coal to last 300 years. Now all we need is to find a way to dig it and to burn it.

Of course, to do this some way must be found first to deal with the regulators.

And these guys are just a couple of blocks away from both Congress and the President.

So once again we have the all too often problem. Both the cause and the so-called solutions are side by side in Washington, D.C.

Now if they'd just get together, all of us would be better off.

EDUCATION OF THE HANDICAPPED ACT

HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. GOLDWATER. Mr. Speaker, unfortunately, during consideration of H.R. 6692, a bill to "extend certain programs under the Education of the Handicapped Act," I was unavoidably absent. I was in my congressional district preparing to conduct a series of "Town Hall" meetings, and it was my understanding that the bill would come up at a later date.

As someone who has long been interested in programs for the deaf and involved with the program for deaf students at California State University—Northridge, CSUN—since I first entered Congress in 1969, I am pleased that my colleagues in the House passed legislation that will have a positive impact on their program.

Hearing-impaired persons in the United States should have equal opportunities, and freedom to choose from a variety of programs, curriculums, and institutions. The program at CSUN is unique in that it offers an integrated educational experience for the hearing-impaired. Hearing and nonhearing students work, study, and share the same dormitories. As a matter of fact, an increasing number of nonhearing students are taking sign language courses.

I am a proud and ardent supporter of the CSUN program, having personally visited its Center on Deafness and met the students and staff. It is an excellent program. Most hearing-impaired individuals want no special considerations once they enter the mainstream of our society. The CSUN program is helping them achieve practical experience in an environment that will not isolate them from hearing persons once they leave the academic community. Section 625A of this bill will be especially beneficial and I commend my colleagues, Mr. BRADEMAS and Mr. QUIE, for their leadership and support in promoting this section of the bill.

CONFERENCE ON THE LEGISLATIVE PRIORITIES OF THE NEW YORK HISPANIC COMMUNITY: III

HON. HERMAN BADILLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. BADILLO. Mr. Speaker, I am pleased to include in today's RECORD the very noteworthy report of the Economic Development Task Force at the recently held Conference on the Problems of the Puerto Rican and Hispanic Community in the New York metropolitan area. The task force, under the able leadership of Ray Norat, commissioner of the New York State Department of Economic Development, very explicitly outlines the problems of getting the Hispanic community into the financial mainstream of the country, and suggests concrete and far-reaching solutions for doing this.

I commend this thoughtful and important paper to each of my colleagues who is interested not only in Hispanic economic development, but in the whole problem of incorporating every citizen into the economic life of our country:

ECONOMIC DEVELOPMENT—MEETING THE NEEDS AND ASPIRATIONS OF THE HISPANIC BUSINESS COMMUNITY IN THE NORTHEAST: A PLAN FOR ACTION

"Nothing makes it harder to provide decent health, housing and education for our people, protect our environment, or realize our goal of a balanced budget, than a stagnant economy.

"As soon as I was elected, the leaders of the Congress and my advisors began to work with me to develop a proposal for economic recovery. *We were guided by the principle that everyone who is able to work ought to work; that our economic strength is based on a healthy, productive private business sector; that we must provide the greatest help to those with the greatest need; and that there must be a predictable and steady growth in our economy.*" (Emphasis added.) From President Jimmy Carter's Televised Speech to the American People, Wednesday, February 2, 1977.

FOREWORD

President Carter has strongly stated his intention to revitalize our economy, and in so doing has raised the hopes and expectations of the Northeast's Hispanic community, which has suffered so terribly in the recent recession.

It is important to emphasize, however, the need to pay special care and attention to the unique conditions, both strengths and weaknesses, assets and liabilities, existing in our communities when designing and implementing any particular economic development for this area. In the past, we all too often accepted the promise of programs launched at national and local levels on face value, without contributing to their formulation. When these initiatives failed to meet our specific needs or advance our aspirations, we found ourselves in the awkward position of being held accountable for a project designed to fail because certain input was not included.

The question of why special consideration would be given to specific regions of our nation, or particular ethnic, racial or social groups, arises with increasing frequency. We are, after all, as stated so succinctly in the Pledge of Allegiance, "one nation, indivisible." But this seeming discrepancy fades when considering the various regions—industrial, agricultural, mountain, plain and coastal—with their differing economies, demographic statistics and cultural distinctions.

We are one people, composed of many peoples with dissimilar social, ethnic and cultural backgrounds, assimilated to a conglomerate body politic. We are one economy, with wide disparities in income distribution and degree of participation within our free enterprise system.

Therefore, it is imperative our national leadership establishes a basic philosophical stance as the guiding principle for the plans and activities meant to deal with the inequities and impediments presently evident in our political and economic system regarding the Northeastern Hispanic business community. This philosophy should be firmly based upon, and incorporate, the following considerations to sustain and justify the economic development effort needed to evoke position change within the Northeastern United States Hispanic business community:

1. *The Moral Imperative:* Our national leadership must fully accept and implement a conscious policy of assisting the less advantaged people of the United States as a fair and just action. Furthermore, there must be proper insurance that this feeling is filtered down to the political leadership and decision makers at the local level.

2. *Economic Imperative:* It must be fully recognized that it is within the enlightened self-interest of the nation to raise the level of economic activity throughout the Northeast, now suffering from an acute case of economic erosion, and that the Hispanic community in this area, being most affected merits extraordinary considerations.

3. *Structural Imperative:* Economic restructuring is inevitable; it is important to be committed to positive change, and to retain a sense of commitment to an ongoing dialogue between the Northeastern Hispanic business community and the Carter administration.

4. *Strategic Imperative:* The proper programmatic action, to effectively tackle problems and impediments which create instability and failure among our existing and emerging Hispanic business community, must be established.

By acting in accordance with the principles described above, and giving proper consideration to the recommendations to be included in this paper, we can move to bring the Hispanic business community in the Northeastern United States to its proper participatory place within the American economic, political and social system.

PART I—INTRODUCTION OVERVIEW OF THE HISPANIC COMMUNITY IN THE NORTHEAST REGION OF THE UNITED STATES

Introduction—Overview of the Hispanic Community in the Northeast Region of the United States

Demographic and Cultural Factors: The Hispanic Community in the Northeast numbers more than three million persons. Puerto Ricans represent the largest single group (almost 70%), but we must highlight the fact that the Hispanic Community in this region is comprised of people from many

Spanish-speaking countries. The balance of the Hispanic Community in this area is made up of people from the Dominican Republic (approximately 300,000); Cubans (250,000); Colombians (75,000); Ecuadorians (65,000); Spaniards (45,000); Peruvians (30,000); and smaller numbers of Mexican-Americans, Panamanians, Argentineans, Chileans, Salvadoreans, Hondurans, Bolivians and others.

The basic differences between them and the White majority community or other ethnic and racial minorities also prevalent in the region (Black Americans, Orientals), outside of racial or cultural considerations, reflect on their length of residence in this country; levels of education; understanding and awareness of our political structure and institutions, and financial resources at their disposal.

Language, cultural background and racial characteristics, frame of references and attitudes also serve to distinguish between them and the community at large.

Opportunities for employment, advancement and business ownership are seriously reduced by these differences.

Cultural patterns have kept many women in the Hispanic Community from the business world, despite the fact that large numbers of them head households or contribute to the support of their families or themselves. Most significantly, because of obstacles and handicaps, the Spanish-speaking community is extremely low on the economic scale, and the average family income falls largely in the poor or "near poor" category.

Negative Factors Affecting Hispanic Community: The Hispanic Community in the U.S. holds today, and for many years has held, the dubious distinction of holding the next to highest unemployment rate in the nation. Only the American Indians show higher rates of unemployment. Youth unemployment in Hispanic neighborhoods like East Harlem (El Barrio) and the South Bronx has been registered to exceed 60% for youth 16 and over not attending school and looking for employment.

Hispanics also occupy the worst housing, living in the most dilapidated and neglected areas of the urban centers and towns in which they have settled in the Northeast. Every winter, fires take an awesome toll in Hispanic ghetto areas in New York City, Chicago, Boston, etc., where people huddle in ice-cold apartments and furnished rooms. Their pitiful attempts to warm up their frigid quarters with whatever means they have at their disposal have led to flaming disaster and tragedy for many. Mono-lingual programming in schools, training programs and qualifying workshops exclude the Puerto Rican and other Spanish-speaking because of language differences. Language and cultural differences restrict access, acceptance and advancement in education, employment and markets.

Furthermore, blue-collar jobs are also disappearing at alarming rates. New York City has been losing blue-collar jobs at the rate of 20,000-plus a year in the late Sixties, to 7,000-plus a year in the 1972–1975 period. Puerto Rico expects to lose 70,000 blue-collar (or low industrial jobs) by 1985, and gain 90,000 technical, professional and managerial opportunities by the same year.

Those Hispanics in the labor force lucky enough to have regular jobs usually hold low-paying positions with little or no room for advancement. And even these lucky ones are threatened with potential unemployment due to the continuous reductions of these jobs as a result of increasing automation. Many have suffered temporary layoffs, and even permanent separation, due to the cumulative effects of the energy crisis. Additional jobs have been lost due to companies going out of business because they cannot deal competitively with the rising tide of foreign competition. Others have suffered the consequences of the relocation of their companies to the Southern states, where a more suitable business climate has emerged, and a variety of incentives are being offered to out-of-state firms to establish their facilities there.

The Hispanic Community has also been more severely affected than the population at large by the budgetary cuts in social programs, health services and education which have been instituted by the financially hard pressed states and localities through the Northeast. New programs, tailored to meet special needs such as bilingual education, have been severely impaired. The abuses in medicaid/medicare and nursing home operations have led to further victimization of the innocent, the poor, the sick and the impaired.

The cumulative effects of all these adverse factors, both chronic and current, maintain the Hispanic Community in the Northeast in a permanent state of depression even more severe than the distress felt by the whole nation during the hard times of the 1930's.

Positive Factors: In presenting an overview of the Northeast Hispanic community, it behooves us to give prime consideration to the various adverse factors affecting our well-being.

But we would be selling ourselves short if we do not address ourselves with equal candor to presenting the positive factors which represent the strength, vitality and tenacity of our people. These individual and collective traits provide the base for the uplifting and eventual prosperity of our community.

Among these positive factors we find that strong family relationships, traditional in our culture, respresent the bedrock of strength and unity among us. Hispanics are used to sharing limited resources of the immediate family, relatives and close friends.

Our people also hold a strong sense of personal dignity and individual worth. These traits, to a degree, explain the higher than average propensity to enter into business whenever groups of Hispanics establish themselves in the U.S.

This entrepreneurial spirit among us is what we consider to be our most valuable national resource, the most crucial element in our favor for the advancement of our community into the mainstream of the American social economic system.

The typical Hispanic family is young, with a median age of 20.7 years, as compared to 28.6 years for the U.S. family. Its median income in 1975 came to $9,600, as compared to $8,779 for the Black family and $13,700 for the U.S. family.

The Hispanic Community in the Northeast represents a sizeable market for goods and services. Its 3 million-plus population in the Northeast enjoys a purchasing power of approximately $4.5 billions. It is also significant to point out that purchasing habits among Hispanics is 10% above those of the U.S. family.

Characteristics of the Hispanic Businesses in the Region: Most Puerto Rican and Hispanic community members from the Caribbean, Central and South America who are adults over thirty years of age are products of the tropical agricultural economy in Puerto Rico and Spanish-speaking countries before the 1950–1960 industrialization period. In 1950, the average annual per capita income in Puerto Rico was $279. The tremendous amount of unemployment, or employment in farm or low-occupational fields, negated any opportunity for most Puerto Ricans or Spanish-speaking to acquire sophisticated business skills, or to gather experience and exposure in modern business systems or practices. Educational opportunities on the Island of Puerto Rico, as in other Spanish-speaking lands, were unavailable or directed to rural needs. Training opportunities were also in short supply or limited in skill development.

With industrialization, the situation improved, and educational systems responded to the more sophisticated needs of industry in professional, technical and managerial areas. Those closer to twenty years of age may have been benefitted from higher levels of education and training, on home grounds or in the Continental United States; but business-oriented skills levels are still unfortunately far below those acquired by the majority community members.

This background of poverty and poor training has not prepared sufficient Spanish-speaking people for business careers. A great many, however, enter business, and many succeed. Many also fail. Even those who succeed can only reach slightly-elevated levels of attainment, since expanded businesses call for more sophisticated business skills than most currently enjoy. The important fact is that there are thousands of successful (by basic definition) businessmen and women in cities and towns across the country, but these Hispanic business people cannot advance without outside assistance.

The best available estimates show that there are approximately 30,000 Hispanic-owned businesses in the Northeast region, as follows:

State	Hispanic Businesses
New York	20,000
Connecticut	2,500
New Jersey	4,000
Pennsylvania	2,000
Massachusetts	1,500
Total—Five-State Area	30,000

In New York City alone, there are 16–18,000 Hispanic businesses, predominantly small retail outlets.

Over 50% of the total Hispanic businesses in the region are bodegas (grocery stores), and approximately 80% of the total are retail outlets grossing less than $100,000 a year.

Consider the unusual handicaps under which the Hispanic businessmen and women must operate:

Poor business skills, business training, business knowledge and understanding of modern business practices and systems;

Language-communication differences, untranslated skills;

Overdependency on cash payment for supplies and services, with little or no access to credit or financing;

Insufficient sales volume to establish real buying power;

Overpayment for supplies, services, equipment and poor delivery, poor quality installations, fixtures and facilities;

Dependency on limited sources of supply and services, controlled by often exploitative majority-owned businesses;

Discrimination in markets and marketplaces, inadequate security, fire protection, safety guards, insurance coverage;

High operating costs stemming from small purchases, dead inventory, poor management, overcharging the supplier, misuse of labor and low productivity (obsolete equipment);

Business interruption and disturbance through mechanical breakdown from older, poorly installed facilities;

Underfinanced, understaffed, underqualified labor;

Dilapidated facilities, inefficient equipment, poor display, poor work flow and materials flow;

Unavailability of emergency services, service contracts warranties and guarantees, often withheld;

High densities of similar operations in local market—overcompetition, overlapping of merchandise lines, dilution of local markets;

Markets disturbed by demolition, construction, abandonment, fire, crime and vandalism;

Inability to rent facilities in prime market areas, forcing them to operate on spotty heterogeneous business streets, in low-income areas;

Not represented by local trade associations or organizations;

High crime deters night business and interferes with business operations during daytime;

Competition from well-financed and established majority-owned businesses of size;

Little utilization of legal representation to protect business rights and interests;

Poor bookkeeping and accounting systems, no knowledge of cost analysis or actual costs, late payment of bills;

And many other operational shortcomings.

Perhaps the most critical obstacle is working capital and investment funds for expansion. The gaps between the receipt of inventories and sales or, in the case of suppliers or manufacturers, the gap between delivery to customers and receipts of payment, dry up available working capital and handicap seasonal purchasing, operational needs, or the meeting of delivery deadlines. Without credit or access to financing or factoring, expansion is a compounding of business problems. Expansion means greater debt, greater risk and greater chance of failure.

Without access to financing or credit, the Hispanic businessman or woman cannot expand into efficient and more profitable vertical or horizontal expansion, cannot centralize operations and standardize packaging, procedures and products, cannot benefit from tax benefits and advantages, and cannot produce or sell goods or services at competitive prices. It resolves itself into a case of small businessmen serving very limited markets, buying and selling between small buyers and small suppliers—a separate operating business system, far below and apart from the mainstream of economic activity in the nation.

Yet, the power is there. Thousands of Hispanic business buyers and suppliers are there. Billions of dollars circulate through this separate economy. Opportunities abound.

To even sell or service the larger markets, the Hispanic businessman needs larger facilities and production, more working capital and investment capital, more relevant training programs and more effective technical and managerial assistance than has been offered so far to them for existing programs.

PART II—GETTING HISPANICS INTO THE INDUSTRIAL, COMMERCIAL, AND FINANCIAL MAINSTREAM OF THE NATION

Getting Hispanics into the industrial, commercial and financial mainstream of the Nation

In Part I we presented an incomplete, but substantial, inventory of the numerous problems facing the Hispanic business community in the Northeast. In this section, we will present a series of recommendations for the type of action required to do away with obstacles to growth and prosperity hampering our business community. Our recommendations fall under two distinct categories, namely:

1. Those programs and activities needed to strengthen and stimulate growth among the already existing Hispanic business.

2. The steps necessary to bring about a favorable environment for increasing numbers of Hispanics entering the business world, particularly in those business areas unavailable to them up to now.

Business Education for the Hispanic Entrepreneur of the Northeast: As a general rule, Hispanics, unlike other ethnic groups, are not being prepared in adequate numbers to be entrepreneurs or managers. A principal reason, among others, is that the existing educational system has consistently oriented the Hispanic toward the semi-skilled job market with little encouragement and preparation for a student toward going to college. When a student does plan to enter college, it is with the intention of seeking a career in the human services of the public sector. He or she then becomes a role model for the next generation. This process results in an inconsequential number of Hispanics attending business schools. Without financial resources to develop one's business know-how, and without the role model to emulate, the only way business can become a viable option to a substantial number of Hispanics is through access of formal learning institutions, proper guidance and the necessary financial and other incentives to exploit these opportunities.

A. *Recommended Steps to Increase Hispanic Enrollment in Business Schools:* The Federal Office of Education should embark on a program of creating greater educational opportunities for the Hispanic to enter college and seek business careers by:

Fostering and supporting the development of our own post-secondary bilingual programs and institutions. (This can be accomplished by a mandate in the policy guidelines of the Developing Institutions Act, the Fund for the Development of Secondary Education Program Act and the use of Discretionary funds.)

Granting an incentive award of $500.00 to every accredited institution for every Hispanic student graduated with a business degree. (A similar grant should be made to those institutions whose Hispanic enrollment is at least 10%.)

Creating meaningful scholarship programs for students interested in a business career.

Subsidizing up to 50% of salary for a stipulated period positions in private industry that provide experience plus upward mobility to Hispanic graduates from business schools.

To minimize the financial barriers to higher education, Congress should:

1. Appropriate full funding for State Student incentive matching grants.

2. Provide full funding for the Basic Education Opportunity Grant (BEDG) Program in fiscal year 1978, increasing the maximum award consistent with recent increases in student expenses and raising the ceiling on awards to actual cost, at least for lower division students.

B. *Latino Business Institute:* The Department of Commerce, under its Interagency Council of Minority Business Enterprise has developed a Special Implementation Committee to establish education and training incentives throughout various federal agencies via the Federal Interagency Committee on Education. This group should give immediate consideration and provide Federal funding for the establishment of a Latino Business Institute that would encompass features and programs similar to those that form part of similar facilities at Howard University, Tuskegee College, Atlanta University, etc.

The objectives and services of such an educational institution would be to:

Provide ongoing information to potential and existing Hispanic entrepreneurs of available business education resources;

Offer specialized counselling services on financial assistance, preparatory courses and specialized business courses for the Hispanic businessman and woman and potential college-level students;

Serve as a liaison with leading business colleges and graduate institutions in the New York City area to insure access of Hispanic businessmen/women and students;

Develop a Hispanic Business Internship Program for Hispanic students with leading corporations and other private sector institutions as part of a credit earning work-study program;

Co-sponsor business seminars and conferences with leading corporate and academic institutions on new methods of accounting, management and marketing which are adaptable to the needs of the Hispanic businessman/woman and students;

Develop a Latino Business Studies Center, a division of the Latino Business Institute conducting studies of economic and business ventures, new business techniques applicable to Latino businesses, and national and international markets for the Latino businessman and woman. Studies would be the basis of graduate level dissertations with leading business colleges and graduate centers.

Initiate a Business Career Institute with the collaboration of New York City business firms on a yearly basis as a means of preparing future entrepreneurs to enter the ranks of industry and corporate life. The range of services would include: résumé preparation, interviewing skills, industry-wide information on corporate positions available, job referral services and a six-month followup.

To insure the proper planning and development of a Latino Business Institute, the following federal resources and support are recommended:

1. That the Secretary of Commerce, Dr. Juanita Kreps, be authorized to empower the Federal Interagency Committee on Education to provide planning and development monies to establish the Hispanic Business Institute for the New York City and Northeast Region.

2. Under the Commissioner of Education, (HEW), the Bureau of Post-Secondary Education as well as the Bureau of Occupational and Adult Education and the Office of Post-Secondary Education Programs (Office of Planning) coordinate efforts for the planning and support of programs and services developed by the Latino Business Institute.

3. Under the Director of the National Institute of Education, the Education and Work Division be authorized to commission studies of relevant Business Development Career Education materials at the post-secondary levels for implementation by the Latino Business Institute.

4. That the Fund for the Improvement of Post-Secondary Education, under the Assistant Secretary of Education, in conjunction with the Federal Interagency Committee on Education collaborate to provide necessary support monies for the establishment of support services and planning for the Latino Business Institute.

5. That HEW and the Office of Minority Business Enterprise (OMBE) as well as the Small Business Administration support and provide business curriculum assistance to the efforts of the Latino Business Institute.

6. That the Offices of the Small Business Administration be called upon to provide and co-sponsor business conferences and contacts with leading business institutions, chambers of commerce, and trade and professional associations within the Northeast area in collaboration with the Latino Business Institute.

7. That the "Small Business Institute" program of the Small Business Administration be utilized to support the consultation of the leading New York and Northeast regional business schools in the planning and development of curricula and seminars.

8. While generally emphasizing skills training and employment, the Department of Labor has resources for training potential minority entrepreneurs in various new and growth service industries such as automotive repairs and business ownership. The Department of Labor should "set aside" $100,000 for entrepreneurial training of potential Hispanic businessmen and women in the Northeast Region.

9. In Fiscal Year 1974 the Department of Agriculture provided more than $4.9 million

for education and training as part of the technical assistance activities of the USDA Extension Service. Training of employees of Hispanic food enterprises by production specialists, marketing experts and other business leaders is offered. This USDA Extension Service program should be applied to assist Hispanic businessmen and women in the Northeast region under the auspices of the Latino Business Institute.

10. As of Fiscal Year 1973 some $10 million has been expended by EPA to provide access for minority entrepreneurs in the research, development, education-training and procurement of EPA related activities. EPA has just recently developed a new business opportunity program providing training in any new field developed by the EPA and its related activities. Such activities should be coordinated with the Latino Business Institute to assure Hispanic involvement.

11. The GSA provides minority business owners in eleven major cities with a full range of government contracting opportunities. Yearly seminars plus media campaigns are provided. Such support should be coordinated with the Latino Business Institute of New York.

12. With the advent of Secretary Patricia Roberts Harris, and the possibility of low income housing being renewed, a program for minority contractors should be revived. Such a program should provide for training as well as contracting with Hispanic minority firms of the New York and Northeast region. In fiscal year 1974 some $43 million were expended for training and contracting in Model Cities areas.

13. The transportation field offers numerous opportunities for minority business in the field of transportation construction, maintenance and improvements. Likewise, the field of aviation and airport maintenance as well as the new Westway Highway Act in New York City should provide minority contractors with renewed opportunities in the contracting and subcontracting field to make sure that Hispanics are well represented in the affirmative action effort of these agencies, a direct link should be established between them and the Latino Business Institute.

Participation in the free enterprise system as the owner or part owner of a business is a complex learned response. Most Hispanics in the United States have not had the opportunity to develop a commercial viewpoint and outlook as part of their educational experience. This has seriously hampered the entry of Hispanics into both the business community, and the mainstream of American culture.

Education is the only means of bringing in to the Hispanic awareness the great potential for upward mobility the business world offers. This education must not limit itself to classroom situations, but should cover work/study programs as well as adult education, both in English (so as to improve the language skills so crucial to conducting a successful enterprise in the United States) and in Spanish so as to facilitate learning by those enterpreneurs having Spanish as a first language.

Until educational opportunities of the Hispanic community are enlarged in regard to business operation, little can be expected in getting Hispanics into the mainstream of our industrial life.

Managerial and Technical Assistance for the Northwest Hispanic: During the last two decades, while business activity as a whole has continued to grow, the small business sector has barely managed to hold its own. Higher operations costs have plagued it due to inflationary forces, and high unemployment and cut-backs in social programs have led to stagnation and even reduction in the purchasing power of the lower and middle income groups.

There has also been a trend toward business consolidation and bigness in business operations. The shipping center, the discount store, the retail chain and franchise networks have cornered the markets. In manufacturing and the service industries there has also been a decided trend toward bigness. The end results of these developments has been a reduction of opportunities for entry by Hispanic entrepreneurs into the business sector. But all has not been bleak for the aspiring entrepreneur. During recent years we have seen the establishment and increase of programs geared specifically to assist members of minority groups to enter the business world. These programs also offer assistance to those already in business on how to better operate their enterprise by offering managerial, technical and financial assistance to them. There has also been a liberalization of terms by the SBA and financial institutions.

This effort toward expanded ownership and assistance to survive have left their mark on the national economy, as can be determined from the statistics offered by the U.S. Department of Commerce, OMBE, the SBA and minority businessmen associations. Hispanics have substantially benefitted from these efforts, but their gains have not been commensurate with those made by other ethnic or racial groups nationally. Neither have these gains made by Hispanics been proportional to their geographic distribution. Minority enterprise gains in the Southeast, Midwest, Southwest and Western part of the nation have been more impressive than those attained in the Northeast and Mid-Atlantic States.

Nor have the gains made by Hispanics been equitably distributed among the various national origin groups that compose the total Hispanic Community. Cubans and Mexican-Americans throughout the nation, as well as regionally, have fared much better than Puerto Ricans and other Hispanics. A good reason for these lopsided results can be attributed to the long-established and growing discrepancy in funding allocations made by Federal agencies to sustain the management and technical assistance and entrepreneurial development programs. Parity has not been a major consideration in the distribution of these funds. Even among those funds earmarked for Hispanic business development, just like in the case of Bilingual Education, the lion's share has been siphoned off to other areas outside the Northeast, to the detriment of the Hispanics residing in this region.

We therefore recommend that:

1. President Carter form an interagency committee composed of (but not limited to) the Secretary of Commerce, Secretary of HUD, the SBA Administration, the Director of OMBE, and the Director of the Community Services Administration to present to the President within a six-month period a plan for a comprehensive, coordinated effort to increase the effectiveness of the economic development effort within the Northeast Hispanic Community.

This Interagency Committee should be complemented by the creation, by executive order, of a Northeast Hispanic Economic Development task force to serve as the connecting link to the community for the Interagency Committee and to provide advice, counsel and policy direction to the Committee's staff in their research and framing of recommendations.

2. The national OMBE office should be requested by the Secretary of Commerce to bring forth, within 60 days, a schedule by implementing a more even spread of the resources of that agency allocated to sustain managerial, technical and financial assistance efforts with the ultimate goal to achieve as soon as possible more involvement in the program by Hispanics in the Northeast. This would entail strengthening the existing Puerto Rican and other Hispanic organizations providing services to businessmen in the region and funding additional consulting groups and service facilities in areas not now covered by the OMBE client service network, particularly in locations in the Northeast with sizeable members of Hispanic residents.

3. That OMBE develop and further strengthen its field capabilities to provide ongoing technical assistance to those organizations it has contracted with to provide services to Hispanic entrepreneurs. Very often these organizations, particularly when receiving funds for the first time from OMBE, are not bureaucratic and accountability requirements of that agency. This has created strained relationships between the funding agency and the contract recipient and, in some instances, contract cancellations for reasons that could have been prevented or corrected in time.

4. OMBE should not permit the encroachment by other OMBE-funded organizations in the service area of Hispanic organizations. In some instances, OMBE has permitted or even encouraged more experienced "outsiders" to bid for contracts in areas where a Hispanic group is attempting to develop an effective service program. If such agancies are to be allowed to come in, it should be to provide technical and managerial back-up or specialized services to the local organizations, and thus enhance their efforts, not to prevent its emergence by bidding against them while they are still developing their capacity.

5. Federal OMBE should also make sure that Hispanic business service organizations in the Northeast are linked programmatically to other agencies providing management and technical assistance to minority entrepreneurs as part of their affirmative action efforts. Among these are: Department of Transportation (Federal Railroad Administration); UMTA (Federal Highway Administration); HUD; SBA; CSA; etc.

Creating a basis for a more meaningful Hispanic involvement in the business sector

Our nation's rate of growth and economic accomplishments places us at the vanguard of the world's developed nations. Even though today we are still suffering from the lingering effects of recent recessions and chronic stagflation, * * *

This standing, however, represents an overall average, and thus distorts reality. There are far too many members of minority groups at the lower scale of the nation's economy. At most, we have hardly managed to get a foothold at the lowest rung of the nation's economy structure. There is a dire need for an economic Headstart program which would assure the most capable in the minority communities that they have an open road to move ahead in today's highly sophisticated, capital intensive, technological society. The time is ripe for this type of special effort, since a unique set of circumstances is forcing the nation's leadership to take a hard look at the direction the nation is heading. The energy shortage; the urban crisis; and environmental concerns provide the basis for a new set of national goals and economic endeavors.

We therefore stand at the threshold of a new era. The Hispanic community of the Northeast wants in now, in order not to be relegated to settle for leftover opportunities. Hispanics can enter into new developing industries at the embryonic stage and grow to maximum potential if the proper climate is

set, and whenever necessary, enabling legislation is passed.

Solar energy.—Until recently, energy from conventional fossil fuel sources has been so plentiful and reasonably priced that our society oriented itself around the availability of inexpensive fuel, not only in terms of transportation, but of industry and, indeed, in almost every facet of our lives. * * * The resulting economic crunch has been felt in the Hispanic community more than anywhere else in the United States.

Federal involvement in solar energy exploration and investigation has never been as great as it is today. Overall administration of energy research programs undertaken by the Federal Government rests with the Energy Research and Development Administration (ERDA) but it is only one example of the national interest in the development of solar energy. All interest and exploration, however, is being geared towards the benefit of middle and upper income society and big industry. Very little attention has been directed towards the people needing energy innovation most, minority and lower income neighborhoods. A redirection should be undertaken and solar energy's research and development should be utilized for the lower income community.

Hispanics must be directly and immediately involved in situations where they will not be the last to come in but rather the pioneers for the future. The development of Solar energy presents an excellent opportunity for growth and could very well be one of the last frontiers available to Hispanics. Clearly, it is time to get Hispanics into an industry early enough to be able to secure the benefits of affluency.

As previously stated, solar energy is no longer experimental, but it is a reality. In the very near future, it will replace other established forms of energy development, however, its exploration and development is not being directed towards the lower income levels of our society. Regulation, therefore, should be enacted to conduct and coordinate all the necessary analyses, studies, research and investigations needed to develop an implementable plan on solar energy immediately applicable to and utilized in the poverty neighborhoods. Planning grants are desperately needed to analyze and consider solutions to the community concerns not addressed by researchers to date.

Lastly, consideration should include the development and implementation of a manpower training program for the low income community to include education in the fields of solar energy installation, repair, maintenance, energy conservation application and insulation, modular construction manufacturing, design and installation, and repair, and training in all the new fields relating to the total solar energy picture.

Also funds should be provided to identify Hispanic entrepreneurs that can expand into or begin to manufacture and develop solar energy units and the related items of insulation and modular construction.

Waste recycling: Our Northeastern, Metropolitan industrial centers are the greatest producers of waste products the world has ever known. It is to the point to consider how this enormous resource can be used to the benefit of the Hispanic entrepreneur.

Recovery of the glass, paper and metal discard of metropolitan users is a relatively simple accomplishment. No highly sophisticated high-cost technology is necessary, no long years in training are required, no large initial outlay of capital is needed to start the business up. What is needed is an eminently practical mental attitude and the learned response of making do with what one has or can find is the virtue of a have-not culture.

As regards the synthesizing of fuel from raw sewerage, a more complex and sophisticated technological framework is necessary, and a more formal understanding of the workings of chemistry and public works is mandatory.

However, the technology of fuel synthesization from raw sewerage is not beyond the reach of such underdeveloped nations as The People's Republic of China, and therefore is surely not beyond the reach of a nation such as ours. The will to succeed is strong within the Hispanic community and all that is necessary is the opportunity, the encouragement, financial aid, and proper attitude in our society.

The Northeast of our country is particularly poor in natural resources, possibly because of nature's seemingly random endowment, surely because this is the oldest intensively inhabited area of the country, and therefore the most exploited: what could have been taken from the area has, for the most part, already been taken. It is natural for us, therefore, to begin to actively recover those resources which would otherwise be lost to us. It is natural, further, that this potential market be exploited by those who have the most to gain, those who have the least at the moment. Hispanics, in all too many of our communities, fall into this category.

The systems for recovery of valuable resources from both our trash and our raw sewerage are already in existence. The urban centers of our nation are the mines for our future, for it is from them our greatest natural resource streams in a wasteful river; that resource is under-privileged youth and ambitious immigrants who long for a chance to make life better for themselves and their families.

Urban renewal: That most of the Hispanics in our country live in areas which are either euphemistically termed either declining or outright slums. There are a thousand reasons why this condition developed and has been allowed to endure. However, they are relevant factors to provide a jumping board to create meaningful, productive opportunities for Hispanic entrepreneurs.

Urban homesteading is another idea whose time has more than come. It does not take high technology, a long and expansive education, or even a large capital outlay to engage in this type of activity. Government is already becoming responsive to the needs of people in this regard, and local groups are beginning to take advantage of the situation. But the tide had not yet begun to turn. This sector needs stimulation, and the Hispanic community has a perfect vantage to take advantage of the situation.

The Security Brokerage Industry: Hispanics have virtually no representation in the Security Brokerage Industry. There are only two black owned firms and these have accounted for very little representation of their ethnic group.

The industry is extremely important in developing equity capital investments, achieving financial sponsorship for existing and new ventures, managing and assisting in the managing of pensions and other vested funds, and the development of mergers and acquisition in which the industry often acts as the deal maker and develops capital sources. This industry is extremely important for minority groups looking to develop the more profitable ventures which in most cases, have a high risk/reward ratio. There are many other benefits derived by having a strong representation in this industry.

The industry is going through a consolidation period and it is likely firms will continue to merge to the point where only the major firms with strong financial structure and a very few financially strong specialty firms will exist. The holding company concept appears to be the trend for this industry. The ideal formation would be a security brokerage company tied in to related synergistic affiliates which are active in other financial industries. A Hispanic holding corporation structured in this manner could benefit not only from its domestic affiliations but from the international relations developed with foreign Hispanic countries. Such a firm could become active as deal maker, underwriter, and investment bankers for these governments and projects which are developed in these countries.

Relationship between such a security brokerage operation, its affiliates and the major financial institutions, namely, the larger banks and insurance companies, would be of utmost importance. In order to achieve this relationship, a security brokerage company must have a strong institutional research department specializing in the insurance and banking fields. It is proposed an industry study and a feasibility report be developed to determine the profit potential and by-products of developing a significant Hispanic representation for this industry. The holding company structure and its potential should be carefully studied to determine the best method of developing this concept.

Developing Increased Involvement of Hispanics in the Insurance Industry: As of today, Hispanics have had very little involvement in the profitable areas of the insurance industry. The insurance industry should be of major interest to Hispanics and other minority groups since it manages, next to the banking industry, the greatest amount of capital funds in the world. From the long term equity capital market, the insurance industry plays a larger role than does any other industry. However, no Hispanic group has made any significant inroads in developing the more profitable lines of this industry.

The industry has always been regarded with a certain mystique, and this may partly explain why Hispanics have been reluctant to attempt major involvement in the industry. The industry is basically broken down into three major groups:

1. The life and health insurance areas;
2. the property and liability insurance industry and
3. the brokerage industry which solicits business for the above two (2) mentioned.

The most lucrative areas of the industry have been those which are involved in the following:

1. The direct writers in the life, health and property and liability insurance area.
2. Companies which specialize in the commercial lines of property and liability insurance.
3. Companies which have a tie in with association groups or similar groups which market their products on a direct basis, eliminating the high sales costs in the life and health insurance industry.
4. Other companies which have unique marketing methods, i.e., Allstate and Colonial Penn group.
5. Companies which are involved in the professional reinsurance industry.
6. Companies which are involved in the spcial insurance international markets.

Presently, the only involvement Hispanic groups have, has been in the brokerage area of personal life insurance (mainly the auto lines). To date, this has been a highly unprofitable area for the insurance companies and, consequently, they have attempted to eliminate or reduce the brokerage commission of these lines. As a result, most brokers dealing with Hispanic groups have found an increased difficulty in obtaining an insur-

ance company to underwrite their clients and a sharp decline in brokerage commission. This has created an extremely difficult climate for the independent broker agent dealing in the minority market with virtually no potential for a profitable growth. It is apparent Hispanic involvement in the insurance industry has not been aggressively directed towards the industry's most profitable area in the industry.

In effort to develop the Hispanic involvement in the lucrative areas of the insurance industry, a thorough analysis of all phases of the industry and the potential for these areas should be undertaken. This analysis should assist in determining the most feasible manner in developing an insurance operation with the greatest profit potential vs. the risk in relation to the capital available for such a venture. Involvement of Hispanic groups at a high professional insurance level, should result in a high degree of influence in assisting Hispanics obtain exposure in the insurance capital market. Furthermore, such exposure will facilitate the development of specialty companies which can cater to Hispanic groups. This area also can be further developed in the international markets particularly, with Spanish speaking countries where Hispanics can develop a good working relationship.

The Import-Export Industry: Hispanics have been involved in the import/export industry for a relatively long time. One industry spokesman estimated over 70% of import/export employees are of Hispanic background. In spite of this however, very few Hispanics have an equity position in any export-import firm. Therefore, it appears the industry is ripe for an equity Hispanic involvement.

The import/export industry is composed of many firms of varying sizes and expertise. Most established firms have a strong working relationship with their clients and, in many cases, have contractual exclusivities on specific products and territories. These firms are financially well structured and thus, have established a high degree of credibility with strong credit lines. In some cases, they have been able to sell products under their own established brand name.

A Hispanic group contemplating involvement in this industry will have numerous obstacles to overcome. The primary one being an image and credibility problem. In addition, the company will have to establish a strong financial structure with good working lines of credit. Finally, once the credibility and financing problems have been considered, the Hispanic company may find major products are tied up by long standing, exclusive working agreements, contracted by established firms.

In spite of the problems a Hispanic minority group would have to overcome, an export-import venture appears significantly promising to warrant further investigation. Areas which should be considered are the following:

1. The development of a working relationship with companies who have no export-import department and do a relatively small amount of export-import business. There are many companies in the 10 million to 100 million sales bracket, doing virtually no export business. This also applies to a lesser degree to foreign companies. These prospects could be sold the idea of developing international business and may be willing to offer an exclusive representation for areas in which they are currently inactive.

2. The development of a trading company to be active in the buying and selling of actual commodities. This company would act more as a deal maker, working closely with major and developing countries in need of trading and negotiating swap transactions.

3. The establishment of mail order or a catalogue marketing operation to sell international products to the consumer market. This company would determine the least expensive world products and attempt to sell to the consumer through a mail order operation.

In addition to the above ventures, there are numerous by-product ventures which can be developed.

A well structured Hispanic export-import trading company should find its ethnic background will facilitate it in developing good relationships with officers and agents of foreign companies and government officials of Spanish speaking countries. A feasibility study should be undertaken to determine the most lucrative areas and the best methods of developing these areas. Such a study should investigate how best to establish strong working relationships with government officials.

Media Ownership by Hispanics: As of June 1975, more than 100 of the 954 television stations in the United States provided some Spanish language programing. The Spanish International Network (Channel 41 in New Jersey) and its almost forty affiliate stations provide Spanish language programing produced in Mexico for syndication through Central and South America including Puerto Rico. More than 200 radio stations broadcast Spanish programing for at least 30 hours per week. The number one New York City radio and TV market has at least two stations with 24 hours and 18 hours of Spanish language programing only.

It is estimated almost 60 radio and television stations are owned or operated by a black majority in America. Although several attempts have been made, up to the present, no Hispanics own or operate broadcast stations. Given size of the Latino market (23 million), its potential buying power ($20 billion plus), and the fact that the distribution of the Northeast region (New York, Chicago, Boston, Washington, D.C. and Puerto Rico) lies within the top ten television, newspaper and SMSA major markets, the following opportunities and recommendations for federal and private sector resources are made:

Financing Hispanic Ownership of Media: Presently, SBA policy specifically disallows any federal loan or loan guarantees for communications ventures. This has prevented most Hispanic organizations with expertise from gaining necessary moneys to venture into this highly lucrative field.

Recommendation: That the House Subcommittee on SBA Oversight and minority enterprise and the Senate Select Small Business Committee, as well as the Senate Banking, Housing, and Urban Affairs Committee support needed legislative changes to allow the Small Business Administration to provide loans and loan guarantees for Hispanics to enter the broadcasting and communications fields as legitimate minority enterprises.

THE EXTRAORDINARY ELEANOR ROOSEVELT

HON. TED WEISS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. WEISS. Mr. Speaker, it is a great privilege for me to support H.R. 5562, a bill creating the Eleanor Roosevelt National Historic Site.

Eleanor Roosevelt was a great woman. Although she now lies at rest in the rose garden of her family home, Val Kill, in Hyde Park, N.Y., her spirit lives on and continues to inspire all Americans.

It is truly fitting that she be honored by the designation of the 175-acre tract, including the Val Kill residence, as the Eleanor Roosevelt National Historic Site.

A devoted wife and First Lady, Eleanor Roosevelt was also an independent, committed woman. She was a public figure in her own right—vigorous, compassionate, dedicated—who demonstrated the equality and emancipation of women throughout her full and active life.

At age 18, she was working in a settlement house in New York City. She was an activist in the League of Women Voters, the Woman's Trade Union League and the Democratic Party during the 1920's. In 1927, she served as vice principal and teacher at the Todhunter School in New York City.

During her years in the White House, Eleanor Roosevelt used her position as First Lady as an opportunity to provide leadership and apply her talents to the issues of her time.

She created many precedents and broke with a number of anachronistic traditions. She wrote her own news column and hosted a radio program. She held weekly press conferences with women reporters from all over the country.

Eleanor Roosevelt spearheaded an era of reform in national policies toward blacks, women, young persons and the poor. She was eloquent in her advocacy of the United Nations, and later stirred the conscience of the Nation and the world in her position as chairwoman of the U.N. Commission on Human Rights.

She continued to play an important, active role in politics and society after the death of her husband. In 1959, she joined with Herbert Lehman and others in forging the reform movement within the Democratic Party in New York.

During these years, I was closely acquainted with this extraordinary woman. In 1961, when I first ran for the New York City Council as a representative of the reform movement, Eleanor Roosevelt endorsed my candidacy and encouraged and guided me in valuable ways.

She was a dynamic worker up until the time of her death, actively involved at grass-roots level in making the Democratic Party a more effective, more representative institution.

Eleanor Roosevelt is truly deserving of a lasting memorial. Her contributions to her country and to the world have endured beyond her own lifetime and will continue to guide future generations.

H.R. 5562 honors Eleanor Roosevelt in a lasting and appropriately constructive way. This bill will insure that the historic site at Val Kill is used by the public for seminars, lectures and studies on the issues with which she was and is still identified.

It is indeed a personal privilege for me to vote in favor of this memorial to Eleanor Roosevelt.

PRESIDENT CARTER VERSUS PARKINSON'S LAW

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. JACOBS. Mr. Speaker, the following is an article by William J. Miller as it appeared in Reader's Digest recently. In connection with which I have introduced today a House concurrent resolution to repeal the Parkinson's Law as it applies to Federal Government activity.

The article follows:

PRESIDENT CARTER VERSUS PARKINSON'S LAW

(By William J. Miller)

In 1956, I had a pleasant dinner with C. Northcote Parkinson, whose remarkable book, *Parkinson's Law*, was soon to set off a great stir. Many admirers regarded the book as simply brilliant satire. But Parkinson himself gravely insisted that his "law" was quite serious, mathematically provable and universally demonstrable. The law, in essence, said that the number of workers in any public bureau will tend to rise, at an annual rate of about 5.75 percent, regardless of the amount of work to be done, or even whether any is done.

Parkinson drew the law from two axioms: (1) "An official wants to multiply subordinates, not rivals"; and (2) "Officials make work for each other." In sum, Civil Servant A, who thinks himself overworked, will not hire one assistant, B, who thus might seem his possible successor, but will, instead, hire two subordinates, C and D, dividing the work into two categories, so that A "will have the merit of being the only man who comprehends them both."

As these individuals make work for each other, C, in turn, will find himself overworked, and will demand and get two assistants of his own. A can then "avert internal friction only by advising the appointment of two more assistants to help D. . . . Seven officials are now doing what one did before. . . . These seven make so much work for each other that all are fully occupied and A is actually working harder than ever."

The memory of that dinner with Parkinson set my neurons firing when I read recently that the size of the Presidential staff was 333 when Lyndon Johnson departed, and 522 by the beginning of Gerald Ford's final year. I fed the figures into one of those electronic aids for mathematical incompetents to see if Parkinson's Law still reigned supreme. Several tries proved that inflation had hit Parkinson's Law, too; while it was still inexorable, its rate of annual increase had risen by about one percent.

The beauty of the law is that it applies whether there is more work to be done, less work or none. For example, LBJ had a lot more things going than Richard Nixon—a full-scale war, a war on poverty, etc. Nixon was chiefly engaged in winding down such of those as he could not let atrophy, while turning over much of the money (and the tasks) to the states and cities. Offhand, this "creative federalism" would seem to require less work and fewer hands. But not so.

All this sets a sharp challenge for President Carter. By Parkinson's Law, inflated, the White House staff should reach 594 by the end of his first year. The President, however, promises a "smaller, tighter" White House staff; he has already made reductions.

He also promises a major reorganization of the gigantic sprawling federal machinery, now such a maze that even its nominal masters find it impenetrable. As President Carter applies his machete to this existing jungle, we wish him well. But even if he can eliminate many of the actual tasks as unnecessary, the very task of elimination may require more bureaucrats than before.

Maybe, just maybe, however, Jimmy Carter can repeal Parkinson's Law. Possibly he will name a new task force, headed by A, to study it. But then, of course, A will have to have C and D to help him, and . . .

SOCIAL SECURITY

HON. BO GINN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. GINN. Mr. Speaker, one of the major problems our country faces today is the rapid depletion of funds for the social security program. Our most urgent need is for the Congress to provide a long-term solution to this problem.

In this regard, the Atlanta Journal recently published an editorial which relates to the efforts of our distinguished colleague, Congressman ELLIOTT LEVITAS, to meet this need. I believe Mr. LEVITAS' program merits our careful attention, and I ask that the editorial concerning his work be reprinted in the RECORD at this point:

SOCIAL SECURITY

With the Social Security system paying out more money than it's taking in, it's elementary that actions must be taken to provide for the deficit.

And President Carter has addressed himself to that problem in a message to Congress. Basically, the president proposes the use of some general tax revenues to offset the deficit plus requiring employers to pay their share on an employe's entire income rather than on a portion of it as is now the rule. The tax rates for self-employed would also increase.

The question that comes to mind is this: Whatever happened to the common sense approach of Rep. Elliott Levitas of Georgia's 4th Congressional District? Levitas looked ahead and saw the financial distress which Social Security was heading toward—and others did so, as well—and he proposed an entire overhaul of the system to bring it into line.

While President Carter is facing unpleasant reality and must move with dispatch to alleviate it now, his proposal is more of the same. The average citizen and the average employer have no say-so as to participation in the Social Security system. They are required to participate. And year after year they are required to ante a steadily increasing Social Security tax.

Congress, incidentally, is immune. It does not participate in Social Security and so the Social Security taxes it keeps increasing do not apply to members of the House and Senate.

Moreover, the proposal regarding employers paying even higher taxes could work a hardship on many of them.

While President Carter's proposal might work as a stopgap measure, it is nothing more than that. It is the sort of thing we've gotten from earlier administrations which proposed increasing both the tax rate and the amount to be taxed.

We need more of a solution than a stopgap proposal. The entire concept must be reviewed and overhauled, as Rep. Levitas has urged his colleagues in the Congress to do. The unpleasant reality which the Carter administration—and the Congress—is being forced to face should lend impetus to consideration of Elliot Levitas' proposal.

THE CARTER AUTO EMISSION SCHEDULE IS TOO MODEST

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. BROWN of California. Mr. Speaker, the reported amendments to the Clean Air Act contain a serious revision of the auto emission control schedule which is in current law. I understand fully that the revision approved by the Interstate and Foreign Commerce Committee is a compromise between existing law and the proposals of the automobile industry for extended delays. As with most compromises, this one satisfies few of the active participants in the auto emission control battle which has been going on for over 10 years.

I wish the committee had taken a stronger position in favor of controlling auto emissions on a more rapid schedule. However, I am grateful that the committee has rejected the position of the auto industry and their partisans. I can assure my colleagues that my constituents share this perspective, as I suspect the majority of the American people do.

A recent editorial on this subject gives another view on this issue, which I wish to share at this time. The editorial follows:

[From the Daily Enterprise, Riverside, Calif., Apr. 29, 1977]

CLOSEST OF CALLS ON CLEAN AIR

There wasn't a vote to spare when the House Commerce Committee sent Detroit's plan for dealing with automobile pollution to its proper resting place.

The automobile industry wanted up to an eight-year stall in the already-delayed Clean Air Act deadlines for reducing the flow of tailpipe pollutants, but when its proposal came up for a committee vote, it went down to defeat on a 21-21 tie. President Carter's proposed amendments to the act, which would countenance a shorter delay, then breezed through the committee, 30–12.

Wednesday's votes mean that the industry finally will have to adhere to someone's clean-up schedule besides its own. But if the defeat of its plan was a significant victory for environmental interests, and for the health of the people who live in polluted air basins, the approval of the President's alternative wasn't necessarily so.

The argument remains valid that the administration could and should have been a lot tougher in its demands on the car makers. Its amendments would require Detroit to develop no new technology in the first year they took effect, work out no new pollution controls, make no advance that hasn't already been made.

California already has automobile pollu-

tion laws on the books that are as strict as those the President proposes for the first year of his plan, and the industry has somehow managed to meet the state standards without suffering any of the dire effects it has been so fond of predicting.

Indeed, the chief sponsor of the President's bill, Florida Democrat Paul Rogers, argues that Detroit already has the technology necessary to meet the contemplated 1985 final pollution standards.

Still, the Commerce Committee vote had been billed as a major showdown between the administration's and the industry's approaches to automobile pollution control, and victory for the car manufacturers would have represented another gutting of the Clean Air Act.

In that sense, the outcome was one of those decisions that staved off something worse, and as such is welcome.

STATEMENT BY GEORGE MEANY

HON. RAYMOND F. LEDERER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. LEDERER. Mr. Speaker, President Carter has sent to Congress an innovative social security financing package—one which promises to restore the financial integrity of the social security system and the confidence of the American people in this vitally important program. In my judgment, the administration is to be commended for its forward-looking proposal.

Already comments from outside interests have begun to be heard. The president of the AFL–CIO, George Meany, for example, has strongly endorsed the President's social security proposals. Mr. Meany's statement put the issue in a nutshell, and in so doing, challenged Congress to take action:

If President Carter's sound recommendations are followed up by responsible and speedy congressional action, we believe workers covered by social security can look forward with confidence to a secure retirement.

Mr. Speaker, I include Mr. Meany's statement be printed at this point in the RECORD:

STATEMENT OF GEORGE MEANY

AFL–CIO President George Meany today made the following comments on Administration proposals to strengthen the financing of the Social Security System:

We support President Carter's recommendation which, if enacted, would put the Social Security program on a sound financial basis now and in the future.

Many people have been disturbed by numerous reports, often distorted and exaggerated, about the alleged financial instability of the Social Security program. Some of our members, active and retired, have expressed their concern to us as to whether the trust funds will be sufficient for their retirement years. If President Carter's sound recommendations are followed up by responsible and speedy Congressional action, we believe workers covered by Social Security can look forward with confidence to a secure retirement.

THE NEED FOR STRONG, CONSISTENT NUCLEAR EXPORT POLICY LEGISLATION

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. BINGHAM. Mr. Speaker, those of us who have applauded the President's decision to refer indefinitely commercialization of plutonium technologies in the United States are anxious to follow up on the President's courageous domestic initiatives by enacting sound, comprehensive nuclear export policy legislation. While the cancellation of the Clinch River Breeder Reactor project is a cornerstone of this policy of restraint at home, we must move quickly to strengthen our nuclear export policies for nuclear supplier and consumer nations abroad.

The President has proposed legislation in this area which has been introduced, by request, as H.R. 6910. A number of my colleagues in the House, including Mr. ZABLOCKI, Mr. FINDLEY, Mr. FRASER, Mr. HAMILTON, Mr. LONG of Maryland, Mr. OTTINGER, Mr. UDALL, and Mr. WHALEN, have joined with me previously to introduce H.R. 4409, a measure with more specific and, in some cases, more stringent export criteria.

While the President's proposed nuclear export policy legislation represents an important first step in the right direction, I am concerned that it does not go far enough in several respects.

But, I am confident that, working together, the Congress and the President can enact sound legislation in this area soon. The House International Relations Committee's subcommittees on International Security and Scientific Affairs and International Economic Policy and Trade will continue joint hearings on nuclear nonproliferation next Thursday, May 19 at 10 a.m. At this time, we will begin considering the two proposals, H.R. 4409 and H.R. 6910 with an eye toward reaching some satisfactory middle ground between the two proposals.

Mr. Speaker, in closing I would like to take note of the thoughtful commentary on this subject offered in this morning's lead editorial from the Washington Post. This editorial notes that the President has "produced some proposed legislation dealing with our own export policy that many people feel is too mild to have much restraining impact on the nuclear activities of our friends" and concludes that "the test of the Carter strategy * * * will be how it uses the time it gets." The complete text of the editorial follows:

THE NEED FOR STRONG CONSISTENT NUCLEAR EXPORT POLICY LEGISLATION

The Carter administration seems to be attempting a very complicated billiard shot in its nuclear nonproliferation policy. The President is simultaneously trying to placate the Europeans and the Japanese and get them to forego the breeder-reactor and plutonium-reprocessing technologies. He is also trying to persuade them not to contract to export these technologies to other countries and—at the same time—trying to assure the would-be importers, mostly Third World countries, that they are not being victimized by a conspiracy of industrialists who want to deny them modern means to advancement.

After some clumsy (and vain) efforts in the first few weeks of the administration to get two notorious export deals turned around—the German sale to Brazil and the French sale to Pakistan of extremely dangerous bomb-prone nuclear plant and technology—the administration seemed to adopt a new strategy. The President announced his own desire to defer, perhaps indefinitely, work in this country on the Clinch River breeder-reactor and the Barnwell reprocessing plant. But he seemed suddenly awash in deference and courtesy and understanding toward those Western European nations and Japan that seemed hell-bent on going forward with the breeder and, much more importantly, with reprocessing plants. He produced some proposed legislation dealing with our own export policy that many people felt was too mild to have much restraining impact on the nuclear activities of our friends. He freed up some stalled shipments of highly enriched uranium for use in foreign-research projects. He was sweet reason itself.

One way to look at all this is to say he simply has sold the pass. Another way is to say that Mr. Carter has finally recognized the fact that both the dangerous civilian technology and nuclear weapons themselves are going inevitably to spread so that trying to stop the spread is pointless and unnecessarily divisive within the alliance. Carter administration people argue that both these assessments are wrong. Rather, they say, the President has recognized, in the words of a White House fact sheet, that "there is no such thing as an effective unilateral nonproliferation policy." For that reason, the argument goes, he does not favor some of the harsher measures currently being proposed. He is asking the Europeans and Japanese for time—time to demonstrate that plutonium reprocessing is economically questionable and time to work out the arrangements for an assured fuel supply and the storage of spent fuel, in ways that would not compromise any nation's independence. He believes, and rightly so, not just that these things are eminently possible but also that there is no practical need or urgency whatever for the Europeans and Japanese to undertake the actual reprocessing of spent fuel for many years to come—if at all.

Did the President make any headway on this goal when he was in Europe? Presumably Mr. Carter wanted more from the conference than a pledge to get together and study the problem. We note with interest that German domestic political opposition to the development of the breeder reactor has compelled Bonn to slow down its research (even as a committee of the House here has gone aganist Mr. Carter's wish and voted to continue the Clinch River breeder project). These backs and forths suggests that no one will know if the Carter approach is working for some considerable time, depending as it does on cooperative arrangements and decisions that can only come out of prolonged negotiations.

The point is this: Cooperativeness, understanding and sweet reason can add up to a very risky strategy. The administration could end up sweet-reasoning the Europeans and the Japanese right into a feeling that it is perfectly okay with us if they pursue the dangerous and ambiguous technologies. The test of the Carter strategy, in other words, will be how it uses the time it gets, how intensely it will go about demonstrating that there are infinitely better alternatives for the Europeans, the Japanese and the rest of the world than those now being pursued.

BROADCASTING AND THE PUBLIC INTEREST

HON. ROBERT W. KASTEN, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. KASTEN. Mr. Speaker, earlier this year, I introduced a four-point program containing my recommendations for Government reorganization and reform of the regulatory process.

My concern was prompted by the incredible burden Government has become on our society. Over the past 50 years, we have witnessed the creation of a fourth branch of Government, the bureaucracy, which is neither elected by nor accountable to the people. The American people are fed up with a Government that is ineffective, inefficient, and unresponsive to their needs.

Today, I would like to address the problems one particular segment of our society faces largely because of Government regulations: The broadcast industry. For too many years, broadcasters have been forced to operate under a nonspecific, vacillating license renewal that is characterized by extensive filings and paperwork. All of these regulations are imposed by the Federal Communications Commission.

Broadcast stations operate on the basis of a 3-year license granted by FCC. This maximum term has been in effect since 1927. It was instituted during the early, unproven years of the industry. Many changes have occurred in broadcasting since those early years. It is today a strong, mature industry. To retain the 3-year license requirement places an unnecessary burden on the industry and in the long run, the consuming public.

Legislation to alter this requirement has been before previous Congresses only to be killed in various stages of the legislative process. I hope this will not be the case in the 95th Congress.

EXTEND LICENSE PERIOD

I am today introducing the same bill which I sponsored in the 94th Congress which would extend the license period from 3 to 5 years. My bill would direct the FCC to renew a license, if the licensee has been responsive in his programing to the "problems, needs, and interest" of the service area in which he broadcasts. Additionally, the FCC would be responsible for establishing procedures for the licensee to follow in determining those needs.

At present, a broadcaster is forced to operate his business without any security that his license will be renewed in the future, regardless of the fact that his broadcast operations have served "the public interest." A broadcaster who has made his best effort faces the possibility that his renewal application may be denied and awarded to a competing applicant whose renewal will better serve the needs and demands of the public.

The very great majority of broadcasters retain their licenses. Thus, the FCC and the broadcasters expend a great deal of needless time and energy routinely filing and eventually approving renewal applications of incumbent licensees every 3 years. My bill would lessen the burden on both FCC and the broadcasters by requiring application every 5 years in those cases where FCC deems such action to be in the public interest.

REDUCE PAPERWORK

My bill would also lessen the license renewal burden by directing FCC to reduce the paperwork required in filing renewal applications. At present, the renewal form is eight pages long, requiring answers to 33 questions. Since thousands of licensees file for renewal during a given 3-year period, the paperwork burden on FCC and the broadcaster is extensive.

A simplification of the process works to the advantage of the agency and the industry. The additional time provided would allow broadcasters to do a better job of program planning, staffing, and providing the expensive equipment necessary to operate a broadcast facility. The stability of operation that the longer license term would give the broadcasters would, in turn, greatly benefit the community as a whole.

ANTISIPHONING

Mr. Speaker, I am also introducing a resolution of interest to the broadcasting industry and relevant to the 97 percent of all Americans who have television sets.

Virtually all of our people enjoy the availability of television programing provied by a capable commercial television system through over-the-air reception.

Programs provided in this way are without direct additional cost to the television viewer.

The question of pay TV concerns broadcasters and should concern TV viewers. Pay television may well have the economic potential, even though available only to a small minority, to outbid the free television system for the most attractive sports programs, first-run movies, and other entertainment programs now available to all.

My resolution addresses this "siphoning" problem that could occur when pay television stations outbid the free stations for premium programing.

It encourages the Federal Communications Commission and other appropriate Federal agencies to use their legal authority to insure that the quality and quantity of over-the-air broadcasting service now available to the public are not reduced or impaired by the operations of pay television.

Pay television has a role to play in a pluralistic communications sytem. But it should be complimentary to free television. It should provide increased opportunities for local expression and innovative programing rather than siphon off programs otherwise available over free television stations.

My resolution conveys this spirit by calling for regulation of pay TV in a manner consistent with the establishment and maintenance of over-the-air television broadcast services, available to all persons, including those unable or unwilling to subscribe to pay television.

TIME TO ACT

Mr. Speaker, I believe it is time for Congress to act on both the license renewal extension and the resolution which recognizes the problem of siphoning. While these measures benefit one sector of our society, their enactment can provide better programing services to the public at large.

ELECTION DAY VOTER REGISTRATION

HON. RONALD A. SARASIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. SARASIN. Mr. Speaker, both the House Administration Committee and the Senate Rules Committee have reported out bills that would establish election day voter registration plans. I personally have many reservations about this concept which was first announced by the President on March 22.

An article on this subject which I strongly agreed with appeared in the Waterbury Sunday Republican, a major newspaper in my district. The article was all the more noteworthy, because it was written by Thomas J. McLarney. Mr. McLarney recently retired as the Democratic registrar of voters in the city of Waterbury, Conn. He is presently a consultant on election legislation and works closely with the Elections Committee of the General Assembly.

As one of the foremost experts on election laws in Connecticut, Mr. McLarney's advice on election procedures is held in high esteem in the State. Thus, when he writes about the President's proposal, I know that it is a viewpoint tempered by considerable knowledge of and experience in the election process.

Thus, I am submitting Mr. McLarney's article for the benefit of my colleagues and the American people:

LIBERALIZED VOTER PLAN UNREASONABLE

(By Thomas J. McLarney)

"The purpose of government is to do for the people those things which they are unable to do for themselves."—Abraham Lincoln.

This nation has come a long way since 1860, and even a longer way from the political philosophy so well expressed by our 16th President.

At every turn someone wants to extend the services of government, and even a small bureaucracy has nowhere to go except to expand. As a result our taxpayers expend approximately one of every three dollars earned to sustain it. The bureaucratic system generally has small beginnings. It settles in and envelops you before you know it is there. Having arrived disguised as a goodie, it immediately becomes so deep rooted that we can not eliminate what "has always been done that way."

To give an example of a beginning in this direction, on March 31 at the Capitol the Committee on Elections held just one of its many public hearings. It was an ordinary day for ordinary bills. Let me select these: H.B. 5539, An Act concerning Door to Door Voter Registration; H.B. 5540, An Act permitting High School Principals and Vice Principals to

admit Students as Electors; H.B. 8215, An Act concerning the Verification of Voter Identity.

Prior to the hearing, Secretary of the State Gloria Schaffer conducted a press conference endorsing early support of President Carter's proposal for voter registration on Election Day.

(The Committee on Elections has reported unfavorably on these proposals. This committee over the years has maintained a high standard of excellence and has continued to keep Connecticut out in front in the area of good elections legislation. Members of the General Assembly from Waterbury have always played a key role in this leadership. The proposal of President Carter, of course, will be decided by action of the Congress of the United States.)

NOBLE PURPOSES, BUT * * *

Each one of these proposals is indeed noble in purpose. The individuals supporting them, and particularly our secretary of the state, are dedicated to excellence in election procedure. Why then am I in opposition?

I have to go back to Lincoln and declare that our people are able to do all these things for themselves now. They can do them simply, without frills, and at no extra expense. Add some plush to them and you tack on additional expense. It is as simple as that.

For many years in an opening statement to the Elections Committee I have suggested that the committee only approve legislation which demonstrated a compelling need. The election laws in Connecticut are excellent and frequently new legislation has created more problems than it has solved.

The opportunity to register as a voter is omnipresent here. Admission is on a daily basis, and in Waterbury, even on Saturday and Sunday whenever needed. All of our high schools, public and parochial, have their own voting machines and voter education/registration sessions are held whenever desired. We have never known anyone who expressed a wish to register who was not given the opportunity to do so.

AVOID ARM TWISTING

It is true that there are many people here who are not voters. These individuals include those who have expressed disillusionment with the political process, those who have no interest whatsoever, and the few who are unwilling to exert themselves to the effort required. Negative and disappointing as this is, it is nonetheless a choice. When motivation fails, we must respect that choice. We should not resort to arm twisting tactics to play a meaningless numbers game.

The large body of voters are conscientious citizens who have made the effort to register and who have done the things required to protect their right to vote. I do not understand the logic of requiring these citizens of steady habits to underwrite the extra expense of chasing down those who have shown they couldn't care less.

Elections are the most important function of government and every citizen, with no exceptions, has both the right and the responsibility to register and to vote. And we mean full participation in both the nomination and election process.

The President Carter proposal for election day registration precludes all pre-election activity, and does not comport at all with the real meaning of full voter participation. It is only half a loaf, and a stale one at that.

In spite of all the talk of numbers being the essence of voter participation, let us not forget that the act of voting is a mental as well as physical exercise. Consequently, it is only a well informed electorate that really can make the difference. The bottom line for the voter is this—who will spend YOUR money?

Reasonable standards of performance in any area of activity are important. A government willing to lower standards just to make an accommodation, instead of motivating its citizens to move up to them, has lost its ability to inspire and to lead. Mediocrity in high places has set in.

CONTROL FRAUD AND ABUSE IN MEDICARE AND MEDICAID PROGRAMS

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. CRANE. Mr. Speaker, just a few weeks ago the Health Subcommittees of the Ways and Means and the Interstate and Foreign Commerce Committees completed subcommittee markup on H.R. 3, a bill to control fraud and abuse in the medicare and medicaid programs.

Because of my concern that the medical records of private care patients be protected from the prying eyes of Federal bureaucrats, I offered an amendment to H.R. 3 prohibiting the acquisition or inspection of these patients' records by any officer, employee, or agent of the United States without the express written consent of these patients. While it can be argued that the Federal Government has a reasonable need to inspect the records of patients whose care is provided or paid for under Federal programs such as medicare and medicaid, there is no justification for violations of privacy against private patients by Government officials.

My amendment was overwhelmingly adopted by the Ways and Means Health Subcommittee on April 6. However, officials at the Department of Health, Education, and Welfare raised a number of objections to my amendment, which was altered by the IFC's subcommittee to meet these objections. Subsequently, the Ways and Means Subcommittee adopted the IFC amendment in order that both committee's versions would agree.

One of the reasons HEW objected to the original language of my amendment, as stated in a letter to me from C. Grant Spaeth, Deputy Assistant Secretary for Legislation (Health)—Designate, was as follows:

Access to medical records, without the consent of the patient, is necessary for several important functions performed by this Department. . . . Federal researchers, side-by-side with their counterparts in universities and private research institutions, need access to such records for the conduct of research on the origin, patterns, and distribution of illness. . . . In other research, by NIH scientists and contractors, the examination of records of large numbers of individuals, who may well not be available to give consent, is an essential tool in discovering relationships between environmental factors and illness, and among illnesses.

Though I seriously questioned the need to conduct such research without obtaining the consent of the patients involved, HEW officials assured the subcommittee, during our markup sessions, that confidentiality of these records was in no way endangered by this research. To cite another passage from Mr. Spaeth's letter:

In these situations, identifiable data is protected carefully, and is not maintained in identifiable form any longer than necessary to conduct the investigation or study. The Privacy Act of 1974 and other legal protections, such as sec. 308(d) of the PHS Act, safeguard such limited data that are in Federal hands, and contractors are subject to contract provisions restricting use and disclosure of identifiable data.

While I was still not satisfied that the records of patients, both public and private, were being properly protected, I was willing to take the word of Mr. Spaeth and other HEW officials to the effect that these precautions were, indeed, being taken.

Today, however, I have found that my original suspicions have been confirmed. An article which appeared in the Washington Star revealed that the New York State Health Department, under a grant from the National Institutes of Health, has been conducting a study of the effects of abortion involving 48,000 women, without their knowledge. The data involved, which identifies the patients by name, was readily available to anyone with access to the Health Department's computer, and had been routinely handled by many personnel outside those conducting the study.

I am appalled that such a research project has been conducted without any concern for the rights to privacy of the patients involved. Whatever my personal beliefs on the morality of abortion, I maintain that women who have undergone this procedure should not be subject to public exposure, because some researchers have found them to be interesting subjects for a study. Furthermore, I cannot help but feel that this massive violation of the confidentiality of medical records is not an isolated case, despite HEW's assurances that privacy is maintained in federally financed research projects.

In light of this article, I feel that is imperative that my amendment to H.R. 3 be adopted in its original language. I intend to make that motion when the full Ways and Means Committee meets to mark up H.R. 3. I urge my colleagues to support me in the passage of this urgently needed provision. It is obvious that we cannot depend on the goodwill of the Federal bureaucrats to provide this protection unless it is written into law.

For the benefit of my colleagues, I include this article in the RECORD:

SUBJECTS UNAWARE, DATA WENT TO UNITED STATES—ABORTION STUDY HIT AS INVASION OF PRIVACY

ALBANY.—The New York State Health Department has been conducting a federally financed study of the effects of abortion involving 48,000 women, without their knowledge, in what two state legislators charge is a "massive invasion of privacy."

Sen. Karen S. Burstein, a Long Island Democrat, and Assemblyman Mark A. Siegel, Democrat of Manhattan, asked the state's health commissioner to halt the study, which is technically legal, until the women involved are notified and give their consent.

To illustrate the possible breach of confidentiality, the legislators held up a Health Department progress report that, to demonstrate the effectiveness of a certain computer program, included a "sample output" with the names of 28 women subjects who

had abortions and were subsequently married.

This report had been filed with the National Institutes of Health, which is financing the three-year, $308,000 study, and under federal law it would be available to anyone who requested it.

"I should not have this information," Burstein said. "This information is not just being kept, but is being disseminated casually, almost randomly."

Dr. Robert P. Whalen, the health commissioner, called the release of the names "inadvertent" and denied any widespread distribution of the names. But he said he would ask the department's Institutional Review Board for the Protection of Human Subjects to consider the matter and "advise me what changes should be made in the project."

The Health Department study is tracking the reproductive lives, marriages and movements of 27,000 women outside New York City who had abortions in 1970–71, the first year abortions became legal in New York State.

It is comparing them with 21,000 women who gave live births the same year, to "quantify the effects of induced abortion on subsequent reproductive functions," according to the state's contract with the National Institutes of Health.

The study would be valuable in providing the first medical information on this subject, Whalen said. It would specifically try to address whether women who have abortions have more problems with future pregnancies and births than women who give live births.

This is determined by matching the names in the original samples with future marriage, birth and death certificates—a process called "record-linkage"—and comparing the two groups. A similar study is under way in Hawaii.

The legislators did not quarrel with the study's value, but they said the Health Department could have gotten more and better information and avoided a possible invasion of privacy by informing the subjects and questioning them more extensively.

"The idea of the study is not patently offensive—it is the idea that it is being done without consent," Siegel said at a news conference.

Whalen said this type of research was not uncommon in cases where the information comes from Department of Health files, and said similar research was being done without the subjects' knowledge on the effects of the chemical, Mirex, and on cancer.

Philip Quickenton, assistant director of the Health Department's Office of Biostatistics, said the names of the women were available to only four persons in his department. But he conceded that they were handled by many others—computer personnel, for example—in the course of the research.

ANNE (NANCY) BLAINE HARRISON

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. EDWARDS of California. Mr. Speaker, it is with deep regret and a feeling of personal loss that I advise my colleagues of the death on Thursday of Anne (Nancy) Blaine Harrison at the Washington Hospital Center.

Nancy Harrison was a personal friend of many Members of Congress. She was one of this area's most outstanding citizens, working unceasingly to help the disadvantaged, especially children in the city.

In 1964, she helped found the District of Columbia Citizens for Better Public Education, and worked with that organization to improve public education in the city. "She was absolutely committed to getting things done for people," said District of Columbia City Council member Polly Shackleton, a longtime friend. "She was a great human being—certainly one of the most important people in this city in the field of education."

Born in Chicago, Mrs. Harrison was a great-granddaughter of Cyrus McCormick, inventor of the McCormick reaper, and James G. Blaine, former U.S. Senator from Maine, twice Secretary of State and unsuccessful Republican nominee for President in 1884.

A graduate of Vassar College, she worked for several labor organizations during the 1940s, then came to Washington after her marriage to Gilbert A. Harrison in October, 1951. Gil was the owner and editor-in-chief of New Republic magazine for 20 years.

She is survived by her husband and their four children, David Blaine, James Louis, Joel McCormick, and Eleanor, all of the home, and a half-sister, Audrey Bird, of Winnetka, Ill.

FORCED BUSING DOES NOT WORK

HON. CHARLES E. GRASSLEY

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. GRASSLEY. Mr. Speaker, forced busing is one of the most divisive issues in American life. An overwhelming proportion of Americans do not support this massive and inflationary special experiment which is being mandated on innocent children under the guise of equal educational opportunity. It is particularly disturbing that influential Federal officials have been neither forthright nor accurate in reporting basic busing facts. For example, the U.S. Civil Rights Commission concluded its 1976 report, which cost $2.3 million, with a thumping endorsement of accelerated forced desegregation. However, in a nationally televised debate with representatives of the National Association for Neighborhood Schools in November 1976, Commission members were unable to establish any evidence that children derive benefits from forced busing.

In an effort to enhance our factual understanding of this complex and emotional problem, I should like to insert into the CONGRESSIONAL RECORD the following press release concerning the special Black Journal issue "Does Busing Work?" which was recently aired over WNET–TV, New York:

EFFECTIVENESS OF BUSING INTEGRATION CHALLENGED

(By "Black Journal")

On "Does Busing Work?" Week of March 13; Poll: Both Whites *and* Blacks Against Busing

NEW YORK.—Buses were bombed, rocks hurled, children taunted—in some places Busing has taken place peacefully, for the most part, although in many cities there has been violence. But almost everywhere in the country where busing has been ordered to achieve integration in the schools, there has been resentment and questioning among both Blacks and Whites. The debate has boiled down to a single question, "Does Busing Work?"

That's the issue Black Journal has examined. Produced by WNET/13, New York, Black Journal was distributed nationally by the Public Broadcasting Service to its member station on Monday, March 14, 1977. Hosted by executive producer Tony Brown, Black Journal is produced with the assistance of a grant from Pepsi-Cola Company.

Tony Brown believes that "there is a significant silent Black majority view on busing that is virtually never heard. Because Black leaders are the only members of the Black community who get media exposure, the public only hears their perceptions of busing for integration purposes, and Black leaders are overwhelmingly in favor of busing. This program will depart in that respect."

There is mounting evidence questioning the effectiveness of busing. The United States Civil Rights Commission in a report costing more than a million dollars, cannot substantiate the success of busing for desegregation purposes. Scholars who once supported busing after extensive research have now according to Brown, "documented its failure and point instead to a deterioration of educational achievement and race relations . . . Everyone agrees that the findings to support the success of busing for desegregation purposes are inconclusive. This is really a polite way of saying that it does not work."

Black Journal examines the work of two social psychologists—Dr. Norman Miller of the University of Southern California and Dr. Harold Gerard of the University of California, at Los Angeles, authors of the book *School Desegregation*, a ten-year study of a large scale busing program in Riverside, California. The two scientists conclude that busing caused no real change in achievement, motivation or personality for the Black and Chicano children who participate in the program, and that it was "arrogant" to assume that minority children would assume the values of the middle-class White children with whom they sat in class.

The "Does Busing Work?" edition of Black Jonrnal also presented excerpts from a debate on busing produced last November by public television stations WETA, Washington, D.C., and WGBH, Boston, Mass. Arthur Fleming, chairman of the United States Commission on Civil Rights, and Mrs. Frankie Freeman, a member of the commission, argue in favor of busing. Dr. Lino Graglia, a professor of law at the University of Texas, and Dr. Herbert Walberg, of the University of Illinois at Chicago, argue against They are both representatives of the National Association for Neighborhood Schools, a Denver-based anti-busing group.

Opinions on busing were sharply divided in the Black Journal poll, which consists of two samples—*Ebony Magazine's* 100 Most Influential Black Americans and another 100 Black leaders selected by Black Journal. Although the Ebony sample responded affirmatively by 93 percent to the question, "Should children be bused to schools outside their neighborhoods to achieve desegregagation?" 58 percent of the Black Journal sample does not want busing. A Louis Harris poll shows that 81 percent of the American public is opposed to busing—85–9 among Whites, 51–38 among Blacks.

However, although there is disagreement about busing, both samples agreed that since busing is the law it should be followed—94 percent of the *Ebony* sample, 77 percent of the Black Journal sample. Likewise, the Lou Harris poll found that by 52–41 percent the public is prepared to live with the rationalization that busing is the law and should be obeyed.

Asked whether or not busing will improve the quality of education for all students, 66 percent of the *Ebony* sample responded, "Yes", while 74 percent of the Black Journal group said, "No". Both samples, however, believe that busing gives students a chance to get to know other students with different backrounds.

"Equality—not integration—should be our national objective," Black Journal concludes. "Integration cannot lead to equality, but equality can lead to integration.

". . . Whites who oppose busing must lose their fear of being called racists and Blacks must stop the automatic adoption of integration as a cure-all for the problems of Black children. Both must embrace a higher principal of truth: It is not necessarily good or bad because it is Black or White. It is good or bad because it does or does not work."

LIFELONG LEARNING

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Ms. OAKAR. Mr. Speaker, Notre Dame College, in a suburb of Cleveland, Ohio, offers a unique educational experience that all of us should be aware if we consider ourselves lifelong students and the concept of continuing education worthwhile.

The educational opportunity bridges the age gap between students and the financial gap between expenses and tuition for struggling, small colleges. Yet even more importantly, the program provides motivation to a segment of our society that until now may have felt their time to grow personally and intellectually had expired.

Reporter Mary Strassmeyer of the Plain Dealer should be commended for bringing this excellent program to our attention, and I urge my colleagues to encourage similar lifelong learning training at educational institutions in their own areas.

OLDER WOMEN SET NEW COURSE

(By Mary Strassmeyer)

"I'm 52 years old. Am I too old to get a college degree?"

The answer comes from Sister Mary LeRoy, head of Notre Dame College of Ohio's Lifelong Learning Center.

"You are never too old."

The center stresses college-level education for the older, part-time students. It has developed slowly and gradually the last eight years until now it is a vital part of Notre Dame's operation.

This year there are more older part-time students (336) at the South Euclid institution than fulltime (302). Total enrollment of the college is 638.

"In the face of declining enrollments, the center has helped keep us solvent," said Sister Mary Marthe, college president.

"In the beginning, college adminstrators feared so many older women coming back to classes would frighten off our younger students," Sister Marthe said. "But they help make our courses relevant.

"My favorite story concerns the student of 19 who came to tell to me an older woman had asked for help with her homework. The younger student told me the request made her feel good. 'I felt she had come to me as another woman,' the girl said."

Sister LeRoy said older women are coming to the college to upgrade themselves, to find another career and to finish degrees interrupted by marriage and families.

"Some of the older students are just that, such as the 52-year-old who is here now," Sister LeRoy said. "Some are in their late 20s and early 30s whose husbands have left them. They are looking for saleable skills to prepare them for the job market."

Sister LeRoy said some women come back to school for individual courses, but many are interested in obtaining degrees.

"Why take a college faculty's energy and time for what a YMCA-YWCA or a high school continuing education program can do?" she asked. "Our focus at Notre Dame is on mental stimulation and personal growth which ought to be part of everybody's life. It is also on providing employable skills for those who need them."

The oldest student to enroll in the Lifelong Learning program to date was 70. She took accounting courses to improve her skills on her job at Menorah Park Jewish Home for the Aged.

"Some older women are hesitant about coming back to school," Sister LeRoy said. "We have a re-entry program which helps them brush up on basic skills such as notetaking, class discussions, writing papers, use of the library and preparing for examinations."

In addition to helping older women return to classes, faculty members welcome a few of the students' children. Last semester, students in a child development class looked after five children, observing them as classwork.

This semester, Mary Pryor of Cleveland, who is taking classes in elementary education, brings her son, Lee, 2, to school with her. Gail Franklin of South Euclid, who is majoring in communicating arts, brings her daughter, Carrie, 20 months.

Many women in Notre Dame's Lifelong Learning program have older children. Mary Jane Burin of Cleveland Heights enrolled in Notre Dame "to start a new life."

She was trained as a laboratory technician after high school, now is taking classes in merchandising and design. Her children, Amy, 14, and Susan, 10, enjoy seeing their mother go to college.

Arlene Grapo, who lives near the college, will be graduated a year from May. She is majoring in business administration. Her husband, Dennis, is an investment banker. Their children are 16, 13, and 10.

"I love being back at school," she said. "It give me something in common with my children. We do our homework together. Right now, one of my children and I are reading the works of Nathaniel Hawthorne for classes."

Pat Mamone of Lyndhurst, is taking classes in elementary education. "In a way, our children are in competition with us," she said. "It is wonderful to find them sympathetic to our studies."

Mrs. Mamone and her husband, Joseph, a lawyer, have four children.

Maryann Ketchesin will only have to commute from Elyria to South Euclid a few more weeks. She gets her degree from Notre Dame College in May. A registered nurse she is majoring in catechetics.

She wants to work in adult religious education or, combining her nurse's training with theology, with the dying and their families.

"Returning to college after marriage has a great many pluses," said Virginia Maver. She and her husband, Bob, are in the musical entertainment field.

Mrs. Maver, a junior, still is not sure she will complete studies for her degree. In the meantime, she is "involved in many things, philosophy, theology and psychology."

The women said they enjoy classes with younger students. Mrs. Maver said she often is tempted to wear earplugs when she hears the music in the Willow Room (the student recreation center).

The older women don't have a lot of time for recreation. "This is known as the 'work horse' college, and it lives up to its name," Mrs. Mamone said. "I have been forced to define what is wasting time and what is leisure time.

"And I don't use my charge cards as much as I used to. Our bills look more realistic than they have in a long time."

"I have had to cut my television viewing to nothing," said Mrs. Grapo. "I am also able to avoid a great deal of neighborhood gossip."

"The best thing about it," said Mrs. Maver, "is, once you are here awhile, you know that papers are graded on content, not age."

MO UDALL—A LEADER IN WHOM THE NATION CAN TAKE PRIDE

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. SIMON. Mr. Speaker, for some years one of my interests has been the problems of the world's poor. I have a brother, Rev. Arthur Simon, who has shared that interest. We coauthored a book a few years ago called "The Politics of World Hunger." He is now executive director of an organization called Bread for the World which lobbies for the world's desperately poor. Since I am on the Budget Committee and a Member of Congress, I suppose some could reach the assumption that there is something unethical about his position and mine, though I believe most would agree that our stands are consistent with the positions we have taken through the years.

What is logical in our case suddenly has become a feature story in the case of our colleague from Arizona, Mo UDALL. For some years he has been identified with a sensible concern for the environment, and one of these stands—for several years—has been for the Alcan pipeline in Alaska and Canada. His brother Stewart has had similar interests and now has been employed by the company which is promoting the Alcan atlernative. There is nothing inconsistent either in the positiontion taken by Stewart Udall, or in the support of Mo UDALL for the Alcan pipeline.

Not only do the obvious facts not suggest anything unethical, those of us who have known and worked with Mo UDALL know that doing the unethical is not his type of activity. The deep respect we have for Mo UDALL in the House and Senate, on both sides of the aisle, is no secret. Life is too short to fill with regrets, but from time to time there are things you do which you would handle differently if you had the chance. Last year I openly and vigorously supported

and advocated the cause of HUBERT HUMPHREY for the Democratic nomination for President. I am proud of that support and that stand. But had I correctly sensed how firmly he would have resisted the entreaties of those of us who wanted him to become a candidate, I would have thrown my lot with Mo UDALL, for he is Lincolnesque in more than physical size.

Our Nation has been fortunate to have him in the House, and while a news story hinting at something improper about his brother's new position must be discouraging to him, those of us who know him know that there is wisdom with his humor, and he is wise enough to know that his colleagues in Congress, his friends in the media, and citizens all over this Nation respect his integrity and look to his continued distinguished leadership in many fields.

Mr. Speaker, I am taking the liberty of inserting into the RECORD the response of Representative UDALL to the article. I hope my colleagues will read it.

STATEMENT OF REP. MORRIS K. UDALL

For years I have consistently favored bringing Alaskan oil and gas to the United States by one of the overland pipeline routes if arrangements could be worked out with Canada.

Years ago, when the Alaskan Oil Pipeline was before the Congress, I was one of the leaders working for an overland route with Congressmen from the upper Middle West. As a candidate for the Democratic presidential nomination in 1975 and 1976 I campaigned in Wisconsin, Michigan, and Ohio on this issue urging that gas be brought to where the shortages are, and not to the Pacific Coast where there is a surplus.

From the beginning it has been my position that one of the overland routes would and should be the choice for three reasons: Alaskan gas should be delivered where it is needed; it avoids energy losses inherent in the liquifying process; and it avoids the obvious dangers of the sea route. Recent decisions in the United States (the Federal Power Commission) and in Canada (Justice Berger's report) tend to rule out the Arctic overland route, leaving Alcan as the sole possibility if we do not go the sea route to the West Coast.

I have made no final decision and will not do so until the President acts and Canada completes its decisions process—and, until the House Interior Committee completes its hearings. From the beginning I have been frank and open in saying that I have been strongly leaning towards an overland route—and that is still my position.

Stewart Udall's employment by Foothills began only this spring. My position on the pipeline was made long before that. If I were no longer in Congress, Stew would still have much to offer any firm. He is no newcomer whose only credentials is his relationship with me. He has the experience of having handled energy and oil programs of the United States for eight years under two Presidents. He is a former Member of Congress and he knows U.S. and Canadian energy relationships and decision makers as well as anyone alive. He has a long history of favoring cooperation with Canada on energy policy.

Any decision I make on this matter will be mine and out in the open under public scrutiny as it should be. Stew and I are brothers, but we are independent-minded people who often differ. While he was Secretary of the Interior and I was in Congress we had major differences. I will be open and careful about this sensitive matter. I have asked that while my brother has every legal right to do so, that he not appear before my Committee or try to persuade its members one way or the other.

MACARTHUR SCHOLARSHIP FUND RECEIVES BIG UPLIFT

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. JOHNSON of California. Mr. Speaker, I wish to take this opportunity to congratulate the Gen. Douglas MacArthur scholarship program at California State University at Chico on its recent receipt of $10,000 from the William Randolph Hearst Foundation of New York. This contribution to the scholarship program's endowment fund will greatly improve the capability of the program to assist deserving students attending the university.

Established by two local women who pooled their resources to initially fund it in 1955, the MacArthur scholarship is designed to provide financial assistance to foreign students from all parts of the globe, giving them a "personal association" amounting to a hand-in-hand experience of friendship, understanding, and cooperation. Vonnie Eastham and Alice Anderson started this most noteworthy project with $203 over 20 years ago. It has grown through the years. Now, the scholarship committee is launching a $100,000 endowment fund drive. The contribution from the Hearst Foundation has given the drive a very solid beginning, and I wish the committee every success in its efforts.

Recently the Chico Enterprise-Record published a very fine editorial outlining the activities and accomplishments of the scholarship program. So that my colleagues may better understand the significant contributions and great potential of this effort, I request that the editorial which appeared in the April 27 issue be reprinted below:

HEARST HELP FOR SCHOLARSHIP FUND AIDS INTERNATIONAL UNDERSTANDING

Since its inception back in 1955, the General Douglas MacArthur Scholarship program at Chico State University has become one of the most effective enhancements of international understanding in the realm of American higher education.

Admittedly, the MacArthur scholarship project is small indeed when measured on the vast financial yardsticks employed by huge foundations such as those based on the Ford and Rockefeller foundations.

But from the standpoint of proportionate impact, the giants in the field might well take a back seat to the local MacArthur program.

For example, in its relatively brief 22-year existence, MacArthur Scholarship awards have assisted scores of youngsters from foreign lands in furthering their education here. A partial listing includes Japan, Korea, Thailand, Nigeria, Hong Kong, Tanzania, Jordan, Iran, India, Taiwan, the Azores. Indonesia and hosts of other lands.

Yet the geographical scope and the modest financial awards are not the main distinguishing characteristics of the MacArthur Scholarship program. Rather, the unique nature of the other aspects of the program makes its awards—in the minds of recipients—mean a great deal more than most scholarships.

This is because campus and off-campus volunteers—who play key roles in the scholarship project—provide the foreign youngsters with a "personal association" amounting to a hand-in-hand experience of friendship, understanding and cooperation.

This "people to people" relationship is, of course, something that cannot be provided by the huge, depersonalized and computer-operated government and national-scope programs.

As a matter of fact, the community volunteers—who played lead roles in the founding of the MacArthur Scholarship program—have consistently been the most active in keeping it alive and in operation over the years, scratching for funds and contributing giant shares of their own resources and energies.

Under such circumstances, it was of immense significance last week when the scholarship fund announced reception of a $10,000 award from the William Randolph Hearst Foundation of New York City.

The Hearst Foundation, which honors the memory of the late publisher of the San Francisco Examiner and other newspapers, seems to aim its good works at endeavors enhancing the causes of Patriotism, Education, Youth and International Understanding.

It is noteworthy that the local MacArthur Scholarship program serves all four of those causes, with an emphasis on "personal community relationships" for young foreign students who merit the awards.

Under such circumstances, The Enterprise-Record hastens to commend the Hearst Foundation for joining in support of the General Douglas MacArthur Scholarship program. We have long been proud of the local program and it is good news that this new Hearst endowment will help continue its good work.

PRESIDENT CARTER'S SUGAR SUBSIDY PLAN IS ANTIFREE MARKET

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. BROOMFIELD. Mr. Speaker, American economic history is a history of free trade, free competition and individual entrepreneurship. President Carter's quarter-billion dollar a year sugar subsidy plan flies in the face of some very basic principles of the American economy.

We often hear the exhortation to "build a better mousetrap." In the case of sugar, somebody has. Corn processors have, for the last several years, been marketing a corn syrup that can replace sugar in many, many foods—for a lower price than sugar. In total, just over a quarter of the sweeteners used by Americans come from corn today. And now,

the President proposes to penalize their efforts to make a cheaper product by subsidizing their competitors in the sugar industry to the tune of $250 million per year.

The President made no bones about it last week when he announced this subsidy. In turning down requests for import relief for sugar producers, he said:

Import relief would be of questionable benefit to the domestic sugar industry, because it would encourage increased market penetration by substitute sweeteners, particularly high fructose corn syrup which can be produced at a lower cost than most U.S. sugar.

I do not think the President should be putting himself in the position of either encouraging or discouraging business decisions. That is a job for the free market. But I surely do not think that he should be handing out giant subsidies to help one American industry hold off a competitor who can offer the consumer a more economical product.

THE 125TH ANNIVERSARY OF THE AMERICAN PHARMACEUTICAL ASSOCIATION

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. MIKVA. Mr. Speaker, this week marks the 125th anniversary of the American Pharmaceutical Association. Through the years, pharmacists have played an important role in the health of the Nation.

Many of the medical breakthroughs of the last 25 years are a direct result of research conducted by pharmacists. Almost everyone who has lived through the last generation has been spared a degree of pain, or freed from an extra day of illness or relieved from unnecessary worry by the use of pharmaceuticals.

This year, I am calling particular attention to the annual meeting of the American Pharmaceutical Association because a friend and constituent of mine, Phil Sacks, is being installed as national president. I congratulate the association on an excellent choice.

For many Americans, pharmacists are the first tier of support provided by the medical delivery service. And, for many Americans, pharmacists are the most important providers. Pharmacists exemplify the successful single entrepeneurships. Where other professions have incorporated and centralized, pharmacists have remained tied to their communities, and dedicated to providing personal service.

Mr. Speaker, community concern and professionalism occur too infrequently today to go unnoticed. I ask all my colleagues in the House of Representatives to join me in extending best wishes to the American Pharmaceutical Association.

AMERICANS "SPIRITUALLY HUNGRY," REJECT RATIONALISM

HON. MARJORIE S. HOLT

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mrs. HOLT. Mr. Speaker, in the Washington Post of May 13, 1977, I noted a news article filed by Religious News Service from New Orleans, quoting Dr. George Gallup, Jr., the well-known pollster, that Americans are "spiritually hungry" and that more and more Americans are disillusioned with the secular world and are looking toward life of the spirit for guidance while rejecting rationalism.

Having been long dedicated to the power of prayer and being a devout subscriber to the Christian faith, I am truly gratified to learn of Dr. Gallup's observation. I commend this excellent article to my colleagues:

GALLUP SAYS AMERICANS "SPIRITUALLY HUNGRY," REJECT RATIONALISM

NEW ORLEANS.—Pollster George Gallup Jr. told a joint religious press convention that Americans are "spiritually hungry," and he urged increased attention to an emerging interest in mysticism, meditation and prayer.

He said increasing numbers of people in the U.S. are disillusioned with the secular world, have rejected rationalism and are turning to "the life of the spirit for guidance.

"The inner life is in, if you will, and the religious press can provide a great service by giving Americans help to come closer to religious maturity," he said.

He noted that Gallup International, based at Princeton, N.J., is establishing a "center for religious research" to monitor changing religious and spiritual trends in the U.S. and elsewhere; measuring levels of religious belief, practice, knowledge and stewardship, and exploring strengths and weaknesses of the religious community.

Gallup spoke at a banquet during the 1977 convention of the Catholic Press Association and the Associated Church Press.

In speaking of religion in the U.S., Gallup said church leaders "appear to have very little idea of the changing levels of religious involvement in this nation, let alone commitment.

"Our leaders seem to have only a vague notion of where the nation is headed spiritually or whether their leadership is or is not effective," he said.

Gallup said "evidence is mounting that the U.S. may be in an early stage of a profound religious revival with the evangelical movement providing a powerful thrust."

For the first time in two decades, he noted, the Gallup Poll recorded a rise in chuch attendance in 1976, with 42 percent of Americans attending church or synagogue in a typical week. Seven of 10 Americans describe themselves as church members, and six in 10 say religious beliefs are "very important" in their lives.

Gallup pointed to the "considerable interest" in what might be called "experimental religion"—involvement in transcendental meditation, yoga, the charismatic movement, mysticism and Eastern religions.

He said a recent survey indicated 6 million Americans are active in TM, 5 million in yoga, 3 million in the charismatic movement, 3 million in mysticism and 2 million in Eastern religions.

Among the factors affecting the "upturn" in religious interest, he said, are the seeking of refuge from everyday worldly pressures, the search for non-material values in light of disappointments in the material world, President Carter's open discussion of his personal religious beliefs, a normal upswing following a decline in religion and efforts by the clergy in America to make religion "more appealing to young people and to satisfy their apparent spiritual hunger."

Yet, the pollster asked: "Are we perhaps only superficially religious? Indeed, America appears to be facing a seeming paradox: religion is increasing its influence on its society, but morality is losing its influence."

Religious experience in America, he added, is "widespread" and not limited to people of a particular age group, educational level or economic status.

PAUL VERSUS GAMMAGE

HON. JOSEPH S. AMMERMAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. AMMERMAN. Mr. Speaker, by a vote of 260 to 126 on May 9, this House dismissed the contest filed by Ron Paul, Republican of Texas, against Representative BOB GAMMAGE, Democrat of Texas.

As chairman of the special panel of the Committee on House Administration which heard the Paul against Gammage case, I believe our decision was fair and proper. I would like to explain some of my thinking on the matter to you.

CONSTITUENT MAIL

Apparently as a result of a letter he sent them, many of my constituents have written me in support of former Representative Ron Paul, of Texas, who is contesting his election defeat last November in the 22d District of Texas by Representative BOB GAMMAGE, Democrat of Texas.

I have, in addition, received a large number of cards and letters supporting Mr. Paul from persons across the Nation. Other Members of the House have been sent similar messages, also apparently the result of Mr. Paul's letter.

I was the chairman of the special elections panel of the House Administration Committee that heard the Paul against Gammage case. After public hearings in February and March, the panel voted 2 to 1 March 9 to recommend that Mr. Paul's challenge be dismissed. This decision was affirmed by the full committee April 28, by a vote of 16 to 6.

And on May 9, just this past week, the House voted 260 to 126 for dismissal.

The communications I received from my constituents in support of Mr. Paul raised several questions about the fairness of the procedures under which his complaint was heard. Similar questions were raised by some of Mr. Paul's defenders in the House.

I want to respond to those questions in some detail because I believe that Mr. Paul was treated fairly and equitably by the House of Representatives, and I resent any implication otherwise.

BASIC FACTS

First, the basic facts of the case: The long-time Democratic incumbent in the 22d District resigned early in 1976 and Mr. Paul defeated Mr. GAMMAGE in a special election that April. However, in November the outcome was reversed and Mr. GAMMAGE emerged as the winner with a 236-vote margin. Mr. Paul asked for, and received, a complete recount which showed Mr. GAMMAGE the winner by 268 votes.

Mr. GAMMAGE thereupon was issued a certificate of election by the State of Texas and was duly seated as a Member of the 95th Congress in January.

Mr. Paul, in the meantime, filed contests to the election in the Texas courts and with the U.S. Congress.

The following issues have been raised in connection with the case by Mr. Paul's supporters:

STATE COURTS

First. It was argued that Congress should have waited until the State courts ruled before deciding the case.

Article I, section 5 of the U.S. Constitution specifically states that "each house [of Congress] shall be the judge of the elections, returns and qualifications of its own Members." The Supreme Court of Texas dismissed Mr. Paul's challenge in the State courts on the grounds that Texas had no constitutional authority to hear the case.

However, even though the House was under no constitutional obligation to wait for the Texas courts to rule, we did so. The court handed down its decision March 2 and the elections panel held its final hearing and voted to dismiss on March 9, a full week later.

BURDEN OF PROOF

Second. Mr. Paul alleges he was not given an opportunity to make his case.

The Federal Contested Elections Act, to quote from the panel's report, "places a weighty burden upon a contestant."

It is not a sufficient basis for a challenge that an election was close or even that there were voting irregularities. For the House to hear his case, a contestant must produce evidence which, if verified, would prove that he would have won.

This heavy burden of proof exists because Congress cannot seek to overturn the apparent will of the voters unless we are absolutely certain that official State returns do not reflect their will. Nor can we permit a contestant to conduct a fishing expedition in the hopes of somehow, somewhere, sometime finding evidence to prove his case, all the while casting a shadow on the declared winner and forcing him to bear the legal expenses necessary to defend his interests.

Mr. Paul simply did not produce any evidence that would have been admissible in any court. The voters in the 22d District of Texas will have a chance to review the case themselves in 1978.

PARTISANSHIP

Third. It is charged that the proceedings were partisan.

Mr. Paul's defenders, notably Representative CHARLES E. WIGGINS, Republican of California, made a reasoned challenge to the procedural theories of the Contested Elections Act. I take him at his word that his position reflects his legal philosophy, not his party affiliation.

The fact remains, however, that of the four challenges including Paul against Gammage, dismissed by the House May 9, there was broad bipartisan support only in those two cases where the challenge had been made against Republicans. While House Democrats voted to dismiss all four challenges, House Republicans only voted to dismiss the challenges against their fellow Republicans.

So on the partisanship question, I believe the record speaks for itself.

FROM NICKEL ROOT BEER

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. STEERS. Mr. Speaker, on the same day that Charles Lindbergh completed his famous transatlantic flight—May 21, 1927—J. Willard Marriott opened a stand selling 5-cent root beer in downtown Washington.

Today, Marriott Corp. is a diversified food service-lodging-leisure services company with sales expected to reach $1 billion in the current fiscal year. This growth represents a phenomenal success story.

The success is particularly significant to my congressional district because 4,000 of Marriott's employees work in Montgomery County and because the company will break ground for a new international headquarters in Bethesda, across from Montgomery Mall, on its 50th anniversary, May 21.

The headquarters will occupy a seven story building on 33.7 acres and employ 1,400 employees, including those in special food research and development laboratories and in a computer complex.

The company's history in many aspects has paralleled the development of modern transportation. In 1927, Marriott was first with drive-in food service east of the Rockies—and first again in 1937 with an independent airline catering kitchen. The company now serves 25 of the world's 30 busiest airports.

Throughout the 1960's and 1970's, Marriott diversified, today including Roy Rogers Family Restaurants, the Big Boy chain, Farrell's Ice Cream Parlour restaurants, Hot Shoppes restaurants and cafeterias, and a variety of fine dinner houses.

J. W. Marriott, Jr., son of the founder, assumed presidency of the company in 1964. He has emphasized expansion, including two "Great America" theme parks in the Greater San Francisco and Chicago areas.

Locally Marriott operates four hotels, two airline catering kitchens, 100 restaurants and 42 food service management accounts. Today, the company which began with 5-cent root beer employs 13,600 area residents with an annual payroll of $80 million and sales of $160 million. In 1976, Marriott paid a total of $6 million in area taxes and has a total investment of $87 million in the District of Columbia and nearby Maryland and Virginia jurisdictions.

Mr. Speaker, the list of superlatives and accomplishments is lengthy for this homegrown organization. In the past 50 years, Marriott Corp. has been not only a significant force in the metropolitan area and the Nation but a good corporate citizen as well.

A fine contribution to the area Bicentennial observation was made by Marriott's "Music '76" presentation, sponsored in cooperation with the National Park Service on the Washington monument grounds last summer.

So, Mr. Speaker, I salute the Marriott Corp. on its 50th anniversary and wish them equal success and accomplishment during the next half century.

VIOLATIONS OF HUMAN RIGHTS IN CAMBODIA

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. LAGOMARSINO. Mr. Speaker, I would like to call to the attention of my colleagues the following letter from the Department of State in response to my inquiry concerning violations of human rights in Cambodia. I am appalled by the reports of the slaughter of men, women, and children during the past 2 years. It is beyond human comprehension that such acts could be carried out and there be so little reaction against it by concerned international organizations and humanitarian agencies. I urge the administration to do everything in its power to seek an end to such gross inhumanity to man.

The letter from Assistant Secretary Bennet follows:

DEPARTMENT OF STATE,
Washington, D.C., May 10, 1977.

HON. ROBERT J. LAGOMARSINO,
House of Representatives.

DEAR MR. LAGOMARSINO: Secretary Vance has asked me to thank you for your letter of April 19 requesting information concerning reports of human rights violations in Cambodia.

The information that we have received on this subject is generally consistent with reports in the news media. Although we do not know the number of people who have died in Cambodia since the 1975 Communist victory, the evidence of refugees who have fled that country suggests a substantial loss of life. The Cambodian authorities have permitted no Western journalists, members of international organizations, or other impartial observers to enter and investigate these reports.

The Administration's strong advocacy for the protection of basic human rights has been forcefully stated on a number of occasions. The President has declared that "because we are free we can never be indifferent to the faith of freedom elsewhere,"

and Secretary Vance has pledged that, "without being strident," this Administration will stand for human rights, and make this concern "a major focus of our foreign policy calculations." These views apply in this situation as well. However, we do not have diplomatic relations with Cambodia and are therefore not in a position to express our concern directly to the Cambodian authorities. Nevertheless, the United States has in the past indicated that it would support an inquiry into the situation by a group of nations, by international humanitarian organizations, or by responsible private humanitarian agencies. We continue to hold this position.

We have substantially assisted those Cambodians who fled their country. Over 6,000 have come to the United States, and we have contributed over $12 million to the U.N. High Commissioner for Refugees for the relief of Cambodians, as well as for Lao and Vietnamese, now in refugee camps in Thailand.

Sincerely,

DOUGLAS J. BENNET, Jr.,
Assistant Secretary for Congressional Relations.

WELFARE REFORM MUST BE DONE CAREFULLY

HON. DANIEL K. AKAKA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. AKAKA. Mr. Speaker, there is indeed a great deal of work to be done in the area of welfare reform where no easy solutions can be found. Moreover, in any uniform welfare system, high-benefit States such as Hawaii must be given special consideration. I would like to share with my colleagues an editorial which appeared in the Honolulu Star-Bulletin on May 7, 1977, dealing with welfare reform:

WELFARE REFORM MUST BE DONE CAREFULLY

During his election campaign, Jimmy Carter said that cities should not be burdened with the cost of welfare and that the federal government should eventually absorb the welfare costs borne by state governments as well.

But in his welfare presentation Monday the President didn't refer to those points. Nor was there any convincing explanation as to how a uniform system of national benefits could be provided without cutting aid to high-benefit states.

A national welfare system is an attractive idea: the present system, everyone agrees, is a complicated mess.

That much said, the problem remains of creating a viable new system. The President, having imposed a deadline on himself to announce a plan by May 1, discovered that the problem was far from simple and confined his presentation to general principles.

Hawaii is at the top of the list in state spending on poor residents, with a 1976 figure of $3,083 in annual benefits compared to a national average of $1,380. In the Aid to Families with Dependent Children program, Hawaii is providing $497 per month for families of four; at the other end of the spectrum, Mississippi is providing $60.

Obviously Hawaii and Mississippi would be affected differently by a national welfare program. Hawaii's representatives in Congress must try to protect Hawaii's interests when welfare legislation is considered.

It is likely, for example, that Hawaii would want to maintain its high level of benefits by supplementing federal benefits, as it does now. If so, federal and State benefits should be meshed in the most efficient way possible.

Another area of concern is work requirements. The State has established stiff work requirements for its general assistance program, which is entirely State-funded. Lax requirements in a federal program would represent a step backward.

One of Hawaii's chief concerns is stemming the flow of Mainland residents who come here and try to get on the welfare rolls. Gov. Ariyoshi has proposed a residence requirement to cope with this practice, but its constitutionality is questionable.

A national welfare system might make a residence requirement unfeasible, especially if federal funding is increased. But a national system might relieve immigration pressure by raising benefits in states in which benefits are now low. This might lessen the attraction of states with higher benefits.

Moreover, a truly national system would strengthen the case for the federal government's shouldering the burden of immigrants on welfare, whether they be from foreign countries or other states.

The President says he wants to scrap the present jumble of welfare programs and replace it with one simple cash payment. He wants to create jobs to accommodate welfare recipients who are able to work and to provide financial incentives to draw recipients into job training and ultimately employment.

These are laudable objectives, but the details will be all-important, and they are not known as yet. Even after the President's proposals are completed, it will take Congress many months to deal with welfare reform. At this point we can only hope that the final product takes account of the Islands' special welfare problems.

WHEN BOXING HAD CLASS

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. PICKLE. Mr. Speaker, there may much dispute among observers about what caused the decline in the art of prizefighting. Some say that professional boxing was ruined by overexposure on television. Others may opine that the hoopla surrounding the heavyweight matches ruins the actual event. Promoters who arrange bouts with one fighter taking on five different opponents have certainly added to the circus-like atmosphere.

Probably the best entertainment for fight fans today is in the amateur bouts, especially the Golden Gloves.

A man who has contributed greatly to that program over the years is also the best fighter ever to come out of Austin, Tex., Tommy Attra.

Tommy is still in excellent shape and probably as recently as 8 or 10 years ago could have gone several rounds with many top-ranked light-heavies.

I salute Tommy for his work over the years, and insert an article from the American-Statesman about his contributions to the sport:

[From the Austin (Tex.) American-Statesman, Mar. 6, 1977]

AN AUSTIN LANDMARK, AND A GOOD FIGHTER

(By Lou Maysel)

Tom Attra, in addition to almost certainly being the best fighter Austin has ever produced, is somewhat of a landmark downtown, where he operates in a very conspicuous way as a newspaper street sales manager.

A year or so ago a visitor stopped him and said, "I haven't been here in 20 years. You're the only thing downtown I recognize."

At 58, Attra is graying, his face shows a few wrinkles and his legs aren't what they once were; but other than that he's changed only a little. He's only nine or 10 pounds over his best fighting weight of 172 pounds and his muscles are firm and his stomach so hard he probably could still shake off a solid body punch.

Although he hasn't sparred in more than 10 years, the two-time national Golden Gloves champion still puts on gloves twice a week for four 1½-minute rounds of savage punching on a heavy bag at a local athletic club. He also chins himself 20 to 25 times and does 50 situps, 25 at a time, during his workout.

It's only designed to keep himself in shape because Attra, despite his killer ways in the ring, claims he always walks away from trouble. Which is a change from when he first started selling newspapers 49 years ago. Then he used to run from it.

"Momma and Daddy wouldn't let me fight and all the kids jumped on me because I wouldn't fight back. Some of them were smaller than I was. They'd make me cry and beg them to quit," Attra remembered.

Years later when he was doing roadwork in Guam for a service boxing show, someone who knew him only by his nickname, "Banjo" (which is short for "Banjo Eyes"), stopped him and asked him what he was doing. When Attra told him, the guy questioned his veracity, remembering. "You were the biggest sissy in Austin when I left."

It's hard to believe that anyone with this sort of reputation would venture into the ring for 188 pro and amateur fights, and count those national Golden Gloves titles in 1942 and '45 as his top achievements.

Back when he was running from trouble, Attra's idol was Matt Martinez, the local Mexican food restaurateur. "Matt was selling papers, too, and nobody bothered him. He was a good lightweight and pretty tough," Attra recalled.

Attra got into boxing via wrestling. He participated in a wrestling exhibition at a regional Golden Gloves tourney and asked how he could get one of the miniature gold boxing gloves the winners received.

"If you want one, why don't you fight for one?" he was told. Though he "was scared to death," Attra decided to enter the next tournament but lost a real slugfest to a good fighter named Buddy Summers. Attra had a 3–2 edge in the knockdowns. It was the only fight he ever lost in Austin.

"I was going to quit but a sportswriter here by the name of Wilbur Martin told me I ought to stay with it. I went back to the gym eight months ahead of time and started training," he said.

It paid off since Attra went all the way to the national semifinals at Chicago before losing to Joey Maxim, later the world light-heavyweight champion. After that it was just a matter of time before he won a championship.

The coming of March each year always makes him a bit nostalgic because it brings the state Golden Gloves at Fort Worth where he had many fine moments. Although his job is such that it's hard for him to get away, he managed to go last year but he found the competition way off—just as the last nationals he saw at Fort Worth in 1973 were disappointing to him.

However, he's still remembered by many oldtime fans up there and well he should be. A while back in a poll to name the top fighters to appear in the many state tourneys there, Attra finished second to Port Arthur lightweight Morris Corona. Port Arthur bantamweight Dick Menchaca was third and Roy

Harris, the heavyweight from Cut and Shoot, was fourth.

Attra never regrets for a moment becoming a fighter. It turned him from a nobody into somebody and he still speaks up for amateur boxing although he mainly has disdain for the pro game.

"It's a good clean sport if it is run right but the boys have been hurt so bad and lied to so much, they drop out and it's got a bad name," he said. "If a boy is in real good shape, he's not going to get hurt either."

Of course, few fighters nowadays will train eight months for a boxing tournament like he did for his first serious one. That's because few of them have the great pride Attra did.

"I wanted to win so bad because I was a hard loser. If I lost a fight, I cried for a week. I couldn't stand to lose so I put everything into it," he said.

As folks who knew Attra back then remember, there were very few occasions when Attra had reason to cry. After he started boxing, that is.

THE ROLE OF GOVERNMENT IN OUR LIVES

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. GILMAN. Mr. Speaker, for several years I have sponsored an essay program for the graduating high school seniors of the 26th Congressional District—New York—to encourage their participation in good government. Again, I would like to share with my colleagues the inspirational literary work of these young people.

These essays reveal a reaffirmation of the ideals of our Founding Fathers by our youth, combined with an awareness of present day problems and realities. Since I believe that they deserve to be widely read, I would like to offer the following three winning essays for review by my colleagues. At a later date, I will submit the other winning essays in our competition.

The essays follow:

[First Place]

THE ROLE OF GOVERNMENT IN OUR LIVES

(By Thomas Lynch, Pearl River High School, Pearl River, N.Y.)

Democracy and tyranny are diametrically opposed in one respect; the tyrant enforces uniformity while the democracy encourages individuality. The Constitution of the United States is an exemplary schematization of a democratic government, because it fundamentally recognizes the individual's right to exercise his free will. But self-righteous democracies often metamorphose into repugnant autocracies, simply because the governments decide that they must usurp the individual's sovereignty as a means of controlling the destiny of the masses. To avoid the imminent danger of autocracy in this country, our legislators must make individual freedom the harnessing force of all their reforms.

The government must remember that the free market is the ultimate expression of the individual's free will, and therefore, its workings should go unhampered. In the free market economy, the government should act only to free up existing molds, and to flush out the stagnating accretions which devitalize the marketplace. The government should also act to protect the individual from unscrupulous merchants, but each governmental action should be guarded by the government's official cognizance of its possible debilitating effect upon the marketplace.

The government must also serve as a guardian of the people's heritage; for these birthrights are the only links that can transform a group of individuals into a cohesive nation-state. The heritage of the people consists not only of literature, music and art, but also of the nation's irreplaceable natural resources, all of which should be protected at any cost.

The government is performing its most significant role when it is acting as a catalyst for a world-wide, fundamental recognition of human rights. From the freedom fighters of Hungary, to the freedom marchers of Montgomery, Alabama, the government must serve as an unrelenting torchbearer for the beleagured and subjected throughout the world. For a government that hides from morality is no government at all.

To fulfill its role, our government must remain loyal to the nation's original precepts; the doctrine of faith in the individual. And as long as our government realizes that the individual is fundamentally good, we can rest assured that, "government of the people, by the people, for the people, shall not perish from the earth."

[Second Place]

THE ROLE OF GOVERNMENT IN OUR LIVES

(By Joseph D. Oliansky, Newburgh Free Academy, Newburgh, New York)

Government is nothing more than the regulating body of a society. It exists only because without it society, as we know it, would collapse. In order for a society to exist, its components must coexist peacefully and must work together smoothly. For this to take place, rules and laws must be followed. But people, who are the components of a society, will not always follow these rules voluntarily, and we, therefore, find the need for an enforcing body.

This enforcing body must exist in any society, whether it be communistic or democratic, a Monarchy or a Dictatorship. The type of society one has is determined by how stringently that society's enforcing body acts upon, or regulates, its components.

The less power the regulating body has, the more democratic the society is. The United States is one of the more democratic societies in that its people have a direct say in regulating themselves. The Soviet Union, which masquerades as a democracy of sorts, gives its people little or no say in regulating themselves. Therefore, its enforcing body creates a highly undemocratic society.

Government's only purpose is to keep the society it regulates intact and operating as smoothly as possible. When the government fails to achieve this goal, it is rejected and replaced. In the United States this occurs regularly by election. If the person in power is not doing a good job, the people will replace him with somebody who they feel can do better.

The United States does not have a perfect governing body. It is, however, the most perfect available, and it is every citizen's duty to contribute to its well being as best he can. If something's wrong with the government, it must be either changed or endured. Government is a necessary part of every society; the two are interdependent.

[Third Place]

THE ROLE OF GOVERNMENT IN OUR LIVES

(By Stephen Radin, Clarkstown High School North, New City, N.Y.)

On July 4, 1776, thirteen English colonies formally broke away from their mother country, declaring themselves free of British dominance. The authors of the Declaration of Independence sought to create a Nation in which the individual's rights to life, liberty and the pursuit of happiness would be the primary concern of government. Since that day such altruistic phrases as freedom of speech, freedom of religion, freedom of assembly, and freedom of the press have resounded throughout these United States. Our government's role today, however, is not primarily dedicated to the safeguarding of these freedoms. For in practice it appears to be essentially concerned with protecting its citizens from the excesses of those freedoms our ancestors cherished so greatly.

Our society has wisely chosen to surrender absolute freedom to a sector of government quite often overlooked—the judiciary system. In his thirty years as a Supreme Court Justice, Oliver Wendell Holmes interpreted the constitution in such a way so as to defend the rights of individuals and at the same time give due consideration to public welfare. In one very famous case he declared that no one had the freedom to shout "fire" into a crowded theater. Our government functions in this manner to control abuses of freedom, a concept which if allowed to expand unchecked would promote chaos and anarchy.

Most state governments have moderately stringent educational laws. The theory behind this is that a child's right to go to school (or by the same token a parent's right to deny his child schooling) should not be respected because of an abstract doctrine known as "the good of society." Local town and school boards have similar standards regarding particular subject areas. Every citizen of the United States is affected by our government in thousands of similar ways. The food we eat must be government inspected. Certain products cannot be imported into the country. Automobiles can travel only at certain limited speeds. The list is endless.

With the freedoms established by our founding fathers comes responsibility, but without a government to control the behavior of individuals, it is doubtful that many people could or would accept this way of life. Greater in importance than freedom for any individual is the safety of society. Government must serve to protect its people. It is just as important, however, that the legislative and judicial branches of the government are very wary in the execution of their duty to protect the citizenry from overzealous executive actions.

PHILADELPHIA'S WATER COMMISSIONER GUARINO HONORED FOR OUTSTANDING ENGINEERING CONTRIBUTIONS

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. EILBERG. Mr. Speaker, I am proud to be able to announce that the Engineers' Club of Philadelphia has conferred its George Washington Medal on Water Commissioner Carmen F. Guarino.

The Washington Medal is bestowed each year on "an engineer who has made outstanding contributions to technological progress as a member of engineering management." It is the highest honor conferred by the Engineers' Club.

Mr. Guarino was appointed water commissioner by newly elected Mayor Rizzo in January 1972. He entered city service 25 years ago. He is recognized internationally as a leading expert on wastewater treatment, instrumentation, and automation.

Under his direction the Water Department has made a number of technical advances and is presently carrying out a $414 million expansion of the wastewater plants which will give Philadelphia the most technologically advanced plants in America, complete with automation.

Mr. Guarino is a member of more than a half dozen engineering societies, including the Engineers' Club. Recently, he was appointed by the national EPA Administrator to the National Drinking Water Advisory Committee.

MISTAKES IN DEALING WITH UNEMPLOYMENT

HON. PAUL SIMON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. SIMON. Mr. Speaker, as I speak to various groups and discuss the idea of recognizing that unemployment is not a temporary thing and that we have to move toward some kind of a WPA-type of approach, I find that both liberals and conservatives think that approach makes a great deal of sense.

I am inserting into the RECORD a column I wrote a few weeks ago discussing where we are on welfare and unemployment and what the alternative might be, and I am also inserting in the RECORD, immediately after, that an editorial from the Paducah Sun-Democrat commenting on the idea.

I am inserting the Paducah Sun-Democrat response because it is fairly typical of the response that I have been getting talking to people of every type of political persuasion:

THREE MISTAKES IN DEALING WITH UNEMPLOYMENT

(By Congressman Paul Simon)

I have been voting for measures to encourage creation of jobs for the Nation's unemployed, but we are making three fundamental errors as we provide work opportunities.

Our first mistake is viewing high unemployment as a temporary problem. We believe that Band-Aid formulas (like a $50 tax rebate and Comprehensive Employment and Training Act programs) will somehow get the economy moving again and end the joblessness.

I would like to believe that but I don't.

Each day more people enter the potential work force, particularly more women, but each day we can produce more cars, refrigerators, soybeans and steel with fewer and fewer workers. Inevitably there will continue to be a sizeable number of people out of work, particularly among the unskilled.

Our choice for them is either to provide meaningful work, with which they can contribute something to the needs of our Nation, or continue to pay them for doing nothing through unemployment compensation and welfare.

Government pays in either event. The choice is paying people for doing something or paying them for doing nothing. Faced with that choice, the answer should not be difficult.

We ought to recognize this as a long-range problem which needs more solid answers. That long-range look will not take place so long as we keep believing that in a few months or a few years our employment problems will disappear.

The second mistake we are making is in paying more than we should for some of those who work in our present programs.

I do not suggest that right now pay levels be reduced. But as we devise long-range answers for our problems, the aim should be to provide temporary but meaningful work for the person who finds himself or herself out of work for a short period, and perhaps longer term but temporary employment for the person whose skills are extremely limited.

The pay level ought to be geared to the national minimum wage, so that the incentive is to get off the federal payroll rather than stay on.

And we should provide work opportunities which do not conflict with local employment or business. To do that, in each county there should be an advisory committee of perhaps a dozen business and union leaders to select projects that would be of help to a community or area but would not put others out of work.

Planting trees, helping in a day care center, teaching reading and writing skills to the illiterate—these are the types of things which can be done in almost any community. There are thousands of such projects which need doing.

But this work should be viewed as temporary. The pay level should be high enough to encourage people to work rather than draw unemployment compensation or welfare, but low enough so that the incentive is to go to work in the private sector.

The third mistake is failing to let people know the severity of the problem.

I sense that most Americans do not understand the unemployment problem. They hear about unemployment but they see "Help Wanted" ads in the paper, and they do not understand why the two don't meet.

What the Bureau of Labor Statistics calls "the discouraged worker" disappears from visibility. These are the more than one million Americans who don't show up in the employment lines, who don't fill out job applications (if they can), who don't pound the streets looking for a job, because they have given up. And that means giving up on our system of government's ability to respond to their need.

Unless and until we recognize these three mistakes, we will continue to stumble and drift rather than move decisively.

[From the Paducah Sun-Democrat, May 3, 1977]

UPDATE AND BRING BACK THE WPA

Our Southern Illinois neighbor, U.S. Rep. Paul Simon believes the federal government should reinstitute a program similar to President Franklin Roosevelt's depression-born Works Progress Administration to help bring down unemployment.

"I know the image of the WPA was of men leaning on shovels," Simon said recently. "But the facts are that WPA workers built 113,000 schools and libraries, they constructed 600,000 miles of highways (including several miles of concrete streets in Paducah) and helped 1.5 million adults learn to read and write. We had histories written and plays produced. We became a richer nation because we converted a liability into an asset."

Simon admitted that the old WPA program would have to be modified, because it was largely male-oriented and there are many more women on the job market today. Also, more in-depth training of workers would be needed because of the higher degree of sophistication of construction equipment today.

"I think we really face the choice of where we pay people for doing something or pay them for doing nothing and I think it makes a lot more sense to pay them for doing something," the Carbondale Democrat said. He also said that excessive unemployment compensation and some welfare programs are "encouraging some people to do nothing."

Simon added that the Comprehensive Employment and Training Act (CETA) "is better than nothing" but that it is only an emergency program "based on the theory that unemployment is a temporary emergency. I don't happen to buy that," he said.

Simon's idea to dust off the old Roosevelt-ian program and reshape it to today's needs is food for thought. There's nothing wrong with the idea of paying the able-bodied unemployed a decent wage for working. It's better than an unending procession of government unemployment or welfare checks.

VIKING CHOIR

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. DERWINSKI. Mr. Speaker, the outstanding Viking Choir of the Homewood-Flossmoor, Ill., High School has, for many years, made an annual trip to Europe; and each of their trips has been a musical as well as public relations success.

Their programs have thrilled and impressed audiences all over Europe. This year's group of students traveled to Greece, and an article in the local Star Publications, of May 8, tells of the praise they received from their Greek audiences.

The hundreds of young men and women, who have been members of the Viking Choir over the years, have been great ambassadors of good will for the United States. I am proud to have this progressive group of students as members of my constituency.

Therefore, I insert the above-mentioned article of their travels in the RECORD at this time:

H-F VIKING CHOIR REAPS GREEK CRITICS' PRAISE

Greek music critics praised concerts performed by the touring Viking choir of Homewood-Flossmoor high school during spring vacation.

A Thessaloniki newspaper said:

"The Viking choir concert at the Radio City theater was very successful. The Viking choir consists of high school students from Flossmoor, Ill. Its perfect performance confirmed its fame as being one of the best choirs of the United States.

"In the first part of their concert, the Vikings impressed their crowded audience with a particularly inspiring program of hymns by Handel, Tschaikovsky, Rachmaninoff and Gasparini. A series of Negro 'spirituals' followed, and the program ended with a careful selection of popular songs by Gershwin and other famous composers.

"The admirable harmony, punctuality and control of music of those young musicians as well as the unique performance of many songs under the direction of Mr. Walter

Rodby impressed the audience who applauded them with enthusiasm.

"The performance was organized by the American center in Thessaloniki and by the Youth for Understanding. Thessaloniki was the last stop of the 10-day tour of the Viking choir in Greece, during which the more than 100 members of the choir and their companions had a chance to visit places of archeological value and to get to know our country's present life and customs."

"For the past several years Holocaust day has given us good opportunities to enjoy music events which not only brighten the anniversary but also satisfy the friends of good music.

"This year, along with our familiar state orchestra of Thessaloniki, we enjoyed the American Viking choir which consisted of about 100 students of an Illinois high school. The concert at the Municipality theater was a real surprise.

"No one had imagined what was awaiting them at the theater. The young people, in particular, expected pop music rather than the kind of music they heard: Negro spirituals and classic songs with only one part of American popular music.

"In spite of the different expectations, the young people along with the old in the audience were absorbed from the very beginning. One hundred voices seemed as though they were one.

"No voice was separate from the whole, and no one could tell the exact time the diminuendo had finished even though there was absolute silence in the overcrowded hall. The warm applause and Mayor Vlahos' words of appreciation to the American counsel in Thessaloniki were very justifiable."

The director of the American center (United States Information Service) at Thessaloniki, Carl R. Sharek, wrote:

"Personally, and on behalf of my staff, I want to congratulate the Viking choir for the most successful concert that you gave at the Municipality theater of Naoussa and at the Radio City theater of Thessaloniki.

"The mayor of Naoussa, the Youth for Understanding organization of Greece and we here at the American center are thankful for the opportunity to present you to the people of Northern Greece and hope that it will be possible to have you back here again.

"Once again, many thanks and best wishes to you and to all the members/staff and friends of the Viking choir. I would like very much and hope that we will again have the pleasure of performances here by the Homewood-Flossmoor musical groups."

THE HYDE AMENDMENT SHOULD BE DEFEATED

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. STEERS. Mr. Speaker, last June 24, Congressman HENRY HYDE proposed an amendment to the Labor-HEW appropriations bill to prohibit medicaid funding of abortions. On October 1, after the Senate had twice rejected this wording, a compromise version—with essentially the same intent as the original Hyde proposal—went into law.

On that same day, the Second District Court of New York granted a temporary restraining order on the grounds that the amendment is unconstitutional. On October 22, a preliminary injunction was granted in the same court and the law has never been implemented.

Next month, when the Labor-HEW appropriations bill comes to the floor, the House will once again be faced with a decision as to whether medicaid funds should finance abortions.

I believe that this amendment is unconstitutional. Nine Federal courts have ruled in suits involving State prohibitions on the coverage of abortion services under public programs that to deny such services to beneficiaries of the program would be in contravention of the equal protection clause of the Constitution when services are available for maternity and delivery care. The Supreme Court heard arguments in January 1977 and will rule this year on the constitutional questions involved.

On April 19, 1977, in hearings on the Labor-HEW 1978 appropriations, I testified on behalf of Women's Lobby in favor of medicaid funding of abortions. For the RECORD, my remarks before the House Labor-HEW Appropriations Subcommittee follow:

Mr. Chairman, members of the committee, I am reading the following statement for the women's lobby because I, too, favor medicaid funding of abortions. I am reading the statement verbatim:

Quote: "Mr. Chairman, members of the subcommittee, we are once more faced with the issue of medicaid abortions.

"It is outrageous that the present administration, which stresses its populism, its concern for human rights on a global scale, sees no contradiction in denying poor women here in the United States their right to choose whether or not to have an abortion.

"We must continue to fund abortions under Medicaid. Much as we applaud the attempt to circumvent the need for abortions as outlined in the Abortion Alternatives section of the HEW budget, there will still be a need for abortion services. No contraceptive is 100 percent effective—and even abstainers can be raped. Many women cannot safely use the two most effective forms, the pill and the IUD. It is not simple carelessness or thoughtlessness that causes many of these unwanted pregnancies.

"There are 11 million sexually active teenagers today. Each year more than 1 million 15 to 19 year olds become pregnant, and an additional 30,000 under the age of 15 become pregnant. We cannot force these children to bear children: the physical and socio-economic burdens are too great. These very young mothers have babies that are 2 to 3 times more likely to die in the first year; their maternal death risk is 60 percent higher than that for mothers in their 20's; their babies are more likely to have a low birth weight, and so are more susceptible to childhood illnesses and neurological defects. Most teen mothers drop out of school; ⅔ of pregnant teenage brides are divorced within six years; most spend their lives in a series of dead end jobs or on welfare. And this teenage group is the one age group to have a still increasing birth rate.

"It should be enough to point out that it is unfair to these poor and young women to force them to bear unwanted children, or to resort to back alley or self-induced abortions. That should be sufficient grounds to keep these services available. But in purely fiscal terms, it is insanity to outlaw Medicaid abortions. An abortion costs $150, a live birth $600. Each poor child costs $1000 per year, exclusive of food stamps and Medicaid. Since many of these cases are first time pregnancies it would mean two new names on the welfare rolls. It would cost the taxpayer $600 million the first year alone to support these mothers and new children if Medicaid abortions were outlawed.

"If you support the Hyde amendment language in any way, you must appropriate that additional $600 million, with the sum multiplying annually. Neither the states nor private organizations have the money necessary to replace Medicaid abortion services. These women and young girls will have nowhere else to turn.

"Ordinarily the Congress has no responsibility to provide funds for the exercise of constitutional rights. But since the government has set up a comprehensive medical aid program for the indigent, to exclude abortion services from that program is imposing a burden on the right to have an abortion. This amendment is clearly aimed at discouraging and preventing abortions, and is therefore an unconstitutional condition imposed on a constitutional right.

"The Congress should not waste its time on a law that not only violates our country's founding principle of separation of church and state, but is clearly unconstitutional.

"Mr. Chairman, members of the subcommittee, the women's lobby urges you to strike the Hyde amendment language from the bill." End Quote.

Mr. Chairman. This ends the statement of Women's lobby. To reiterate, I favor Federal funding of abortions.

A NEW CONSUMER AGENCY

HON. PAUL N. McCLOSKEY, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. McCLOSKEY. Mr. Speaker, last Tuesday, on a 22-to-21 vote, the Government Operations Committee reported out a bill to create a new Consumer Agency with the power to sue nearly every other agency of Government.

The bill specifically empowers the new Consumer Administrator to sue any Cabinet office or agency, with few exceptions, with whom he disagrees as to the impact of an Agency decision which "the Administrator determines substantially affects the interests of consumers."

There is no precedent for such a power and to my knowledge there has never been such a power granted to any other agency in Government. Disputes as to policy priorities between executive branch agencies are, and should be, settled by the President who is accountable for his decision to the American public at the next election. Should the Consumer Advocate sue the Secretary of Interior, or Treasury or even the Justice Department? He can, if H.R. 6805 is enacted.

It seems almost inconceivable that at a time when the Federal courts are already heavily backlogged with pending litigation we should add this new type of intrusion into the executive decision-making process.

Today, I am placing in the RECORD an amendment in the nature of a substitute which will delete both the unlimited power of litigation as well as the power

to compel answers to written interrogatories to private businesses on the part of the new Agency.

The basic concept underlying my substitute is that while consumers do need a more vigorous voice in governmental decisionmaking process, it would be unwise to add on top of existing Government consumer programs a new Agency with the power both to sue other agencies in court and to increase the paperwork burden presently imposed on businessmen.

I would view the Consumer Advocate as an "ombudsman," empowered to raise his or her voice as vigorously and as publicly as possible on the consumer's behalf in all governmental agencies and decisionmaking processes, and with the further power to obtain all relevant information and cooperation from every agency of Government, including the Departments of Agriculture and Labor.

The Consumer Advocate's powers, however, would end there. The Advocate would have no power to impose his views on Government agencies; and no agency would be bound to accept the Advocate's position. Each agency would be required to consider the Advocate's viewpoint and full publicity would attend his or her arguments and efforts.

The substitute recognizes another basic principle: That we should never again create a new office in the Government without abolishing at least as much bureaucracy as the bill creates. The substitute contains a specific provision that the Advocate's office will come into existence only when the Comptroller General certifies that a Presidential reorganization plan, accepted by the Congress, has abolished or transferred to the new Agency offices and functions whose fiscal year 1976 budget outlays exceed the budget authority for the Advocate's office. A description of the difference between H.R. 6805 and my substitute is attached.

DIFFERENCES BETWEEN H.R. 6805 AND MCCLOSKEY SUBSTITUTE

CONSUMER PROTECTION ACT (H.R. 6805)	M'CLOSKEY SUBSTITUTE
1. Establishes an "Agency for Consumer Protection," to be directed by an Administrator.	1. Establishes an "Agency for Consumer *Advocacy*," to be run by a Consumer *Advocate*.
2. Permits the Agency to sue most other Federal agencies.	2. Denies to the Advocate any power to seek judicial review of actions by other Federal agencies save as to the independent regulatory bodies such as the FTC, ICC, etc., or with respect to the Freedom of Information Act.
3. Authorizes the Agency to issue interrogatories to private businesses, and to request court order to enforce those interrogatories.	3. Denies the Agency the power to issue interrogatories to private businesses.
4. With regard to requests for information by the Agency to other Federal agencies, alters the Freedom of Information Act to ease access to trade secrets and confidential commercial or financial information.	4. Places the Agency in the same position as all other Federal agencies.
5. Exempts the Departments of Agriculture and the NLRB from consumer advocacy.	5. *Permits* Agency advocacy in labor and agricultural issues.
6. Authorizes the appropriation of $15 million for FY 1978 and $17 million for FY 1979.	6. Reduces the authorization to $10 million for FY 1978 and 1979.
7. The Act takes effect 90 days after the date of enactment.	7. Before the Act takes effect, all *other* consumer programs, operations and activities in the government must be abolished or transferred to the new Agency. The *total* budget outlays for the programs abolished or transferred must exceed the amount authorized for the new agency.

CLEAN AIR ACT AUTO EMISSION ISSUE

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. TEAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a Clean Air Auto Emission Fact Sheet which was given to me by my good friend Mr. W. O. Bankston of Dallas, Tex. Mr. Bankston is an auto dealer in the Dallas area and in addition a very community minded individual who has participated in many community activities. The problem of auto emissions is a complicated issue, and it is Mr. Bankston's hope that this factsheet will shed additional light on the issue:

FACT SHEET—CLEAN AIR ACT AUTO EMISSION ISSUE

SYNOPSIS

President Carter has proposed one set of auto emission standards for the coming years.

Congressmen John Dingell and Jim Broyhill have proposed a different set of standards.

In making a choice between these two sets of auto emission standards, the Congress should consider:

(1) the effect on public health and progress toward meeting the Nation's air quality goals;

(2) the effect on auto fuel economy;

(3) the added cost to new car purchasers; and

(4) the effect on auto industry employment.

Available health data indicates that the Dingell/Broyhill schedule is stringent enough to adequately protect public health and continue the present rate of progress in improving air quality.

No evidence presently available indicates that the President's schedule will achieve any additional air quality improvement over and above that which the Dingell/Broyhill schedule would achieve.

When compared to the Dingell/Broyhill schedule, the President's schedule would result in the consumption of an additional 12 billion gallons of gasoline between now and 1985.

When compared to the Dingell/Broyhill schedule, the President's schedule would require the consumer purchaser of a new car to spend $400 more to buy a new car, and more than $100 to buy the additional gasoline needed to operate it.

The President's schedule may adversely impact on auto sales and result in more unemployment in the auto industry.

The technology does not presently exist to meet the final statutory NO_x standard of .4 which the President's schedule retains as a possible final standard for NO_x.

The Dingell/Broyhill emission schedule will continue the Nation's present progress in reducing auto emissions and cleaning up the quality of our Nation's air, and at a significant savings over the President's schedule in terms of fuel economy and cost to the consumer.

In summary, the Dingell/Broyhill schedule will protect public health, conserve fuel, and save consumers money.

I. Issues involved

The House of Representatives will soon be considering two alternative auto emission schedules for the coming years.

Members will have to choose one.

They will base their judgment on the relative merits of these two schedules in terms of:

1) the effect on public health and progress toward meeting the Nation's air quality goals;

2) the effect on fuel economy;

3) the added cost to purchasers of new cars in terms of both purchase price and maintenance costs; and

4) the effect of auto industry employment.

II. Background

The Clean Air Act of 1970 mandated a 90-percent reduction in the following three automobile pollutants:

a) hydrocarbons (HC)

b) carbon monoxide (CO)

c) oxides of nitrogen (NO_x)

Translated into concrete numbers, the 90-percent reduction would be:

Final Statutory Standards

a) HC—0.41 grams per mile (gpm).

b) CO—3.40 grams per mile (gpm).

c) NO_x—0.40 grams per mile (gpm).

The original act required this 90-percent reduction for HC and CO by model year 1975. For NO_x, the 90-percent reduction had to be accompanied by 1976 model year.

In the 1970 Act, Congress gave EPA discretion to delay these final standards for one year. EPA subsequently acted to delay compliance with the final standards until 1978 model year.

The present situation is as follows: unless the Congress acts, the final statutory standards are now scheduled to go into effect this fall with respect to model year 1978 light duty vehicles. EPA has no authority to delay these final standards from going into effect.

III. Emission schedules under consideration by the House

1. The House Interstate and Foreign Commerce Committee voted to adopt the emission schedule proposed by President Carter:

Model year	HC	CO	NO_x
1978	1.5	15.0	2.0
1979–80	.41	9.0	2.0
1981–82	.41	3.4	1.0
1983 and beyond	.41	3.4	*.4

*EPA must decide in 1980 whether to require a final .4 NOx standard on health grounds. Standard would remain at 1.0 if EPA decides .4 is not necessary.

If a final .4 standard is required, manufacturers could still sell vehicles meeting the 1.0 standard, but would pay a tax on each such vehicle.

This is the emission schedule which will be contained in the Clean Air Act legislation (H.R. 6161) when the full House considers the bill in a few weeks.

2. Congressman John Dingell (D-Mich.) and James Broyhill (R-N.C.) have proposed the following emission schedule in H.R. 4444.

Model year	HC	CO	NO_x
1978–79	1.5	15.0	2.0
1980–81	.41	9.0	2.0
1982 and beyond	.41	9.0	*1.0

*EPA can waive up to 2.0 if health and technology considerations permit.

You will note that this schedule would set the final CO standard at 9.0. Present available scientific evidence indicates that this standard is stringent enough to meet the ambient air quality goals for CO.

The final NOx standard would be set no lower than 1.0, eliminating the possibility of a final .4 standard. Evidence indicates that the .4 standard is not necessary from a health perspective, and will be difficult, if not impossible, to meet from a technological standpoint. A final .4 NOx standard would also have a severe adverse impact on fuel economy.

Prior to adopting the President's emission schedule, the full House Interstate and Foreign Commerce Committee rejected the Dingell/Broyhill emission schedule on a tie vote of 21–21.

IV. Future legislative action in the House

The Clean Air legislation, with the President's emission schedule as adopted by the House Commerce Committee, will be considered by the full House of Representatives.

Congressmen Dingell and Broyhill will offer their emission schedule as a floor amendment to the Clean Air Act legislation on the floor of the House. This means that every member of the House will have an opportunity to vote specifically on whether to adopt the Dingell/Broyhill emission schedule.

V. The auto emission control/fuel economy/consumer cost "connection"

In general, the techniques currently being utilized by the auto manufacturers to meet present emission requirements (1.5 HC, 15.0 CO and 2.0 NOx) have a negative impact on fuel economy. The engine is effectively "detuned" somewhat in order to reduce omissions. This also reduces the efficiency of the engine and results in poorer fuel economy.

New engine emission control technology such as the catalytic converter has enabled the manufacturers to recoup some of this fuel efficiency loss over the last three years. These gains may be threatened by implementation of more stringent emission standards prior to the development of new technology capable of meeting those standards without accompanying fuel penalties.

If excessively stringent standards are required above and beyond those necessary to protect public health, further fuel penalties can be anticipated in the coming years, even with the introduction of the three way catalytic converter.

In addition to fuel penalties, more stringent standards will require the manufacturers to utilize more sophisticated emission control systems such as computer controlled carburetion systems, three way catalytic converters, fuel injection systems, etc. These systems will substantially add to the cost of purchasing a new vehicle, and will also add to the cost of maintaining the vehicle over its useful life.

In short, the more stringent the emission standards—the more fuel penalties and added costs consumer purchasers of new vehicles will have to bear.

VI. Arguments favoring the Dingell/Broyhill emission schedule

1. *The Public Health Issue:* President Carter would require that the final NO_x standard of 0.4 be met in 1983 if EPA decided it was necessary. The Dingell/Broyhill schedule would set a final standard of 1.0, with EPA permitted to waive it up to 2.0 if public health would not be adversely affected.

According to the presently available health data, no statistically significant difference in air quality will result regardless of whether the final standard is 0.4, 2.0 or somewhere in between. (Source: Interagency Study conducted by the Environmental Protection Agency, Department of Transportation, and Federal Energy Administration, April 8, 1976).

President Carter would require the final statutory CO standard of 3.4 beginning in 1981 model year. The Dingell/Broyhill schedule would eliminate the final statutory standard of 3.4, and require a final standard of 9.0 commencing in 1980.

According to both David Ragone, Dean of the College of Engineering at the University of Michigan, and the California Air Resources Board, a final CO standard of 9.0 will enable the nation to meet the ambient air quality standard for CO.

In summary, the Dingell/Broyhill schedule contains the final standards necessary to meet our air quality goals. The President's proposal, on the other hand, goes far beyond what is necessary or justified on public health grounds.

2. *The Fuel Economy Issue:* When compared to the Dingell/Broyhill emission schedule, the President's proposal would result in an additional fuel penalty of over 12 billion gallons of gasoline between now and 1985. This figure is based on a preliminary update of the April 8, 1976 interagency study done by EPA, DOT and FEA (commonly referred to as the 3-agency study) and represents a 5–10% fuel penalty.

This translates to approximately 100,000 barrels of oil per day of additional consumption due to the more stringent emission requirements of the President's schedule.

With the President's emphasis on increased fuel economy for automobiles and oil and natural gas conservation in general, it is difficult, if not impossible, to justify the President's more stringent emission schedule based on fuel consumption consequence.

3. *The Cost Issue:* When compared to the Dingell/Broyhill emission schedule, the President's proposal would result in the American new car purchaser spending on the average $400 more to purchase and maintain his vehicle over its useful life.

In addition, the consumer will have to pay more for gasoline since the vehicle will have poorer fuel economy. Based on 10,000,000 annual new car sales through 1985 and gasoline priced at 60¢ per gallon (a conservative estimate), the added gasoline costs for new car purchasers will be in excess of $100.00.

The cost estimates above are based on the January update of the 3-agency study.

4. *The Jobs Issue:* Because of the added costs and anticipated technical problems manufacturers may encounter, the President's emission schedule may have a significant adverse impact on employment in the auto industry. Sharply increased costs due to technical difficulties in meeting the final standards proposed by the President would likely lead to lower sales. The obvious result would be reduced employment in the auto industry.

It should be noted that the 3-agency study of last year and the Chase Econometric study based on the 3-agency study indicated a direct correlation between more stringent emission standards and increased unemployment in the auto industry. The relationship is rather simple—the more stringent the standards, the more likely that a significant adverse impact on auto related employment will result.

Summarizing: The Dingell/Broyhill emission schedule will enable the Nation to continue its present rate of progress in cleaning up auto pollution. From a public health perspective, the Dingell/Broyhill schedule will adequately protect air quality over the coming years. At the same time, the Dingell/Broyhill schedule will result in the minimum adverse impact on fuel economy, jobs and consumer costs necessary to meet the public health requirements of the Clean Air Act.

VII. Arguments of the environmentalists and responses thereto

1. *The Volvo Case:* Your member of the House may bring up the 1977 Volvo California certification case as proof that the auto manufacturers can meet the final statutory NO_x standard of 0.4 gpm.

The question may be put in this fashion, "If Volvo can do it, why can't the domestic manufacturers do it?"

Here are the facts. The Volvo in question was a test vehicle utilized during the emission certification tests to meet the 1977 California emission standards (HC—.41 CO—9.0, NO_x — 1.5). It was a four cylinder, fuel injected, triple catalyst equipped vehicle. It retails for about $8,000.

The vehicle met the .4 NO_x standard at the beginning of the 50,000 mile endurance test but did not meet it at the end of the test. Thus, the vehicle could not have been certified under the Federal emission test if the statutory NO_x standard had been in effect. This was so stated by Volvo representatives at hearings before the Health and Environment Subcommittee earlier this year. Volvo also states that this advanced system has only been developed for application to a 4 cylinder engine.

2. *The Rhodium Loading Problem:* Many environmentalists and the Administration are arguing that utilization of the three way catalytic converter technology will enable the manufacturers to meet the stringent statutory standards without further delays and without significant fuel penalties.

Here are the facts. In addition to platinum utilized in the present catalytic converter systems, the three way catalytic system also utilizes rhodium.

In nature, rhodium is mined as a byproduct of platinum. When mined, it is found in a ratio of 19 parts platinum to 1 part rhodium. The only major sources of supply for rhodium and platinum are South Africa and Russia. The implications of making the domestic auto industry reliant on imports from these two countries for this critical raw material should be obvious.

Testimony before the Subcommittee on Health and Environment indicates that the supply of rhodium and platinum would be sufficient to meet the auto manufacturers'

requirements for nationwide production only if the three way catalytic converter required a ratio of platinum to rhodium which was at least the same as 19:1.

It should be strongly emphasized that the three way converter system utilized by Volvo in its California certification had a ratio of 5 parts platinum to 1 part rhodium.

Thus, it would be impossible to secure enough rhodium to equip the nationwide fleet of new cars (10,000,000 new cars annually) utilizing the Volvo converter system.

The auto manufacturers have testified that they are currently working on alternative substances that would produce the same emissions reductions as rhodium. They are also working on ways to achieve sufficient emission reductions with less rhodium being used. These attempts have not yet proven to be successful.

3. *The California Experience:* The 1970 Clean Air Act provided the state of California with the right to adopt more stringent emission standards than the rest of the country because of the particularly bad smog problems in the Los Angeles basin. The emission standards applicable to California are:

HC	.41
CO	9.0
NOx	1.5

Some members of the House are arguing that even with the more stringent standards which went into effect in 1977, fuel economy of California cars increased 10 percent.

Here are the facts. The 10 percent fuel economy improvement refers to the fuel economy of 1977 California vehicles vis a vis 1976 California vehicles, i.e. the average fuel economy of California vehicles improved 10 percent from model year 1976 to 1977. Most of this gain is due to the efforts of the auto manufacturers to significantly improve average fleet fuel economy to prepare for the mandatory fuel economy standards which become effective in model year 1978. The fuel economy improvements would have been even better but for the more stringent emission standards effective in model year 1977.

As a result of the more stringent emission standards in effect in California, 1977 California cars average 11 percent worse fuel economy than 1977 49-state cars.

Additionally, 1977 California cars cost on the average $300 to $400 more than a similarly equipped vehicle sold in the other 49 states.

It is interesting to compare these fuel penalties and cost differentials for the current model year between 49-state cars and California cars in terms of the emission standards applicable to this model year.

Model year	HC	CO	NO_x
California car	.41	9.0	1.5
49-State car	1.5	15.0	2.0

Based on this difference in terms of emission standards, the fuel penalty is 11 percent and the additional purchase cost is $300 to $400.

The President wants to get to even more stringent standards than the present California standards. It should be obvious that the President's final standards are going to result in significant fuel penalties and substantial added costs to new car buyers.

4. *The Transportation Control Argument:* The Clean Air Act provides that EPA can require various transportation control measures (in effect reducing auto emissions by reducing total vehicle miles driven) to supplement the auto emission standards in locales where it is necessary to obtain compliance with air quality goals.

EPA considered requiring transportation controls in Boston, but met with a veritable storm of public protest. EPA then withdrew its initial proposals.

Some members of the House are using the argument that they would rather support tougher emission standards on the theory that these tougher standards will eliminate the need for EPA to impose unpopular transportation control measures.

Here are the facts. Even if the most stringent possible emission standards were required immediately, certain localities (metropolitan areas) would still require transportation controls in order to meet the ambient air quality standards for HC, CO and NOx.

This position is supported by the Environmental Protection Agency itself.

Requiring more stringent emission standards won't help the Congressmen from these areas which may require transportation controls, but it will insure that his constituents pay a lot more for less fuel efficient vehicles in the coming years.

FOOTNOTE

This is by its nature a technical and complex subject. In discussing the matter with your House member, you should stress to him/her the importance of examining the testimony on this subject before the House Commerce Subcommittee on Health and Environment, and the 3 agency study conducted by EPA, DOT, and FEA.

You may also wish to refer any detailed questions from your House member to NADA or either Congressman Dingell or Broyhill (depending on whether your member is a Democrat or a Republican) for a detailed explanation.

The facts on this issue strongly indicate that the Dingell/Broyhill emission schedule represents the best balancing of the Nation's clean air and energy conservation goals. It also represents the least expensive answer to the auto pollution problem for the Congressman's constituents while at the same time guaranteeing public health.

OAK PARK-RIVER FOREST HIGH SCHOOL RECEIVES FEDERAL ENERGY CONSERVATION AWARD

HON. HENRY J. HYDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. HYDE. Mr. Speaker, I am pleased to bring to the attention of my colleagues the fact that Oak Park-River Forest High School, in my district, has received a special achievement award for energy conservation by the Federal Energy Administration. If schools across the country could learn from the innovative methods employed by this high school, it would be a great step forward in our search for energy independence.

Between the school years 1970–71 and 1975–76, the Oak Park-River Forest High School has reduced its consumption of electricity and natural gas by 35 to 40 percent in both areas. The award was presented to the school by Kenneth Johnson of the FEA at a meeting last week of the Illinois Association of School Business Officials.

The award cites the high school, which serves 4,200 students, for—

Outstanding leadership in implementing or promoting energy conservation measures which have resulted in a significant contribution toward conserving our Nation's energy resources.

According to Mr. Richard C. Rietz, the director of buildings and grounds, except for $6,000 spent to purchase radio receivers to remotely stop and start fan motors, commonsense has been relied on to achieve the reductions. The largest savings came about by reducing the running time of equipment, particularly the air-handling and air-conditioning equipment. In addition, controls and thermostats were reset, timers installed, excessive hall lighting eliminated, some inefficient incandescent lighting replaced, and 35-watt fluorescent bulbs are gradually replacing the thousands of aging 40-watt bulbs.

Mr. Rietz said that except for this past winter, natural gas consumption used for heating the school has been reduced at the same rate as has electricity. However, despite the coldest winter on record, the high school still expects total consumption of natural gas this winter to be less than was used in the years of 1970 through 1973, and has relied primarily on temperature controls and reduced running time of equipment for the savings.

Mr. Rietz gave credit to the maintenance staff, who are ever alert to savings and are kept constantly informed of monthly consumption and expenditures for utilities. He said that all monthly consumption figures are graphed and all maintenance personnel see the results of their efforts.

I know my colleagues join me in congratulating the administration, faculty, maintenance staff, and students of Oak Park-River Forest High School for their concerted effort to save energy and the taxpayers' money. I think this one high school's initiative in this area should serve as a model for all of us and I hope my colleagues will pass the ideas along to school administrators in their own districts.

FOOD STAMPS—A FACT OF LIFE

HON. CARDISS COLLINS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mrs. COLLINS of Illinois. Mr. Speaker, I have been following with keen interest the controversy provoked by President Carter's recent proposal that the food stamp purchase requirement be eliminated.

As the representative of a less than wealthy, inner-city district, I am well acquainted with the many problems related to the food stamp program. My office receives a constant stream of mail from constituents who are unable to come up with enough money to cover the purchase price of food stamps. Although these constituents are more than qualified for the program, they are not able to take advantage of it.

Eliminating the purchase requirement will allow these people to receive food stamp benefits. My major objection to the Carter proposal, however, is that it

will eliminate certain current participants from the food stamp rolls.

Ideally, a reform in the food stamp program would allow all of those currently participating in the program to remain on it, while making provisions—such as the elimination of the purchase price—which would attract those who are currently eligible for the program but have not sufficient funds to participate.

With this in mind, I am inserting a very perspicuous column by Carl T. Rowan, Washington Star, April 29, 1977, that addresses the food stamp issue:

MAKE FOOD STAMPS FREE

(By Carl T. Rowan)

Some of the most provocative words in the English language are "dead-beat," "hustler," "pimp," "moocher," "shyster." They arouse strong emotions. Another is "giveaway." Every self-styled champion of the work ethic professes to hate welfare "giveaway" programs. Emotionalism provoked by cries of "giveaway" may turn out to be the most formidable barrier to badly-needed reform of the food stamp program.

The Carter administration wants to make food stamps free. Whereas a poor family of four (net income of $250 a month) now must pay $71 to get $166 in food stamps, meaning it gets a government subsidy of $95, the Carter reform would simply give the family $95 worth of food stamps.

This change makes sense both morally and physically.

This program, begun partly as a means of removing surplus commodities from the market, ought to have one overriding purpose: to shield poor families from the hunger which only recently was shamefully widespread in America.

The truth is that even though the government spent $5.4 billion last year to provide food stamps to 17.4 million people, an equal number of eligible Americans got no help at all.

Many of the most wretchedly poor families simply cannot put together enough cash at one time to purchase stamps. So we now have hundreds of thousands of slick moochers getting stamps while millions of children go hungry.

Agriculture Secretary Bob Bergland says the Carter proposal would remove from the program some 1,750,000 persons by tightening eligibility standards and would reduce benefits for 5 million others.

Thus, at the same level of spending almost 3 million of the very poorest Americans could be brought into the program and benefits could be raised for 5 million more.

A lot of fuss has been raised in congress about food stamp frauds. Anyone who has seen the poor line up at tiny stores, churches and other places, paying $3 billion a year to 15,000 food stamp vendors, knows that the current program is an open invitation to crookedness.

Under the Carter reform, that $3 billion would not pass through the vendors' hands—so the fraud potential would be reduced greatly.

Well, why the resistance to the Carter reform? Some lawmakers are simply opposed to government giving anyone anything for free. They argue that ending the purchase requirement would turn the food stamp program into "just another welfare giveaway."

Ironically, some who oppose free food stamps are talking about replacing the stamps program with cash food supplements for poor families. Not only would this be a "giveaway," but it would reduce to miserable diets many children of parents who would spend the cash for everything but food.

It is silly to engage in philosophical semantics, pretending that the food stamp program is not a welfare program. The current purchase requirement does not alter the reality that Uncle Sam is giving away $5.4 billion. The sensible thing is to surmount the emotionalism and give it away through procedures where it goes to those who need it most.

Comprehensive welfare reform is a long way off. Until we get it, the Bergland proposals for revising the food stamp program ought to be adopted speedily.

YOUTH EMPLOYMENT AND INNOVATIVE DEMONSTRATIONS PROJECT ACT OF 1977

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. HAWKINS. Mr. Speaker, I rise today to submit for the RECORD information regarding H.R. 6138, the Youth Employment and Innovative Demonstration Projects Act of 1977. This bill was favorably reported by the Committee on Education and Labor on May 5 by a vote of 32 to 2 and will be brought up for floor action under suspension of the rules on Monday, May 16.

H.R. 6138 provides a variety of innovative and demonstration programs to deal with the structural unemployment problems faced by our Nation's youth. It is not the intention of this measure to provide make-work jobs for unemployed young people, but rather to provide youth with opportunities to learn and earn that will lead to meaningful employment opportunities after they have completed the program. This bill would provide an estimated 203,000 jobs over the next 18 months and will impact on the expenditure of the $1.5 billion in the economic stimulus package that is intended for youth employment and training programs. In addition to the demonstration programs authorized by this proposal, the bill would establish a national Young Adult Conservation Corps providing an estimated 35,000 young people with employment in conservation and management projects on our Nation's public lands. Many Members will recall that the YACC passed this House overwhelmingly during the last Congress but died in the Senate. It is based on the combined experience of the CCCs of the thirties and the YCC summer program.

There is no question that youth unemployment is a serious problem. Youth age 16–24 make up slightly under a quarter of the civilian labor force but they represent nearly half of the total unemployed workers. If we do not afford our Nation's youth opportunities to become productive members of society we will reduce their sense of self worth and will be poorer as a nation for the lack of goods and services they could provide.

For the benefit of my colleagues a summary of the bill and a section-by-section analysis follows:

SUMMARY OF MAJOR PROVISIONS OF H.R. 6138 AS REPORTED BY THE COMMITTEE ON EDUCATION AND LABOR, MAY 5, 1977, YOUTH EMPLOYMENT AND INNOVATIVE DEMONSTRATION PROJECTS ACT OF 1977

TITLE I

Title I of the bill amends the existing YCC summer program by creating the Young Adult Conservation Corps Act to employ young adults year-round to reduce the volume of management work on our Nation's public lands. This program is to be administered by the Secretaries of Interior and Agriculture, pursuant to interagency agreements with the Secretary of Labor.

Applicant referrals for the Corps are to be made via the interagency agreements from the agencies of the United States Employment Service and CETA prime sponsors. Eligible youth are to be unemployed, age 16–24 who have completed high school or dropped out for reasons other than joining the Corps. They shall be physically capable of carrying out the work to be accomplished and may be employed for two or more periods not to exceed a total of twelve months. They may share common facilities with youth enrolled in other federally assisted employment and training programs and may receive academic credit for their participation if applicable.

TITLE II

Title II of the bill amends Title III of CETA.

Section 318. Youth Incentive Entitlement

Section 318 of this title authorizes the Secretary of Labor to enter into arrangements with selected prime sponsors to demonstrate the efficacy of guaranteeing employment and/or training to economically disadvantaged youth age 16–19 who are in school or willing to return to seek a high school diploma or its equivalency. Twenty-five percent of the funds appropriated for this title shall be available for this program. This section details the eligible employment and training opportunities which shall be part-time during the school year and full-time during the summer. The Secretary shall take into consideration in selecting prime sponsors to conduct pilot programs of this nature the extent which they will devote funds available under Title I and the summer youth program under Section 304(a) for the entitlement program and shall select prime sponsors from areas with differing socio-economic circumstances. This section also describes the information to be included in a prime sponsor's proposal including assurances that local institutions and organizations have been consulted and that regular workers will be protected. The Secretary is required to report to Congress on the effect of the program on various economic conditions.

Section 319. Demonstration Projects

Section 319 of this title is allocated the remaining 75% of the funds appropriated for this title. Of these funds, 75% shall be allocated to prime sponsors on a formula basis similar to that used in Title I of CETA and may be used for a variety of youth employment and training programs including the upgrading of existing Title I programs. There is a special provision that up to 30% of the allocation to a prime sponsor may be used for community improvement projects, but only 25% of project funds could be used for supplies and equipment. Of the funds allocated to prime sponsors in each State, 5% is set aside to be utilized at the discretion of the Governor for statewide services.

The remaining 25% of the funds allocated to this section are available at the discretion of the Secretary of Labor for innovative projects and programs.

Eligible youth under Section 319 are age 16–21 not from families who have a gross annual income over the BLS lower living standard.

Other Provisions

Earnings received by youth in these programs shall be disregarded in determining eligibility for, and the amount of, any benefits for other family members based on need under other Federal programs.

Section 322 details the labor protection

standards that apply to both Section 318 and 319.

Title III of the bill waives Section 4(e) of Part C of Title III and Title IV of CETA for FY '78.

Title: Title I (YACC).

Existing law amended; YCC; 84 Stat 794; 16 USC 1701–1706.

Appropriation: Such sums.

Authorization: Fiscal year 1978, 79, 80.

Administrative agency: Departments of Interior and Agriculture pursuant to interagency agreements with DOL.

Title: Title II.

Existing law amended: CETA Title III PL 93–567, as amended.

Appropriation: Such sums.

Authorization: Fiscal year 1978.

Administrative agency: Department of Labor.

Existing law amended: Section 318, Youth Incentive Entitlement (Sarasin).

Appropriation: 25% of funds.

Existing law amended: Section 319, Demonstration Projects.

Appropriation: 75% of funds, 75% formula to prime sponsors, 5% of each State's funds set aside for Governor, up to 30% may be used for community improvement projects with a 25% limit on materials, 25% Secretary's discretion.

SECTION-BY-SECTION ANALYSIS OF H.R. 6138, AS REPORTED BY THE COMMITTEE ON EDUCATION AND LABOR

YOUTH EMPLOYMENT AND INNOVATIVE DEMONSTRATION PROJECTS ACT OF 1977

TITLE I—YOUNG ADULTS CONSERVATION CORPS ACT

Section 101 cites the title, Young Adult Conservation Corps Act.

Section 102 amends the "Act to establish a pilot Youth Conservation Corps" program in the Departments of the Interior and Agriculture (84 Stat. 794 as amended 16 U.S.C. 1701–1706) by adding a new title II, the Young Adult Conservation Corps Act.

POLICY AND PURPOSE

Proposed section 201 states the policy and purpose of this title is to reduce the volume of resource management work on our Nation's public lands and to provide employment opportunities for young adults.

EXTENSION OF YCC

Proposed section 202 provides for the extension of the YCC to employ young adults year-round. Applicant referrals are to be made according to interagency agreements made with the Secretary of Labor by agencies affiliated with the U.S. Employment Service and CETA prime sponsors of youth:

Age 16–24 who have completed high school or can give assurances adequate to the Secretary of Labor that they have not dropped out for the purposes of enrolling in the YACC;

Are physically capable to carry out the work to be accomplished; and

May be employed for one or more periods not to exceed a total length of 12 months.

SECRETARIAL DUTIES AND FUNCTIONS

Proposed section 203 states that those duties and functions detailed in section 103 of the YCC shall apply to this title as well and:

Details eligible resource management activities but only limits that such activities be relatively labor intensive;

That to the maximum extent practicable, corps members under this title may share common facilities with youth in other Federal programs;

Shall utilize existing facilities and equipment if possible;

Set rates of pay as provided in the Fair Labor Standards Act; and

Make suitable arrangements with the Secretary of HEW whereby academic credit may be offered.

EXTENSION OF GRANT PROGRAM FOR STATE PROJECTS

Proposed section 204 enables the Secretaries to extend the grant program for State projects currently required of the YCC program on non-Federal (including State and local) public lands and provides that:

Not more than 30 percent of the sums appropriated to carry out this title for any fiscal year may be made available for such grants; and

That no displacement fo currently employed workers or substitution of workers on layoff may occur.

SECRETARIAL REPORTS

Proposed section 205 requires that the Secretaries prepare an annual report to be presented to the Congress and the President.

APPLICATION OF PROVISIONS OF FEDERAL LAW

Proposed section 206 states that YACC enrollees shall not be deemed as Federal employees except for purposes of:

Internal Revenue Code of 1964 (U.S.C. 1 et seq.);

Title II of the Social Security Act (42 U.S.C. 401 et seq.);

Subchapter 1 of Chapter 81 of title 5 United States Code;

Chapter 171, title 28, United States Code relating to tort claims; and

Section 5911, title 5 United States Code.

ANTIDISCRIMINATION

Proposed secion 207 prohibits discrimination because of race, creed, color, national origin, sex and political affiliation.

INTERAGENCY AGREEMENTS

Proposed section 208. The administration of this title shall be pursuant to interagency agreements entered into by the Secretary of Labor with the Secretaries.

AUTHORIZATION OF APPROPRIATIONS

Proposed section 209 authorizes such sums as may be necessary for fiscal year 1977 and each of the two succeeding fiscal years.

CHANGES IN EXISTING LAW

Section 103. Sections of the existing YCC Act are redesignated and "Act" is struck being replaced by "Title".

TITLE II—YOUTH INNOVATIVE AND DEMONSTRATION PROJECTS ACT

SHORT TITLE

Section 201 cites the short title, Youth Innovative and Demonstration Projects Act.

Section 202 amends title III of CETA, as amended, to establish a new Part C, Youth Innovative Demonstration Projects.

STATEMENT OF PURPOSE

Proposed sction 316 establishes pilot, demonstration and experimental programs to explore methods of dealing with youth employment and training, but it is explicitly not the purpose to provide make work.

USE OF FUNDS

Proposed section 317 states that 25 percent of the funds shall be available only for section 318 (Youth Incentive Entitlement) and the remainder shall be available for section 319.

YOUTH INCENTIVE ENTITLEMENT

Proposed section 318 authorizes the Secretary to enter into arrangements with selected prime sponsors to demonstrate the efficacy of guaranteeing employment to economically disadvantaged youth who are:

Aged 16–19; and

In school or are willing to return to school for the purpose of obtaining a diploma or seek a high school equivalency certificate.

This section details the eligible employment opportunities and training or combination thereof which shall be part-time up to 20 hours per week during the school year and full time up to 40 hours per week during the summer. The Secretary shall take into consideration:

The extent which the selected prime sponsors shall devote funds available under title I and section 304(a) for the entitlement program.

The Secretary shall not select any prime sponsor failing to submit:

A description of outreach, auditing, and monitoring procedures to be used;

A statement of the number of economically disadvantaged youth to be served;

Assurances that the prime sponsor has consulted with local organizations and agencies such as education agencies, labor organizations, community based organizations and state employment security agencies;

Assurances against the hiring of relatives of those responsible for hiring;

Assurances that appropriate arrangements have been made with local education agencies or institutions offering certified high school equivalency programs; and

Assurances that prime sponsors will provide the Secretary with necessary data.

This section lists examples of eligible employment and prohibits funds from being used to provide public services previously provided by a political subdivision or local educational agency in the area served.

In approving youth incentive entitlement projects, the Secretary shall test a variety of private subsidies, arrangements with unions for apprenticeship training, alternative administrative mechanisms, the addition of economically disadvantaged youth between 19 and 25 who have not received their high school diploma, the inclusion of career counseling, outreach on the job training and apprenticeship, and the inclusion of adjudicated youth.

The Secretary is required to submit interim and final reports to Congress on the projects funded under this section.

DEMONSTRATION PROJECTS

Proposed section 319—75 percent of the funds available for this section shall be allocated as follows:

Seventy-five percent shall be allocated on the basis of relative number of unemployed persons within the State; and

Twenty-five percent shall be allocated on the basis of relative number of persons in families with income below the low-income level, but of the funds allocated to any State, 5 percent shall be set aside for the Governor for special statewide programs.

The remaining 25 percent available for this section shall be available to be used at the discretion of the Secretary of Labor. Eligible activities shall include but shall not be limited to activities such as:

Outreach, assessment, counseling, and orientation;

Promotion of transition from school to work;

Development of labor market and occupational information;

Literacy and bilingual training;

Attainment of high school equivalency certificate;

Job sampling, OJT and development of job skills;

Supportive services;

Community services;

Programs to overcome sex-stereotyping and outreach mechanisms to increase the participation of women and minorities;

Job development and placement; and

Upgrading of ongoing title I programs.

Eligible youth in this section shall be:

Age 16–21; and

Not from families which have a current gross annual income over the BLS lower living standard income.

Up to 30 percent of a prime sponsor's allocation may be used for community improvement projects but no more than 25 percent of those funds may be used for materials and supplies.

Ten percent of the funds for this section may be used to test programs for youth of all economic backgrounds.

DISREGARD OF EARNINGS

Proposed section 320 states that earnings under this part shall be disregarded when determining the eligibility of other family members for Federal programs.

DEFINITION

Proposed section 321 defines "community improvement projects" as those which would not otherwise be carried out including but not limited to rehabilitation of public facilities, neighborhood improvement, conservation, maintenance or restoration of natural resources on non-Federal public lands.

LABOR STANDARDS

Proposed section 322 details the applicable labor protection standards by reference to Section 205(c)(8), 205(c)(24) and (25), 208(a)(1), and (2), 208(a)(2), 208(c), and 605(b) of title VII.

"AUTHORIZATION

"Proposed section 323. There are authorized to be appropriated such sums as are necessary to carry out the provisions of this part for the fiscal year ending September 30, 1978.".

TITLE III—MISCELLANEOUS

Proposed section 301 states that the limitations of section 4(e) of the Comprehensive Employment and Training Act of 1973 shall not apply to appropriations for part C of title III and for title IV of such Act for the fiscal year ending September 30, 1978.

Proposed section 302 states that appropriations for youth programs (other than those authorized under section 304(a)(3), under title III of the Comprehensive Employment and Training Act as in effect before the amendments made by this Act shall, to the maximum extent consistent with law, be obligated and expended in accordance with the provisions of part C of title III, as added by this Act.

DO WE NEED MORE GOVERNMENT OR LESS?

HON. BUD SHUSTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. SHUSTER. Mr. Speaker, in the May 1, 1977, edition of the Washington Post there appeared an article entitled, "U.S. Office of Education Assailed as Sluggish Bureaucracy." As a member of the Education and Labor Committee and specifically the Postsecondary Education and Compensation, Health and Safety Subcommittees, I am very disturbed by this report and I am sure most Americans would also be disturbed. As I have pointed out on other programs and proposed programs, such as the Youth Camp Safety Act, the tendency for Federal programs is to grow larger and larger. The Office of Education in 1965 administered 35 programs and had a budget of $1.383 billion. For fiscal year 1978 that same office will administer over 120 programs and will command a budget of $9.144 billion. It appears that bigger does not always mean better. I ask unanimous consent that the article from the Washington Post be inserted into the RECORD:

[From the Washington Post, May 1, 1977]

U.S. OFFICE OF EDUCATION ASSAILED AS SLUGGISH BUREAUCRACY

(By Bart Barnes)

The U.S. Office of Education, overseer of $9 billion worth of federal educational programs annually, has evolved over the past decade into a sluggish bureaucracy, unwilling to enforce federal educational policy, a coalition of civil rights groups has charged.

In 1965, at a time of minimal federal involvement in education, the groups noted, the Office of Education was a small service agency. It was staffed chiefly by bureaucrats whose backgrounds "were often shaped in unaggressive state educational bureaucracies."

They were unprepared for the new federal role in education, including the setting of standards, issuance of regulations, monitoring, enforcing sanctions against illegal practices and evaluating programs, the coalition contends.

"The result has been," the groups said in an 85-page paper delivered in March to Secretary of Health, Education and Welfare Joseph A. Califano Jr., "a failure of policy, of enforcement and of integrity. There has been too little evaluation, too little consistency in regulation, too much confusion and delay in regulation . . ."

Calling themselves the Education Coalition, the authors of the paper included representatives of the NAACP Legal Defense Fund, the Alabama Council on Human Relations, the Children's Defense Fund, the Federal Education Project of the Lawyers Committee for Civil Rights Under Law and the Southeastern Public Education Program of the American Friends Service Committee.

They asked Califano to meet with them to discuss possible remedies, but Califano declined. He said he would see to it that top HEW officials study the coalition's paper. The Office of Education said last week it would have no immediate comment.

Disclosure of the coalition's paper coincided with release of a draft report by the Commission on Federal Paperwork in which the Office of Education was accused of overwhelming local schools, school systems and colleges in mountains of paperwork.

"Educators complain that the rapid growth of educational bureaucracies at all levels has led to an increased concentration on the regulatory and administrative process and the diversion of faculty from their primary responsibility—teaching. One result has been the creation of an atmosphere of hostility . . . bringing with it very real, though intangible costs."

"School systems say they are drowning in paperwork," the report noted. At the college level, it went on, one 15-page application for federal assistance for needy students is so complicated that the Office of Education had to issue a 17-page set of instructions explaining how to fill the forms out.

At a press conference shortly after assuming office in early April, U.S. Education Commissioner Ernest L. Boyer acknowledged that the paperwork requirements of his office "had reached crisis proportions" and that something had to be done about it.

In particular, the Education Coalition's study of the Office of Education found the bureaucrats singularly unaggressive in attempting to recover federal money found to have been misspent by the state or local school systems.

"The problem is that the Office of Education is run by people who come from the constituency that OE is supposed to regulate," said Phyllis McClure of the Legal Defense Fund, one of the authors of the study.

"Their sympathy is with the people who are to be regulated."

The paper noted that during a 10-year period auditors from HEW found $241 million distributed by the Office of Education under Title I of the Elementary and Secondary Education Act to have been misspent by state or local school systems. (Title I is intended to supplement educational programs for disadvantaged children.)

Yet, the report said, the Office of Education requested reimbursement of only $7 million of that money, and, in fact, less than $700,000 was actually returned.

"In numbers of instances, the Office of Education appears to negotiate away recoverable Title I dollars without apparent rhyme or reason," said one internal OE memorandum obtained last week by The Washington Post.

Chartered by Congress in 1867 essentially to gather statistics on education, the Office of Education has broadened its scope dramatically in the past 15 years to the point where it now funds programs ranging from bilingual education to compensatory education for poor children to vocational education. It administers 120 programs, compared with fewer than 35 in 1965, and each theoretically requires regulation, evaluation and monitoring.

In fact, according to some Office of Education employees, very little hard evaluation ever gets done. Once started, programs are likely to continue forever, regardless of their value to children, because they mean jobs for bureaucrats.

"For 98 per cent of the people here, they've never had it so good," said one OE employee. "They come from state and local school systems and most of them are making over $30,000 a year here and that's more than they've ever made in their lives.

"They are very security conscious, they don't want to take chances and they have no place to go. If they go back to the local school system, they have more trouble, they have to work harder and they get less pay."

Another person who does program evaluations for the Office of Education said, "OE simply will not accept an unfavorable evaluation of a program. If you turn in an unfavorable evaluation, they'll just rewrite it."

"Other than making sure that states got their money and making sure it was spent, there was no real role for the Office of Education," said another official. "I don't know anyone around here who wants to monitor."

The one cardinal rule at OE, several employees said, is to make sure that all money available does, in fact, get spent. The Office of Education declined to comment on the charge from the employees, who asked that their names not be used.

One employee recalled sitting in an office toward the end of the fiscal year when a complete set of new furniture arrived unexpectedly.

When the employee asked about it, she said, the answer was simple and direct:

"We had money left over in the budget and we had to spend it somehow."

LEGAL ASSISTANCE FOR MILITARY PERSONNEL

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mrs. SCHROEDER. Mr. Speaker, I am today introducing legislation to guarantee the right to legal assistance to members of the Armed Forces and their dependents. This action is prompted by the significant decline in the quality of such aid that has been witnessed in recent years.

The legal assistance program was established and is based upon the fact that adequate civilian legal services are generally not available to military personnel stationed overseas, deployed at sea, or serving at remote installations. Even in areas where civilian attorneys are physically available to military personnel

and their dependents, considerable time and expense are saved by providing legal services at the command with which the service member is serving. Requiring military personnel to travel from their duty stations to consult with civilian attorneys, often a considerable distance, results in many lost man-hours from training and job performance. An "on-the-site" approach to providing legal services, when possible, contributes to the accomplishment of the primary objective of the Armed Forces—defense preparedness, and readiness. In a similar vein, unresolved personal problems can adversely affect morale and efficiency and frequently result in behavior requiring disciplinary action. Prompt aid in resolving these problems is an effective preventive measure. Accordingly, it has been the policy of the military departments, through the legal assistance program, to make personnel aware of their legal rights and obligations and to provide a means whereby these problems can be resolved, if possible, before disciplinary action is needed.

Recognizing these factors, during World War II—in 1943—the American Bar Association's committee on war work encouraged and assisted the War Department and the Department of the Navy in establishing a program of legal assistance for the millions of service members then in the Armed Forces. During the succeeding 33 years, the legal assistance program has been continued by military lawyers pursuant to regulations issued by each of the military departments. During the Vietnamese conflict, the scope and sophistication of legal assistance reached a high level with millions of active service members and their dependents receiving high quality legal service in the form of wills, powers of attorney, and advice and assistance on all types of tax problems, Soldiers' and Sailor's Civil Relief Act matters, marriage, divorce, adoption, separation, name change and other domestic relations problems, landlord-tenant matters, consumer protection problems, personal real estate transactions, minor civilian misdemeanors, and civil litigation problems.

Prior to 1970, the military legal assistance programs were generally limited to in-office services, such as consultation, preparation of documents, and limited professional representation. In 1970 however in response to congressional intent as expressed in the Carey amendment to the Economic Opportunity Act of 1964 and at the urging of the American Bar Association, Secretary of Defense Melvin Laird established a pilot legal assistance program to provide in-court representation for service members who could not otherwise afford the services of an attorney. This program, similar to that provided by the Office of Economic Opportunity now the Legal Services Corporation—provided full legal services, including in-court representation for service members who met strict income and need requirements. It supplemented the traditional legal assistance "in-office" program and was provided, in cooperation with local bars, at those installations where greatest need existed and adequate legal assistance resources were available. At the end of the 3-year pilot program, conducted in 19 States, the Department of Defense established the program permanently as a part of the traditional legal assistance program.

As the war in Vietnam was phased out, the resources available to the military departments were reduced; however, the legal problems faced by the military departments and the statutory responsibilities placed upon military lawyers were not. Requirements such as representing service personnel in all special and general courts-martial as well as prosecuting, adjudicating, reviewing, and appealing those cases, investigating and adjudicating all manner of claims, reviewing and assisting in the awarding and administration of government contracts for increasingly sophisticated and technical goods and services, representing service members before administrative boards, and advising commanders on a whole range of new and extremely technical laws, including the National Environmental Policy Act and the Freedom of Information and Privacy Acts, have imposed an ever-increasing demand for legal services on an ever-decreasing number of military lawyers. This increased demand for legal services, however, has meant that some area of legal service must be reduced. Legal assistance resources have been a prime victim of these reductions.

As early as 1971 the American Bar Association's standing committee on legal assistance for servicemen, which meets regularly on military installations to observe legal assistance activities in operation, reported indications of reductions in the number of military lawyers assigned to provide legal assistance and in the total amount of time spent on legal assistance services. The reductions in resources committed to the delivery of legal assistance have been manifested in a number of ways: Longer waiting periods to obtain an appointment to see an attorney, limitations on the level of sophistication of services available and so forth.

The purpose and need for the legislation is simply to provide statutory recognition and authorization for the military legal assistance programs. Until such legislation is adopted, the legal assistance program is operated solely under Department of Defense and military service directives, and frequently under local command prerogatives. As a result, the military services are unable to request specific budgetary authorizations and must continually use legal assistance as the "excess" legal service to be provided only after the statutorily required services relating to military discipline and other matters are performed.

The bill proposed here does not mandate a specific level of legal assistance programs of any kind. It recognizes that the military services must have flexibility to increase their effort in one area and decrease it in other areas. Rather, the bill merely recognizes and protects by statute a longstanding practice of the services, leaving the implementation to the best judgment of the military departments.

At base, the bill closes off the possibility of the discontinuance of legal assistance, an option which is currently available to the military departments, and insures that legal assistance will be duly considered along with other statutory responsibilities.

The text of the bill and a section analysis follows:

H.R. 7192

A bill to provide for legal assistance to members of the Armed Forces and their dependents, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it is hereby declared to be the intent of the Congress that members of the Armed Forces and their dependents have legal assistance made available to them in connection with their personal legal affairs.

SEC. 2. Armed Forces personnel and their dependents are entitled to legal assistance in connection with their personal legal affairs under such regulations as may be prescribed by the Secretary concerned.

SEC. 3. The Judge Advocate General, as defined in section 801 of title 10, United States Code, or their designees, are responsible for the establishment and supervision of legal assistance programs under such regulations as may be prescribed by the Secretary concerned.

SEC. 4. Nothing contained herein shall be construed as authority for the representation in court of Armed Forces personnel or their dependents who can otherwise afford legal fees for such representation without undue hardship.

SECTION ANALYSIS

Section 2 is designed to insure the continuation and permanency of the providing of legal services to servicemen and their dependents and is expressed in terms of an entitlement to such legal services. This is subject to such regulations as the Secretary concerned may prescribe. By utilizing the term "entitlement", the fulfillment of this entitlement is left to the Secretary of the Department concerned—i.e. by utilizing military attorneys, by utilizing contracted services of civilian attorneys, by utilizing civilian attorneys who are civil service employees, etc. The choice of the method of fulfilling this statutory entitlement is left to the Secretary.

Section 3 clearly places upon the Judge Advocates General the responsibility for the creation and operation of the legal assistance programs. The reference to 10 U.S.C. 801 is necessary so as to include the Coast Guard. The Coast Guard has no "Judge Advocate General" and the only place in the law where the term "Judge Advocate General" is made applicable to the Coast Guard is in the definitional section of the UCMJ wherein it is stated that the term "Judge Advocate General" shall include the General Counsel of the Department in which the Coast Guard is operating. The language "or his designee" is also necessary in order that the General Counsel of the Department of Transportation can delegate to the Chief Counsel of the Coast Guard the responsibility for the creation and operation of the legal assistance program for the Coast Guard.

Section 4 is designed specifically to indicate that this legislation is not authority for the expansion of the legal assistance program

to include representation in court to those presently able to pay legal fees—i.e. to continue the present expanded legal assistance program to the military indigent, but not provide any requirement or authority for expansion to others than the military indigent. If the client can afford legal fees without undue hardship or if the case is one in which the attorney can recover a reasonable fee out of the judgment, then the legal assistance program, insofar as presentation in court is concerned, may not be expanded under the authority of this legislation.

TEXAS

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 13, 1977

Mr. PICKLE. Mr. Speaker, in February I sent out a comprehensive legislative questionnaire to every household in the 10th District of Texas. The results of the survey have now been tabulated and I would like to share the results with my colleagues.

Some of the results appear to be contradictory. One of the strongest messages that came through on the questionnaire was that people want less government. An overwhelming 80 percent of the respondents felt that excessive Federal spending was responsible for high Federal deficits and only 1 percent said that there should be no cuts in the Federal budget.

However, the respondents also want the Federal Government to finance national health insurance, an economic stimulus program, increased spending for energy research, and continuation of the B–1 bomber.

Nearly everyone agrees that Federal spending should be cut but few people will agree on what should be cut. The only area for cuts that most people agree on is foreign aid. Sixty-eight percent want foreign aid reduced but this is only a drop in the bucket for the Federal budget. Foreign aid spending amounts to about 1.3 percent of the budget and if it were cut out entirely it would have little affect on the Federal budget.

Of those who favor economic stimulation, most prefer tax cuts rather than job creation. While 58 percent favor spending Federal funds for stimulation, there is no consensus on how much should be spent. Many people felt they were not qualified to pick a dollar amount for this program and I realize that it is a question that should be answered by economic experts.

Only 12 percent favored a reduction in energy research spending with 62 percent supporting increased funding. The highest priority for research was put on solar energy, with coal a distant second.

A majority opposed regulation of interstate natural gas prices by the Federal Power Commission and only 22 percent want the FPC to regulate intrastate gas prices. Thus, it appears that the 10th District would oppose President Carter's proposal for Federal control of Texas gas. Fifty-eight percent also opposed breaking up the big oil companies.

On defense questions, most people favored continuation of the B–1 bomber at limited production and only 28 percent want production stopped. Almost half of the respondents, 48 percent, want to maintain U.S. troop levels in Europe and Korea. The most popular area for defense cuts was pensions and benefits.

Forty-two percent said that the United States should not support either side if Israel and the Arab States have another war. In a similar survey 2 years ago, 47 percent chose this response. Forty percent favor supporting Israel with nonnuclear arms.

Three questions produced rather unexpected results because of the overwhelming support they received. Seventy-one percent favor drilling for oil and gas off the east coast while only 19 percent are opposed. On the question of allowing abortion by individual choice, more than three-fourths said "Yes" and only 19 percent said "No." Also, 82 percent support President Carter's proposal for reorganizing the Federal Government.

Some people may find the results of two questions surprising. Sixty percent favor legislation to control the manufacture and sale of certain types of handguns. And 53 percent favor wage and price controls during times of high inflation or scarcity.

The results of the questionnaire follow:

SURVEY RESULTS

NOTE.—The figures in table indicate percent.

1. At the present time, do you feel that the federal government should take steps to stimulate the economy?

Yes	64
No	32
No opinion	4

2. What form of economic stimulation would you favor? (you may choose more than one).

Individual income tax rebate	37
Reduction in withholding tax	45
Reduction in business tax	21
Creation of public service jobs	23
Increase public works projects	28

3. How much do you think the federal government should spend on economic stimulation this year?

Nothing	34
Less than $5 billion	15
$5 to $10 billion	22
$10 to $15 billion	8
More than $20 billion	8

4. If Congress approves funds for job creating programs, those funds should be allocated to the states on the basis of—

Statewide population	18
County population	8
Statewide unemployment	36
County or neighborhood unemployment	38

5. What do you think is the major cause of high federal budget deficits?

High unemployment	18
Excessive federal spending	80
Low federal taxes	2

6. Do you think that deficit spending should be increased this year to improve the nation's economy with the hope that it will produce more federal revenue in the future?

Yes	21
No	69
No opinion	10

7. The Congressional budget procedure established last year forced Congress to set levels of spending for every phase of the federal government. The resulting budget was $413 billion with a $50.2 billion deficit. The new buget procedure is—

An effective means of controlling federal spending	25
A continuation of uncontrolled federal spending	45
No opinion	30

8. Last year, Congress appropriated $4.15 billion for energy research and development. Next year's energy research budget should be—

Increased	62
Decreased	12
The same as last year	26

9. Which areas of energy research do you think should receive the highest priority?

Oil and gas	19
Solar	58
Nuclear fusion	17
Nuclear fission	13
Coal	26
Geothermal	15
Wind	18
Synthetic fuels	13

10. Do you think that the Federal Power Commission should regulate the price of interstate natural gas?

Yes	36
No	57
No opinion	7

11. The price of natural gas sold in Texas should be regulated by—

The Federal Power Commission	22
The State of Texas	43
The open market	35

12. There have been several proposals for a federal utility stamp program to help subsidize utility bills of consumers in areas with high utility costs. Would you favor such a program?

Yes	25
No	66
No opinion	9

13. Which source of fuel do you think will provide the best solution to the electrical generating problem in Central Texas in the next 15 years?

Natural gas	15
Fuel oil	5
Nuclear	25
Coal	36
Lignite	26
Other	17

14. Do you favor legislation that would limit oil companies to one area of the oil business such as refining, drilling, distribution or retail marketing? (commonly known as divestiture)

Yes	30
No	58
No opinion	12

15. Plans for the B–1 Bomber should be—

Continued at full production	30
Continued at limited production	42
Discontinued	28

16. In the area of strategic military weapons (nuclear weapons and delivery systems), the U.S. should—

Maintain international superiority	48
Maintain the same level as other nations	20
Maintain a level to retaliate but without regard to levels maintained by other nations	32

17. If cuts are made in the defense budget, they should be in the area of

Personnel	17
Pensions and benefits	28
Conventional weapons	11
Nuclear weapons	12
None of the above	18
Cuts in all areas	28

18. The U.S. should reduce its troop levels in—

Europe	31
Korea	41
Neither	48

19. If Israel and the Arab States become involved in another armed conflict, the U.S. should—

Support Israel with military supplies (non-nuclear)	40
Support Israel with military supplies and American troops	5
Not support either side	42
None of the above	13

20. U.S. military weapons sales to foreign nations should be—

Continued	17
Stopped	18
Restricted	62
Expanded	3

21. In African nations with white-minority governments (Rhodesia and South Africa), the U.S. should—

Continue to promote negotiations to establish black-majority government	29
Not interfere with their internal politics	52
Strictly enforce economic sanctions until black-majority governments are established	10
End economic sanctions and support the white-minority governments	9

22. If the OPEC nations institute another oil embargo, the U.S. should—

Retaliate with a total economic boycott of the participating nations	60
Retaliate with armed force to break the boycott	4
Institute fuel allocation and rationing until a settlement is negotiated	26
None of the above	10

23. In the Panama Canal Zone, the U.S. should—

Retain complete control of the canal	46
Allow for joint control of the canal between the U.S. and the government of Panama	30
Retain U.S. control of the canal with increased payments to Panama and give Panama a greater voice in the operation of the canal	17
Allow the government of Panama to completely control the canal	7

24. Should the federal government establish a grain reserve?

Yes	76
No	14
No opinion	10

25. Regarding agricultural exports, the federal government should—

Attempt to negotiate long-term agreements to avoid disruption of U.S. markets	54
Establish a federal agency to control all exports	18
Not interfere	28

26. Funding for animal disease research should be—

Increased	30
Decreased	13
Remain the same	57

27. Should the federal government place greater restrictions on beef imports in order to assist U.S. cattle producers?

Yes	54
No	34
No opinion	12

28. Do you favor stricter federal regulation of strip mining operations?

Yes	54
No	33
No opinion	13

29. Should the federal government provide for offshore drilling along the east coast?

Yes	71
No	19
No opinion	10

30. Federal safety standards for the operation of nuclear generating plants are—

Adequate	46
Too restrictive	9
Not restrictive enough	45

31. Federal regulations on auto emissions should—

Restrict pollution at the expense of fuel economy	18
Restrict pollution only if fuel economy is maintained	59
Be abolished	23

32. Should the federal government establish guidelines on the use and development of land?

Yes	34
No	58
No opinion	8

33. There are two proposals for welfare reform that are most often discussed. With which do you agree?

Replacing the present programs with one minimum income program	37
Increase funding for administration of present programs to cut down the number of ineligible recipients	26
Neither	37

34. Do you favor transferring all welfare programs from the state and local governments to the federal government?

Yes	18
No	73
No opinion	9

35. The federal government helps fund day care centers for children of low-income parents. This funding should be—

Expanded	28
Continued at the present level	36
Reduced	13
Eliminated	23

36. Do you think Congress should exempt itself from federal laws in the areas of equal employment, occupational safety and health, and Social Security?

Yes	16
No	75
No opinion	9

37. The best way to deal with massive school busing used to achieve racial balance is to—

Follow the latest Supreme Court decision giving more authority to local school districts	36
Amend the Constitution to prohibit busing	24
Pass a federal law prohibiting the use of busing	30
Continue to use busing to integrate schools	10

38. The federal government's Food Stamp Program makes stamps available to low income families. The Food Stamp Program should be—

Continued as it is	13
Eliminated	17
Changed so that only the neediest families are eligible	64
Expanded to make more families eligible	6

39. Do you think that the present federal housing program is—

Sufficient	37
Inadequate	31
No opinion	32

40. Do you agree with the Supreme Court decision which allows individual choice regarding abortion?

Yes	76
No	19
No opinion	5

41. Do you support legislation to control the manufacture and sale of certain types of hand guns?

Yes	60
No	36
No opinion	4

42. Laws designed to protect the rights of women and minority groups should be—

Extended	33
Remain the same	49
Repealed	18

43. A national health insurance program should (you may choose more than one)—

Cover only catastrophic illness	19
Cover catastrophic illness and preventive care	25
Replace all private medical insurance	11
Replace Medicare and Medicaid	19
Be financed by employee and employer taxes	8
Be financed partly by employee and employer taxes and partly by federal revenues	29
Cover only those who are employed	4
Cover everyone	34
Should not be established by the government	35

44. In order to maintain the short-term solvency of the various Social Security trust funds, the government should—

Increase the Social Security payroll taxes	18
Cut Social Security benefits from one or more of the funds (Retirement, Survivors and Disability funds)	23
Support the Social Security funds with money from other federal income	59

45. Do you favor President Carter's proposal reorganizing the federal agencies to make them more efficient even though it may not result in a reduction in the number of employees?

Yes	82
No	11
No opinion	7

46. If federal spending is cut, what areas would you recommend for less federal spending?

Defense	28
Social services (Social Security, education, housing, welfare, health care, etc.)	32
Environmental programs	21
Research and development	5
Agriculture	8
Foreign aid	68
Equal cuts in all areas	12
No cuts	1

47. Do you think wage and price controls should be used by the government during times of high inflation or scarcity?

Yes	53
No	39
No opinion	8

HOUSE OF REPRESENTATIVES—*Monday, May 16, 1977*

The House met at 12 o'clock noon.

DESIGNATION OF SPEAKER PRO TEMPORE

The SPEAKER pro tempore (Mr. BRADEMAS) laid before the House the following communication from the Speaker:

WASHINGTON, D.C.,
May 16, 1977.

I hereby designate the Honorable JOHN BRADEMAS to act as Speaker pro tempore for today.

THOMAS P. O'NEILL, Jr.,
Speaker of the House of Representatives.

PRAYER

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Be doers of the word and not hearers only.—James 1: 22.

O God and Father of us all, fit us for the duties of this day and this week by bringing us closer to you that forgetting ourselves in an earnest desire to do good things for a great people we may demonstrate the value of our democratic spirit. Renew our faith, restore our courage, release our enthusiasm, and revive our concern for what is right that we may not only work for it but even more may want to work for it until our life's end. Thus may we choose wisely, speak softly, and act nobly, that good may come to our Nation and to all mankind; for Thine is the kingdom and the power and the glory forever. Amen.

THE JOURNAL

The SPEAKER pro tempore. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed with an amendment in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 4088. An act to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the concurrent resolution (S. Con. Res. 19) entitled "A concurrent resolution setting forth the congressional budget for the United States Government for the fiscal year 1978."

The message also announced that the Senate agreed to the House amendment with an amendment to the foregoing concurrent resolution.

The message also announced that the Senate agrees to the amendment of the House with amendments to a bill of the Senate of the following title: "An act to authorize appropriations to the Energy Research and Development Administration in accordance with section 261 of the Atomic Energy Act of 1954, as amended, section 305 of the Energy Reorganization Act of 1974, and section 16 of the Federal Nonnuclear Energy Research and Development Act of 1974, and for other purposes."

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 425. An act to authorize the President of the United States to present on behalf of the Congress a specially struck gold medal to Lieutenant General Ira C. Eaker, United States Air Force (retired);

S. 810. An act granting an extension of patent to the United Daughters of the Confederacy;

S. 853. An act to extend the Defense Production Act of 1950, as amended; and

S. 1474. An act to authorize certain construction at military installations, and for other purposes.

CONSENT CALENDAR

The SPEAKER pro tempore. This is Consent Calendar day. The Clerk will call the first bill on the Consent Calendar.

SABINE RIVER COMPACT AMENDMENT

The Clerk called the bill (H.R. 1551) granting the consent of Congress to an amendment to the Sabine River compact entered into by the States of Texas and Louisiana.

There being no objection, the Clerk read the bill, as follows:

H.R. 1551

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the consent of Congress is given to an amendment to the Sabine River Compact (68 Stat. 690) entered into by the State of Texas and Louisiana, which amendment strikes out the last paragraph of the preamble to such compact.

SEC. 2. The right to amend or repeal the first section of this Act is expressly reserved.

Mr. DANIELSON. Mr. Speaker, the bill H.R. 1551 grants the consent of Congress to an amendment to the Sabine River Compact, between the States of Texas and Louisiana. By striking the last paragraph of the preamble of the compact, the amendment permits the Sabine River authorities to handle the problems of pollution abatement and saline intrusion in the river subject to the powers already vested in them under the present compact. In 1954, the Congress gave its consent to the establishment of an interstate compact between the States of Texas and Louisiana. The compact provided that those States could equitably apportion the water of the Sabine River and its tributaries between them (Public Law 83-578, 68 Stat. 690).

The amendment provided for in this bill has been approved by both States. The legislature of the State of Texas adopted the amendment on June 12, 1973, and the Louisiana Legislature followed suit on July 12, 1974.

The amendment would strike the last paragraph of the preamble to the existing compact, which reads:

It is recognized that pollution abatement and salt water intrusion are problems which are of concern to the States of Louisiana and Texas, but inasmuch as this compact is limited to the equitable apportionment of the waters of the Sabine River and its tributaries between the States of Louisiana and Texas, this compact does not undertake the solution of those problems.

Thus, under the provisions of the compact, the two States are prohibited from taking joint action to solve the problems excluded from the compact by that paragraph. The States and the authorities acting under the compact have expressed a desire to attack the problems of pollution and saline intrusion at a State level, rather than rely heavily upon Federal action. They are anxious to remove the technical obstacle posed by its language. If the amendment is consented to, each State would be able to use an appropriate governmental body already in existence with established expertise capable of seeking solutions to those problems.

Based on its study of the amendments adopted by the respective State legislatures and the testimony received by the Subcommittee on Administrative Law and Governmental Relations, it is clear that the amendment will accomplish this purpose. Its purpose is wholly consistent with recent Federal legislation which was enacted to encourage States to combine their efforts to combat water pollution wherever possible.

The Congressional Budget Office in its report to the committee on the bill has stated that it has reviewed the matter and concluded that no additional cost to the Government would be incurred as the result of the enactment of this bill.

At a hearing held on this bill on March 7, 1977, a statement presented in behalf of the Environmental Protective Agency stated that the agency concluded that this bill in making it possible for the Sabine River Compact Administration to exercise its authorities in the areas of water rights apportionment and water resources conversation planning so as to further the objectives of salinity control and pollution control is generally consistent with the purposes of section 103 of the Federal Water Pollution Control Act, which encourages "compacts between States for the prevention and control of pollution." The EPA also noted that it is both appropriate and desirable for water resource control authorities

such as the Sabine River Compact Administration to take environmental protection into account in exercising their authorities. One legitimate use of water allocation authority, for example, is in the preservation of stream quality, particularly in periods of low flow and hot weather, which can combine to produce in-stream conditions inhospitable to fish and other organisms. At such times, controlled release of stored water can protect such organisms against destruction.

The Environmental Protection Agency concluded that nothing in the compact or in H.R. 1551 alters the FWPCA in any way. EPA studied that it will continue to implement that statute's provisions and policies. A pertinent provision is section 102(b), which provides that streamflow augmentation by Federal reservoirs may not substitute for "adequate treatment or other methods of controlling waste at the source."

In view of the testimony at the hearing and the information supplied by the EPA, the committee concluded that this is a needed and logical change in the compact. It is recommended that the bill be considered favorably.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AMVETS

The Clerk called the bill (H.R. 1952) to amend the corporate name of AMVETS (American Veterans of World War II), and for other purposes.

There being no objection, the Clerk read the bill, as follows:

H.R. 1952

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the first section and sections 2, 8, 9, 17, 18, and 19 of the Act entitled "An Act to incorporate the AMVETS, American Veterans of World War II", approved July 23, 1947 (61 Stat. 403–408; 36 U.S.C. 67–67s), are each amended by striking out "World War II)" wherever it appears and inserting in lieu thereof "World War II, Korea, and Vietnam)".

(b) Such Act of July 23, 1947, is further amended—

(1) by inserting immediately after "World War II" in section 3(2) the following: ", the Korean conflict, and the Vietnam era";

(2) by striking out "on or after September 16, 1940, and on or before the date of cessation of hostilities as determined by the Government of the United States," in the first sentence of section 6 and inserting in lieu thereof "at any time after September 15, 1940, and before May 8, 1975,"; and

(3) by striking out the period after "World War II" in section 9 and inserting in lieu thereof ", the Korean conflict and the Vietnam era.".

SEC. 2. The amendments made by the first section of this Act shall take effect on the first day of the second calendar month following the date of enactment of this Act.

With the following committee amendment:

Page 1, line 3, strike "9,".

The committee amendment was agreed to.

Mr. DANIELSON. Mr. Speaker, the bill H.R. 1952 would amend the law incorporating the AMVETS to change the official name of the organization from "American Veterans of World War II" to "American Veterans of World War II, Korea and Vietnam." The organization was originally incorporated by an act of Congress in 1947. Under that charter, only persons who served honorably "in the Armed Forces of the United States or citizens who served in the Armed Forces of an allied nation of the United States on or after September 6, 1940, and on or before the date of cessation of hostilities as determined by the Government of the United States" were admitted by AMVETS as regular members. On August 1, 1971, the Constitution and By-Laws Committee recommended to the 27th Annual Convention at Los Angeles, Calif., that the preamble of the constitution be made to conform to the organizations' determination to include those who served during the Korea and Vietnam hostilities. The committee agreed to this change. AMVETS petitioned the Congress to reflect this change of policy in the organization's Federal charter, and this bill provides for the change.

The committee is of the opinion that the new membership policy is a sound one and one which operates to further the purposes of AMVETS as reflected in its existing charter (36 U.S.C. § 67B). Therefore, it is recommended that H.R. 1952, as amended, be considered favorably.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MISSISSIPPI-LOUISIANA BRIDGE CONSTRUCTION COMPACT

The Clerk called the bill (H.R. 3662) granting the consent of Congress to the Mississippi-Louisiana Bridge construction compact.

There being no objection, the Clerk read the bill, as follows:

H.R. 3662

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the consent of Congress is given to the Mississippi-Louisiana Bridge construction compact entered into between the States of Mississippi and Louisiana, which compact reads as follows:

"Mississippi-Louisiana Bridge Construction Compact"

"Article I. The purpose of this compact is to promote the construction of a bridge connecting the States of Mississippi and Louisiana at or near Natchez, Mississippi, and Vidalia, Louisiana, and to establish a joint interstate authority to assist in these efforts.

"Article II. This compact shall become effective immediately as to the States ratifying it whenever the States of Louisiana and Mississippi have ratified it and Congress has given consent thereto. Any State not mentioned in this article which is contiguous with any member State may become a party to this compact, subject to approval by the Legislature of each of the member States.

"Article III. The States which are parties to this compact (hereinafter referred to as 'party States') do hereby establish and create a joint agency which shall be known as the Mississippi-Louisiana Bridge Authority (hereinafter referred to as the 'authority'). The membership of such authority shall consist of the Governor of each party State, one representative each from the Mississippi State Highway Department and the Louisiana Department of Highways, five other citizens of each party State, to be appointed by the Governor thereof. The appointive members of the authority shall serve for terms of four years each. Vacancies on the authority shall be filled by appointment by the Governor for the unexpired portion of the term. The members of the authority shall not be compensated for service on the authority, but each of the appointed members shall be entitled to actual and reasonable expenses incurred in attending meetings, or incurred otherwise in the performance of his duties as a member of the authority. The members of the authority shall hold regular quarterly meetings and such special meetings as its business may require. They shall choose annually a chairman and vice chairman from among their members, and the chairmanship shall rotate each year among the party States in order of their acceptance of this compact. The secretary of the authority (hereinafter provided for) shall notify each member in writing of all meetings of the authority in such a manner and under such rules and regulations as the authority may prescribe. The authority shall adopt rules and regulations for the transaction of its business; and the secretary shall keep a record of all its business and shall furnish a copy thereof to each member of the authority. It shall be the duty of the authority, in general, to promote, encourage, and coordinate the efforts of the party States to secure the development of the Mississippi-Louisiana Bridge at or near Natchez, Mississippi, and Vidalia, Louisiana. Toward this end, the authority shall have power to hold hearings; to conduct studies and surveys of all problems, benefits, and other matters associated with the construction of the Mississippi-Louisiana Bridge, and to make reports thereon; to acquire, by gift, grant, or otherwise, from local, State, Federal, or private sources such money or property as may be provided for the proper performance of their function, and to hold and dispose of same; to cooperate with other public or private groups, whether local, State, regional or national, having an interest in the bridge construction; to formulate and execute plans and policies for emphasizing the purpose of this compact before the Congress of the United States and other appropriate officers and agencies of the United States; and to exercise such other powers as may be appropriate to enable it to accomplish its functions and duties in connection with the construction of the Mississippi-Louisiana Bridge and to carry out the purposes of this compact.

"Article IV. The authority shall appoint a secretary, who shall be a person familiar with the nature, procedures, and significance of the bridge construction and the informational, educational, and publicity methods of stimulating general interest in such developments, and who shall be the compact administrator. The term of office of the secretary shall be at the pleasure of the authority and such officer shall receive such compensation as the authority shall prescribe. The secretary shall maintain custody of the authority's books, records, and papers, which shall be kept by the secretary at the office of the authority, and shall perform all functions and duties and exercise all powers and authorities which may be delegated to the secretary by the authority.

"Article V. Each party State agrees that its legislature may, in its discretion, from time to time make available and pay over to the authority funds for the establishment and operation of the authority. The contribution of each party State will be in equal amounts.

"Article VI. Nothing in this compact shall

be construed so as to conflict with any existing statute, or to limit the powers of any party State, or to repeal or prevent legislation, or to authorize or permit curtailment or diminution of any other bridge project, or to affect any existing or future cooperative arrangement or relationship between any Federal agency and a party State.

"Article VII. This compact shall continue in force and remain binding upon each party State until the legislature or Governor of each or either State takes action to withdraw therefrom; provided that such withdrawal shall not become effective until six months after the date of the action taken by the legislature or Governor. Notice of such action shall be given to the other party State or States by the secretary of state of the party State which takes such action."

SEC. 2. The right to alter, amend, or repeal this Act is expressly reserved.

With the following committee amendment:

Page 2, lines 6, 7, 8, and 9: Strike "Any State not mentioned in this article which is contiguous with any member State may become a party to this compact, subject to approval by the Legislature of each of the member States."

The committee amendment was agreed to.

Mr. DANIELSON. Mr. Speaker, the bill H.R. 3662 would grant the consent of Congress to the compact entered into by both Mississippi and Louisiana and entitled the "Mississippi-Louisiana Bridge Construction Compact." The purpose of the compact is to promote the construction of a bridge across the Mississippi, and will go into effect upon State ratification and Congressional consent as is provided in this bill.

Under the compact, a joint agency known as the Mississippi-Louisiana Bridge Authority would be created to coordinate State efforts to develop a bridge between Natchez, Miss., and Vidalia, La., and to take necessary action to construct the bridge. The authority is to appoint a secretary who is to be the compact administrator and to exercise authority and power as delegated to him.

On the question of funding, it is provided that each State agrees to furnish funds on an equal basis to operate the authority.

In order to clarify the effect of provisions, it is stated that the compact is not to be interpreted as conflicting with existing law or to limit the powers of a member State or to repeal or prevent legislation or to authorize or permit curtailment of any other bridge project, or to affect any existing or further cooperative arrangement or relationship between a Federal agency and a party State.

The compact is to continue in effect and shall bind the States until the legislature or Governor of either party withdraw the State from the compact, and such withdrawal is effective after 6 months of such action.

Section 2 of the bill itself reserves the right of the Congress to alter, amend, or repeal the act.

The Subcommittee on Administrative Law and Governmental Relations conducted a hearing on this bill and companion measures on March 7, 1977. The testimony at that hearing described the basis for the compact and the necessity for State cooperation as provided therein. The committee also received a report from the Department of Transportation which indicated that it had no objection to the provisions of the compact in that they were essentially concerned with subjects which relate to matters of State policy.

In view of the testimony developed at the hearing and the information supplied the committee by the department, it was concluded that this bill merits favorable action. Therefore, it is recommended by the committee that the bill be considered favorably.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. DANIELSON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks with respect to each of the last three bills just passed by the House.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. McKAY. Mr. Speaker, I ask unanimous consent that the reading of the Consent Calendar be discontinued at this point.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Utah?

There was no objection.

THE NATION'S WHEAT FARMER IS OUR FORGOTTEN AMERICAN

(Mr. HIGHTOWER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HIGHTOWER. Mr. Speaker, last Friday, May 13, was not a lucky day for the wheat farmers of this country. The wheat market has been at a very low level for many months. As a result of depressed prices the wolf is standing at the door of many farmers in my area.

Last Thursday in the markup of the farm bill in the Agriculture Committee some of us who represent rather large wheat-producing areas tried to increase the target price and loan levels for wheat to at least the levels contained in the Senate bill. We failed by one vote, 22 ayes, 23 nays. The committee bill, H.R. 7171, was introduced on Friday; it was an unlucky day.

In Sunday's Washington Star, Eliot Janeway's column was titled, "America's Agripower—A Forgotten Weapon." The nation's wheat farmer is our "Forgotten American." We have a habit of forgetting groups of minorities in this country until something happens in a drastic manner that gets the attention of the entire country. Breaking the back of our agricultural economy will get the attention of every Member of this body.

It will get our attention because an economic depression of the farm sector traditionally has brought the rest of the country right along with it. The few pennies we fought so hard for in the farm bill might have been enough to save many family farms from going under in the next few months.

A replay of the economic conditions of the 1920's and 1930's will cost this country billions more than the few millions we "saved" last week. The Nation's wheat farmer needs far more help than is provided in the House Agriculture Committee's farm bill. If we do not reach out and help these who are in trouble, we might as well not have a farm bill. Congress must respond to the needs of all the people of this country, urban and rural, consumer and producer. We cannot turn our backs on any sector of our economy or any group of our people. I appeal for your help, your compassion and your understanding.

Thank you, Mr. Speaker.

PRESERVE THE "SEQUOIA"

(Mr. GLICKMAN asked and was given permission to address the House for one minute and to revise and extend his remarks.)

Mr. GLICKMAN. Mr. Speaker, during the past weekend when I was in Kansas, I talked with a former mayor and now city commissioner of the city of Wichita, James Donnell and he informed me about something that very few of us recognize is going to happen shortly, and that is the fact that on this Wednesday, the Presidential yacht, the *Sequoia*, is going to be sold. This is in line with the austerity program of the President. I applaud President Carter's efforts to save money. But, Mr. Speaker, the more I thought about it, the more ridiculous it seemed to me to sell the *Sequoia* because when we do that, we will be selling another part of our history that will go to whatever form of commercialism that a purchaser will want to use her to exploit. I realize that selling the *Sequoia* is not the kind of thing that will cause too much concern, but this ship is a vitally important and interesting part of our historical past. It would seem ridiculous to me to sell the ship which has become so much of our history to a commercial private enterprise, which will attempt to exploit its historic value. The ship has not been used, and should not be used, in the "imperial" fashion that President Nixon was so accustomed to. But, it should be made a part of our American heritage—perhaps a floating museum would be appropriate; one that all Americans might have access to see.

I urge the President to seriously reconsider selling this ship. In an effort to save this country money, let us let the President know that he is acting in the national interest by seeing that the yacht is not imorudently used, but is not acting in the national interest by insuring its commercial exploitation.

THE GIVEAWAY SUGAR PROGRAM

(Mr. GRASSLEY asked and was given permission to address the House for 1

minute and to revise and extend his remarks.)

Mr. GRASSLEY. Mr. Speaker, at a time when the country is struggling to put its balance of trade with the world in order, the giveaway program proposed by the President for sugar growers and processors strikes me as ill advised and ill timed. One of the big contributors to our balance-of-trade deficit is foreign raw sugar. The scheme the administration has proposed to prop up U.S. sugar growers will do nothing to stem this flow, and strikes a direct competitive blow at a U.S. industry which helps our balance of trade.

Through the efforts of corn farmers and processors, the United States has been moving in the direction of self-efficiency in its sweetener supply. Millions of bushels of corn each year are being converted into high fructose corn syrup, which can replace foreign sugar in numerous foods. American corn and American labor are used to make this product—more economically than sugar.

By proposing to hand out a quarter-billion dollars to sugar growers and processors—and to do nothing to restrict the flow of imported sugar—the President has used the power of the Government to slow the growth of this important American industry. Because of our basically nontropical climate, the United States has been forced to rely to a large degree on imported sugar. In the past several years, however, sweeteners from corn have grown to supply a larger and larger share of our sweetener needs. This action by the President to subsidize their competitors in the sugar industry can only harm corn growers and processors. The extra demand for corn generated by its use for sweeteners contributes to the export earnings we realize through our large corn exports. Corn sweeteners replace foreign raw sugar—a trade deficit item.

If for no other reason than the balance-of-trade problems it creates, this giveaway program should be withdrawn.

RETURN TO CONSENT CALENDAR

Mr. McKAY. Mr. Speaker, having received further information, I would ask unanimous consent that the House at this point return to the Consent Calendar and consider House Joint Resolution 424.

The SPEAKER pro tempore. Mr. BRADEMAS. Is there objection to the request of the gentleman from Utah?

There was no objection.

JOHN FITZGERALD KENNEDY PRESIDENTIAL LIBRARY

The Clerk called the joint resolution (H.J. Res. 424), to authorize the Administrator of General Services to accept land, buildings, and equipment, without reimbursement, for the John Fitzgerald Kennedy Library, and for other purposes.

There being no objection, the Clerk read the joint resolution, as follows:

H.J. RES. 424

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to accept, for and in the name of the United States, and take title on behalf of the United States to, any land, buildings, and equipment that have been or may be offered to the United States, without reimbursement, for the purpose of maintaining, operating, and protecting a Presidential archival depository in memory of John Fitzgerald Kennedy at Columbia Point, city of Boston, Commonwealth of Massachusetts, as part of the National Archives system. The Administrator may accept such property and make agreements, as necessary, to complete the transfer of title to the United States without regard to the provision of section 2108(a) of title 44, United States Code, that the Administrator may not take title to land, buildings, and equipment or make an agreement, until the expiration of the first period of sixty calendar days of continuous session of the Congress following the date on which a report in writing on any such proposed Presidential archival depository is transmitted by the Administrator to the President of the Senate and the Speaker of the House of Representatives.

SEC. 2. Nothing in this Act shall be construed to impair or affect the authority of the Administrator under any other provision of section 2108 of title 44, United States Code, or any provision of other law.

Mr. JOHN L. BURTON. Mr. Speaker, the purpose of this resolution is to authorize the Administrator of General Services to accept land, buildings, and equipment offered to the United States, without reimbursement, for the purpose of maintaining, operating, and protecting a Presidential Archival Depository in memory of John Fitzgerald Kennedy. It is to be located next to the University of Massachusetts campus on Columbia Point, in the city of Boston.

By this resolution, the Congress will declare approval of a proposal which GSA presented to the House and to the Senate on April 1, 1977. The proposal is that the United States accept and operate the John Fitzgerald Kennedy Library as part of the National Archives system. The GSA report is set forth in the report of the committee on the resolution, which is House Report 95–273. Copies are available at the rear of the hall.

Enactment of this resolution will enable the Administrator to proceed without delay to take the necessary steps to begin the project. A groundbreaking ceremony on June 12, 1977, is planned, and the facility is expected to be completed in about 18 months.

Hearings by the Government Activities and Transportation Subcommittee of the Committee on Government Operations were held covering the report. Witnesses included the Acting Administrator of General Services, the Archivist of the United States, and Senator EDWARD M. KENNEDY, of Massachusetts. The full Committee on Government Operations unanimously approved the resolution at its meeting of May 4, 1977.

Let me summarize the proposed project which will be the 6th Presidential library incorporated into the National Archives system:

Land for the library is 12.5 acres. The Commonwealth of Massachusetts has authorized and directed the University of Massachuetts to convey the property to the United States without consideration.

The Kennedy Library Corp. at its own expense will design and equip a building to be donated to the United States, which will contain adequate facilities for scholarly research and exhibit rooms for the public.

The Commonwealth of Massachusetts has authorized the Governor to make a conditional offer to the United States of $2 million to finance improvements to the property.

Environmental studies and procedures have been accomplished. There appear to be no environmental problems, and the new site has full local support.

The total annual Federal costs for operation and maintenance of the facilities are estimated to be about $1.2 million, beginning with fiscal year 1980.

Last year the Congress enacted Public Law 94–300, which enabled GSA to return to the Commonwealth of Massachusetts land which had been accepted in 1968 pursuant to Public Law 89–547. That land, located in Cambridge, Mass., was not used for the library because of certain environmental factors, which happily do not encumber the site with which this resolution deals.

Mr. Speaker, our Presidential libraries are not just memorials to the Presidents, but extremely valuable sources of history and inspiration for scholars and the general public. The interest which scholars and the public generally have shown in the present temporary Kennedy Library at Waltham, Mass., where the collections now are housed, foreshadows rapid growth in use and visitation of the new facility. It is especially fitting that the library will be next to a great institution of learning and next to the sea. Both meant much in the life of John Fitzgerald Kennedy.

Mr. Speaker, I urge approval of House Joint Resolution 424 so that construction of this institution for our 35th President may soon be under way.

Mr. THONE. Mr. Speaker, I would like briefly to express my support for House Joint Resolution 424, now before the House. This resolution passed the House Committee on Government Operations by a unanimous vote on May 4 of this year.

This legislation simply would waive the required waiting period of the General Services Administration to accept the buildings and equipment connected with the John Fitzgerald Kennedy Presidential Library.

In April the Government Activities and Transportation Subcommittee, of which I am a member, held hearings on House Joint Resolution 424, and we were privileged to hear from such distinguished personalities as Chairman JACK BROOKS of the House Government Operations Committee, the well-known senior Senator from Massachusetts, EDWARD KENNEDY, the Acting Administrator of the General Service Administration, Robert Griffin, and the Archivist of the United States, James Rhoads. All of

these noted gentlemen spoke in favor of the resolution.

Mr. Speaker, I urge favorable consideration of House Joint Resolution 424 today. By accelerating the process by which the buildings and equipment can be accepted, we will hasten the day when the John Fitzgerald Kennedy Presidential Library will open its doors to the public.

Mr. BROOKS. Mr. Speaker, there has been far too much delay in getting a John F. Kennedy Library built and in use, and I hope, with the passage of this resolution, this project will finally get underway.

It was my privilege in 1966 to introduce a similar resolution to waive the 60-day waiting period for accepting a site in Cambridge for the library. However, the local situation in Cambridge made it necessary for the Kennedy Library Corp. to find another site. That problem has caused some delay but apparently it has now been resolved and the project can get under way.

From what I have seen of the new plans for the library, it appears to be a well-chosen site. I think it is particularly appropriate that it commands a view of the ocean. For, in addition to being a library, this is to be a memorial to a great President. The sea played an important part in the life and development of John F. Kennedy—from the many happy days of sailing with his family and the heroic exploits with the torpedo boats in World War II, to the long, solitary walks along the shore when he gained a brief respite from the stresses of high office.

It is also especially suitable that there be a library honoring the memory of John F. Kennedy. He had a great appreciation of the importance to historians and scholars of the preservation of records of public officials.

He was, after all, an author. He may well have made his name as an historian if he had not gone into politics. I recall that when he was President and I was chairman of this subcommittee, we worked together on legislation to provide for a coordinated program for preserving Government documents. President Kennedy wrote a letter in support of the legislation in which he said:

> Documents are the primary sources of history; they are the means by which later generations draw close to historical events and enter into the thoughts, fears and hopes of the past.

The Kennedy papers will provide rich material for those who study the all-too-brief years of his presidency. Although short in time, they were packed with important events—the first travel by Americans in space—the rising turmoil of racial disturbances—the Cuban missile crisis, when his cool leadership averted what might have been man's first nuclear war.

So I hope this legislation will be speedily enacted, the generous gift of land by the State of Massachusetts formally accepted, and the work of building this fitting memorial to a fallen President begun.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. JOHN L. BURTON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the joint resolution (H.J. Res. 424) just passed by the House.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

CHANGE IN LEGISLATIVE PROGRAM

(Mr. FOLEY asked and was given permission to address the House for 1 minute.)

Mr. FOLEY. Mr. Speaker, I take this time to announce two changes in the legislative program. H.R. 1139, amendments to the National School Lunch Act will not be taken up today, but will be considered tomorrow after consideration of the conference report on the budget resolution.

We will also have one additional suspension for consideration tomorrow: S. 1279, the Community Emergency Drought Relief Act of 1977 will be scheduled as a suspension for tomorrow.

PERMISSION FOR COMMITTEE ON AGRICULTURE TO FILE REPORT ON H.R. 7171, THE OMNIBUS FARM BILL

Mr. FOLEY. Mr. Speaker, I ask unanimous consent that the Committee on Agriculture may have until midnight tonight to file a report on the bill H.R. 7171, the omnibus farm bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Washington?

There was no objection.

PERMISSION FOR COMMITTEE ON AGRICULTURE TO FILE REPORTS ON H.R. 6135, H.R. 7073, AND H.R. 75

Mr. FOLEY. Mr. Speaker, I ask unanimous consent that the Committee on Agriculture may have until midnight tonight to file reports on the bills H.R. 6135, H.R. 7073, and H.R. 75.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Washington?

There was no objection.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER pro tempore. The Chair desires to make an announcement.

Pursuant to the provisions of clause 3(b) of rule XXVII, the Chair announces that he will postpone further proceedings today on each motion to suspend the rules on which a recorded vote or the yeas and nays are ordered, or on which the vote is objected to under clause 4 of rule XV.

After all motions to suspend the rules have been entertained and debated, and after those motions to be determined by nonrecord votes have been disposed of, the Chair will then put the question on each motion on which the further proceedings were postponed.

NATIONAL SEA GRANT PROGRAM ACT AUTHORIZATION — FISCAL YEAR 1978

Mr. MURPHY of New York. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 4301) to authorize appropriations for the National Sea Grant Program Act during fiscal year 1978, as amended.

The Clerk read as follows:

H.R. 4301

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That sections 206 and 212 of the National Sea Grant Program Act (33 U.S.C. 1125 and 1131) are each amended by striking out "the fiscal year ending September 30, 1977" and inserting in lieu thereof "each of the fiscal years ending September 30, 1977, and September 30, 1978".

SEC. 2. Section 3(c) of the Sea Grant Program Improvement Act of 1976 (33 U.S.C. 1124a) is amended by striking out "the fiscal year ending September 30, 1977" and inserting in lieu thereof "each of the fiscal years ending September 30, 1977, and September 30, 1978".

The SPEAKER pro tempore. Is a second demanded?

Mr. BAUMAN. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from New York (Mr. MURPHY) and the gentleman from Maryland (Mr. BAUMAN) will be recognized for 20 minutes each.

The Chair recognizes the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Speaker, I yield myself such time as I may consume.

Mr. MONTGOMERY. Mr. Speaker, will the gentleman yield?

Mr. MURPHY of New York. I yield to the gentleman from Mississippi.

Mr. MONTGOMERY. I appreciate the gentleman's yielding. I thank the gentleman for giving me this opportunity to bring up a matter which I cleared with the Parliamentarian, and it would be in order.

One of our colleagues has returned to the floor after a serious operation; I would like to have the gentleman from Texas (Mr. TEAGUE) stand up so we can welcome him back.

Mr. TEAGUE. Mr. Speaker, will the gentleman yield?

Mr. MURPHY of New York. I yield to the gentleman from Texas.

Mr. TEAGUE. I thank the gentleman for yielding.

Might I just say how very much I appreciate the many visitors, the cards, telephone calls, flowers, and candy that I received from all the Members of this House. I appreciate it very much. I guarantee the Members that the rest of my life I will send more cards and get well cards than I have in the past. I thank everyone.

Mr. MURPHY of New York. Mr. Speaker, I might say to my colleagues that Texas A. & M. will have a new "kicker offer" this year of a unique variety.

Mrs. FENWICK. Mr. Speaker, will the gentleman yield?

Mr. MURPHY of New York. I yield to the gentlewoman from New Jersey.

Mrs. FENWICK. I thank the gentleman for yielding.

This side of the aisle would like to join most warmly and heartily in welcoming back our dear colleague, the gentleman from Texas (Mr. TEAGUE) for whom we have such affection and respect.

Mr. MURPHY of New York. Mr. Speaker, H.R. 4301 is a bill to extend the authorization of appropriations for the National Sea Grant Program Act during the fiscal year 1978.

The sea grant program is a Federal-State cooperative effort of matching grants to carry out important ocean, coastal, and marine research. The research is of the applied nature and the program is beginning to produce significant commercial results, some of which lead to the exportation of products from the United States.

Recently, Profs. Herbert Holloman and James Utterback, from the Massachusetts Institute of Technology, conducted a major study on the commercial and foreign trade impacts of the sea grant program. From the 77 projects which they selected for their analysis, 21 were in aquaculture, 11 in fishing, 9 in food processing, 11 in pharmaceutical and farming chemicals, 8 in waste treatment, 2 in leisure and land development, 6 in marine mining, 2 in marine construction, and the remaining ones were in miscellaneous categories.

Professors Holloman and Utterback concluded that a substantial part of the sea grant projects examined in detail received matching funds from industry rather than from either the State or Federal Governments or from institutions.

Two of the projects have potential commercial sales in excess of $10 million, 13 have potential commercial sales between $1 and $10 million, and 23 have less than $1 million of potential commercial sales. Finally, they concluded that the cooperative use of facilities, ideas, and people is possibly unique to sea grant activities with respect to relationships between universities and industry.

The potential value of the sea grant program has clearly been demonstrated. It is important, then, that the authorizations for appropriations for this program be continued for fiscal year 1978.

H.R. 4301 will continue three authorization funds that were agreed upon last year by the House-Senate conferees.

The main program funds were authorized at $50 million with $5 million and $3 million for national and international programs respectively.

The major problem with the sea grant program has not been in the authorizing committee, but with the requests of the administration for appropriations. Last year, for example, we made similar requests for authorizations as we have in this legislation. However, only $27.7 million was appropriated for the main program and no funds were allocated for either of the new international or national efforts.

I urge my colleagues to continue our authorization levels from last year and I hope that the administration will reexamine its appropriation requests with respect to this important ocean-related research effort.

Mr. Speaker, I yield such time as he may consume to the gentleman from Louisiana (Mr. BREAUX), the chairman of the subcommittee.

Mr. BREAUX. Mr. Speaker, I would just like to echo the remarks of the gentleman from New York (Mr. MURPHY), the chairman of our full committee, in explaining the sea grant authorization program.

Mr. Speaker, I am pleased to present to the House, H.R. 430, a bill to authorize appropriations for the National Sea Grant Program Act during fiscal year 1978. I urge your support for this legislation which is designed to strengthen our knowledge about one of our most precious resources—the waters and coastal areas of our oceans and great lakes.

When this legislation was enacted in 1966, it was felt that the sea grant program could do for marine resources development what the land grant program had achieved for agriculture by developing a solid base of expertise in universities and colleges. This would be done by utilizing the existing capability in State and private institutions already involved in the study of marine sciences.

Today sea grant is a unique Federal-State-university partnership. Sea grant is a three-prong program consisting of research, education and training, and advisory service activities. It supports a network of sea grant colleges and local sea grant programs through its granting process. The present funding method provides Federal funding in the form of grants to provide up to 66⅔ percent of the total cost of the project to universities, colleges and private organizations and the remaining one-third is matched by State or local sources.

There are four stages of sea grant activity. It begins with an institution obtaining a grant for an individual project having a clearly defined objective. The next step is a coherent project which is a collection of interrelated projects under management of a single institution or consortium. After a program has expanded in multiproject efforts covering a wide range of marine resource fields in all three areas of education, research and advisory services, it can achieve institutional status. Following a minimum of 3 years in an institutional status, the designation of "sea grant college" can then be conferred upon an institution.

In its first 11 years of existence, sea grant has supported more than 4,000 projects under nearly 500 grants. Twelve institutions have been designated sea grant colleges, five are now designated institutional programs and another eight are operating coherent programs.

In testimony before the Oceanography Subcommittee on March 8, Profs. Herbert Holloman and James Utterback of the Massachusetts Institute of Technology informed the subcommittee that they had just completed a major study entitled "An Analysis of the Potential Commercial and Foreign Trade Impacts of the Sea Grant Program."

Their testimony was very encouraging. Their study concluded that a $5 million to $10 million investment in sea grant projects underway in 1975 will yield $122 million in sales in the year 1980. They further stated that they were surprised that sea grant has demonstrated the kind of activity which produces significant commercial results, some of which lead to exportation of products from the United States.

When the Congress passed the Sea Grant Improvement Act of 1976 last year, we initiated two new programs to meet national and international needs. Both programs were authorized separate from the main program so as not to encroach upon the basic program funds. Sea grant's success has derived in large part from its system of developing programs at universities and other institutions in which local and regional funding sources have been able to provide matching funds. Conversely, the matching fund requirement has limited the program to projects of a local and/or regional nature.

The Congress was convinced that sea grant's service to State and local problems must be maintained but at the same time attention needed to be focused on ocean issues of major national and international importance. We therefore passed legislation last year authorizing $5 million for 100 percent grants for national projects. A restriction was placed, however, limiting national project funds to not more than 10 percent of funds appropriated for the main sea grant program in order to insure a proper balance between local and national projects; $3 million was authorized for 100 percent grants for international projects recognizing that coastal water problems are not unique to the United States; $50 million was authorized for the basic program.

The bill before us today, H.R. 4301, would extend this authorization level of $58 million for fiscal year 1978. Of the $58 million authorized last year, only $27.7 million was appropriated with no new programs being funded. The President has requested $27.8 million for fiscal year 1978—a mere $100,000 increase. I hope that sea grant will be more successful this year in obtaining the moneys that the Congress clearly intended they should have when we passed the Sea Grant Improvement Act of 1976—Public Law 94-461.

I urge your support for these authorizations.

Mr. BAUMAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. PRITCHARD. Mr. Speaker, will the gentleman yield?

Mr. BAUMAN. I yield 1 minute to the gentleman from Washington (Mr. PRITCHARD).

Mr. PRITCHARD. I thank the gentleman from Maryland for yielding.

Mr. Speaker, I rise in support of H.R. 4301 which amends the National Sea Grant College and Program Act of 1966. This bill would extend the authorization of the basic program funds under section 212—$50 million—for fiscal year 1978. It would also provide for a separate authorization of funds for programs national in scope under section 206—$5 million—and for programs international in scope under section 3(c)—$3 million—for fiscal year 1978.

The separate authorizations for the national and international programs are necessary to meet the requirements of the Sea Grant Improvement Act of 1976 which was given careful consideration by the Oceanography Subcommittee this past session of Congress. It was felt that separate authorizations were necessary for both of these programs so as not to detract from the basic program's funds.

The basic sea grant program funding has not kept pace with inflation. Therefore, it was impossible to expect the existing authorization to cover new national and international programs which fall outside perceived local and regional needs and the existing matching grant mechanisms.

With the emergence of extended jurisdiction over marine resources and continuing debate regarding the degree of coastal State sovereignty over marine scientific research it is important for sea grant to develop some degree of capability to promote international cooperation in marine affairs. Consequently, these new program areas should be given major support at this time without imposing further demands on an already meager sea-grant budget.

With the growing importance of offshore resources to our Nation's economy, it is essential that we fund programs like sea grant sufficiently to keep pace with the increasing demands made upon sea grant. At the same time, we must expect well-designed and carefully thought-out programs which will play a significant role in the national effort toward marine resource development, utilization, and protection.

Therefore, Mr. Speaker, I urge support of H.R. 4301 in order to encourage the type of marine research, education and advisory services which are essential for the development of a long-term, comprehensive, and adaptive policy toward the management of the ocean and its resources.

Mr. BAUMAN. Mr. Speaker, I have no further requests for time.

I concur with the statements the gentlemen made previously.

Mr. TEAGUE. Mr. Speaker, I am and have been a strong supporter of the sea grant program in this country. It is a unique Federal-State-university partnership which was established to develop a base of expertise in universities and colleges by utilizing the existing capability in State and private institutions already involved in the study of marine sciences. One of these institutions is my alma mater, Texas A. & M. University, which has just such a school in Galveston, Tex.

The program is essentially patterned after the land-grant college system which has proven its worth to this country many times over. I am of the opinion that the sea grant program will be, and in fact has been, as beneficial to this country as the land-grant system. The program consists of research, education, and training and practical usages of the knowledge gained. Its success has derived in large part from its system of developing programs in which local and regional needs are met.

With the advent of the international aspect of the program, worldwide needs will be met, such as new sources of food for an ever-burgeoning world population. The sea holds as many challenges for the future as does space, and I am glad that the committee has seen fit to report this legislation to us for consideration.

Mr. ROGERS. Mr. Speaker, I rise in support of legislation designed to extend the National Sea Grant Program Act for fiscal year 1978. As you know, I have always maintained a strong support for the Sea Grant program since I authored the original bill that was enacted into law in 1966.

As this Nation moves to protect its fishery resources through the enactment of a 200-mile fishery conservation zone and embarks on a program for the development of aquaculture, a sound program of research, education and advisory services in the marine field becomes indispensable.

The National Sea Grant program is a Federal-State-university partnership. It encompasses all three functions of American universities: research, education and advisory services. The present funding mechanism provides Federal funding in the form of grants to provide up to 66⅔ percent of the total cost of the project to universities, colleges and private organizations and the remaining one-third is matched by State or local sources.

It is certainly regrettable that actual appropriations have lagged far behind the authorizations that the House Merchant Marine and Fisheries Committee has sought to obtain for this vital program. The authorization request stands at $58 million which includes $5 million for a national projects section and $3 million for international projects. It is hoped that the Congress will be receptive to increasing the appropriations from the $27.7 million of last year so that these two programs can be implemented.

I refer my colleagues to the results of the study conducted by Prof. Herbert Holloman and Prof. James Utterback of the Massachusetts Institute of Technology, entitled "An Analysis of the Potential Commercial and Foreign Trade Impacts of the Sea Grant Program." The study concluded that a $5 to $10 million investment in the sea grant program in 1975 would yield $122 million in sales in 1980. Such significant commercial results point up the economic advantages of this program, which are complemented by the continuing advances in the marine science field.

It is with these facts in mind, coupled with my belief that Sea Grant has continued to live up to its original purposes, that prompt me to recommend passage of the National Sea Grant Program Act Authorization to my colleagues at this time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New York (Mr. MURPHY) that the House suspend the rules and pass the bill H.R. 4301, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The title was amended so as to read: "A bill to authorize appropriations for the National Sea Grant Program Act during fiscal year 1978, and for other purposes.".

A motion to reconsider was laid on the table.

AUTHORIZATION FOR THE NATIONAL ADVISORY COMMITTEE ON THE OCEANS AND ATMOSPHERE (NACOA)

Mr. MURPHY of New York, Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 3849) to establish qualifications for individuals appointed to the National Advisory Committee on Oceans and Atmosphere and to authorize appropriations for the committee for fiscal year 1978, as amended.

The Clerk read as follows:

H.R. 3849

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act entitled "An Act to establish the National Advisory Committee on the Oceans and Atmosphere", approved August 16, 1971 (33 U.S.C. 857-6 through 857-12), is amended—

(1) by adding the following new sentence at the end of section 2(a): "No individual shall be appointed as a member of the Advisory Committee unless such individual has knowledge and expertise in fields related to oceanic or atmospheric matters."; and

(2) by amending section 7—

(A) by striking out "and" immediately before "(4)", and

(B) by striking out "1977." and inserting "1977, and (5) $560,000 for the fiscal year ending September 30, 1978.".

The SPEAKER pro tempore. Is a second demanded?

Mr. BAUMAN. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from New York (Mr. MURPHY) and the gentleman from Maryland (Mr. BAUMAN) are recognized for 20 minutes each.

The Chair recognizes the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, H.R. 3849 extends the authorization for the National Advisory Committee on the Oceans and Atmosphere—NACOA—for fiscal year 1978.

NACOA assumes three primary functions: First, to continuously review our Nation's marine and atmosphere policies and programs; second, to report to the President and Congress annually and upon request; and third, to advise the Secretary of Commerce with respect to the National Oceanic and Atmospheric Administration's activities.

The legislation would authorize an appropriation of $560,000 for fiscal year 1978 for the operation of the committee. Additionally the bill contains amendatory language providing a more rigid definition of the qualifications necessary for NACOA membership. The committee is composed of 25 members and the new amendment would prevent the appointment of persons lacking knowledge or expertise in fields related to oceanic and atmospheric matters.

The authorization represents an increase over the fiscal year 1977 level and is clearly justified based on the sound work which the committee has performed in the past and the responsibilities it will face in the future.

During its 5 years of operation, NACOA has played a significant role in providing insights and options for the complex issues which we face in the national ocean policy and marine affairs.

When I was chairman of the Oceanography Subcommittee of the full Merchant Marine and Fisheries Committee during the long and arduous consideration of the complex 1976 amendments to the Coastal Zone Management Act, we were fortunate in receiving clear and concise advice and expert staff assistance from NACOA.

Also, as chairman of the Ad Hoc Select Committee on the Outer Continental Shelf, I can attest to the valuable help which NACOA has provided and is continuing to provide on OCS legislation.

The administration has recommended a fiscal year 1978 appropriation equal to last year's funding. Given higher costs generally, and salary increases in particular, this, of course, represents an effective decrease in the committee's budget.

I urge my colleagues to support the authorization levels in H.R. 3849 and bring to the attention of the administration, the quality work which NACOA has performed in the past. Level funding for this important committee will clearly require a diminution of the important studies and analyses carried out by the staff and members of the committee.

Mr. Speaker, I yield such time as he may consume to the chairman of the subcommittee, the gentleman from Louisiana (Mr. BREAUX).

Mr. BREAUX. Mr. Speaker, does the gentleman from California wish me to yield?

Mr. BROWN of California. I do, Mr. Speaker.

Mr. BREAUX. I yield to the gentleman from California.

Mr. BROWN of California, Mr. Speaker, I thank the gentleman for the opportunity to speak in support of H.R. 3849 and to explain the interest in NACOA of the Science and Technology Committee, and in particular of the Environment and Atmosphere Subcommittee, which I chair.

The Science and Technology Committee has authorization and oversight responsibility for a range of atmospheric research and related matters, including those with NASA, NSF, ERDA, EPA's Office of Research and Development, parts of NOAA, et cetera. In particular, the Environment and Atmosphere Subcommittee has the responsibility to examine environmental research in a comprehensive and cross-cutting way.

The members of NACOA have regularly addressed their attention and advice to key atmospheric and marine problem areas, in a timely way. Their recommendations have been very useful to us in the Science and Technology Committee. One very current example is the progress of legislation to establish a national climate program.

In NACOA's third annual report, June 1974, noting that our current knowledge of climate and what causes it to change is unequal to the importance of its impact on world food supply and other human activities, additional cooperative programs between NOAA and USDA, and NOAA and NSF, were recommended. NACOA's urging help call the attention of several of our colleagues to the need for expanded and better coordinated climate research and monitoring.

NACOA's 1975 report recommended a coherent national program on climate. Members of the advisory committee then contributed to our hearings in early 1976. Their 1976 report endorsed climate legislation like that which the Science Committee considered this year, which has been reported, May 3, and is ready for House floor action.

NACOA's efforts to focus attention on climate questions early on, its counsel to us in the course of congressional deliberation on the climate bill, and the general ability of its members to provide critical yet constructive outside advice on a variety of ocean and atmosphere matters continue to have my thanks and support. I urge my colleagues to support the fiscal year 1978 authorization under consideration.

Mr. Speaker, I would also like to address for just a moment the question of qualifications of members of the National Advisory Committee on the Oceans and Atmosphere. I feel that it is very important for individuals chosen to be members of the NACOA to have premier knowledge and expertise in atmospheric and ocean matters, especially of research frontiers. The amendment is an important reminder that we need topnotch outside advice in isolating and scrutinizing topical and institutional problem areas, like the environmental-research-related ones which NACOA has helped to call to the attention of the Subcommittee on the Environment and the Atmosphere. I thank the gentleman for the opportunity to speak to the amendment.

Mr. BREAUX. Mr. Speaker, I thank the chairman of our full committee for yielding to me for some comments about NACOA.

Mr. Speaker, the bill being discussed today, H.R. 3849, is a bill to extend the authorization for NACOA, the National Advisory Committee on Oceans and Atmosphere.

NACOA was originally conceived by the Stratton Commission which in 1969 published a comprehensive ocean policy report which has had a powerful and pervasive impact upon our Nation's oceans effort. This report called for the formation of an advisory committee which would bring together people from outside the Federal Government having expertise in oceanic affairs. This group would provide a vital link between the various sectors of the oceanic community, including government, academia, and industry, and represent a broad range of geographical and disciplinary areas.

The National Advisory Committee on Oceans and Atmosphere was subsequently established by the passage of Public Law 92–125 on August 16, 1971. Atmospheric advisory functions were added to NACOA subsequent to the establishment of the National Oceanic and Atmospheric Administration in 1970. By law, NACOA is mandated three primary responsibilities. First, to continuously review our Nation's marine and atmosphere policies and programs; second, to report to the President and Congress annually or upon request; and third, to advise the Secretary of Commerce with respect to the National Oceanic and Atmospheric Administration.

NACOA's membership serves as a valuable source of knowledge and information. The credibility and effectiveness of NACOA is directly related to the quality of its members. H.R. 3849 provides language which will restrict NACOA membership to those persons bringing only the highest level of knowledge and expertise in fields which would complement and enhance the advisory capability of NACOA.

In addition, H.R. 3849 increases the level of authorization from $445,000 to $560,000 for fiscal year 1978, an amount necessary to maintain NACOA's current level of operations in the face of Government salary increases and other inflationary factors.

In my view, NACOA represents one of the few advisory committees that actively addresses ocean issues; 1977 marks the sixth year of existence for NACOA. In that time NACOA has contributed significantly to the formulation of many of our country's ocean and atmospheric policies. H.R. 3849 insures the continuation of NACOA at its present level of operation while providing for the strengthen-

ing of the qualifications of its membership. It is for these reasons that I urge the passage of this legislation.

Mr. BAUMAN. Mr. Speaker, I yield such time as he may consume to the gentleman from Michigan (Mr. RUPPE).

Mr. RUPPE. Mr. Speaker, I rise in support of H.R. 3849 which is designed to extend the authorization of appropriations for the National Advisory Committee on Oceans and Atmosphere during fiscal year 1978 at a level of $560,000. The bill would also establish limitations on the individuals who could be appointed by the President to serve on the advisory committee.

NACOA, a 25-member advisory board, was formed in 1971 to establish an effective nonagency body which would be able to advise Congress and the President. NACOA was formed as an essential part of the Stratton Commission report which provided a foundation for the development of a national ocean policy. One of the most beneficial features of NACOA is its ability to assemble representatives from the relevant marine and atmospheric science disciplines as well as other recognized authorities in order to exchange information from their respective disciplines and areas of interest and evaluate policy alternatives.

H.R. 3849 would amend section 2 of the NACOA Act to include a narrower definition of the qualifications necessary to be appointed to NACOA. Specifically, only individuals with knowledge and expertise in the areas of oceans or atmosphere could be appointed to the committee. Mr. Speaker, this narrow definition could provide a situation where only scientists are represented, and I do not think this body would then be as effective as it has been in the past. I urge support of this bill, although I feel that it is important for Congress to continuously scrutinize the types of appointments made to this body.

This bill would also amend section 7 of the act to extend and increase the authorization for fiscal year 1978 from $445,000 to $560,000. This amount reflects mandated increases in Federal salaries and supply costs of NACOA which have been put off for several years.

Therefore, Mr. Speaker, I urge Congress to support H.R. 2349 in order that NACOA will be able to contribute substantially, especially in the next few years, as this country progresses toward a more rational and comprehensive national ocean policy.

Mr. BAUMAN. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

The SPEAKER per tempore. The question is on the motion offered by the gentleman from New York (Mr. MURPHY) that the House suspend the rules and pass the bill H.R. 3849, as amended.

The question was taken.

Mr. MOTTL. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

Mr. MOTTL. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Pursuant to the provisions of clause 3(b) of rule XXVII, and the prior announcement of the Chair, further proceedings on this motion will be postponed.

The point of order is considered withdrawn.

SEAL BEACH, GREAT DISMAL SWAMP, AND SAN FRANCISCO BAY NATIONAL WILDLIFE REFUGES AUTHORIZATIONS

Mr. MURPHY of New York. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 5493) to extend until October 1, 1980, the appropriation authorizations for the Seal Beach, Great Dismal Swamp, and San Francisco Bay National Wildlife Refuges.

The Clerk read as follows:

H.R. 5493

Be it enacted by the Senate nad House of Representatives of the United States of America in Congress assembled, That section 5 of the Act entitled "An Act to provide for the establishment of the San Francisco Bay National Wildlife Refuge", approved June 30, 1972 (16 U.S.C. 668jj), is amended by striking out "June 30, 1977" and inserting in lieu thereof "September 30, 1980".

SEC. 2. Section 4 of the Act entitled "An Act to establish the Seal Beach National Wildlife Refuge", approved August 29, 1972 (Public Law 92-408; 86 Stat. 663), is amended to read as follows:

"SEC. 4. There is authorized to be appropriated until the close of September 30, 1980, not to exceed $525,000 to carry out the purpose of this Act.".

SEC. 3. Section 4 of the Act entitled "An Act to establish the Great Dismal Swamp National Wildlife Refuge" (Public Law 93-402, 88 Stat. 801) is amended to read as follows:

"SEC. 4. For purposes of carrying out this Act, there are authorized to be appropriated not to exceed—

"(1) $1,000,000 for the fiscal year ending June 30, 1975;

"(2) $3,000,000 for the fiscal year ending June 30, 1976, and the transition quarter beginning July 1, 1976, and ending September 30, 1976;

"(3) $3,000,000 for the fiscal year ending September 3, 1977; and

"(4) $21,000,000 for the period beginning October 1, 1977, and ending September 30, 1980, of which not to exceed $15,750,000 shall be available for land acquisition and not to exceed $5,350,000 shall be available for purposes other than land acquisition.".

The SPEAKER pro tempore. Is a second demanded?

Mr. SNYDER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from New York (Mr. MURPHY) and the gentleman from Kentucky (Mr. SNYDER) are recognized for 20 minutes each.

The Chair recognizes the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, H.R. 5493 would provide additional funding for the purpose of assisting in the conservation and protection of our Nation's valuable fisheries and wildlife resources.

To assist in this regard, there were three wildlife refuges established as a result of legislation reported by the Committee on Merchant Marine and Fisheries in the early 1970's. The three refuges are the Seal Beach Refuge, the San Francisco Bay Refuge, both of which were established in 1972, and the Great Dismal Swamp Refuge, established in 1974.

The establishment of these refuges provided for the setting aside of over 100,000 acres of valuable habitat in the States of Virginia, North Carolina, and California.

In addition to assisting in the perpetuation of a number of endangered species of fish and wildlife, these refuges provide millions of man-days of hunting and fishing each year as well as additional recreational opportunities for the general public. Developments at these refuges will consist of such things as wildlife and environmental interpretive centers, wildlife trails, fishing piers, hunting blinds, boat tours and observation platforms.

Mr. Speaker, the need for H.R. 5493 arises from the fact that the appropriation authorizations for these three refuges expire this fiscal year.

H.R. 5493 would extend for 3 years the funding authorization of the Seal Beach Refuge at the same level of $525,000, the San Francisco Bay Refuge at the same level of $20,300,000, and the Great Dismal Swamp Refuge at an increased level of $21,100,000.

Mr. Speaker, this legislation received favorable departmental reports, and it was unanimously ordered reported by the Committee on Merchant Marine and Fisheries and I urge its passage.

I now yield to the gentleman from California, (Mr. LEGGETT), chairman of the subcommittee that reported this legislation, such time as he may consume.

Mr. LEGGETT. I thank the gentleman for yielding.

Mr. Speaker, the purpose of H.R. 5493 is to extend for an additional 3 years the appropriation authorizations for three National Wildlife Refuges, the Great Dismal Swamp Refuge in the States of Virginia and North Carolina, and the Seal Beach Refuge and the San Francisco Bay Refuge, both in the State of California.

Mr. Speaker, under present law, there is authorized to be appropriated until September 30, 1977, $525,000 for the Seal Beach Refuge. This refuge consists of about 700 acres of the Naval Weapons Station at Seal Beach and although it is still under the ownership of the Navy it is being jointly managed by the Department of the Interior and the Navy as a refuge pursuant to an approved management plan dating back to 1974.

Mr. Speaker, no funds have been appropriated under this authorization thus far since only personnel costs have been involved and the Interior Department is absorbing those costs under its general appropriation authority.

H.R. 5493 would extend the authorization at the same level of funding for the 3 additional years.

Mr. Speaker, the San Francisco Bay Refuge was established in 1972. It consists of four distinct units totaling about 23,000 acres. The refuge consists of lands and waters that constitute an ecological system that supports a rich diversity of fish and wildlife, including species known to be threatened with extinction, such as the California clapper rail, the least tern, and the salt water harvest mouse.

Its 11,000 acres of salt ponds, 3,000 acres of salt marsh, 6,000 acres of tidal flats, and 2,000 acres of open waters afford natural habitat to large numbers of migratory waterfowl, shore and water birds, fish, and aquatic animals, including a colony of harbor seals.

Mr. Speaker, present law authorizes to be appropriated $20,300,000 through fiscal year 1977 for the San Francisco Bay Refuge. To date, $9,600,000 of that authorization has been appropriated, all of which is earmarked for acquisitions. No acquisitions have taken place thus far, except for 203 acres that were donated. Most of the lands within the boundaries of the refuge are owned by Leslie Salt and Westbay Associates. Although negotiations for purchase of these lands have been underway for several years now, the Interior Department is optimistic that offers to purchase will be accepted within the next few months.

H.R. 5493 would extend the present funding authorization for an additional 3 years leaving to be appropriated during the 3-year period $10,700,000, all of which would be used for operation and development of the refuge.

Mr. Speaker, the Great Dismal Swamp Refuge was established in 1974. It presently consists of a 49,000-acre tract of land donated by the Union Camp Corp. and about 4,000 acres of additional lands purchased from private owners. Remaining to be acquired within the refuge is about 53,000 more acres of which 13,000 acres will probably be purchased within the next 6 months.

The swamp consists mostly of forest lands. It is abundant with fish and wildlife; it has a high bird population, including migratory waterfowl; and the largest mammal in the forest is the black bear.

Under present law there was authorized to be appropriated $7 million through fiscal year 1977 for this refuge.

H.R. 5493 would authorize to be appropriated $21,100,000 for the next 3 fiscal years provided that not more than $15,750,000 could be used for acquisitions and not more than $5,350,000 for purposes other than acquisitions.

Mr. Speaker, H.R. 5493 was ordered reported by the Committee on Merchant Marine and Fisheries unanimously. It has the support of the Department of the Interior, and it is widely supported by conservationists throughout the country.

I urge its prompt passage.

Mrs. FENWICK. Mr. Speaker, will the gentleman yield?

Mr. LEGGETT. I yield to the gentlewoman from New Jersey (Mrs. FENWICK).

Mrs. FENWICK. I thank the gentleman for yielding.

Mr. Speaker, I hope my questions will not suggest in any way any reluctance to support this legislation, which I consider not only desirable, but essential. However, there is something which worries me here, and that is the fact that in many cases—for example, in the San Francisco area—there is less money for land acquisition than there is for development. This is something of which I am intimately aware in my own district. I think we should stop acquiring land for wildlife habitat and then proceed to change that habitat and construct dikes and roads and access, so that it is not really a wildlife habitat any more, very often with very startling and very unfortunate repercussions upon the neighboring areas.

For example, in one wildlife refuge of which I am intimately aware they have decided to make a dike in order to increase the pond area so that they can get more room for birds. As a result, the neighbors are having a back-up of water that they never had before.

When we are acquiring for wildlife, it seems to me we ought to leave it alone. If we put in walks and ways to make it possible for children and others interested in wildlife to see what is going on, it would be desirable; but to change the nature of the land, when we have acquired it for wildlife, does not seem to me to be quite straight. I wish somehow we could establish in the dialog here that it is the intention of the committee, so far as possible, to recommend to the Congress that land acquired for wildlife refuges should not be tampered with except for a minimal amount necessary to make it convenient for students and those who wish to study the area.

Mr. LEGGETT. Mr. Speaker, if the gentlewoman is asking the question of the subcommittee, we are very much concerned with our overall refuge program. We have some 32 million acres federally owned which we manage in the National Wildlife Refuge System. The States have others. We are thinking of adding to the system an additional 40 million acres in Alaska. With respect to the Alaskan acreage, that will be kept in its pristine state to the maximum extent possible. There are some projects, such as the Tinicum area, which we had on the floor the other day, which have been seriously eroded because of the digging of holes, dredging, and various other kinds of things in the refuge area.

So we do have to spend more money in an urban-type refuge to either restore it to its natural state or to make it consistent with the development that has already taken place there.

In San Francisco it so happens that the refuge, consisting of this 23,000 acres, that we are taking over is in large part in salt ponds. The salt ponds are not inconsistent with plans for the refuge. What we have found is that the salt water is consistent with the promotion of a wildlife habitat.

There are a number of levee activities that are taking place in the southern part of San Francisco Bay. There are also some salt development programs and nearby commercial activities. We do intend by this legislation not to create something artificial but to try to maintain as much of the area in its natural state as we possibly can.

However, each project is different. Fortunately, we have had one donor who has donated a rather substantial sum of money for an environmental center in the San Francisco Bay Refuge, and that will meet with the needs of students and others who are interested in wildlife.

Mrs. FENWICK. If the gentleman from New York (Mr. MURPHY) will yield further, it does seem questionable for us to spend only $9 million for land acquisition and then spend $11.3 million for development of what is meant to be a wildlife habitat. This is what is of concern to me.

It is not just a question of this particular wildlife refuge. This seems to be a policy that we generally follow; I am sure the chairman of the subcommittee is aware that in some of these wildlife refuges they have one area that is marked out for development.

How can that be used for development if the land is bought for wildlife? Why is it marked out for development?

Mr. LEGGETT. Mr. Speaker, it is not marked out for development for any purpose other than to create proper ponding so that we can acquire the desired wildlife. It is true that the amount of money used to take the land is small in relation to the development costs.

One of the reasons for that is that we are going to continue to allow the salt development program to take place in these lands. That is not inconsistent with the overall development program. As a result, the costs for the taking are lean as compared to development costs.

This is one of the better wildlife programs in the country. It is sponsored by the gentleman from California (Mr. MCCLOSKEY), a member on the gentlewoman's side of the aisle. The gentleman from California represents a district some miles away from my district. This program does have the full support of all the environmental community and all of the wildlife people in Northern California.

Mr. FENWICK. Mr. Speaker, I am sure it is an essential program. So is the San Francisco Bay Refuge program.

I am going to sit down now, and I will not take any more time of the Committee, but I did want to make the point that I think this is something we are going to have to resist. If we are taking lands for wildlife habitats, as I believe we must, I think we ought to be very careful before we fool around with the development of those lands.

Mr. LEGGETT. Mr. Speaker, if the gentleman from New York (Mr. MURPHY) will yield further, let me say this:

If the land is in a pristine state when we acquire it, we do not have to spend much money, if any, on it. However, when we acquire lands like this that have been within the heart of development areas, then we have to do some other things in order to attract the desired wildlife.

Mrs. FENWICK. Yes, I agree that has to be done where the lands have been tampered with. But in some cases we acquire some lands that are pristine, and then we decide they are not good enough and not enough birds are stopping there.

So then we start fooling around with dikes, and we begin to invade the land of the neighbors. This, it seems to me, is unfortunate.

In other words, I think we ought to simply accommodate what birds we have and stop developing our wildlife lands with the building of access roads. As I understand it, we have allowed carrier routes to be put through wildlife areas. Perhaps that is necessary, but I hope that trend will be resisted.

Mr. LEGGETT. Mr. Speaker, we are developing these lands to the minimum extent possible, and I hope the gentlewoman will believe me when I say that.

Mr. SNYDER. Mr. Speaker, I yield such time as he may consume to the gentleman from Michigan (Mr. RUPPE), the ranking minority member of the subcommittee.

Mr. RUPPE. Mr. Speaker, I rise in support of H.R. 5493 which authorizes appropriations for the acquisition and development of three unique areas: the Seal Beach National Wildlife Refuge, the Great Dismal Swamp National Wildlife Refuge, and the San Francisco Bay National Wildlife Refuge.

The Seal Beach Refuge in California is one of the largest single undisturbed tracts of salt marsh remaining along the California coast. Over 100 species of marsh birds, migratory waterfowl, and shore birds, including three endangered species, nest or feed on or near the marsh.

The Great Dismal Swamp, which is one of the last undisturbed great swamps, is literally teeming with wildlife. In fact, the swamp supports the only breeding population of black bears in eastern Virginia and North Carolina. The swamp also offers visitors a chance to view many unique forms of vegetation.

The area is also rich in historic significance. In 1763, George Washington visited the area and later surveyed it. He was impressed by both the beauty of the swamp and the commercial possibilities of its timber resources. In 1764, he formed a company called the "Adventures for Draining the Great Dismal Swamp" which dug numerous ditches and canals in the area to facilitate a timber harvest. The first such ditch which was dug in the late 1760's was one of the first canals dug in the Colonies and may well be the oldest canal in usable condition in the United States.

The preservation of the Great Dismal Swamp has been a joint public and private effort. The Union Camp Corp., acting through the Nature Conservancy, has donated 49,000 acres of the Dismal Swamp for use as a wildlife refuge. This gift constitutes about 50 percent of the land area of the proposed refuge. The Federal contribution authorized by H.R. 5493 will match the private donation so that this great area will be preserved and protected.

The San Francisco Bay Wildlife Refuge is another unique ecosystem which will be protected by H.R. 5493. The estuarine environment of the bay provides a haven for numerous species of wildlife. In fact, nearly 70 percent of the Pacific flyways' shorebirds depend on the San Francisco Bay's tidal flats for feed at some time during the year. The bay area is also the home for several endangered species. Unfortunately, the bay's wetland area has been diked and filled to such an extent that the available wildlife habitat has been reduced by 75 percent.

Mr. Speaker, to protect the remaining wildlife habitat in the bay area, to preserve the Great Dismal Swamp, and to protect the marshes of Seal Beach, I urge the adoption of H.R. 5493.

Mr. SNYDER. Mr. Speaker, I have no further requests for time.

Mr. MURPHY of New York. I have no further requests for time, Mr. Speaker.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New York (Mr. MURPHY) that the House suspend the rules and pass the bill H.R. 5493.

The question was taken.

Mr. MOTTL. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

Mr. MOTTL. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Pursuant to the provisions of clause 3(b) of rule XXVII, and the prior announcement of the Chair, further proceedings on this motion will be postponed.

The point of order is considered withdrawn.

CANAL ZONE BIOLOGICAL AREA AUTHORIZATION

Mr. MURPHY of New York. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 3348) to amend the Act of July 2, 1940, as amended, to increase the amount authorized to be appropriated for the Canal Zone Biological Area, as amended.

The Clerk read as follows:

H.R. 3348

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 7 of the Act of July 2, 1940 (20 U.S.C. 79e), is amended by striking out "$350,000" and inserting in lieu thereof "$750,000".

The SPEAKER pro tempore. Is a second demanded?

Mr. SNYDER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

The was no objection.

The SPEAKER pro tempore. The gentleman from New York (Mr. MURPHY) and the gentleman from Kentucky (Mr. SNYDER) are recognized for 20 minutes each.

The chair recognizes the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I support H.R. 3348 and urge the Members to approve this bill which is indispensible to a sustained level of resource protection and research activity for the Canal Zone biological area.

H.R. 3348 increases to $750,000 the statutory limitation on funds authorized to be appropriated to the biological area for its administration and the maintenance of suitable facilities for observation and scientific investigation. The present limitation of $350,000 was established in 1965.

A new $750,000 authorization ceiling for the area will recognize three elements: Rapidly rising operating costs caused chiefly by salary and other personnel expenses; a modest reconstruction and renovation program for deteriorating facilities; and the assignment of certain costs not previously included in the limitation.

A new ceiling could conceivably increase expenditures for the Canal Zone biological area by some $2 million total in the next 5 fiscal years. But the Committee on Merchant Marine and Fisheries estimates that the total actual increase in U.S. Government outlays over the next 5 years as a result of this legislation will not exceed $1 million.

Mr. Speaker, the Canal Zone biological area encompasses Barro Colorado Island and several tiny adjacent islands near the channel of the Panama Canal. The area is a prime world center for tropical research, due to the great diversity of flora and fauna on its premises and the community of scientists who study there. Hundreds of scientific studies are made each year, many of which yield important results.

There are tangible benefits for the United States in the conservation and preservation of Barro Colorado Island and the maintenance of its associated laboratory facilities.

Thousands of students from U.S. universities and colleges have done research on the island, because more effective study is possible.

Some of the bird populations of North America which are important to environmental balance overwinter in the area of the Isthmus of Panama, and thus find the island a safe haven.

Additionally, the variety of plant species there that may provide important information for agricultural and medicinal purposes is impressive.

Let me add on more of a marine note that scientists associated with the biological area were responsible for an important study in the early 1970's pointing out the environmental hazards of a sea-level canal.

In spite of the high reputation of the Canal Zone biological area and its superior entity, the Smithsonian Tropical Research Institute, the Committee on Merchant Marine did not act precipitately in reporting this legislation. Since the present authorization limitation was set in 1965, the Smithsonian Tropical Research Institute, which now administers the Canal Zone biological area, was created by the Smithsonian Board of Regents. Also, since 1965 Canal Treaty negotiations have become protected with the Kissinger-Tack guidelines of 1974 causing special concern.

After studying these two phenomena the committee concluded that fiscal accountability in the administration of the Canal Zone biological area demanded that all of the funds obligated from amounts appropriated to the

Smithsonian Institution each fiscal year and used in connection with the biological area must be charged to the authorization limit. The committee also concluded that the budget for the biological area must be more explicit.

With regard to the treaty negotiations in which the United States is now engaged, it is clear that these talks do not impinge upon the legal title on U.S. property in the Canal Zone. The facilities that might be constructed under the program envisioned for the Canal Zone biological area will become part of the $7 billion worth of investment the United States has made in the real property and the structures situated thereon in the Canal Zone. This investment is not subject to transfer without the authorization of both Houses of Congress.

When I chaired the Subcommitee on the Panama Canal in the 92d Congress, we concluded, as stated in House Report 92–1629:

> No treaty involving the appropriation of United States monies or the transferral of territory or other property owned by the United States will be effected without due consideration of the jurisdiction of the House over these matters.

On June 18, 1976, in debate on the Snyder amendment, I said that—

> Any treaty drawn up by the executive branch and submitted to the Senate involving the territory of the Canal Zone or the Panama Canal must be drawn so as to require this implementing legislation.

I emphasize these statements to which I continue to adhere in order to point out that this authorization is not recommended without some confidence in our ability to protect its end results in behalf of the taxpayer.

Mr. Speaker, it should also be noted that the status of the Canal Zone biological area is also well protected in Panama's eyes by the ample benefits the area has provided, since its existence, like that of the Panama Canal that runs near it, includes special benefits for the Republic of Panama.

H.R. 3348 ought to be passed to reaffirm our commitment to operate the Canal Zone and the facilities in the best manner possible, and also to reaffirm our commitment to the advancement of science in our own best interests and those of the world.

Mr. Speaker, I yield back the balance of my time.

Mr. SNYDER. Mr. Speaker, I yield such time as he may consume to the gentleman from Michigan (Mr. RUPPE), the ranking minority member.

Mr. RUPPE. Mr. Speaker, although I am concerned as to the ultimate form the proposed new treaty with Panama will take, I am in favor of continued negotiations with that country. I am, of course, aware that the President promised in his campaign never to give up practical control of the Panama Canal.

In the meantime, though the outcome of the talks remains in doubt, scientific progress must not be stifled. The Smithsonian Institution has done, and continues to do very valuable work in many countries of the world including Panama. Barro Colorado Island in the Canal Zone offers a magnificent opportunity for scientists from all over the world to study tropical flora and fauna in a concentrated area.

The Smithsonian Tropical Research Institute which administers the Canal Zone biological area on the island should not be held hostage to the negotiations or penalized in advance, because of a new treaty that seems to be many months in the offing at the very least.

The increase in the appropriations limitation requested by Smithsonian officials is, in my estimation, worthy of our support. The modest expansion and repair program for the biological area presented to the Committee on Merchant Marine and Fisheries by Smithsonian officials makes sense, and warrants the additional appropriations. Even those Members opposing the bill on the grounds that we should not add anything to the great investment made by our taxpayers in the Canal Zone if we are to give it to Panama, admit they would support the increase under other circumstances.

I repeat, the Smithsonian Institution for years has successfully operated in numerous countries around the world. I am confident it can continue to do so in the Canal Zone whether under United States or Panamanian jurisdiction.

Mr. SNYDER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I oppose H.R. 3348 because the taxpayers of the United States should not have to spend an additional dollar to improve facilities that shortly may be handed over to Panama's dictator, Omar Torrijos. My position is consistent with my overall opposition to surrendering the Canal Zone and Panama Canal to Torrijos.

I do not object to the work of the biological area on Barro Colorado Island or the Smithsonian Institution's administering of that activity. On the contrary, I find much merit in the operation from all I have learned of it, and the facilities could stand repair and improvement.

However, I object strenuously to our citizens always being socked for tax money to support a foreign policy that seeks to make friends out of our enemies by sapping our own strength and strategic position. H.R. 3348, of course, does not authorize money in support of our foreign policy but such funds at once would be subject to that policy—with the taxpayers the losers.

Placating Omar Torrijos by giving him the Canal Zone would in no way solve Panama's basic problems or greatly ease our tensions with that country. Without huge amounts of U.S. money we would be giving Panama a gigantic new burden. Few people know, for example, that canal maintenance has required twice as much excavation since its completion than was required for its construction.

We would have to be more involved than ever both in Panama's internal politics and in giving her increased financial aid to insure that the canal would remain open and operable. Worse, we would just whet Torrijos' appetite and demonstrate to the world a weakness not truly representative of the national will of our people.

With little regard for world shipping, Panama, of course, intends to milk the Canal Zone once it becomes Panamanian. She cannot make money on the present break-even tolls we charge. Her economists talk of hiking those rates at least 300 percent.

Panama could be expected to try to establish fees and other charges and levy taxes on anything we might want to operate or use in what would then be the former Canal Zone. That is an indication of what could be done with Barro Colorado Island. Improving the facilities there would just enable Torrijos to jack up the rent on them.

Smithsonian officials have expressed confidence in their ability to carry on under Panamanian jurisdiction, because of two agreements—one a Western Hemispheric treaty and the other a compact the Institution has with Panama.

However, as my colleague from California (Mr. DORNAN) and I point out in our dissenting views in the committee report, either agreement is subject to a unilateral cancellation by Torrijos with only 12 months' notice. That is just not good enough security for the biological area for me to vote to commit increased tax money, small as the amount may be in comparison with other day-to-day authorizations by Congress.

Mr. MURPHY of New York. Mr. Speaker, I yield such time as he may consume to the gentleman from Illinois (Mr. METCALFE), the chairman of the Subcommittee on the Panama Canal.

Mr. METCALFE. Mr. Speaker, I urge favorable consideration of H.R. 3348, a bill to increase the permanent annual authorization for the Canal Zone biological area to $750,000.

H.R. 3348 has broad bipartisan support. In their testimony before the subcommittee which I chair, and in reports to the Committee on Merchant Marine and Fisheries, the executive has indicated support for this legislation. The other body has also indicated its support for this by passing an identical bill on May 2. Your Committee on Merchant Marine and Fisheries has reported H.R. 3348 with only two dissenting opinions and finally, several of America's leading academic institutions express approval of this legislation.

To those who are not familiar with the value of the Canal Zone biological area as a repository of various forms of plant and animal life, I would simply say that thousands of studies have been done in connection with this area since 1923. The Government has been funding the area since 1940. In 1965, its authorization limit was set at the present $350,000.

There is now a clear need for an increase in the authorization for the biological area. In terms of operating costs alone, the impact of inflation and legislation will cause the present authorized limit to be exceeded within the next 2 years.

Moreover, some of the facilities on Barro Colorado Island which are literal-

ly falling apart at this time cannot be replaced or renovated without a higher authorization. These facilities are a prerequisite to advanced study and effective research.

Finally, costs which have not heretofore been charged under this limit of title 20, section 79 of the United States Code, must now be considered. This increases the amount by which the limit must be raised.

Mr. Speaker, when I introduced H.R. 3348 by request on February 9, the legislation called for an increase in the authorization limit from $350,000 to $600,000. In subcommittee deliberation on May 2, this later figure was amended to $750,000.

The purpose of the change was to recognize what the General Accounting Office has termed "indirect costs" in connection with the administration of the Canal Zone biological area. These are costs which have been in the appropriations for the Smithsonian Tropical Research Institute, and used in connection with its administration of the Canal Zone biological area, but not charged to the area's limit.

Records available to the Committee on Merchant Marine and Fisheries indicate that in spite of the bookkeeping problems of the Canal Zone biological area, the statutory limit on authorized funds has not been exceeded. But since it is only fair that all Smithsonian costs that apply to the area be counted, the report on the bill directs this.

In debate in the Committee on Merchant Marine and Fisheries, one major objection was raised to the legislation. This concerned the uncertainty of the status of the biological area under any possible new treaty with the Republic of Panama.

I am not uncertain about the future status of Barro Colorado Island in the Canal Zone. Apparently neither are most members of the Committee on Merchant Marine and Fisheries.

Of course, none of us has the crystal ball that makes the future clear. If we did, this body might not exist. In making judgment about the future, we must proceed on the best known intentions and actions that pertain to our decisions. If we look at only worst-case thoughts and the most ill-intentioned actions, we deprive ourselves of the chance to make things better.

As I said, regardless of the outcome of present canal treaty negotiations, the preponderance of evidence seems to indicate that the status of Barro Colorado Island will not change.

The basic reason for my confidence on this point is the justified self-interest of the United States and Panama in keeping these things as they are. While the United States gains valuable scientific information on the island, Panama has also gained more knowledge of the ecology of the Isthmus and can draw upon the community of scientists that come to study.

As an indication of the intentions of the Panamanian Government on scientific matters, we should note the case of Gorgas Memorial Laboratory. This U.S.-funded operation located under Panamanian jurisdiction in Panama City has never been hindered in its work. In fact, it has had the cooperation of the Panamanian Government.

We should also note that Panama signed in 1972 a Western Hemisphere convention on nature protection and wildlife preservation by which it pledged to do many things, including the following: To protect designated flora and fauna from destruction and allow them available only for scientific investigation; to keep wilderness lands inviolate; to lend assistance to scientists engaged in scientific research; and to protect migrating birds and endangered species. All of these pledges relate to a reserve such as the biological area.

Further, this year the Smithsonian Tropical Research Institute and the Government of Panama signed a contract which provides for Government recognition in return for a continued sharing of information.

So we have the good will of the Panamanian Government. It is the same kind of good will that has been extended to the Smithsonian by 20 other countries.

Good will, however, may not be enough. Fortunately, we have more protections. We have the constitutional protection on disposition of property. We have recorded in the conceptual agreements released in 1975 an intention to conclude a special agreement on "tests in connection with tropical environmental studies"—this presumably means Barro Colorado Island, among other locations.

These, then, are legal protections, but the basic protection is the international reputation of the Canal Zone biological area.

I urge passage of H.R. 3348 to continue the productive tropical research in which the United States has been a world leader and to insure that all costs to the taxpayers associated with the Canal Zone biological area are properly authorized.

Mr. SNYDER. Mr. Speaker, I yield 5 minutes to the gentleman from California (Mr. DORNAN).

Mr. DORNAN. Mr. Speaker, I am one of those to whom the esteemed chairman of the Committee on Merchant Marine and Fisheries referred when the gentleman said there were some who would willingly support any assistance for our excellent and invaluable Smithsonian Institute, were it not for the difficult circumstances surrounding negotiations with the Panamanian dictator who has publicly said that if we do not give him exactly what he wants, he will take it by force.

I take this opportunity to again remind my colleagues that bombs were set in our Canal Zone in October and that the guilt has been traced back to the head of G–2 Intelligence in the Gardia Nationale, Gen. Torrijos' Palatin Guard. I think we should do everything we can here in the Congress to let the nation of Panama know that we are not going to improve any facilities there until it is very clear to them and the world that we are not giving up practical control of our canal. I think euphemisms like "vital interests," which some at our State Department interpret to mean turning the canal over to Panama should be dropped from our negotiating verbiage. The citizens of our Nation need more assurance that the United States is not going to run from this strategic area of the world before we start spending more money on facilities there. Look again at what we abandoned in Vietnam—over $8 billion in U.S. equipment and facilities.

Mr. Speaker, I also use this opportunity to remind my colleagues that the Joint Chiefs of Staff have described this Canal Zone area as a strategic and critical area to U.S. defense. This strong statement of fact has been garbled by some of our ambassadors down there who have denied that this critical area description has been made very strongly to them by the Joint Chiefs of Staff.

I again commend the Smithsonian Institute on the excellent work they have done on Barro Colorado Island. It is my hope they will continue this fine work when we have cleared up the impression that our negotiations are a one-sided attempt at fair partnership with the other side, the dictator Torrijos saying, "Get out and leave your checkbook as you depart."

Mr. Speaker, I would like to add to the RECORD of this debate the dissenting opinion of the gentleman from Kentucky and me on H.R. 3348:

DISSENTING VIEWS ON H.R. 3348 BY MR. SNYDER AND MR. DORNAN

In view of the treaty negotiations with Panama we oppose this bill. However, its defeat will not endanger the project itself.

The activities of the Smithsonian Institution's Tropical Research Institute carried on at the Barro Colorado Island facility are, from all we have learned of them, of a worthwhile nature.

Setting aside the Canal Zone biological area as a protected preserve on this island in the midst of Gatun Lake for biological studies was in our opinion a farsighted move by the authorities who made that decision many years ago.

We believe the project has been and continues to be a good one.

Not the least of the studies produced by STRI—whether it was done at Barro Colorado or elsewhere we are not certain—was that concerning the ecological problems that would be caused by the construction of a sea-level canal. Chief among the dangers that study warned of would be the introduction into the Caribbean Sea and Atlantic Ocean of poisonous sea life from the Pacific Ocean unless a biotic barrier were built into such a canal.

At present the Canal Zone biological area receives annual appropriations under an annual limitation of $350,000. While H.R. 3348 would increase this limit to $750,000 for future years, the Smithsonian Institution is only asking for $352,000 for fiscal 1978 for the Barro Colorado Island biological area.

We are told the increase in the limitation is needed in order that capital improvements and repairs may be made to the facilities on the island, and in certain forthcoming years such costs would exceed the annual limitation. Termites have damaged wooden structures and these the Smithsonian would

replace with cinderblock or other permanent construction.

We most certainly would go along with this logical step under normal circumstances.

However, at this point in time, things in Panama and the Canal Zone are anything but normal. Our State Department—we wish we could say it were someone else's—has regrettably determined to give the Canal Zone and our $7 billion investment in it to Panama. That weak little country whose independence we guaranteed from 1903 to 1936, is no longer a Republic but a nation repressed by a dictator who likes to be called the "Maximum Leader."

Panama's General Omar Torrijos has already spoken of raising canal tolls at least 300 percent—a fact which has caused anguish among all the Latin American countries which depend heavily on the waterway for export of their products. They realize such an increase would enormously affect their costs—and consequently the prices they must ask in the United States and other markets.

We should take heed of this warning sign.

What sense does it make for us to put more U.S. tax money into the zone—for any purpose whatsoever—if we are in fact going to turn it all over to Omar Torrijos?

Everyone knows that he and his gang are skimming the cream off the Panamanian economy while the people increasingly suffer from the deterioration of that economy.

You might not know Torrijos charges a nickel on every travelers check you use in Panama—regardless of its face value.

Why should we put more money into Barro Colorado Island when Torrijos can clamp some kind of rent onto it and keep raising that rent?

The Smithsonian Institution has an agreement with Panama under which it claims it will be free to continue to operate as at present.

How can we be sure?

We all know Torrijos and his gang overthrew the last constitutionally elected President, Arnulfo Arias, in 1968 and discarded the old constitution.

Checking into the Smithsonian Institution's own contract with Panama, as submitted to the Subcommittee on the Panama Canal, we find that the seventh of its seven clauses reads as follows: "Seventh: This contract will remain in effect so long as any of its parties does not express a desire to terminate it, which intention should be made known at least 1 year before it is desired that the contracts terminate. The Institute will allow the use of its laboratories, work shops and field stations upon request of the Nation (Panama) for scientific research and work when this is possible and available."

The Smithsonian Institution, in addition to its own contract with the Republic of Panama, cites a Western Hemispheric Convention respecting nature protection and wildlife preservation signed by the United States (1941) and by Panama (1972) as further evidence of its ability to operate STRI and Barro Colorado under Panamanian jurisdiction should Torrijos gain control of the Canal Zone.

However, article XII of the convention provides for the denunciation of the convention at any time by any contracting government, such denunciation to take effect 1 year after notification in writing to the Pan American Union.

Therefore, Omar Torrijos legitimately would be bound only 12 months by this treaty from the moment he notifies the Pan American Union he is denouncing it. In effect, this means the Smithsonian Institution never really has more than 12 months guaranteed existence under the Convention should Panama decide to withdraw from it.

It is clear, then, that either or both of the two documents upon which the Smithsonian Institution bases its rosy outlook for the future under possible Panamanian jurisdiction, can be voided by Omar Torrijos with just 12 months notice.

The majority makes the following statements in the report: "With respect to the future status of Barro Colorado Island, it is important to note that a transfer of sovereign rights from the United States to Panama in what is now the Canal Zone, a change which is apparently an assumption of present canal treaty negotiations, would not in itself affect the U.S. ownership of real estate and improvements paid for with appropriated funds in the biological area or elsewhere in the present Canal Zone. The question of ownership of real estate and improvements under a new treaty arrangement is a matter which is best addressed as a matter distinct from its sovereign status of the zone."

We consider this very distinction itself to be of the utmost importance—for without sovereignty, ownership could be shortlived, indeed. This vital matter was admirably addressed by Hon. Strom Thurmond, U.S. Senator from South Carolina, in a speech to the Inter-American Conference on Freedom and Security held in Washington, D.C. in September 1975 under the sponsorship of the American Council For World Freedom. The text of the Senator's speech was printed in the Report of Official Proceedings of the conference published by The Heritage Foundation.

The following excerpt explains our convictions as to just how shaky a hold the Smithsonian Institution would have on its facilities on Barro Colorado Island should it fall under the Panamanian dictator's jurisdiction:

"At least six earlier Isthmian canal treaties had failed in Congress, because they did not give the United States sufficient capability to defend and maintain such a Canal. It was historically clear that Congress would not authorize a Canal which was under the sovereignty of another nation.

"This is the explanation of the treaty of 1903, which granted to the United States the rights of sovereignty in perpetuity. The two concepts are essential: sovereignty and perpetuity. The one implies the other. Sovereignty is the highest power or authority, the supreme and independent political authority. It is a contradiction in terms to speak of sovereignty as subordinated in any way to the authority of another. You either have sovereignty or you don't.

"Now there is a confusion abroad in the land between title—that is, ownership—and sovereignty. Let me say that there is all the difference in the world between the two. You can have ownership without sovereignty, as any homeowner can tell you. You can also have sovereignty without ownership, unless that ownership is acquired by eminent domain. It is, therefore, clear that if the United States surrenders sovereignty in any territory, even where it has ownership, then the titles to U.S. property therein are not worth a tinker's damn, except in so far as the real sovereign so pleases.

"Sovereignty, therefore, is not a title. It is authority in operation. As soon as authority ceases to operate, it ceases to exist. That is why the grant of sovereignty in the 1903 treaty is so important. We are not talking about some abstract legality, or some splitting of legal hairs; we are talking about practical day-to-day operations. The authority to act cannot be shared without disagreement, disaffection, and ultimately disaster.

We repeat Senator Thurmond's words:

"It is, therefore, clear that if the United States surrenders sovereignty in any territory, even where it has ownership, then the titles to U.S. property therein are not worth a tinker's damn, except in so far as the real sovereign so pleases."

More and more we learn of the repressive acts of the Torrijos regime against not only the people of Panama itself but even against U.S. citizens who live in the Canal Zone. Arrests without cause, beatings, disappearances and exiles have become commonplace.

It goes without saying that a regime which has no respect for the human rights of its own citizens will have no respect for the property rights of foreigners.

Despite the agreement the Smithsonian Institution has with Panama, at any moment the "Maximum Leader" might decide to make some move regarding the Barro Colorado biological area which would be to his advantage—be it for propaganda or otherwise.

We know dictators to be just that—dictators. They move, not according to written agreements, but according to their own whims—as long as they have the power to do so and get away with it. Up to now Torrijos has had the guns to back him up.

As long as our executive branch is foolishly committed to giving away the Canal Zone to him, we see no sense in authorizing an even greater commitment of tax dollars to improve any U.S. facility in the zone.

GENE SNYDER.
ROBERT K. DORNAN.

Mr. MURPHY of New York. Mr. Speaker, I just have a few comments to make. I want to set in perspective the fact that we are dealing here with an authorization for a scientific installation. The fact that it is on a small island, Barro Colorado in Panama, probably is analogous to the situation where we have the Gorgas Institute in downtown Panama, nowhere connected with the Canal Zone. Furthermore, there has never been a levy by the Republic of Panama on the relocation of the Barro Colorado and Smithsonian Institution in their work in key scientific areas. We have 21 other such scientific areas throughout the world, mostly in Africa and the tropical areas. This is a key program run not only for our own benefit, but for the benefit of those countries in which the installations reside, but for all mankind. The obtaining of key scientific information, that is the purpose of this legislation.

Now, let me set aside some of the concerns my colleagues, the gentleman from California and the gentleman from Kentucky, raised. Back in 1967 when my colleague, the gentleman from Kentucky, and I were there visiting the canal as Members of Congress, we met Mr. Torrijos. There was a canal treaty under consideration at the time. It was abbrogated by the Republic of Panama.

The gentleman knows my sentiments about the canal treaty. I do not think the United States should ever give up operational control of that canal and, second, the defense of that canal. If we intend at some time in the future to build a sea level canal, only at that time we should enter into serious negotiations for a new canal treaty.

The gentleman from California and the gentleman from Kentucky and I are totally in agreement. I am sure that the scientific research program with which we are dealing here is an endeavor which will benefit the United States and benefit the Republic of Panama and many of our Latin friends and, of course, mankind.

Mr. Speaker, I would urge the House to favorably consider this bill.

Mr. MURPHY of New York. Mr.

Speaker, I have no further requests for time.

Mr. SNYDER. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New York (Mr. MURPHY) that the House suspend the rules and pass the bill, H.R. 3348, as amended.

The question was taken.

Mr. SNYDER. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

Mr. SNYDER. Mr. Speaker, I object to the vote on the ground that a quorum is not present, and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Pursuant to clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

The point of order is considered withdrawn.

REIMBURSEMENT FOR SEIZED COMMERCIAL FISHERMEN EXTENSION

Mr. MURPHY of New York. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 4140) to extend the provisions of the Fishermen's Protective Act of 1967, relating to the reimbursement of seized commercial fishermen, until October 1, 1980.

The Clerk read as follows:

H.R. 4140

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 7(e) of the Fishermen's Protective Act of 1967 (22 U.S.C. 1977(e)) is amended by striking out "October 1, 1977" and inserting in lieu thereof "October 1, 1980".

The SPEAKER pro tempore. Is a second demanded?

Mr. McCLOSKEY. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from New York (Mr. MURPHY) and the gentleman from California (Mr. McCLOSKEY) are recognized for 20 minutes each.

The Chair recognizes the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the purpose of H.R. 4140 is to extend the cooperative insurance program carried out under section 7 of the Fishermen's Protective Act for an additional 3 years, until October 1, 1980.

The need for the legislation—other than the fact that the appropriation-authorization under section 7 expires at the end of this fiscal year—arises from the fact that the United States does not recognize the right of any nation to regulate tuna. Tuna is a highly migratory species which spawns and migrates over vast distances in the Pacific, Atlantic, and Indian Oceans and, therefore, necessitates international regulation. Consequently, whenever a tuna vessel of the United States is illegally seized by a foreign nation in contradiction of this policy, it is incumbent of the United States to indemnify the owners of such seized vessels for their losses when such vessel owners are following a policy clearly established by the U.S. Government.

This policy on the part of the United States which, incidentally, is shared by many other nations, dates back to 1954 when the Fishermen's Protective Act first came into being. Under that act, the U.S. Government agreed that when American fishing vessels were fishing in conformity with that policy and their vessels were seized and fines, fees, and other direct charges were required to be paid to obtain release of their vessels and crews resulting from such seizure beyond 3 miles from the shores of any nation, then the U.S. Government would reimburse the vessel owners and crews for those charges.

In 1967, the act was broadened to add a new section 7 to the act which would allow any vessel owner—whether fishing for tuna, shrimp, or any other species of fish—to voluntarily enter into an agreement with the Secretary of Commerce for the purpose of providing reimbursement for certain losses incurred other than those for fines, fees, and other direct charges which are fully reimburseable under section 3 of the act. The losses to be covered by section 7 of the act would include such things as damage, destruction, loss, or confiscation of the vessel, fishing gear or other equipment, dockage and utility fees, confiscated or spoiled fish, and 50 percent of the loss of fishing time during the detention period.

Mr. Speaker, this is the program under the act that would be extended by this legislation. Under this program, the participating vessel owners have been paying about 40 percent of the cost and the U.S. Government the remaining 60 percent.

It is estimated that the extension of this program for an additional 3 years would cost the taxpayers of this country only $60,000 per year.

Mr. Speaker, before closing I would like to briefly comment on the dissenting views included in the committee report on H.R. 4140.

I regret to say it, but the dissenting views are based on a number of inaccurate statements.

First, we do not pay U.S. fishermen to invade the 200-mile fishing zones of other nations, as stated in those views. We do provide full reimbursement for any fines, fees, or other direct charges paid to obtain release of vessels and crews seized for fishing in accordance with this policy and partial reimbursement for other losses incurred to those vessel owners who are voluntarily participating in the section 7 insurance program.

Second, throughout the dissenting views, it is stated that we do not allow other nations to have the same rights in their 200-mile fisheries zone as we claim in our 200-mile zone and, therefore, this is totally inconsistent with the actions we took when the 200-Mile Fishery Zone Act came into being on April 13 of last year.

Mr. Speaker, this assertion is entirely incorrect and the committee report on H.R. 4140 clearly points out why these assertions are incorrect.

Section 103 of that act clearly spells out that the exclusive fishery management authority of the United States shall not include, nor shall it be construed to extend to, highly migratory species. The term highly migratory species is defined in the act to mean tuna.

Now, what does this mean? It means that any nation's vessels can freely fish—without the necessity of obtaining a permit—for tuna up to 3 miles from our shores. As I stated before, this policy was established in 1954 and it is the same policy we are advocating today, as evidenced by the passage of the 200-Mile Fishery Zone Act, on which, incidentally, this body clearly expressed its opinion when it passed the conference report on that legislation by a resounding vote of 346 to 52.

Also, Mr. Speaker, the position of the United States on this issue, as expressed in that legislation, is consistent with the U.S. position on this issue at the Law of the Sea Conference and with the article 53 revised, part II, of the latest single negotiating text. Article 53 requires coastal states and other states whose nationals fish for highly migratory species to cooperate directly or through appropriate international organizations to insure conservation and optimum utilization of such species both within and beyond the exclusive 200-mile economic zone of a nation.

In addition, this consistency was highlighted by section 202 of the 200-Mile Fishery Zone Act and it was clearly spelled out in the policy and purposes of that act. The consistency of this position is further emphasized by U.S. participation in the International Convention for the Conservation of Atlantic Tunas, the Inter-American Tropical Tuna Convention, the Indian Ocean Fishery Commission, and the Indo-Pacific Fisheries Council, all of which regulate tuna on an international basis.

Finally, the charge has been made in the dissenting views that there are practically no tuna within our 200-mile fishing zone. The fact is that, based on the findings of the General Accounting Office in its study of the U.S. fishing industry, more tuna is taken within 200-miles of U.S. shores than the United States takes outside 200 miles of its shores. The total U.S. commercial fishery catch of tuna caught off foreign shores for 1975 amounted to 506 million pounds. In the same year, over 514 million pounds of tuna were caught within 200 miles of U.S. shores, and over 129 million pounds of that total were taken by foreign vessels without U.S. regulation or requirement that such nations obtain any permit or license and this situation has not changed since our 200-mile zone went into effect on March 1, 1977.

Mr. Speaker, the Committee on Merchant Marine and Fisheries believes the U.S. position in this respect to be entirely consistent inasmuch as it merely asks that U.S. vessels fishing for tuna in foreign waters be treated in the same manner as foreign vessels fishing in our waters for tuna.

Until the policy of the United States regarding the regulation of tuna is changed, it behooves the Congress to continue the voluntary insurance program authorized by section 7 of the Fishermen's Protective Act, which provides reimbursement to U.S. vessel owners for losses incurred resulting from illegal seizures of such vessels.

Mr. Speaker, I apologize to the Members for taking so much time to go into the background and explain the merits for the passage of the legislation, which is estimated to cost only $60,000 per year for the next 3 years, but I felt under the circumstances that this information should be made available to the Members before voting on it.

I thank the Members for their indulgence.

Now, Mr. Speaker, I yield to the gentleman from California (Mr. LEGGETT), chairman of the subcommittee that handled this legislation, such time as he may consume.

Mr. McCLOSKEY. Mr. Speaker, I yield myself such time as I may consume.

I rise in opposition to H.R. 4140, a bill to extend the provisions of the Fishermen's Protective Act of 1967 until October 1, 1980.

The Fishermen's Protective Act should not be extended. It has outlived its justification and should be allowed to expire.

In 1967 when the act was passed the United States claimed a 3-mile territorial and a 9-mile contiguous zone. At that time, we insisted that under international law a 12-mile zone was the maximum area which could be claimed by a coastal State. We maintained that any assertions of jurisdiction over an area greater than 12 miles was in violation of international law, we would not recognize it, and we would give protection to any of our nationals who were acting in accordance with that policy.

In the late 1960's several Latin American countries, including Ecuador and Peru, began to manage the fisheries within 200 miles off their coasts. A right which they had claimed since 1947. They insisted that U.S. tuna fishermen who wished to fish in their zone have licenses. However, the United States did not recognize their right to assert fisheries jurisdiction out to 200 miles. Therefore, we told our fishermen that they did not have to obey their laws on the grounds that they were contrary to our official policy and international law. We determined that we would protect them, financially, using the Fishermen's Protective Act. That act protects them from any financial losses they suffer while acting as an instrument of our foreign policy.

The act was used as an alternative to gunboat diplomacy and allowed us to protest the assertions of jurisdiction of the coastal states using our fishing fleet.

However, last year we created our own 200-mile zone with the Fisheries Conservation and Management Act. With that law we asserted our right to do what Ecuador and Peru had been doing for 29 years. We told the rest of the world that we had the right to manage the living resources off our coasts out to 200 miles. We now insist that any foreign fisherman who wants to harvest fish within the zone obtain a license and conform to our regulations.

In light of this assertion, it is clear that it is the height of hypocrisy for us to insist that foreign fishermen pay license fees to fish in our zone while insisting that our fishermen do not have to pay foreign license fees for fishing in their zones.

In conclusion, Mr. Speaker, I believe that in light of the establishment of our 200-mile zone, it is incumbent on us to recognize similar assertions by other countries. A continuation of our "Do as I say and not as I do" arrogance can only hurt our international reputation as a world leader. We should no longer continue to insist that other countries cannot impose fisheries zones off their coasts and we should no longer use the Fishermen's Protective Act for that purpose. Therefore, I oppose the continuation of the Fishermen's Protective Act and urge my colleagues to join me in defeating H.R. 4140.

Mr. Speaker, if I may, I wish to direct a question to the chairman of the full committee or the chairman of the subcommittee. I am not sure where these statistics come from, and I do not recall any statistics about the catch of tuna within 200 miles of our shores compared to the catch of tuna 200 miles away or within 200 miles of the shores of other nations.

Mr. Speaker, I sat in this committee on Thursday and on Friday—and I think the chairman of the subcommittee was there with me—when we heard our own people testify that 70 percent of our tuna was caught within 200 miles of the coasts of other nations. That is not consistent with the statement contained in this report. If I am in error, I wish the gentleman would point it out to me.

Mr. LEGGETT. Mr. Speaker, will the gentleman yield?

Mr. McCLOSKEY. I yield to the gentleman from California.

Mr. LEGGETT. Mr. Speaker, let me say that I believe the gentleman has caught a technical error in our report. We, along with counsel, were reading from a GAO report that indicates the total fish catch by species off the U.S. coastline, and that does indicate that in 1974 approximately 235,000 metric tons of tuna alone was caught. The report said they were caught off our coastline. That, I believe, is taken a little bit out of context, even though that is what the report says.

The fact of the matter is that in another part of the report it is indicated that the Atlantic Ocean produced about 25 percent and the Indian Ocean produced about 9 percent of our tuna. In 1975 the tuna—primarily albacore—caught within 200 miles of U.S. shores accounted for 11 percent of the total U.S. catch. Eleven percent of 235,000 tons is right around 25,000 to 30,000 tons.

The point is that it is substantial, although the numbers we were talking about were probably in error. According to the report, the remainder consisted of foreign catch and the catch of U.S. recreational fishermen.

Mr. McCLOSKEY. Mr. Speaker, I am glad to hear the gentleman say that the numbers were in error because I had heard nothing like that in some several years of testimony.

If I can define the crucial point, let me describe the difference between the views of the majority and the minority of the committee.

On page 2 of the committee report, the committee, in discussing the background of the act, states that the act was passed to oppose any claims of right by foreign nations with which we do not agree.

The point of difference with respect to that is this: Apparently the majority, in enacting this law, is not willing to recognize the claims of Mexico or Ecuador or Peru to a fishing conservation zone for tuna taken 200 miles off their shores. That is the only way the majority can justify continuing an act which was passed to oppose the claims of foreign nations.

Mr. Speaker, is the majority saying in this legislation that because we have only included, say, 29 out of 30 of the species of fish within our 200-mile zone and we have left out tuna, we are denying to foreign nations the right to claim a fishing conservation zone 200 miles off their shores for that one species?

We cannot justify continuing this act unless we deny the right of Ecuador, Peru, and Mexico to claim the right to conserve within their 200 miles.

In other words, we are saying in this legislation that they should still be considered international waters, to be governed by treaty, and that a coastal zone cannot even conserve a migratory species within 200 miles.

Is that the gentleman's position?

Mr. LEGGETT. Mr. Speaker, if the gentleman will yield, that is not our position.

The gentleman has asked a compound question. When I am recognized on my own time, I am going to try to straighten the whole question out.

We do have some fundamental differences, but I think we all are trying to comply with international law and certainly the Law of the Sea Conventions in effect.

Mr. GILMAN. Mr. Speaker, will the gentleman yield?

Mr. McCLOSKEY. I yield to the gentleman from New York.

Mr. GILMAN. Mr. Speaker, I thank the gentleman for yielding and I rise in opposition to H.R. 4140, the Fishermen's Protective Act Extension. I agree with my colleague from California (Mr. McCLOSKEY) that a renewal of the Fishermen's Protective Act constitutes U.S. denial of other nations' rights to regulate 200-mile fisheries zones that they might claim.

As a congressional adviser to the Law of the Sea Conference—which is scheduled to meet for its sixth session in New York from May 23 to July 8, 1977—I wish to point out to my colleagues that passage of this legislation could be detrimental to U.S. efforts to work in harmony with other states at the Conference in

concluding an effective and equitable oceans treaty.

As my colleague from California, who serves on the Merchant Marine and Fisheries Committee, indicates, practically no tuna, for commercial fishing, are found within the U.S. 200-mile fisheries zone; thus, the provision allowing foreign vessels to fish these waters. To protect U.S. tuna vessels entering 200-mile fisheries zones, claimed by other nations which have tuna in these waters, is inconsistent with the goals the United States has articulated concerning the Law of the Sea Conference.

With the negotiations for a law of the sea at such a critical juncture, I urge my colleagues to vote against legislation, such as H.R. 4140, which would impede the Conference's efforts toward concluding an equitable, far-reaching, and much needed multilateral oceans treaty.

Mr. RUPPE. Mr. Speaker, will the gentleman yield?

Mr McCLOSKEY. I yield to the gentleman from Michigan, the ranking minority member.

Mr. RUPPE. Mr. Speaker, I rise in opposition to H.R. 4140, a bill which would extend the insurance against seizures provisions of the Fishermen's Protective Act of 1967 for three more fiscal years. Quite simply, I believe that these provisions of law, with the enactment of this Nation's and other countries' 200-mile exclusive fishery zone legislation, have outlived their usefulness and should be allowed to expire on October 1 of this year.

A brief examination of the history surrounding enactment of this insurance program should disclose why the program is no longer required. Its purpose was to authorize voluntary insurance for the reimbursement of certain losses incurred as a result of the seizure of a U.S. commercial fishing vessel by a foreign country on the basis of rights or claims in territorial waters or on the high seas not recognized by the United States.

The program was enacted in response to the 200-mile territorial sea claims of certain Latin and South American countries in the late 1950's and 1960's. At that time, you will recall the United States and a majority of the countries of the world did not recognize such expansive territorial sea claims.

Under international law, however, the silence or the failure to challenge by one country can be construed as acceptance of the claims asserted by another country. Thus, the U.S. Government had to challenge the 200-mile territorial sea claims of our southern neighbors. Our distant water fishing fleet became agents of U.S. foreign policy in that through their fishing without a license, we challenged the claims of those countries.

Last year with the enactment of the Fishery Conservation and Management Act of 1976, the international position of the United States changed dramatically with respect to fisheries. Unilaterally, we have asserted an exclusive 200-mile fishery conservation zone. Foreign fishing vessels must obtain a license before they can enter our zone to fish. In response to our action, many other nations, for example Mexico and the Soviet Union, have enacted similar laws. As to those Latin and South American countries which had already enacted such laws, U.S. enactment of Public Law 94-265 could be viewed as a recognition of these laws.

The proponents of this legislation argue that the United States in passing the Fishery Conservation and Management Act expressly excluded from the law's scope tuna and other highly migratory species which spawn and migrate over vast areas of the ocean. My answer to that is simply so what. The fact of the matter is that our southern neighbors are not required to be as sophisticated as we purport to be in management of fishing stocks. To carry the proponents' argument to its logical conclusion would be to permit a nation to enact a 200-mile fishery zone for one species, which is the only one in its zone, and then assert that they do not recognize similar 200-mile zones of those countries which nature has blessed with varied and abundant species in their zones.

Also, I think we ought to clear up for the record, and perhaps for the gentleman from California (Mr. McCLOSKEY), now in the well, and who has been a very strong spokesman against this legislation, that during our committee tuna hearings in the last few days we have taken as the 1975 U.S. commercial fishery catch a total of 568 million pounds of tuna as the base point.

On the other hand, the figures in evidence from the National Marine Fisheries Service indicate that 494 million pounds of skipjack, yellow fin and other tuna were actually caught in foreign waters by U.S. fishermen. So if we say that the U.S. catch was 568 million pounds, and if we agree that the National Marine Fisheries Service is accurate in their estimate that 494 million pounds were taken by U.S. vessels in foreign waters, then this would appear to mean that there is only room for about 74 million pounds of actual U.S. tuna catch in American waters.

Mr. PRITCHARD. Mr. Speaker, will the gentleman yield?

Mr. McCLOSKEY. I yield to the gentleman from Washington.

Mr. PRITCHARD. Mr. Speaker, I thank the gentleman from California for yielding to me.

Mr. Speaker, what we have before us is the Fishermen's Protective Act bill which is going to be voted up or down without the opportunity for amendment.

Mr. MURPHY of New York. Mr. Speaker, if the gentleman will yield, we are only debating a 3-year extension of the new provisions that amount to $60,000 a year. The minority has been carrying on about whether we are going to repeal the fishermen's protective bill. We are only dealing with one small section of it.

Mr. PRITCHARD. The gentleman from New York may be right, technically, but we are not debating that. The purpose of the debate is to determine whether this is proper or not. I think the gentleman knows as well as we do what we are talking about. I do not think we can justify this action from a legal standpoint since we passed the 200-mile fishing zone bill.

From my standpoint, Mr. Speaker, I think that we should defeat this and send it back to the committee and extend it, we should implement a phasing out of this act so that the impact on the tuna industry will not be so abrupt and so hard as it will be if we immediately cut off these funds. We should have brought this to the attention of the committee earlier in the legislative process and gotten more deeply into it. But I think we ought to defeat this today and then the committee should go back and institute a phaseout so that the impact on the tuna industry will not be as hard as it will be if we had immediately cut it off. We should take the position that this country in no way can continue this program after we have passed our own 200-mile zone bill.

Mr. McCLOSKEY. Mr. Speaker, if I could direct this question to the chairman, the chairman is correct that the cost of this program is minute if foreign nations do not seize our fishing boats within their 200-mile zones. But I heard the chairman refer to this industry as a billion dollar industry. There are a billion dollars worth of U.S. purse-seine vessels that can conceivably go down and try to renew last year's success in 70 percent of our tuna being caught within 200-mile zones of other countries. We have just seized a Russian ship which came within our 200-mile zone in violation of our 200-mile law.

Is it possible, Mr. Speaker, that if we continue this act and the U.S. tuna fleet is encouraged by passage of this minor insurance program to go into the waters within 200-mile zones of other countries, that under this program the cost of that fishing fleet, a half billion dollars, would be borne by the taxpayers of the United States? Is that true or false?

Mr. MURPHY of New York. If the gentleman will yield, the gentleman could not be further incorrect and speak further from the truth. We seized the Russians for violating the permits we issued to them for fishing on species out of season and incorrectly, according to the conditions of the permits. What we are dealing with here is a migratory fish, and I just explained it in detail to the gentleman. We know the seizures have cut back significantly from the late 1960's. This is a very modest program only, which provides for insurance, where a migratory fish, tuna, is involved.

If the gentleman wants to cooperate later this afternoon and tomorrow, we will report out of the committee a resolution on the tuna-porpoise controversy, and he will well serve his constituents at that point.

Mr. McCLOSKEY. I do not think I got an answer to my question.

Mr. MURPHY of New York. Mr. Speaker, I yield such time as he may consume to the gentleman from California (Mr. LEGGETT).

Mr. LEGGETT. I thank the Chairman for yielding.

Mr. Speaker, it is too bad that we have four Members of the minority signing a report that is substantially defective in some of its assertions of fact. Of course, the majority report is not impervious to some error; I admit that. We have had that one problem.

Mr. RUPPE. If the gentleman will yield, his charity is touching.

Mr. LEGGETT. I think we have to recognize this: When we passed the 200-mile fishing law, the Fishery Conservation Act, to help out the gentleman from Washington and to help out the other interests that we have represented in this Congress, included in that law is section 103, which says, "highly migratory species" are exempted from its coverage. It was right up front. What it says is that the exclusive fishery management authority of the United States shall not include, nor shall it be construed to extend to, highly migratory species of fish. That is what we said in our law.

In the Law of the Sea Conference in New York, in Caracas, and in Geneva we have consistently given separate treatment to tuna and to other migratory fish. I know the gentleman from California has had representation at the Law of the Sea consistently. He knows what they have been talking about, and he knows that that has not been just an idle act.

We have spent under the 1954 act to date about $8 million in reimbursing fishermen under section 3 of the act for fines, fees, and other direct charges resulting from illegal seizures and that is not here in dispute in this bill. If the Members of the minority wanted to totally repeal the Fishermen's Protective Act, they could have offered amendments in committee to abort the act. All we are dealing with here is section 7 of the act which deals with the payment of one-third by the industry and two-thirds by the Government for reimbursement for loss of fishing time, damaged gear, and a few other incidental items, but it does not cover the major items of loss covered by section 3 of the Fishermen's Protective Act.

Total reimbursements to date under this section are $1.8 million, and it has cost the Government on the average of about $180,000 per year. We have to keep in mind when we passed the Conservation Act we were concerned about what would happen when countries did not have the exact same kind of law that the United States has. What if they claim, say, a 50-mile territorial sea and a 150-mile conservation limit?

What happens if they inflict totally confiscatory fees that totally violate the conscience of the United Nations and the law of the sea? What remedies do we have there? We took care of that in our 200-mile legislation because we have the provision in that act, section 403, that amended the Fisherman's Protective Act and this does not just apply to tuna. It applies to any vessel fishing for any kind of fish off any foreign shore.

Essentially what we said there was that if laws are enacted by foreign nations that are not designed to protect fish and not to protect endangered species, if they fail to take into consideration and take into account the traditional fishing practices of the United States, because we intended to take into account the traditional practices of foreign countries, if the fees are greater or more onerous than the conditions and restrictions which the United States applies to foreign fishing vessels subject to the exclusive fishing management authority of the United States, if they fail to allow fishing vessels of the United States equitable access to fish subject to such countries' fisheries management authority, then in all of these cases we need an authority to provide reimbursement in the event our fishermen were exercising what we considered their rights under international law or the policies by the U.S. Government.

We do not have the absolute right to exclude any nation from fishing within the 200 miles of our shores. We could do it only within that limited window after we promulgate a plan and control conservation and go through the restrictions we have in our law, and only then can we do that. And a foreigner can come into the United States and say he wants to set aside this law because it was not enacted for purposes of conservation and it was enacted provincially to protect a particular industry or a particular coast.

We gave them that right, but if the foreign countries do not give us similar rights and they in fact enact laws that provide for charging fees like $60 or $80 a ton which comes out to something like 10 percent of the value of the fish, and it is not the value of the fish but it is the value of the amount of fish that can be caught in a ship, then these fees in fact are confiscatory and they are such that no nation can comply.

Last year there were no seizures off the South American coast because the tuna industry, contrary to American policy, determined they wanted to go ahead and pay a $20 per ton fee, rather than risk being seized, which they could do under the law and there were no seizures. But that is not the condition that confronts the industry at the present time.

Mr. BOB WILSON. Mr. Speaker, will the gentleman yield?

Mr. LEGGETT. I yield to my colleague from San Diego, the gentleman from California (Mr. BOB WILSON).

Mr. BOB WILSON. I want it understood that not everyone is taking the position that a few recalcitrants on the committee are taking. I agree with the gentleman from New York that the statements of the minority views are entirely inaccurate, particularly with respect to the 200-mile limit provisions. Anyone who says there is no tuna off the California coast does not understand the tuna fishing. They operate out of San Francisco and Los Angeles and San Diego and under our laws anyone can come in under the 200-mile limit and fish for albacore if they want to.

Mr. LEGGETT. The gentleman is exactly correct. All the bluefin off the east coast is subject to foreigners coming in and taking that, we do not attempt to regulate that, except by international convention, and there are about four international conventions regulating tuna to which we are signatory.

I know the gentleman from California strongly respects those conventions and it is stated in the Fishermen's Protective Act under section 1974, 22 U.S. Code that:

> The provisions of this chapter—which is the Fisherman's Protective Act—shall not apply with respect to a seizure made by a country at war with the United States or a seizure made in accordance with the provisions of any fishery convention or treaty to which the United States is a party.

Now, I do not know how more civilized we could become than to state that we will not be denying protection to our vessels if a seizure is made of a ship that does not violate a convention or agreement.

Mr. McCLOSKEY. Mr. Speaker, will the gentleman yield?

Mr. LEGGETT. I yield to the gentleman from California.

Mr. McCLOSKEY. Mr. Speaker, both my colleagues are on the Committee on Armed Services. Are we also willing to send our cruisers and destroyers down to the 200-mile zones of Peru and Ecuador, that we are asking our taxpayers to pay for? This Act originally was to prevent that. We did not want to send destroyers and cruisers down there. I think the gentleman on the Armed Services Committee will recognize an inherent inconsistency if we deny to certain nations the right to enforce the 200-mile limit, solely because the species within that limit is a migratory species. Are we to send our Navy down there to defend our tuna boats? Is there a yes or no answer to that, can the gentleman state?

Mr. LEGGETT. Mr. Speaker, there is not a simple answer. We are going to protect the U.S. ships on the high seas. They are not claiming that right. They are claiming a territorial sea. It violates every international principle that the gentleman is fighting for on the law of the sea.

Mr. BOB WILSON. Mr. Speaker, will the gentleman yield?

Mr. LEGGETT. I yield to the gentleman from California.

Mr. BOB WILSON. Mr. Speaker, I must say that my colleagues are with us on the Advisory Committee on the Law of the Sea Conference. The Law of the Sea Conference is trying to work this problem out right now. It seems to me if we took unilateral action and recognized the right of a country to have complete jurisdiction over the 200-mile limit, I think it would, in effect, cause additional problems to the Law of the Sea Conference.

I would hope that we can pass an extension of this legislation and in the meantime contribute successfully to getting the law through the Conference.

Mr. LEGGETT. Mr. Speaker, to give other countries more rights on our shores than we claim off the shores of other nations has got to be the height of inconsistency.

The gentleman says that the United States is arrogant. We have been arrogant in some things, but certainly not in this matter. We are working with the South American countries. We are help-

ing them develop their fishing industry. We are giving them loans and grants and all kinds of things; but when the gentleman tries to nitpick the Fishermen's Protective Act by doing away with the insurance provisions that would provide compensation for loss of fishing time and other losses when we are already providing for the major loss that results from seizure, such as fines and fees, is highly inconsistent. These men will be fishing and when we take away the agreement we made some years ago, we can do it, but that does not make it right.

Mr. EVANS of Delaware. Mr. Speaker, I rise in opposition to the motion to suspend the rules and pass H.R. 4140, amendments to the Fisherman's Protective Act.

As a delegate to the United Nations Law of the Sea Conference, I believe that the passage of this bill only 1 week before the convening of the Conference would have a significant adverse effect on our ability to successfully negotiate any agreement.

The renewal of this act would be the height of international arrogance. What this bill proposes to do is compensate American fishermen for breaking a law we ourselves are trying to enforce. It has been only a few weeks since the Coast Guard seized a Soviet vessel for violation of our 200-mile zone. Now, we seem to be arguing that other nations do not have the same right to enforce a 200-mile zone of their own.

The original Fisheman's Protective Act was passed in 1967 at a time when the United States pursued a national policy that no nation could claim more than a 3-mile territorial sea. When several Latin American countries, notably Peru, Ecuador, and Brazil claimed a 200-mile zone for fishery protection and other purposes, the Fisherman's Protective Act was passed to support American fishermen who fished within the 200-mile zone of those countries.

But our national policy has changed. We now claim 200-mile fishing limits. It makes no sense whatsoever to encourage Americans to break the 200-mile laws of other countries.

Mr. Speaker, as the minority views on H.R. 4140, which were signed by Representatives MCCLOSKEY, RUPPE, PRITCHARD, and me, emphasize, the Law of the Sea negotiations are now at a crucial point. If an agreement is to be reached, there must be mutual trust between nations. In my view, this bill is one of the best ways to earn distrust by other nations, particularly developing countries, thus making any treaty infinitely more difficult to obtain.

For those reasons, Mr. Speaker, I urge my House colleagues to recognize the minority position taken by myself and others and defeat this bill.

The SPEAKER pro tempore. All time has expired.

The question is on the motion offered by the gentleman from New York (Mr. MURPHY) that the House suspend the rules and pass the bill, H.R. 4140.

The question was taken.

Mr. MCCLOSKEY. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this motion will be postponed.

COAST GUARD AUTHORIZATION—FISCAL YEAR 1978

Mr. MURPHY of New York. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 6823) to authorize appropriations for the U.S. Coast Guard for fiscal year 1978, and for other purposes, as amended.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That funds are hereby authorized to be appropriated for necessary expenses of the United States Coast Guard for fiscal year 1978, as follows:

(1) For the operation and maintenance of the Coast Guard, including expenses related to the Capehart housing debt reduction: $882,821,000;

(2) For the acquisition, construction, rebuilding, and improvement of aids to navigation, shore facilities, vessels, and aircraft, including equipment related thereof: $314,500,000, to remain available until expended;

(3) For the alteration or removal of bridges over navigable waters of the United States, constituting obstructions to navigation: $19,100,000 to remain available until expended; and

(4) For research, development, test, and evaluation: $24,800,000 to remain available until expended.

SEC. 2. For fiscal year 1978, the Coast Guard is authorized an end strength for active duty personnel of 39,009: *Provided,* That the ceiling shall not include members of the Ready Reserve called to active duty under the authority of section 764 of title 14, United States Code.

SEC. 3. For fiscal year 1978, average military training student loads for the Coast Guard are authorized as follows:

(1) recruit and special training: 3,872 students;

(2) flight training: 109 students;

(3) professional training in military and civilian institutions: 415 students; and

(4) officer acquisitions: 1,110 students.

SEC. 4. Title 14, United States Code, is amended—

(1) by adding a new section to chapter 17, after section 658, as follows:

"§ 659. Merger of obligated balances with current appropriations

"Amounts equal to the obligated balances against appropriations for 'Operating expenses' and for 'Reserve training', for the two fiscal years preceding the current fiscal year, shall be transferred to and merged with current fiscal year appropriations for 'Operating expenses' and 'Reserve training', respectively. The obligated balances for the period commencing on July 1, 1976, and ending on September 30, 1976, may be merged into the respective accounts for fiscal years 1977 and 1978. Such merged appropriations shall be available as one fund, for the payment of obligations properly incurred against such prior year appropriations and against the current fiscal year appropriations. Coast Guard accounting shall reflect your identity of the merged obligated balances until such obligated balances are transferred to a consolidated account as prescribed in section 1 of the Act of July 25, 1956, as amended (31 U.S.C. 701)." and

(2) by amending the analysis of chapter 17 by inserting at the end thereof the following item:

"659. Merger of obligated balances with current appropriations.".

SEC. 5. Notwithstanding the provisions of any other law, available funds appropriated to or for the use of the Coast Guard for "Acquisition, Construction, and Improvements" may be used to pay for part of the construction and other capital costs of a sewage treatment plant to be built, operated, and owned by the North Marin County Water District (California) and to be used by Coast Guard facilities located in the vicinity of Point Reyes Station, California.

SEC. 6. The Coast Guard is authorized to accept and retain funds from the city of Baltimore, Maryland, in payment for Coast Guard facilities to be removed by the city incident to the improvement of Hawkins Point Road, the funds to be available, until expended, for the construction of replacement facilities. Any funds not obligated by the end of fiscal year 1980 shall be paid into the Treasury of the United States.

The SPEAKER pro tempore. Is a second demanded?

Mr. TREEN. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from New York (Mr. MURPHY) and the gentleman from Louisiana (Mr. TREEN) will be recognized for 20 minutes each.

The Chair recognizes the gentleman from New York (Mr. MURPHY).

Mr. MURPHY of New York. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I rise to urge the passage of H.R. 6823, as reported by the Committee on Merchant Marine and Fisheries. The bill would authorize appropriations for the Coast Guard for fiscal year 1978.

In past years, the requirements for annual authorization of Coast Guard appropriations has been limited to the acquisition, construction, and improvement of vessels, aircraft, and shore facilities. Except for that specific authorization and the indirect authorization reflected in personnel ceilings, the remainder for the Coast Guard annual budget requests were based upon general authority contained in various statutes, including the provisions of title 14 of the United States Code. With the passage of the Congressional Budget Act of 1974 and the experience of the committee with that act, it became abundantly clear that, if the Committee on Merchant Marine and Fisheries is to carry out its required oversight responsibilities, it must be enabled to carefully review the annual budget requests of the Coast Guard and to make a decision in the authorization area. It is impossible to make authorization decisions on procurement of new vessels and aircraft and on the construction of shore establishments without also making some hard decisions on the cost effectiveness on the maintenance and improvement of existing facilities. Nor can the committee exercise the necessary legislative control which is inherent in its responsibilities without

annually authorizing the expenditures of significant funds on operating expenses, the improvement of navigational safety on navigable waterways, and on the request for research and development relating to Coast Guard operational program needs.

Because of this need, the committee last Congress proposed an expansion of the authorization process. That proposal was incorporated into Public Law 94–406. Therefore, the authorization bill this year includes authorization for operating expenses, for alteration of obstructive bridges, and for research, development, test and evaluation—in addition to the acquisition, construction, and improvement authorization of former years.

The total authorization under the bill amounts to $1.2 billion. While the figure seems large, I can assure the House that it is a minimal level for the Coast Guard to carry out its responsibilities. It contains approximately $883 million for operating expenses, a large part involving costs of personnel necessary to operate and maintain the 250 vessels and 170 aircraft, as well as the multitude of shore facilities in the Coast Guard inventory. The $315 million figure for acquisition, constructon and improvement includes replacement programs primarily to bring up-to-date the many aging and obsolete facilities of the Coast Guard—many of which are as much as 30 years old and the performance of which is inadequate. In addition, these aging facilities drain off unnecessary dollars and personnel for their constant upkeep and maintenance.

The $19 million for alteration or removal of bridges involves a continuing requirement under existing legislation to improve the navigability of our waterways, now constrained in many areas because of bridges which obstruct the ready passage of modern vessels. Member will recall recent headlines on damages to bridges by vessels attempting to negotiate confined channel clearances. The most recent which comes to mind is the accident this past winter which placed out of operation a necessary bridge near Hopewell, Va.

Finally, the authorization provides for the necessary research and development in bringing Coast Guard operations into the modern era. Available application of technologies and techniques need to be carefully examined in order to assist the Coast Guard in the most effective manner in carrying out its many missions, not the least of which includes vessel traffic safety, marine environmental protection, and search and rescue.

The authorization of $1.2 billion involves approximately $100 million additional funds above the President's request. Some $88 million of that figure relates to critically needed improvements in icebreaking capabilities on the Great Lakes, as well as an addition to approximately $20 million to upgrade Coast Guard capabilities in the pollution prevention and marine safety areas. This latter addition anticipates the costs of the Presidential initiatives on the subject of oil pollution prevention which was received by the Congress last month.

The committee has exercised constraint in its proposed additions. I believe strongly that every addition can be justified. I will now defer to the Chairman of the Subcommittee on Coast Guard and Navigation, the Honorable MARIO BIAGGI, to explain in somewhat more detail the exact breakdown of the authorization figures.

Mr. BIAGGI. Mr. Speaker, I urge the support of the House in passing H.R. 6823, as reported by the Committee on Merchant Marine and Fisheries. The bill authorizes appropriations for the Coast Guard for fiscal year 1978; for the operation and maintenance of the Coast Guard; for acquisition, construction, and improvement of vessels, aircraft, and facilities; for the alteration or removal of obstructive bridges; for research, development, test and evaluation; for military personnel ceilings; and necessary average student training loads. It also includes action to place into positive law existing accounting procedures and to authorize necessary utilization of funds in connection with projects involving a sewage plant in California and replacement of facilities at the Coast Guard Yard.

The authorizations in this bill are based upon Public Law 94–406 which placed under one authority the requirements for annual authorizations for the Coast Guard. For the first time this year, the authorization process includes operating expenses which are related to the operation of existing and newly-acquired facilities and the improvement of operational capabilities. It includes authorization for alteration and removal of bridges as well as funding for research and development, and the total funding for acquisition, construction, and improvement of vessels, aircraft, and facilities. This also authorizes the fiscal year-end strength for average duty personnel and for the average military training student loads.

Before discussing the levels of the proposed authorization, I direct your attention to the broad, all-encompassing and ever-increasing duties and obligations the Congress has fostered upon the Coast Guard. The U.S. Coast Guard, as part of the Department of Transportation, is a multi-mission organization providing the general public with numerous services on a day-to-day basis. It is charged with the primary responsibility of enforcement, or assisting in the enforcement, of all applicable Federal laws on or under the high seas and waters subject to the jurisdiction of the United States; the promotion of safety of life and property and the protection of the marine environment in these areas; the maintenance of aids to maritime navigation, icebreaking, and rescue facilities; and engaging in oceanographic research. The Coast Guard has also been charged with the safety of our ports and waterways through the operation of vessel traffic services and port safety controls while also regulating foreign and domestic vessels carrying oil or other hazardous polluting substances. This Service also, pursuant to title 14 of the United States Code, is an Armed Force, maintaining a readiness to operate as a service in the Navy, upon declaration of war or when the President otherwise directs. A recently added duty is the responsibility for the enforcement of an extended fisheries zone to 200 miles established by the Fishery Conservation and Management Act of 1976, Public Law 94–235.

The Committee on Merchant Marine and Fisheries has been and continues to be gravely concerned over the Coast Guard's capability to perform the duties with which it has been charged by the Congress. The actions of this agency continuously affect all of us, and it must be furnished with the necessary equipment and personnel for carrying out its many and varied missions and responsibilities. The purpose of the bill before the House today is to provide at least a minimal necessary authorization to permit the Coast Guard to accomplish its mandated responsibilities.

The administration requested operating expense authorization of $875,261,000, and the committee has added $7,560,000 for a total authorization request of $882,821,000. As you no doubt remember, the winter of 1976–77 was significant in its severity in causing extensive damage and in the resulting series of oil tanker accidents highlighted by the *Argo Merchant* disaster off the coast of Massachusetts on December 15, 1976. Of the addition, $4,000,000 will provide for the replacement and repair of many aids to navigation lost or destroyed which are absolutely necessary for the safe movement of waterborne commerce. It will also provide for the essential repair of shore and offshore facilities. In addition, $260,000 will provide for the restoration to full search and rescue capability a station located on Lake Superior; and $3,300,000 will provide for the costs of an additional 150 personnel in the marine safety and the marine environmental protection programs. With respect to this latter increase, the committee was particularly concerned over the Coast Guard's capability to properly carry out its responsibilities related to pollution prevention and cleanup and maritime safety. This addition could be utilized to begin the implementation of the administration's plans as outlined in the President's message to the Congress dated March 17, 1977, recommending very broad pollution prevention and marine safety initiatives.

In the vessel, aircraft, and facility authorization section, the bill authorizes a total of $314,500,000 which also highlights the committee's concern over the Coast Guard's capability to perform its icebreaking, search and rescue, and port safety missions. Increases were authorized for additional vessel traffic services improvement and equipment for the Puget Sound, Houston/Galveston, and New Orleans areas. This year, as in prior years, questions center upon the necessity for additional icebreaking capability. Therefore, the authorization provides for the continuation of the harbor tugboat replacement program by authorizing the construction of three more tugs with icebreaking capability. Authorization has also been provided for the design and construction of a vessel, com-

patible with existing Coast Guard conceptual designs for the Great Lakes, which is intended to be a replacement for the vintage deep-draft polar icebreaker *Westwind*. Authorization has also been provided for ten 32-foot port safety/harbor pollution boats; thirty 41-foot utility boats; and for two medium-endurance cutters. This latter continues the cutter replacement program initiated in 1977 and should materially add to the Coast Guard's capability to respond to its recently enlarged fisheries enforcement rsponsibilities.

The authorization also provides for the acquisition of 12 medium-range surveillance—MRS—aircraft, and a training simulator for this aircraft, which continues the program of replacement of the HU–16E amphibious aircraft fleet which first entered Coast Guard service in 1951 and is reaching operational and engineering obsolescence. It also provides for the procurement of 10 short-range recovery—SRR—twin-turbine helicopters intended to replace the aging single-engine amphibian HH–52A helicopter. Authorization was provided for fiscal year 1977 procurement, but the replacement program did not materialize. Authorization has also been provided for the continuing program of upgrading and improving numerous shore and offshore facilities, which are inadequate, substandard, overcrowded, too costly to maintain or repair, structurally unsound, or environmentally inadequate. It also continues numerous phases of on-going and previously authorized programs, all with the substantial upgrading and modernization of facilities to meet today's needs, as well as the requirements of the future.

The acquisition, construction, and improvement authorization of $314,500,000 provides $158,306,000 for the procurement of vessels; $108,252,000 for the procurement of aircraft; $21,303,000 for the construction and improvement of shore units; $27,308,000 for improvement of aids to navigation and the acquisition of vessel traffic services equipment; $8,600,000 for pollution control on Coast Guard vessels; $1,311,000 for public family quarters; and $10,069,000 for property acquisition, design, and administration. For necessary expenses for the alteration or removal of obstructive bridges, $19,100,000 has been authorized which will permit the completion of four bridges, for the continuation of alterations to two bridges, and for the commencement of removal of an obstructive bridge over Newark Bay.

Authorization for research, development, test and evaluation has been set at $24,800,000 to provide major emphasis on marine safety and marine environmental protection programs for seeking resolutions for today's problems and the challenges for the future. The committee added to the original administration's request a sum of $2,000,000 for research and development in pollution control which is designed to restore a part of the funds deleted in the budget process. This addition will restore the research and development funding for marine environment protection to a more acceptable level, even though this addition is less than the amount requested by the Department of Transportation. It should, however, enable the Coast Guard to move more expeditiously in the development of necessary equipment to respond to oil spills.

The total authorization is for $1,241,-221,000, which includes $882,821,000 for operating expenses; $314,500,000 for acquisition, construction, and improvement; $19,100,000 for bridges; and $24,-800,000 for research and development.

I, once again, feel that we cannot stress too strongly that every item in this authorization is badly needed if the Coast Guard is to carry out its designated missions. One of the difficulties is that the administration and the Congress in past years have been less than generous in providing funding for the Coast Guard. This Agency, probably more than any other agency, provides a Federal service second to none and has always endeavored to be of assistance to the general public. Even at this moment, because of the recent additional responsibilities for enforcement of the 200-mile fisheries zone, the Coast Guard is operating vessels built during World War II and vintage aircraft handed down from the Air Force. The Subcommitee on Coast Guard and Navigation and the full committee have considered the administration's desires to reduce outlays and the need to stay within certain anti-inflation limitations; however, I can assure you that the benefits to the Nation from this investment will be larger than the additions we have agreed to. Additionally, the expenditures will primarily benefit those business segments such as shipbuilding, aircraft manufacturing, and construction which will experience excess capacity.

Mr. Speaker, in this authorization bill, it is my firm belief that the Committee on Merchant Marine and Fisheries has reported a bill which is realistic and conservative in meeting Coast Guard needs and in meeting the President's overall budgetary objectives. I, therefore, urge all Members to support the passage of H.R. 6823.

Mr. OBERSTAR. Mr. Speaker, will the gentleman yield?

Mr. BIAGGI. I yield to the gentleman from Minnesota.

Mr. OBERSTAR. Mr. Speaker, I compliment the gentleman from New York (Mr. BIAGGI) on the leadership he has exercised as chairman of the Subcommittee on Coast Guard and Navigation in his first term. He has taken over and really done a splendid job in bringing the Coast Guard into the 20th century into full participation in the technological advancement which the United States has made. He has seen the needs and responded to them.

Mr. Speaker, I also want to thank the gentleman for his recognition, coming, as he does, from an east coast State, of the needs of the Great Lakes and the special problems we have had this past year, with the most severe winter we have experienced on record. He has responded to that need by helping us to obtain urgently needed authorization for new icebreaking capability on the Great Lakes and the St. Lawrence Seaway system.

Again, Mr. Speaker, I thank the gentleman for his support of our needs in Great Lakes States.

Mr. STUDDS. Mr. Speaker, will the gentleman yield?

Mr. BIAGGI. I yield to the gentleman from Massachusetts.

Mr. STUDDS. Mr. Speaker, I join the distinguished chairman of the subcommittee, the gentleman from New York (Mr. BIAGGI), in saying to the Members of this House that the most fiscally cautious soul amongst us can, in very good conscience, vote for this bill.

Mr. Speaker, this is one area in the Federal budget in which the taxpayer gets more than a fair return.

This Congress has imposed legions of additional responsibilities on the U.S. Coast Guard in recent years, such as the Fishery Conservation and Management Act of 1976, the 200-mile fishery zone, the Ports and Waterways Safety Act of 1972, the Federal Water Pollution Control Act, as well as new responsibilities with respect to tanker safety. Yet, this budget is still approximately one-half that of a nuclear carrier.

Mr. Speaker, I would say to all of our colleagues in the House that this is money well spent.

I thank the gentleman from New York (Mr. BIAGGI) for his leadership.

At this point, Mr. Speaker, I ask unanimous consent to insert in the RECORD a powerful editorial from the Standard Times in New Bedford, Mass. in support of more adequate Coast Guard funding.

The editorial is as follows:

[From the New Bedford Standard Times, May 3, 1977]

COAST GUARD WOE

The Coast Guard has been struggling manfully to do its new chores with the same old creaky equipment, operating on a shoestring budget with hand-me-down ships and planes that are unreliable and embarrassing.

As the only military service submerged in a non-military bureaucracy, the Coast Guard, under the jurisdiction of the Department of Transportation (as second-guessed by the State Department) suffers from isolation and insufficiency.

In the past five years, the Coast Guard has been given two new and important responsibilities: enforcement of the Fishery Conservation and Management Act and of the Ports and Waterways Safety Act.

To police the 200-mile fishing limit and to develop and enforce safety standards for ships—especially oil tankers—on top of its traditional functions, the Coast Guard needs more money from Congress and more muscle in the making of policy.

The Coast Guard gets called out for just about everything these days. The upshot is, in the words of Commander J. C. Goldthorpe: "The blue line is spread awfully thin."

Short-changing the Coast Guard has been standard presidential and congressional practice. Its $900-million budget wouldn't keep the other military services in septuplicate forms for a year. The Coast Guard takes to the air in Korean War planes and puts to sea in World War II ships. Its procurements smell of mothballs.

It is supposed to handle increasingly, sophisticated and diverse duties without a

corresponding increase in its own technological gear and transport. The wonder is the Coast Guard does it at all. If the Army, Navy or Air Force were treated so shabbily Capitol Hill would be afloat in a sea of brass hats.

The New England seacoast, from New Bedford to Kittery Point and elsewhere, knows intimately the significance a fully-manned, fully-funded, fully-equipped Coast Guard will have for years to come in keeping our fishing grounds free from piracy and our beaches free from pollution.

Congress, led by the delegations from coastal states like Massachusetts, should be vividly instructed in what is at stake. A uniformed service that protects our natural resources and waterways is an everyday line of defense worthy of the sturdiest support. It's time to unanchor a few minds.

Mr. TREEN. Mr. Speaker, I yield such time as he may consume to the gentleman from Michigan (Mr. RUPPE), the ranking Republican on the Committee on Merchant Marine and Fisheries.

Mr. RUPPE. Mr. Speaker, I would like to say that the gentleman from New York (Mr. BIAGGI), the chairman of the subcommittee, and the gentleman from Louisiana (Mr. TREEN), the ranking Republican, certainly have done a tremendous job on behalf of the Coast Guard and on behalf of all of those who depend on the Coast Guard for essential services.

I also agree with my colleague, the gentleman from Minnesota (Mr. OBERSTAR), that the chairman and ranking Republican have been very careful to take care of all of the interests associated with the Coast Guard, particularly those on the Great Lakes. They have put in great programs to promote icebreaking capability on the Great Lakes.

Also, Mr. Speaker, they have put in funds for further land-sea aids to navigation, aids which will be a far-reaching technological improvement for those vessels plying the Great Lakes for up to 12 months a year.

In sum, Mr. Speaker, I think they have done a very excellent job, and I certainly support this legislation.

Mr. Speaker, I want to join my colleagues in urging the House to pass H.R. 6823, the Coast Guard authorization bill for fiscal year 1978.

The Coast Guard today has expansive responsibility in the area of marine safety and pollution prevention. It has been charged by Congress with broad responsibilities for marine search and rescue, maintenance of aids to navigation, development, and enforcement of marine safety and personnel standards, polar and domestic icebreaking, enforcement of the 200-mile fishery conservation zone, licensing of deepwater ports, ports and waterway safety, marine pollution protection, enforcement of all Federal laws on and under the high seas and navigable waters of the United States and for the continued maintenance of a state of military readiness. This bill will provide the Coast Guard with the minimal authorization necessary to meet these ever-increasing responsibilities.

The Coast Guard's responsibility for domestic icebreaking to meet the reasonable demands of commerce is of major importance to my area and is in the greater national interest. The Coast Guard's icebreaking fleet in the Great Lakes is composed of five 180-foot buoy tenders, five 110-foot harbor tugs, the *Mackinaw* and the *Westwind*. These vessels were all constructed some 30 years ago. In particular, the 110-foot harbor tugboats are unequal to growing domestic needs and costly to maintain and operate. Any vessels added to the Coast Guard inventory to meet these needs also contribute to the Nation's military arsenal and defense.

This past winter was also one of the most severe on record. The extreme cold weather resulted in severe ice conditions requiring increased use of the Coast Guard's icebreaking resources. It also resulted in extensive damage to aids to navigation not normally subject to ice damage.

This bill authorized $26.7 million for the construction of three 140-foot harbor tugboats. In addition to their normal Coast Guard missions, these vessels will help meet the icebreaking needs in both the Great Lakes and the northeastern coastal region.

The bill also authorizes $55 million for the design and construction of an icebreaker to replace the World War II, temporarily deployed, polar icebreaker *Westwind*. This will insure the maintenance of and enhance the current level of Coast Guard icebreaking capability throughout the Great Lakes and assist in maintaining and extending a year-round navigation system. I should note at this point that there was ample discussion of the merits of Finnish icebreakers and procurement during hearings. Though the committee decided it was not its prerogative to direct sole-source procurement and though Finland is not part of the NATO alliance I would suggest that such action would be consistent with the President's pronouncement pertaining to our NATO allies in which he said:

The United States must be willing to promote a genuinely two-way transatlantic trade in defense equipment and further that the alliance should not be weakened militarily by waste and overlapping.

Such action would also be in accord with the interests of the United States in maintaining a viable western democratic economy in Finland.

The bill also authorized $4 million to provide for aids to navigation damaged by the severe winter conditions, and to replace the pollution abatement equipment lost during the *Argo Merchant* incident.

An addition made by the committee concerns the Coast Guard Station at Portage, Mich. This station is currently used as a base of operation for an aids-to-navigation and an electronic repair ship, neither of which has an assigned search-and-rescue mission. Search and rescue responsibilities are assigned to the voluntary nonmilitary members of the Coast Guard Auxiliary and conducted through the use of privately owned craft. The nearest Coast Guard search and rescue stations are at Station Marquette, Mich., located 65 miles southeast, Station Bayfield, Wis., located 90 miles west southeast and Station North Superior, located 79 miles northwest at Grand Marais, Minn. The search and rescue coverage at Portage is simply inadequate. This bill will authorize $260,000 for 13 additional personnel to restore the existing Portage Station to a full search and rescue status.

This authorization action completes the existing Loran–C national implementation plan with approval of an $8,396,000 request for construction of a Loran–C radio navigation station in northeastern Minnesota and provision of equipment at Training Center New York, for the training of maintenance personnel. The Minnesota station will provide complete Loran–C service for all of the Great Lakes, will insure close adherence to established vessel track lines, will lend itself to vessel traffic monitoring and control systems, reduce dependence on other shore installations, reduce the chances of collision, and contribute immeasurably to efforts to preserve and enhance the quality of lake waters.

The recent rash of tanker casualties and the resulting oil pollution are still vivid in our memories. This bill authorizes $4.3 million for the addition of 200 men to the marine safety and environment programs. These forces will be used to provide for a tanker boarding program, to double the pollution strike forces on the east coast, west coast and Gulf coast, with the remaining personnel divided as appropriate between the Marine Safety and Captain of the Port Personnel. These provisions are consistent with the President's recent message to Congress outlining a plan to cope with marine pollution.

This bill authorized $16.1 million to upgrade the vessel traffic services or control systems in selected areas of the Nation.

The work of the committee reported in H.R. 6823 represents its first opportunity to review in depth various Coast Guard programs in other than the traditional acquisition, construction, and improvement areas. Though it was thus the committee's prerogative to revise priorities and to shift funding emphasis within the ceiling established by the administration it chose to reflect its concern for the adequacy of the Coast Guard forces and essential equipment through this additional authorization effort. I urge your support for the passage of H.R. 6823.

Mr. BIAGGI. Mr. Speaker, will the gentleman yield?

Mr. RUPPE. I am happy to yield to the chairman of the subcommittee, the gentleman from New York (Mr. BIAGGI).

Mr. BIAGGI. Mr. Speaker, I thank the gentleman for yielding to me.

Mr. Speaker, I would like to take this occasion to thank all of the members of the subcommittee, especially the ranking minority member, the gentleman from New Orleans (Mr. TREEN) and my colleagues on this side of the aisle and all of those who worked so assiduously and diligently with one objective in mind. I am grateful that during the entire course of the developments that the issue of partisanship never raised its head. It was just the Members of the House desiring to do the best for the Coast Guard and

for the administration and for the Nation that they were able to do.

Mr. RUPPE. I thank my colleague, the gentleman from New York, for his kind remarks. I would say absolutely that all of us on the subcommittee can certainly agree that this Coast Guard bill came out with bipartisan support, it does a very effective job, not for a single political party but for the country as a whole.

Mr. TREEN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I would like to join my colleagues in supporting H.R. 6823, the Coast Guard authorization bill for fiscal year 1978. This bill authorizes appropriations for the operation and maintenance of the Coast Guard; for the acquisition, construction, and improvement of vessels, aircraft, and facilities; for the alteration or removal of obstructive bridges; and for research, development, test, and evaluation. It also authorizes military personnel ceilings and necessary average student training requirements; sets in positive law certain existing accounting procedures; authorizes funds to assist in the construction of a sewage treatment plant to be utilized by the Coast Guard in north Marin County, Calif., and the replacement of certain facilities at the Coast Guard yard in Baltimore.

Over the years, the role of the Coast Guard has greatly expanded from its traditional functions of search and rescue, aids to navigation, and marine and port safety. Today, the Coast Guard has a leading role in such diverse responsibilities as enforcement of marine pollution laws, oil and hazardous substance spill containment and cleanup, enforcement of the 200-mile fishery conservation zone, and licensing of deepwater ports. These responsibilities require sophisticated equipment and knowledgeable personnel. This bill will provide the authorization necessary for the Coast Guard to meet its responsibilities under law.

I would like to highlight several aspects of the bill I feel are significant.

A major function of the Coast Guard is the enforcement of the marine pollution laws. This bill would authorize $4.3 million for the addition of 200 men to the marine safety and environment programs. Approximately 60 of these people will be used to double the pollution strike forces presently located on the east coast, gulf coast, and west coast. The remaining personnel will be divided as appropriate between the marine safety and captain of the port personnel. Part of these forces will be utilized to begin implementation of the President's tanker-boarding program.

We are all aware of the severe cold conditions that prevailed across the Nation last winter. This cold weather resulted in severe ice conditions necessitating the use of icebreaking resources to a much greater degree than in previous years. This was particularly true in shallow or otherwise restricted waters. Also, many aids to navigation which historically have never suffered ice damage were damaged. This bill would authorize $26.7 million for the construction of three 140-foot harbor tugboats which would have icebreaking capability, and $55 million for the design and construction of a new icebreaker for the Great Lakes. Additionally, $4 million has been authorized for damage to aids to navigation caused by the severe winter conditions and to replace certain pollution abatement equipment lost during the *Argo Merchant* incident.

If I may, I would like to discuss two items which, while parochial in nature, are of grave consequence to my area.

In my district, one of the most important functions of the Coast Guard is the enforcement of vessel traffic safety. Vessel traffic on the lower Mississippi River involves a great variety in sizes and types of vessels. Many of these vessels are carrying very hazardous and highly inflammable cargoes. In addition to the variety of vessels, the large volume of traffic—New Orleans is the second largest port in the Nation and Baton Rouge the seventh—and the numerous arteries in the form of locks and canals connecting with the river provide a complex problem in maintaining an orderly flow of traffic on the river. This bill would provide for upgrading the vessel traffic system in New Orleans by authorizing $1.1 million for a low-light-level television monitoring system at the dangerous Algiers bend. It would also authorize $1.8 million to provide badly needed radar coverage at the lower reaches of the Mississippi River. The bill would also authorize $1.2 million for low-light-level television coverage of the Houston/Galveston port area and $12 million for a vessel traffic center and radar equipment improvements in the Puget Sound.

Finally, I would like to touch on the Lake Pontchartrain Causeway. This causeway has been subject to 13 rammings since 1955. These rammings have caused entire sections or slabs of the bridge to collapse into the lake. Automobiles—and in one instance a Trailways bus—have plunged into the lake through these missing sections resulting in the loss of nine lives. This bill will authorize $100,000 to provide a Loran-C collision avoidance system to provide much needed protection for this heavily traveled causeway.

I believe we have a good bill. It will provide the necessary equipment and facilities to enable the Coast Guard to carry out its enormous responsibilities. I urge you to support its passage.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New York (Mr. MURPHY) that the House suspend the rules and pass the bill H.R. 6823, as amended.

The question was taken; and the Speaker pro tempore announced that, in his opinion, two-thirds had voted in favor of the bill.

Mr. ASHBROOK. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

So (two-thirds having voted in favor thereof), the rules were suspended and the bill, as amended, was passed.

A motion to reconsider was laid on the table.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER pro tempore. The debate has been concluded on all motions to suspend the rules.

Pursuant to clause 3, rule XXVII, the Chair will now put the question on each motion, on which further proceedings were postponed, in the order in which that vote was entertained.

Votes will be taken in the following order:

H.R.3849 (de novo).
H.R. 5493 (de novo).
H.R. 3348 (de novo).
H.R. 4140, by the yeas and nays.

The Chair will reduce to 5 minutes the time for any electronic votes after the first such vote in this series.

NATIONAL ADVISORY COMMITTEE ON OCEANS AND ATMOSPHERE AUTHORIZATION

The SPEAKER pro tempore. The unfinished business is the question of suspending the rules and passing the bill H.R. 3849, as amended.

The Clerk read the title of the bill.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New York (Mr. MURPHY) that the House suspend the rules and pass the bill H.R. 3849, as amended.

The question was taken.

Mr. MOTTL. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 387, nays 6, not voting 39, as follows:

[Roll No. 233]

Mr. Koch with Mr. Kemp.
Mr. Nix with Mr. Pressler.
Mr. Pepper with Mr. Winn.
Mr. Florio with Mr. Mann.
Mr. Eilberg with Mr. Johnson of Colorado.
Ms. Burke of California with Mr. Sebelius.
Mr. Ashley with Mr. Railsback.
Mr. Roe with Mr. Stockman.
Mr. Hubbard with Mr. Rousselot.
Mr. Applegate with Mr. Pursell.
Mr. Conyers with Mr. Van Deerlin.

So (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER pro tempore (Mr. DOWNEY). Pursuant to the provisions of clause 3(b)(3) of rule XXVII, the Chair announces that he will reduce to a minimum of 5 minutes the period of time within which a vote by electronic device may be taken on all of the additional motions to suspend the rules on which the Chair has postponed further proceedings.

SEAL BEACH, GREAT DISMAL SWAMP, AND SAN FRANCISCO BAY NATIONAL WILDLIFE REFUGES AUTHORIZATIONS

The SPEAKER pro tempore. The unfinished business is the question of suspending the rules and passing the bill (H.R. 5493).

The Clerk read the title of the bill.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from New York (Mr. MURPHY) that the House suspend the rules and pass the bill, H.R. 5493.

The question was taken.

RECORDED VOTE

Mr. MOTTL. Mr. Speaker, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 384, noes 4, not voting 44, as follows:

[Roll No. 234]
